A MONTHLY PUBLICATION DEVOTED TO THE EDUCATIONAL INTERESTS OF MUSIC.

Hatch Music Company ✤ Eighth and Locust Streets PHILADELPHIA

Standard and Popular Books Published and For Sale by the Hatch Music Company

Sieber's 36 Elementary Vocalises

Op. 92-97 Inclusive

FOR SOPRANO, MEZZO SOPRANO, ALTO, TENOR, BARITONE AND BASS

With Introductory Notes by FREDERIC W. ROOT.

Sieber's 36 Eight Measure Vocalises, for all voices, are well known and appreciated by teachers. The composer had a double object in view and prepared them for use in the school, as well as for self-study at home. The hook for each voice differs from the companion volumes, as the exercises were written with especial regard for the voice part under consideration. Each study is contained within eight bars—therefore do not become tedious—and are written with the *sol fa* syllables, also with an ingenious and effective set of vowel sounds designed by the composer, who is a teacher of European celebrity. All of his studies are melodious and interesting.

Our new edition is, in every respect, the finest in print. These studies have, heretofore, been published only in sheet music form, at $1 50 each. While our new edition is of much more convenient size and much handsomer in every way, it is sold for 50 cents per copy.

Mr. Frederic W. Root says: "The new edition of Sieber's Exercises are beautifully gotten out and I hope will be properly appreciated. I congratulate you upon the edition and hope to use it in my teaching for many s year."

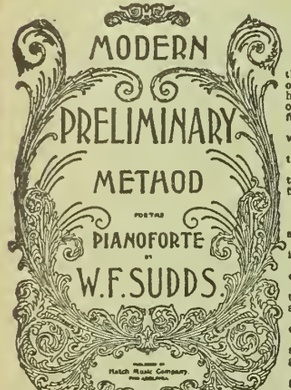
Paper Binding. Price, 50c. Each.

MODERN PRELIMINARY METHOD

FOR THE PIANOFORTE

Embodying the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation

By W. F. SUDDS.



As its title implies, this Method is modern, contains the newest ideas and their practical application. The bulky and voluminous instruction book is a thing of the past. The Method of to-day deals with *more* subjects than its predecessors, but deals with them in a terse and effective manner. It recognizes the importance of practical exemplification of its principles involved, but wisely leaves the amplification of various points to future study.

Among the many excellent features of the Modern Preliminary Method, we direct attention to the following:

The Rudiments are very progressive and explained with such clearness that the pupil cannot fail to comprehend them.

The Various Touches are clearly set forth and are accompanied by illustrations, drawn and engraved expressly for this work, showing the movements of finger, hand and arm.

The Correct Principles of Touch and Technic are illustrated by examples.

The Scales are introduced in an effective manner.

Proper Use of the Pedals, a matter generally disregarded, is given particular attention.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

Five-finger Exercises are judiciously used, but not in the usual enormous quantity that disgusts and discourages the pupil.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a Complete Preliminary Method—a work which cannot fail to interest both the practical teacher and the earnest student.

MODERN PRELIMINARY METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

THE HARMONIZING OF MELODIES

A Text Book for Students and Teachers

By HENRY C. BANISTER.

The harmonizing of melodies, generally termed the knowledge of harmony, is one of the most practical applications of the knowledge of chords and their treatment. One may know the meaning of a number of words and still be unable to construct a sentence; he who lacks the ability to use chords in harmonizing a melody is in a similar position.

"Harmonizing of Melodies" will prove a most helpful aid to the student of harmony. It is extremely practical and abounds in examples which will readily be understood. No point has been overlooked and all important subjects are treated at considerable length. Various methods of handling the same melody are shown, and valuable information as to the best choice, with reasons for the selection, are given. Many excellent hints as to taste and ornamentation, culled from the experience of the writer, are included.

Paper Binding. Price, 50 Cents.

BURROWES' PIANOFORTE PRIMER

Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

The fundamental principles which have given the work a world-wide reputation were not disturbed in the revision, but as the method of instruction has improved more rapidly than any other portion of the musical art, the sole aim of the editor was directed to bringing it up to the requirements of a progressive age.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Half Cloth Binding. Price, 25 Cents.

BUSSLER'S PRACTICAL HARMONY

Newly Revised and Corrected Edition

Authorized Translation from the Third German Edition by N. GANS.

Without exception, the best and most practical work on this subject ever published. The author is a noted German theorist, whose works are known, used and held in high esteem at all the most prominent European colleges and conservatories. The demand for PRACTICAL HARMONY has been so great that three revised editions have been printed in Germany. Ours was translated from the third German edition, by a writer selected by the author. It is, as its title indicates, a thoroughly practical work, embracing the latest and most approved methods. It is simple, is illustrated by practical examples, and is eminently suited for a self-instructor. Its price brings it within the reach of all.

[illegible] instruction or for self instruction, Bussler's Practical Harmony is unequalled. It makes the study of harmony easy, rapid and entertaining.

Cloth Binding. Price, $1.00.

JOUSSE'S MUSICAL CATECHISM

Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

No one questions the merit of Jousse's Catechism—it is a universal favorite; but the progressive teacher demands text books and studies of the most advanced character. He is not satisfied with original editions, but wants the latest and best ideas. The possession of up-to-date editions saves time and insures more rapid and more substantial progress.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Paper Binding. Price, 20 Cents. Half Cloth Binding. Price, 30 Cents.

Musical Memory and its Cultivation

Also an Investigation into the Forms Of Memory Employed in Pianoforte Playing and a Theory as to the Relative Extent of the Employment of Such Forms

By FREDERICK G. SHINN, Mus. Doc., Dunelm.

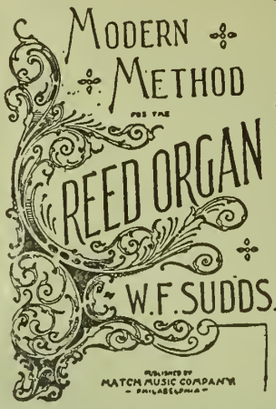
The purpose of the work is twofold: *First*, an inquiry into the various forms of memory employed in piano playing and the formation of a theory with regard to the relative extent of the employment of the various forms by different individuals. *Second*, to repeat, with the strongest possible emphasis, that Ear-training, which is largely a cultivation of the musical memory, is THE FACTOR of all musical education.

"MUSICAL MEMORY AND ITS CULTIVATION" is divided into two parts. *Part 1* contains seven chapters, as follows: General and Special Memory; Musical Memory; Musical Memory in Connection with Practical Execution; Muscular Memory; Visual Memory; Intellectual Memory; Relative Extent of the Employment of the Different Forms of Memory. *Part 2* contains six chapters, as follows: Necessity for the Cultivation of Musical Memory; General Conditions Favorable to Memorizing; Suggestions for a Scheme of Memory Training; Method of Studying Pieces for Memorization; Memory Training and Examination Schemes; Memories of Musicians.

A valuable work which should be read and studied by all musicians.

Paper Binding. Price, 50 Cents.

Modern Method for the Reed Organ



Embracing the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation; also Containing Various New and Important Features, such as Registration, Stop Nomenclature, Adaptation of Piano Music, etc., etc., Not to be Found in Any Other Work of the Kind

By W. F. SUDDS.

As the title implies, this method is modern, the newest ideas, and their practical application, governing its compilation. It treats all subjects in a terse and effective manner.

Among the many excellent features of the MODERN METHOD, we direct attention to the following:

It begins with Dictated Lessons.

The Rudiments are explained with remarkable clearness.

It is Carefully Graded.

It is sure to Awaken the Musical Instincts of the pupil without smothering the soul with too much drudgery.

The Fingering is the so-called Foreign, thus according with all the best class of modern musical publications for either Organ or Piano.

It contains a complete treatise on registration as applied to the modern Reed Organ; also full information and comparison in the matter of Stop Nomenclature.

It is the only work of the kind treating the subject of Adapting Piano Music to the Reed Organ.

Every variety of Touch is clearly set forth, accompanied by illustrations (drawn and engraved expressly for this work), showing the movements of finger hand and arm.

The Scales are introduced in an effective manner.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a work which cannot fail to interest both the practical teacher and the earnest pupil.

MODERN METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates and on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

THE CHILD'S MUSIC WORLD

Being Chapters About the Study of Music

By THOMAS TAPPER.

EXTRACT FROM PREFACE: "The purpose of this book is to serve as a suggestion to teachers who desire their students to become acquainted with the Story of Music. It is not the purpose to present names, dates and facts to be painfully memorized and easily forgotten. Experience teaches that the facts of history take place and interconnection in the mind very slowly; it also teaches that if general principles and tendencies are appreciated first, it is all the easier to put in the details afterwards. Learned in this way, history is less difficult and vastly more entertaining than it is when reduced to a categorical collection of questions about facts that seem isolated and well-nigh impossible to keep together.

"The principal points, then, are these: I. Implant early in life as many fundamental principles as possible. II. General principles first, details afterwards. III. Isolated facts have no value. IV. True education demands activity. *We know what we do.* The basis of all knowledge is personal experience. V. Hence, a teacher should create activities and direct them."

As a basis for talks on History by teacher to pupils, nothing can excel this volume.

Cloth Binding. Price, $1.25.

DICTIONARY OF MUSICAL TERMS

100 Pages. By STAINER and BARRETT. 6 x 9 Ins.

Compressed from the Imperial 8vo Edition, by K. M. ROSS.

We take pleasure in presenting a compressed edition of Stainer and Barrett's valuable work. Mr. K. M. Ross, in his preface, says: "In reducing this book from the author's larger work, we have endeavored to omit only such terms as are not in general use, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits. To the general public it is hoped that this edition will be found of practical utility."

"Dictionary of Musical Terms" is a neat and attractive book. It is offered at a nominal price with the hope that it may prove of incalculable value to those in need of a handy reference book.

Paper Binding. Price, 25 Cents.

WICHTL'S YOUNG VIOLINIST

A new and magnificent edition of Wichtl's celebrated violin school, including the original 100 progressive exercises in the first position, through all intervals and keys, with a second violin part for the teacher, to which we have added "Pleyel's Celebrated Duets for Two Violins"—carefully fingered and bowed—and a splendid collection of Popular Duets for Violin and Piano.

Without exception ours is the best edition of this standard work. Compare it with others.

Half Cloth Binding. Price, $1.25.

Thirty Standard and Popular Operas

ARRANGED FOR VIOLIN AND PIANO

Violin and Piano, 200 Pages. By A. S. BOWMAN. Violin, 64 Pages.

In this superb collection the compiler has displayed taste of the most eclectic character, his selections comprising the various "schools" of music—French, German, Italian and English. In one compact volume, grand opera, opera *comique* and opera *bouffe* have contributed their choicest melodies. The list includes the great operatic successes of a generation ago and passes, in continuous order, to those of the present day; we have Rossini, Donizetti, Verdi, Wagner, Bizet and Mascagni, in close relation. In the arrangement that happy medium has been reached which presents just enough difficulty to interest the player without proving troublesome or overtaxing the powers of the average performer. Without exception, it is the most useful and entertaining work of its character in print.

"Thirty Standard and Popular Operas," for Violin and Piano, is a handsome volume of 200 pages, bound in half cloth. The same, for Violin, contains 64 pages and is neatly bound in paper. Both are printed from new plates, on a fine quality of music-book paper. No expense has been spared to make them perfect in every respect.

Violin and Piano, One Volume, Half Cloth Binding. Price, $1.25. Violin Alone, Paper Binding Price, 75 Cents. Both Books, if ordered at the same time, $1.50.

POPULAR SELECTIONS FOR MANDOLIN AND PIANO

By JOHN J. EBERHARDT.

Mr. Eberhardt, well known as a composer and arranger of music for the mandolin, and for mandolin clubs, is also leader of one of the most popular clubs in the United States. We have, therefore, no hesitation in recommending anything that he may offer in this particular line.

"Popular Selections" is a large book (9½ x 12 inches) of 128 pages, printed from engraved plates, on fine quality toned music-book paper; it has an attractive cover.

Paper Binding. Price, 50 Cents. If Sent by Mail, 11 Cents Additional.

780.5
M.U.S
v. 6

LIMITED TO JANUARY 31st.

In the December number of THE MUSICIAN we announced the formation of a **CHRISTMAS DICTIONARY CLUB**, limited to 50 members, and formed for the purpose of distributing 50 sets of "**GROVE'S DICTIONARY OF MUSIC AND MUSICIANS**" at a reduction of 30 per cent. from the regular price, and upon easy monthly payments extending over a period of one year. The Club is **completed**, but as applications for membership are coming in daily, we are pleased to announce that arrangements made with the publishers enable us to accept and enter all applications received prior to February 1st, when this offer will be withdrawn.

For the benefit of those who failed to notice the original announcement, we reprint it in full. If you need a set of "GROVE'S," you will save money by joining the **Club.**

GROVE'S Dictionary of Music and Musicians

Latest Edition. Five Large Volumes, Including Index. Bound in Full Cloth, with Gilt Top.

Every teacher and earnest student of music should possess a library of the choicest musical literature, and as the foundation or basis of such a collection must cousist of standard works of reference, it will of necessity include "**GROVE'S DICTIONARY OF MUSIC AND MUSICIANS,**" because it is the only work to be found in musical literature that does for the student of music what the many cyclopedias do for the literary worker. For a long time the musician was compelled to gather facts and items of historical knowledge from many sources. Biography of the masters, as well as of many lesser lights who nevertheless did much to advance musical progress, and of whom it is well to have some information, could be had only from widely scattered volumes. A dictionary of musical progress was really unknown. These important and annoying wants are supplied by this work. Biography, definition of musical terms, explanation of Form, origin, structure and development of instruments, History and many other classes of valuable information are contained in it. A complete and specially prepared index (which is included in our club offer) greatly facilitates the use of the work. What its possession means to the teacher can be readily understood. It is, beyond question,

The Only Complete Encyclopædia of Music in the English Language.

"**GROVE'S DICTIONARY,**" in its completed form, represents years of labor, and the expenditure of a very large sum of money in the preparation of the plates. It should have had an enormous sale. While its sale no doubt has been, and is entirely satisfactory to the publishers, nevertheless we believe that if its price had been fixed at $17.50, instead of $25 00, their profits would have been greater. At the lower price the sales would have been quadrupled—no matter how large they have been. Thousands of teachers and students who could and would pay $17 50, either cannot afford to or will not pay $25.00. They have endeavored to get along, without the work, all the while feeling the limitation its absence placed upon their resources. In order to aid 50 teachers and students in procuring a complete set of the latest edition, we offer that number at a reduced price and on easy monthly payments (fully explained below) to the first 50 who join the

Christmas Dictionary Club

As THE MUSICIAN is devoted to the Educational Interests of Music, its various departments, conducted by experts, contain a great number of articles in which constant reference is, of necessity, made to standard works. Among these works, "**GROVE'S DICTIONARY**" occupies a very prominent position, and while no department of our journal makes the purchase of this or any other work compulsory (on the contrary, all departments are conducted upon a basis designed to cut off expense as far as possible), nevertheless the general value of the work and its great usefulness commend it to all progressive teachers and earnest students. In order to enable our customers, including subscribers and readers of THE MUSICIAN, to provide themselves with a set of "**GROVE'S DICTIONARY**" at a cost and upon terms so advantageous as to merit their attention, we concluded to form a **CHRISTMAS DICTIONARY CLUB.** Hence the following offer, which is

LIMITED TO 50 MEMBERS.

The limit has been fixed at 50, because we cannot afford to sell a greater number of sets at the Club Price, upon the terms and conditions explained below. We are not the publishers of "**GROVE'S DICTIONARY,**" and the cost of the work and its handling barely allows the return of our investment, to say nothing of the expense of advertising the distribution. Those who take prompt advantage of this exceptional offer can procure the complete set of books—latest edition—at a greatly reduced price and upon terms of payment which limit the outlay to *less than five cents a day.* Remember that this offer applies to only

50 Sets, at 70 Per Cent. of the Regular Price.

(REGULAR PRICE, $25.00. CLUB PRICE, $17.50.)

Both price and terms of payment are the most liberal that have ever been made on this Standard Reference Library. *Less than five cents a day* for one year will secure its possession. As a Christmas gift to teacher or student of music, nothing could be more appropriate or more useful. But as the Club is positively limited to 50, the importance of joining at the earliest possible moment, in order to secure membership, is apparent. The initial payment of $1.55 will be promptly returned to those whose applications are received after the membership is completed. The full amount ($17.50) is

PAYABLE IN ONE YEAR---$1.45 PER MONTH.

(Less than 5 Cents a Day.)

How to Join the Club. Send **$1.55** with letter stating that it is first payment for a set of "**GROVE'S DICTIONARY OF MUSIC AND MUSICIANS,**" and for membership to the **CHRISTMAS DICTIONARY CLUB.** Each membership will be acknowledged upon receipt, and the books will be shipped by express or freight, as ordered. In the absence of specific shipping instructions, they will be shipped by express. The other payments will extend over a period of **twelve months,** divided into **eleven** payments of **$1.45 each,** the first being due and payable **one month** after shipment, and the others at an interval of one month each.

Please Remember

That this offer is limited to a Club of 50.
That the Club will be completed upon receipt of the 50th order.
That each set contains five volumes, including Index.
That payments are to be made as follows: $1.55 with order; $1.45 per month, for eleven months.
That you have the use of the entire set of books for a full year before the last payment falls due.
That it is to your interest to join the Club at once, so that your order may be received before its completion.

Hatch Music Company, Eighth and Locust Streets, PHILADELPHIA, PA.

To join the CHRISTMAS DICTIONARY CLUB, carefully fill out this blank, and mail it to the Hatch Music Company.

Hatch Music Company, 236 S. 8th St., Philadelphia, Pa. *Date* ..... *1901.*

Please forward one complete set of "**GROVE'S DICTIONARY OF MUSIC AND MUSICIANS.**" I agree to receive and pay for same a total of Seventeen and $\frac{5}{100}$ Dollars, in the following manner, viz.: One and $\frac{55}{100}$ Dollars with this agreement, and each and every month after shipment of books, the sum of One and $\frac{45}{100}$ Dollars, remitting same to the **Hatch Music Company** by bank draft, P. O. money order, express order or registered letter, until the entire amount is paid.

The title and ownership of said Dictionary shall not vest in me, but books delivered shall be held by me as the property of Hatch Music Company until paid for in full. In event of my failure to pay any one of said monthly payments for 30 days after the same has become due, I hereby agree, if so requested by the said Hatch Music Company, to carefully pack and ship the said set of books to the said Hatch Music Company in good condition and in such manner as the said Hatch Music Company may direct; or at its option, the said Hatch Music Company may take, or cause to be taken, the set of "Grove's Dictionary of Music," either with or without process of law, it being expressly understood and agreed that the money already paid shall be forfeited for the use and wear of said books. All transportation charges to be paid by me.

NOTE.—Unless otherwise ordered, books will be shipped by Express. If Express Office differs from the Post Office given below, please give full shipping instructions

Club Members with whom we have no regular account will please give full name and address of two references. As references we prefer business houses, in your own or other cities, with whom you have accounts. Careful attention to this request will avoid unnecessary delay in acceptance of membership.

If to be sent by mail, add 11 cents.

No. 2. Seal-grain leather, black or brown, $2.70.
Avoids all necessity for either rolling or folding sheet music or books. A substantial satchel, made for service.
If to be sent by mail, add 22 cents.

WITH
Practical Suggestions
TO
Students of Music.

Is Entirely New and Superior to Anything of Similar Character That Has Ever Been Offered.

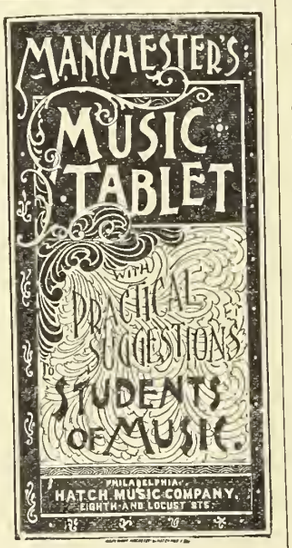
The Tablet is 6¾ x 10¾ Ins.

It contains 100 Sheets—each with 12 staves. The paper is first-class—suitable for writing with either pen or pencil. The leaves are perforated so that they can readily be removed. Second page of cover contains, for ready reference, the following: Notation, Display of Tetrachords, Cycle of Keys, Condensed History of the Minor Scale, Relationship of the Minor Scale. Manchester's is so much superior to all other tablets, that an examination will insure its use.

Price, 20 Cents.

By Mail, 28 Cents.

Liberal discount when ordered in quantities.



THIS SYSTEM IS COVERED BY COPYRIGHT.

MUSICAL KINDERGARTEN FOR THE PIANOFORTE

ASSOCIATE TEACHERS
MRS. GRACE YEAGER,
MISS KATHERINE SCHUSTER.

By FANNIE CHURCH PARSONS.

This system is most simple in outline and material.
It is most comprehensive and complete.
It is essentially a tone system teaching the children how to write music "by ear."
The materials used are, while very durable, most suggestive of the beauty of the art of music.
The lessons are equally instructive to either child or adult beginner.
The students do much real piano work, thus no intermediate course is necessary.
The stories and songs do not savor of the grotesque, but tend to refinement and culture.

The price for normal work, including materials, is within the reach of all.
You can take the work by mail, or of a normal instructor, or of Mrs. Parsons personally.

Correspondence should be addressed to **Musical Kindergarten Company,**
Office, 6 W. Chicago St., Quincy, Mich.

STUDIO, 510 HANDEL HALL, CHICAGO, ILL.

THE MUSIC REVIEW

PUBLISHED MONTHLY EXCEPT JULY AND AUGUST

By CLAYTON F. SUMMY CO.,
220 Wabash Ave., Chicago.

WALTER SPRY, EDITOR.

THE only journal published giving information which makes it a reliable and helpful guide through the musical literature published in all countries.

All music sent to The Music Review is carefully examined, and that which is deemed of sufficient interest and merit is listed with a description of its character and value.

The Music Review does an enormous labor in sifting from amongst the mass of music published that which is most desirable.

Teachers, choir leaders, and the general music buying public will find the Review an incalculable aid.

Subscription price, 50 cents per year.

The Music Review and *Etude*, to one address, $1 60
The Music Review and *The Musician*, to one address, ... 1 60
The Music Review and *Music* to one address, . 3 00

The above rates will be allowed on New Subscriptions only.

Echoes from Music-Land

A Collection of Piano Pieces
(with words)

By MARY L. POWERS.

PRICE, 75 CENTS.

IN the above collection, teachers will find material which from many stand-points is a diversion from the material that is usually prepared for the early grades of pianoforte work. Each piece is founded on a little rhyme—mostly the familiar rhymes—the musical setting being intended to convey to the child a musical illustration of the verse.

The aim has been to put things where they would be easily playable, or, in other words, where the music lies well under the fingers. The writing is unrestricted enough to give free expression to the musical idea and yet technically very simple. They are mainly two-voiced exercises written in various keys up to three sharps and three flats. We consider them a most useful addition to the material suitable for first grade work.

SCHUMANN'S FOREST SCENES.

FRANCIS L. YORK.

"Who will go to the theatre in May or June when he can go into the woods?" So wrote Schumann to one of his friends, Dr. Haertel. Surely, no one would i he could hear the voices in nature that Schumann heard, could find "sermons in stones," whole music dramas in the rush of the wind among the branches or a tragedy in the wild bird's mournful cry. Schumann, like many another poet and musician, was filled with a love of nature and it is in these forest scenes that he shows his love by describing for us his impressions of objects in nature. This little set of nine pieces was written only five or six years before Schumann's death, while he was still in possession of his full powers. Though short and written in a most unpretentious style, they are probably such as no other composer who ever lived could have written. They are a series of pictures showing us woodland scenes as Schumann himself saw them, giving us in music the thoughts and feelings that those scenes awoke in his mind and even describing some incidents. Perhaps we can get a more perfect idea of them by calling them collectively, "A Day in the Woods," and regarding them as a musical setting of the experiences, both mental and physical, of a party of young German students out for a holiday. Schumann himself could enjoy such an outing as well as any one, and that, too, not only in a grave or poetical mood, but also in a decidedly hilarious way. Witness the fact that once, when riding on a stage coach, he took the reins from the hands of the driver and drove for miles at a breakneck speed, only stopping at the wayside inns along the route to treat the passengers to beer.

The title of each little piece indicates more or less clearly its musical contents, but one may study them for years, and by constantly finding new meanings and hitherto unnoticed beauties. Although apparently so simple they are in some respects the most complicated piano music I have ever seen. The wealth of musical ideas, of descriptive, of suggestive, of reminiscence is really wonderful.

Let us take up a few of them somewhat in detail and see what we can discover besides what lies on the surface.

Number one is the entrance into the forest, that is, one's first impressions on entering the forest. How fresh and breezy it is! It is full of woodsy noises. Notice the figure in the right hand of the first two measures. Could anything be more descriptive of the incessantly shifting play of the sunbeams on the fallen leaves as they sift down through the leafy branches over head? To be sure, it must be properly played—no baseball-battered fingers will do for these delicate staccato, vanishing phrased notes. After the little introduction of eight measures (repeated) we hear in the distance the winding of a Waldhorn or huntsman's horn (measures 9, 10, 11, soprano part). Then we listen a moment while the dancing sunbeams plays at our feet. Then, like "horns of elfland faintly blowing," comes the answering call (in the tenor this time) dying away to silence (measure 17) and again the dancing sunbeams. Another faint call is heard and then the soughing of the wind as a gust arises away off among the trees, gradually coming nearer, and as it sweeps by it brings to us again the call of the forest horn (measures 32–33, tenor part). Again the shifting light, a sudden rush of the wind like the cry of a startled bird, and the picture is gone.

The next scene that we examine is number three, the Solitary Flower—and a more delicate *aquarelle* has never been drawn, whether by painter or musician. I may be wrong, but I firmly believe that there are but two flowers and that they are blue—two little blue star-like flowers in some half-lighted forest glade, gently waving to and fro on their graceful blade-like stems as the Spring breeze touches them. As we watch them swaying, now towards, now away from each other, touching each other lovingly as their slender stems cross, we think of the story of Narcissus, of Daphne, of Nymphs and Dryads, and the music becomes an idyl of sylvan love and beauty. Written in the simplest style (as becomes the subject), technically almost in the first grade, this little composition requires the most delicate and artistic handling if its beauty is to be appreciated. I know of but one other piano piece comparable to it—the second of the twelve little preludes by Bach, the one in C minor.

The next one of the set—the Haunted Place—shows us another side of Schumann's character, the side that finally became predominant and caused his life to end so painfully, namely, the gloomy, morbid. This composition could only have been written by a German, one who was full of the gloomy stories of the Black Forest who, at night, saw the Erlking behind each shadowy willow tree, or heard the galloping of the Headless Horseman in every sound of the midnight wind. Here, too, we have a suggestion of flowers, but as the motto prefixed to the piece tells us, they are not of a heavenly blue but pale as death itself—all, save one, that stands in the midst a dark clotted crimson. Here they grow in some noisome fen, dank and miry, the scene of a dreadful deed, and the crimson flower has its color from the dark red blood of murdered men. The piece itself is full of sudden starts and shudders and half-suppressed groans. Towards the end come two long shivering moans, and at the very end a shriek. Of all wierd, uncanny music this is certainly the most remarkable.

Number six—Wayside Inn—is a jolly, roistering bit, perhaps suggested to Schumann by a reminiscence of that memorable stage-coach ride. Our student party, tired and thirsty, come across one of those little taverns that were so frequent along the German roads, and enter to rest and to procure the indispensable beer. First comes a snatch of a jolly, drinking song, followed by the noise of the glasses rapping on the tables. The fun grows more boisterous until, during a momentary lull, one of the students, a tenor, is heard (measure 25) singing in a most sentimental, love-sick way, presumably to the bar-maid. She, however, refuses to listen to any such nonsense and very promptly cuts him short. The noise increases again, more rapping on the tables for more beer, bits of the song somewhat distorted are heard, then suddenly the bar-maid's laugh is heard and, after a few rather clumsy attempts at the song, the party starts to go. As they go away they wave the hostess a good-bye and disappear at the turn of the road. Then back, borne on the wind, comes the sound of the students, merrily whistling their drinking song.

Number seven is called the Prophet Bird, a composition that is a favorite with many of our best concert pianists. It most exquisitely represents the dainty flutter of the feathered songster as he flits from branch to branch, now poising for a moment in the air, now gracefully sliding down his airy path. Six bars of harmony follow, containing the "prophecy," after which the bird begins again its capricious flight and, suddenly, with a dainty shake of its bright wings, is gone.

Number nine, the last and most beautiful of the set, is the "Farewell." The day is past and the tired merry-makers are returning home. In spite of the calm and quiet of the evening, there is an inducement of melancholy, that "feeling akin to pain" that there is in every parting. But the day has left its impression on the members of the party. They recall the solitary blue-eyed flower (measure 17), one student hums to himself the air of the drinking song again (measure 38). Again is heard (measure 39) for an instant—or is it only their fancy?—the note of the forest horn. As the friends part the "Farewell" is twice heard softly uttered as becomes the time and the mood of the speakers, the night wind sighs softly once more "*Farewell.*"

* * * * * * * *

"But," some one says, "this jumbled talk of sunbeams, horns, bar-maids, murdered men and prophesying birds is all nonsense; this is something you have read into the music and not something that Schumann put there. Let us have music *as music*, let us not try to see visions and dream dreams in music, but leave it to its own sphere."

Well, it may be that part of what I have written *is* fanciful, but surely not all of it. Else why the highly suggestive names of the pieces? Why these peculiarly formed phrases and rhythmic figures? And, above all, why this recurrence in a composition called the "Farewell" of ideas already heard in other pieces of a totally different nature? Schumann certainly meant part of what I have written, if not all of it, and the pianist who ignores the presence of these wonderfully suggestive musical expressions not only loses a great deal of enjoyment, but in his playing he either misrepresents Schumann or fails to interpret him adequately.

PRIMARY TEACHING.

Editor of THE MUSICIAN.

Dear Sir—I have noticed articles in THE MUSICIAN on primary work which advance ideas that have given me more trouble in trying to train other teachers' pupils than anything I ever had to combat with. In the first place, one after another has said: "Let them (the primary pupil) read first one part, then the other and afterward put both together." My experience has led me to believe that the quicker you put a child to reading not only two but *four* score music, the better reader he or she will be. The eye is as much a creature of habit as any other part of the body, and if taught to focus on one line will merely see that one line, but if trained to read vertically instead of horizontally can and will adjust itself to as many lines as it is used to. I never allow a pupil to *read* one part at a time but, of course, where one hand has much more difficult work to do than the other, it must *practice* more.

As a child I browsed a great deal in the old-fashioned hymn-books, where everything was written on four different lines, and firmly believe that I owe to this accidental experience the fact that I have always been a rapid and correct reader, and I have never had any trouble in making good readers out of pupils that I have started in this manner.

As to the time to teach touch and technic I find it a very enjoyable part of the little one's lessons, as they grow tired of hunting notes in a very few minutes and it seems to be quite a delight to them all to try to make the fingers *mind*. With the very little ones I use touch and technic in a kindergarten way—having them play the fingers are children and that they must make them obedient, and as the game goes on they become quite excited in trying to help the poor, fourth child to be just as strong and useful as the rest, and in a short time it only takes a word to bring out the tones I wish.

These discussions are very helpful to me, and though one may not, at present, have a pupil they will help, he may have to-morrow and every suggestion has its value. May the good work go on.

MISS DE LA MATYR,
Superintendent of Music of Public Schools,
Glenwood Springs, Colorado.

THE Teachers' Forum

Conducted by N. J. COREY

This department is inaugurated for the purpose of uniting the many teachers who read THE MUSICIAN in a bond of professional brotherhood. It is to be their medium for the interchange of ideas, experiences, encouragement, discouragement and difficulties. The fullest correspondence is invited. The questions will be answered and suggestions given by the conductor and the contributions of those who wish to gain new light or to present their methods will be printed. We propose helping ever teacher who will permit us to do so; we intend to do everything possible to overcome the isolation with which you are burdened. Will you co-operate with us?

No conditions are attached; the department is open to *all* MUSICIAN subscribers. Address all communications to the Teachers' Forum, care THE MUSICIAN, Eighth and Locust Streets, Philadelphia, Pa. Do not hesitate, but be among the first to ask help, or to give some other teacher a suggestion. Let us know what you would like to have treated in its columns.

Mr. Corey's opening article takes a survey of the teachers' work and prepares the ground for future discussion.—Editor of THE MUSICIAN.

"The gates of art are closed unto none; who so entereth thereat, though he seeketh perfection, yet shall he not find it."

—Ancient Egyptian Papyrus, 3580 B. C.

The couplet, "A man works from sun to sun, but a woman's work is never done," might not inaptly be paraphrased in this fashion: A mechanic works from sun to sun, but a professional man's work is never done. Certainly no music teacher of any amount of experience would dispute the assertion, nor can he or she fail to realize that the most difficult and exhausting part of his or her labor is done out of normal working hours. The time actually spent with the pupil is short compared to that devoted to preparation for the problems which invariably present themselves with each new name inscribed upon the teacher's book. And the point of intellectual development arrived at in our day and generation is largely responsible for this. It is not so long ago since a text book in the hands of an instructor, and a more or less successful effort of the memory—we may call "the memory of repetition"—on the part of the pupil, constituted the general formulæ for the production of so-called education. This process, not so singularly as we all now opine, was not eminently successful in flooding the world with thinkers; that is, those who gave us new products through mental generation. Antecedent thought was handed down, but it soon became sterile, a body without a soul, and your most thoroughly taught and trained man frequently proved your most inefficient. Little by little, as the schools were arraigned by such men as Carlyle and others of of his ilk, there came into the general mind the appreciation of the value of a memory association, rather than one of repetition, a vivified articulated intelligence which was a stimulus to new intellectual growths. The *idea* began to be the consideration, more than its mere vehicle of conveyance, and tradition, the usurper, was once more dethroned for the reinstalment of truth.

What we, perhaps, may define as narrow pedagogy, nowhere worked more havoc than in the domain of music. The young scholars, overweighted in mind by technical, and, to them, unmeaning terms, and overtired in body by acts of digital repetition quite as meaningless and unattractive, remained at a dead level of attainment, which was graced by the flattering term of accomplishment. Original taste and even gift frequently succumbed to the benumbing influence of a mistaken process, and the pupils who were strenuous enough to continue their musical studies until school years were past, rarely made them an integral part or interest of their later lives. Many have been the excuses for these lapses—lack of time, outside pressure, etc., etc.—but a matter of really vital interest and pleasure is rarely completely crowded out altogether, and the real reason for this condition of affairs was the slight, and, therefore, ephemeral hold that music had really obtained upon the minds of its so-called students. The result was no special advance along the line of musical art in America. But the new activities of mind which began to obtain suggested to the music teacher, among others, that a primer and a book of exercises, however excellent in themselves, were not necessarily either luminous or satisfying to the little ear craving the "concourse of sweet sounds," and the little mind actuated by the desire to reproduce them. The melodic sense, which was the child's real inspiration, the magnet which drew it to music, began to be recognized as demanding consideration and a certain amount of satisfaction instead of being too rigorously condemned aad excluded. A bad master, undoubtedly, it was yet a good servant, and as such is now utilized. The scales, analyzed and now given to a child to construct like a block house or a picture puzz'e, and completed by the common chords, so simple of formation, proved a very different affair from a succession of notes interscribed upon a page, to be painfully read and tediously played, with an attention distressfully divided between the two great unknowns—the keys and music rack.

There is neither time, space nor necessity for going into detail concerning the methods of teaching in use to-day. Suffice it to say that they recognize the power of associated ideas and seek to develop the pupil in technique, understanding and feeling at the same time. The road to learning is becoming a royal one to the pupil, but it is no road of triumphal and easy progress for the teacher. Discrimination between each individual, earnest thought and endeavor to develop the peculiar gifts and overcome the peculiar defects of widely different personalities, and all this without ceding any of the real essentials of method, and of proper musical foundation—it is these things which claim one's attention when solitude and silence are supposed to bring the reward of a well earned rest. "I don't like this piece," used to elicit from the easy-going teacher the response: "I'll give you another," or from the stern martinet the order: "It must be learned." But the conscientious teacher of to day, knowing that the selection was a wise one, will also know that it must not be changed, but, if possible, made agreeable.

And this is where the gift and grace of teaching comes in. To learn to understand, if possible, just what a pupil lacks, why he lacks it and how to supply it—this is the high function that calls for discernment, power of analysis and a synthetic presentation of a subject that shall make the pupil able to master it. This is generally difficult, but always more or less possible. It takes, however, an amount of self-devotion more exhausting than the severest manual labor, and an infinity of patience and inspiration. There are pupils who are as stars upon a dark night, but they are not plentiful. And there are others, such for instance, as remark during their first lesson: "I don't care anything about music, and I didn't want to take it, but my mother wants me to!" who do not seem to promise infinite things; but it is a good thing to remember that early promise is sometimes scanty in fulfillment, and that occasionally a later growth is as strong and fine as it is unexpected.

After all a teacher must feel a rare pride in not merely having developed, but actually implanted, a taste for art. And this has been and can be done, though, perhaps, not commonly. There are sometimes dormant activities in the mind of a child, or even an older person, which have never received any definite direction, and which prove virile when once thoroughly awakened. This is matter for consolation, but there come many moments to the most earnest and conscientious and enthusiastic and optimistic of us, when we seem fairly at a standstill as to how to proceed in a given case. These are the moments when counsel would be invaluable to us. Counsel from some one who has had sufficient experience to understand our difficulties. Then it is that we long to ask the advice and opinion, and possibly profit by the adventures, of our fellow-teachers. Alas! They are not always available, nor at leisure to receive or bestow confidences.

How then shall we secure advice which may prove invaluable? Invaluable, whether we act upon it or not, for stating our case sometimes clarifies it to our own thought and gives rise to intellectual suggestion; and debating a course proposed to us by another also helps to show us our own wisdom and unwisdom when we are in doubt or perplexity. The standing between two opinions is the really perplexing "cross-roads" of the mental highway. How valuable then is a sign-post in the way of "why not?" or "do not!" or "try this or that," or "I have succeeded by doing so and so!" It has seemed to THE MUSICIAN that some such comfort and help might be secured through the medium of its columns. Feeling that it stands for education, it realizes the importance of an intimate interchange of ideas between those to whose care educational interests are committed, and it bespeaks a free correspondence upon topics of individual significance to teachers in the case of pupils committed to their care. Very often, what seems unheard of, unmanageable and unconquerable to inexperience, has been met and vanquished by older teachers.

This department, therefore, will be open to all questions and requests for counsel. What shall we say of the pupils of ability and little application; with application and little ability; with a mind equal to the highest polyphonic combinations, and small, tightly-knit hands; with large, loose, long-fingered hands and a mind unable to understand the simplest harmonic sequence; of pupils who do not know how to practice; of others who wish to be merely superficial; of those who overestimate themselves; of those who underestimate themselves; of those who have been badly taught and those who have been unevenly developed—one and all interesting and of moment to the teacher devoted to his vocation, his art and the musical future of his country, the hope of which rests, to some degree, upon the shoulders of every music student in America. Is not the field wide? And ought it not to be capable of great cultivation? The answer to these questions can only be obtained by hearty co-operation on the part of all subscribers who are teachers, a co-operation we confidently hope to receive.

The three points to which we desire to call attention most particularly in the present article, aside from the brief outline of an editorial departure, are these: The modern methods in education, the growth in consideration of the individual and the possibilities of both teacher and pupil. The change has been briefly indicated heretofore between the cultivation of a memory of repetition aud a memory of associated ideas. To foster the former nothing was necessary but a dull and wearisome routine, a routine which meant misery to the pupil, and frequently resulted in the mental decline of the power of the teacher.

What childish, or even more mature enthusiasm, could remain entirely proof against the years of drudgery which were essential to a mastery of technique, a mastery of which the old school felt should be completed before the door into the enchanted Palace Beautiful of musical æsthetics should even be unlocked? How many realized that this long travel over and over the same well-worn paths was like the journey through a mirrored maze, which frequently left the mind bewildered and the original love and purpose lost? Intelligence too long held in abeyance is a dangerous thing. It either becomes rebellion and breaks due bonds (which it loses by overpassing), or it gradually withers and dies for lack of purposeful use. In either case it is a damage rather than a benefit to its possessor and to the world at large.

Therefore, it behooves those who have its guidance under their direction to see to it that it is employed as early and constantly as it can be without over-development or undue strain. The minutest detail should be explained clearly to the pupil, and all work attempted should be logical work; that is, hold within itself the explanation for its necessity. When musical structure, resting upon tone foundation and its laws of relation, is accounted for little by little, as the pupil progresses, and seems to be almost a something builded by that pupil's own mental operation, we may expect to see that structure gain new aud beautiful forms by an easeful and natural process, the legitimate outcome of understanding and long familiarity of contact.

When the pupil reads, writes and plays music at the same period then we may expect to see an even and logical development of intelligence which cannot but prove fruitful in the domain of art. We will find, if we consider, that in no other of the manifestations of the art spirit—painting, sculpture, architecture, poetry, etc.—is the student condemned to the dreary and barren waste that he has been in music. From the first he is stimulated by an element of the beautiful which is permitted to come into his daily work, and this should be true with us also.

We should not merely strive to make study interest

ing and vivid, but we should pay close attention to the order of mind with which we have to deal. The personality of the student should be allowed to impress us and to appeal to us strongly. In this way we are brought into a sympathetic contact which is of immense value in imparting and receiving knowledge. Love of the abstract is the highest form of enthusiasm, but love of the abstract is exceedingly rare. It is well to supplement it by a regard for the master and a desire to do well the work he appoints. This is best fostered by a regard given to the pupil, which extends to the humblest and most limited capacity, a due measure of respect and care.

We can easily see how important is the function of an elementary teacher, in view of the methods now in use, and what an amount of ability and endeavor it requires. The fresh mind is confided to his keeping, upon which to impress weariness or zest, in which to cultivate a plainly expressed tendency, or a latent and struggling capacity. With or without the assistance of the will of his pupil, he is to endeavor to lay the foundation of an art which is designed to be one of the forms of expression of the intellect, and one of the dominating influences of the spirit. The power of music is a tremendous power. The Pied Piper of Hamelin is a symbol of its influence over the hearts of the race. It is the divine, the universal language, "whose speech has gone out into all lands." It remains, therefore, with those of us who teach, to be very careful how we discharge our trust. Long ago, in the fertile Nile Valley, a sage with the open vision looked out over the far spiritual distances and declared who might traverse them and in what fashion. The dullest might attempt to understand, the cleverest need not hope to compass all there was to be understood. We should not despair of any pupil committed to our charge, nor fail to cheer them with the hope of attainment, nor shall we fail to check our own pride, nor the egotism of the most promising, since the utmost would still forever elude both them and us. For our warning and comfort, that voice from the dark Egyptian tomb, built thousands of years ago, still solemnly but tenderly proclaims: "The gates of art are closed to none; whoso entereth thereat, though he seeketh perfection, yet shall he not find it."

HINTS FOR THE NEW YEAR.

How to Take a Lesson.

EVELYN G. MARSH.

I.

How shall a pupil make good teaching better and find good even in poor teaching? Do not say that the pupil has nothing to do with the teaching, that his part is only to receive instruction. Neither has a member of Dr. ——'s congregation anything to do with the sermon, except as he is attentive or not. Yet his attitude toward both sermon and man affect to a marked degree his appreciation of the discourse. A well-known clergyman said recently: "A good sermon is one which produces good results," and to show how to obtain these results discusses his topic under the following heads, which I have borrowed. From them I wish to show not how to hear a sermon, but how to take a music lesson and receive the most from it.

Get Ready for It.

In order to get the most out of a lesson the pupil should be sure that his part in preparing it has been been thoroughly done. It is scarcely economy of time or money on a pupil's part to go to his lesson to be told things which, by a little study, he might have discovered for himself. Carelessness is largely to blame for wrong notes. Any pupil, ordinarily advanced, can figure out the time for himself; he can watch for legato passages or for the phrasing as indicated. These things constitute the mechanical part of his study and must be mastered before any artistic finish can be given a composition.

Having prepared himself as well as possible, let the pupil go to a lesson with a receptive and attentive mind. No teacher likes to have an entirely irrelevant question asked the moment an explanation ceases, nor to have a pupil gaze out of the window while he is patiently showing how the lesson should be played. Yet I have experienced both of these annoyances from pupils whom I considered too old to be told: 'Pay attention!" They surely indicate wandering thoughts, and an attempt at explanation under such circumstances was like casting seed upon ground in which it can find no nourishment. What result would a farmer expect from unprepared soil which had never been enriched or harrowed or in any way fitted for the seed? He would properly prepare the soil before he sowed his seed. Pupils must come to a lesson prepared in mind as well as in fingers.

Many come to a lesson expecting to be warmed, to be enthused; in short, to be *made to think*. Don't expect a teacher to do everything—the pupil's work as well as his own. Don't expect always to have his stock of enthusiasm to draw upon. But do your part toward being a thinking, reasoning and receptive pupil.

Expect Something From It.

Go to the lesson looking for some special help. How does the eager botanist discover some new frail flower hidden from other eyes? Because his eyes are looking for it and he will find a dozen species when an ordinary passerby sees but one. Why are the eyes and ears of an Indian so keen that the faintest sign of life, the smallest broken twig in the forest never fail to speak to him? His training has taught him to look, to listen for these things. Expectant eyes see quicker than dull ones.

Is any particular point troubling you? Watch carefully for some hint that may help you. Be attentive to the little suggestions. Watch eagerly for new ideas. In order to expect and to receive the most from a lesson there must be a purpose and leading motive in one's study. Then will all our work be seen in a new light. Not that the instruction differs from that of yesterday, but that to-day we have a new motive in receiving it.

It will be conceded that the most thorough study is done by pupils preparing to teach. Naturally such pupils will want thoroughly to understand and appreciate each point in order to be able to impart the knowledge to another. How many teachers we find who say: "I never expected to be obliged to teach," implying that their instruction might have been of a different character had they expected to put it to practical use. Said a mother recently: "I want Alice to study with this in view that she may be able to teach some day. I never expect she will be obliged to, but with this in mind I think her work will be more thorough, more painstaking."

Whether this be your motive or not, have one that will call forth your best energies and will demand the most conscientious work on the part of the teacher.

Think It Over.

To think over a lesson makes it more to us. How it would rejoice the heart of many a teacher if he knew pupils thought over a lesson after it had been given—that it wasn't a case of "in one ear and out the other." A wise plan is to play over the lesson as soon as one is alone and strive to recall what suggestions or corrections the teacher has just made, fixing each in its proper place. Try to think out why he made the suggestions he did. One trait in a good teacher is that he will give you something to think over, if it is only some small matter. He should set you to thinking for yourself.

Talk It Over.

This is the fourth point in "How to hear a sermon"; that talking it over recalls it and it becomes a sort of second sermon. Of course, the opportunity to talk over a lesson is never so great, and with older pupils the previous point will undoubtedly cover this one. Yet, with younger pupils talking it over is a good suggestion. The things young minds notice and remember are ofttimes surprising. It reminds one of the ancient saying: "Little pitchers have big ears." Ask the small pupil to "see how much he can remember to tell mamma when he gets home." Notice how alert and attentive he is. He may remember some points wrongly but, rest assured, part will be correctly fixed in mind.

Some time talk over practical points with your older pupil and draw out his ideas. It will give you an opportunity to correct any wrong impressions unwittingly made or will suggest new ideas to you. For instance, discuss what seems the most important thing in a composition. You may have noticed wrong notes and time so carefully that the pupil thinks they are important above all else. Or he may have divined the right idea, without your aid, that the true musical idea, the sentiment and feeling in a piece should be given first place. Correct time and notes are essential, but compare the enjoyment of a teachnically correct rendition and the one with less exact mechanical parts, but with the soul, the heart of a musician sounding in every tone. Who does not prefer a Paderewski to a music box? Any discussion of a subject surely leads to new thoughts upon it.

Do a Little Writing.

An eminently practical suggestion, for nothing is of more value to the music student than a notebook. Have a small-sized memorandum book, one that is convenient and easily carried. What a multitude of things sharp eyes and ears can find to jot down for future reference or further study. The concert you heard last week with the noted artist who appeared; the program given which may be pasted in under such a note; the specially strong points of the pianist heard this week; the pieces you study this year entered with the date you commenced each. In connection with lessons proper note any suggestions as to practice or interpretation that your teacher gives you. This might follow the entry of the piece or sonata as noted above. Lose no hints for making your work better. Note any question that may come to you or its solution by the teacher.

If you have time keep a larger book and in this write a sketch of the life of each composer as you study his works, his best-known compositions and what place he occupies in the music world. Newspaper or magazine clipping will be of value in this notebook. In later years you will find these a source of help and delight to you. Ought not the topic of this paragraph to be altered to: "Write all you can on musical subjects?"

Live It Out or Work It Out.

Live out the sermon but work out the suggestions of the lesson if you would gain the most good from it. Strive to reproduce in your playing the style or the touch of the teacher, as he has illustrated the lesson for you. Surely, even inferior teachers have some good points. I am taking it for granted you are having the best instruction you can procure. But by noticing the playing of other teachers or artists or even fellow-students as you hear them, you may often gain helpful suggestions.

The life of the seed is never ended until, nourished by receptive soil and by kindly sun and rain, it has reproduced itself in fruit-bearing. So the seeds of the lesson hour, kindly received, should grow into fruitage in the musical life of the pupil. Often in later years the truth of many a caution, the patience and perseverance of a teacher, seemingly unappreciated, will come to us with new force.

Never think you have grown too old to learn. Our greatest men are the humblest men. They would bestow sincere pity upon one who thought he had come to the end of learning, that he "knew it all." The more we study the broader the field of study and of a life's usefulness opens up before us. The more we see of the vast storehouse of knowledge the smaller seems our own limited attainments. Let the new year find us all more persevering, more teachable.

Briefly summed up, the points this article should teach are these: the importance of a receptive mind; the great need of possessing a seeking and inquiring mind; the importance of being a thinking pupil; the aid and delight we may find in recording each lesson's inspirations. But above all and through all these must be the practicing pupil, who lives out and works out all he learns at the lesson hour.

Years ago numerous books—now very valuable, says the *London Chronicle*—were published dealing with the effect of music on animals. Prof. McConnell is one of those agriculturists who believe that cows and sheep do appreciate melody. At the Eastern counties dairy farmers' dinner he informed those present that music, suitable in quality and administered at the right moment, was a never-failing means of increasing the supply of cream. His remarks naturally caused some surprise, but they are confirmed by an enterprising musician, who combines the occupation of a wholesale milkman with that of a professional organist. He used to sing to the cows, and never had a pail knocked over, whereas his assistants were frequently kicked by the animals. Music, however, has its advantages as well as disadvantages. A poor Scotchman was at death's door in a hospital ward and begged that he might hear the pibroch. His request was granted, and to the amazement of the doctors he recovered. But many of the other patients were brought to the verge of death.

STUDY WITH HANS VON BÜLOW.

Beethoven.

THEODORE PFEIFFER AND J. VIANNA DA MOTTA.

Translated from German by Fred. S. Law.

The limited compass of the piano which Beethoven used often proved the source of unexpected beauties. Precisely because he did not have at his command this or that note which was required by analogy to a parallel passage, he devised expedients which resulted in new beauty. For this reason we must be cautious in altering such passages and not always say, "If Beethoven had had the piano of to-day, he would have written so and so." It is certain that he did not have it, and its lack obliged him to invent some wonderfully beautiful variants. Look, for instance, in the Sonata in D minor, Op. 31, No. 2, at the three measures beginning at the 40th measure from the end of the first movement. Here, in order to correspond with the same passage as it occurs before the working-out, the D should rise to B flat. But at the time Beethoven wrote this sonata his piano extended only to the small three-lined F, hence he wrote the beautiful variant with the pedal point on D. On the contrary, in the first movement of the Sonata in C minor, Op. 111, we can, with a good conscience, in the 29th measure after the second signature of three flats, play the small four-lined E flat indicated by Klindworth instead of the C. Compare the previous corresponding passage in the 6th measure following the signature of four flats.

Sonata in A flat, Op. 26.

First movement. M. (measure) 9: Like an earnest entreaty:

M. 14. Var. I., left hand:

M. 18, right hand:

M. 20, similarly:

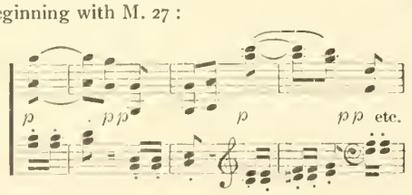
Take the second variation quietly; it should not be played like a brilliant étude. This is a common fault of amateurs and indifferent virtuosos.

Var. III., M. 7, left hand:

You must imagine the fourth variation orchestrated: strings in the left hand, wood wind in the right.

Var. IV, M. 26: Accent the E flat in the right hand, third count. . . . .

Beginning with M. 27:



Var. V, M. 3: *Crescendo;* M. 4, *decrescendo,* and thus:

Beginning with M. 35, note the relation of the basses to the theme.

In the last four measures of the fifth variation, the pedal is to be used thus:

Of the funeral march, he said that in his opinion it surpassed Chopin's. The first part of the latter march was certainly very fine, but the middle section was "abominable." "As an improvement, I would suggest a canon in the octave," and he played:

The effect was so irresistibly comic that all burst into homeric laughter. "In any case," he continued, "the Beethoven funeral march is not for women to play. It would be like a bass singer singing 'Tis there, 'tis there, might I with thee, O my beloved flee!'"

The last movement must not be taken too gaily. It should go at a comfortable pace, rather slowly than otherwise, so that the contrast with the funeral march should not be too great—"not as though you go from the burial to the beer saloon."

In this passage,

separate well the single voices one from another. It is a dialogue, and each one must be polite enough to let the other have his say out and not to fall in before he has finished.

Sonata, Op. 27, No. 1.

The lady who played the sonata tried von Bülow's patience to the utmost. We were astonished to see how quietly he went through it, almost note for note, until her utter incompetency finally became too much for him. Pointing to his forehead, he said, "I beg of you, play a little with the head, *ja?*"

Play the figure in sixteenth notes at the beginning like a graceful obeisance. Much could be learned from a dancing master in the matter of musical expression. In the second subject, one should think of

Raphael's Saint-Cecilia. Here he could no longer restrain himself at the utter want of sympathy in the player and broke out with impatience, "Good heavens! why do you take sonatas that are too hard for you. You are too young to understand Beethoven. If you will play him, play his Op. 2."

With Beethoven one must not display his technic, but rather conceal it.

Sonata in C sharp minor, Op. 27, No. 2.

First movement. The bass must sound full and the first notes of the right hand must be accented, but only once in each measure, e. g.:

M. 10: the passage in E minor must be very melancholy. M. 16 and M. 18: the bass must be brought out. M. 25: the F sharp on the first count, as being the end of the phrase, must be softer than the three C sharps which precede it, e. g.

M. 30: here another voice is heard; the one preceding is out of breath, therefore the touch must be varied in order to give this new voice a different timbre. In the next measure still another voice is heard an octave lower. Though the whole is a monologue, the speaker is represented by different voices. The same holds good for the two measures which follow. Between M. 36 and M. 37 there is no connection, therefore in the first measure, release the pedal a little sooner. In M. 41 bring out strongly the bitter wail of anguish on the third count (D natural).

Senza sordini means with the pedal, and *con sordini* means without the pedal. The word sordini has nothing to do with our "soft pedal," as is so often erroneously thought. The sordini are the dampers; so, when I wish to play without the dampers—*senza sordini*—I must take the pedal, in order to remove the dampers from the strings, and *vice versa:* in order to play with the dampers—*con sordini*—the pedal must not be used so that the dampers may fall back upon the strings.

Second movement. This movement should be played very quietly; most lady pianists take it too fast. It is, as Liszt says, a flower between two abysses, a charming picture seen between dark melancholy (first movement) and flaming despair (third movement). The beginning should be shaded thus:

In the second section the left hand must dominate; the end should by no means be retarded.

Third movement. Make no *crescendo* in the arpeggios leading up to the two chords; play these so that the second always forms the echo of the first. The left hand accompanies the arpeggios in an uninterrupted staccato. The tremolo accompaniment in the left hand, beginning M. 21, is to be played very solidly. After the chord in A major, M 33, pause a moment. From M. 43 with much spirit, but without hurrying the tempo. From M. 57 very delicately, but take care that the last sixteenth note in the right hand is not detached:

It is not well to repeat the first section; a repetition would suspend the dramatic continuity. In the cantilena in F sharp minor, M. 73-75, the last sixteenth note of the right hand must not be slurred over. Play M. 38, counting from the end, in exact thirty-second notes. The runs beginning with M. 15, counting from the end, are to be played *molto tranquillo* with strict division into rhythmical groups. They are not an empty figuration; they have melodic and rhythmic significance. A chromatic run written by Czerny, is a different thing from one written by Beethoven.

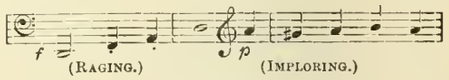
Sonata in D minor, Op. 31, No. 2.

First movement. The difference between *ritenuto* and *ritardando* is, that the first calls for a slower tempo, but requires a regular movement in that tempo; *ritardando,* on the contrary, means growing slower and slower by degrees.

M. 6: the eighth notes in the time of the previous half notes;

In general the sixteenth notes of the Adagio are equal to the quarter notes of the Allegro.

M. 21: raging in the bass; M. 22: imploring in the soprano:



M. 41-2-3: soft and hesitating (there is knocking at the door); the last count of M. 43 and the next two measures *forte* (here it bursts out); the following measures similarly.

The arpeggios in the opening measures of the working-out section (immediately following the double bar) must sound as though from another world. The following tremolo in triplets should, by means of changing fingers, be kept up close and full, for if any notes are missing it reminds one of a broken-down horn player who has taken up the viola. The recitatives in the second section (marked *Largo*) must be played with great expression; adapt words to them and sing them—that will give you the proper expression. The figures in the left hand at the end of this movement are to be played without the pedal—or, the first three measures with the pedal and the last three without.

Second movement. The teacher must often caricature the pupil by exaggerating his faults; in that way the student learns what they are. If we know both extremes it is easy to find the golden mean. The teacher by showing one extreme and then the other, can soon bring the pupil to a correct conception of his task. Play delicate staccato passages without passing the thumb under. This results in greater equality of touch, since a certain effort is always necessary to play lightly with the thumb.

M. 9: the last quarter note in the right hand may be taken by the left hand; the same in M. 11. Beginning with M. 23, play the thirty-second note triplets on the lower staff with the treble clef before them lightly (*flatternd*) with the right hand. In the last measure the *crescendo* in the right hand can be aided by the pedal.

Third movement. This movement must be played very quietly. Beginning with M. 9, accent the basses, G, E flat, C sharp, D, A.

In Beethoven's sonatas and symphonies there is always an intellectual connection between the single movements. This is not the case with Haydn and Mozart.

Sonata in E flat, Op. 31, No. 3.

First movement. In this sonata Beethoven is himself again. We have no adagio; the menuet takes the place of the lyrical movement.

You will find the same characteristics in the E flat major Trio, Op. 70, and in the Eighth Symphony. For the tempo of a menuet take the one from Don Giovanni as a model. In the Eighth Symphony we also find the term *Tempo di Menuetto;* therefore the movement must be played quietly and with dignity. Richard Wagner was the first to conduct the symphony in this manner.

The first movement of this sonata begins with a chord with a fifth and a sixth. The fifth is not merely an empty fifth, it has another character; here it expresses a certain longing. In the second measure the question becomes more persistent and must, therefore, be played stronger. M. 35 and 36, angrily; M. 37 and 38, with resignation—the same in M. 39 and measures following. In M. 57 the following fingering is recommended for the right hand:

Also for the parallel passage, M. 71, counting from the end. In M. 60, the E natural in the bass forms a cross-relation with the E flat on the following count in the treble; its dissonance should be softened by playing the E natural rather lightly. M. 82: after the first eighth note in the right hand play *piano;* M. 83 and 84, earnest; M. 85, cheerful. The same holds good for the parallel passage, beginning M. 41, counting from the end.

Second movement. Avoid all sentimentality in the beginning of this movement. In M. 4 make a *crescendo* on the four sixteenth notes of the second count and begin the next measure *piano.* The change of fingers in the chords of the left hand beginning M. 50, must be well studied; they cannot be played without practice. Master everything; do not always practice the entire passage, but the weak point as well, in slow tempo with a strong touch.

Third movement. Shade M. 3 and 4 thus:

In the trio, after the second count of M. 14, play *piano.*

Fourth movement. Beginning with M. 13, mark well the B flats struck by the left hand crossing over. In M. 20 the sustained E flat in the left hand must sound like a horn.

Von Bülow said to the lady who was playing: "Imagine such compositions orchestrated. It is not unbecoming for ladies to understand something about orchestral instruments; you are not obliged to play them. I must confess, however, that it is more interesting to me to see a lady blow the tuba than to hear her play the piano—there are very few ladies who play the tuba."

Sonata in F major, Op. 54. This sonata has no adagio; it has but two movements. Brahms was once asked by a man who had bored him with the most stupid conversation, whether it was absolutely necessary that every symphony should have a scherzo. His apt answer was: "When the whole is playful (*scherzhaft*), a scherzo is not needed." So here it may be said that when the whole is tiresome (*langweilig*), an adagio is not needed.

When you think that you have mastered a piece lay it aside for a month. When you take it up again you will discover new difficulties to overcome. That shows that in the meantime you have developed. Do not play the second movement like a study; it is advisable, however, to practice it as a daily study, slow and strong.

Sonata in E flat major, Op. 81, a (Farewell, Absence and Return).

First movement (Farewell). In the beginning of the working-out section there appear only two notes of the "Farewell (*Lebewohl*)" motive (*Lebe*); e. g., M. 4-5, 8-9, 12-13, 16-17, counting from the first double bar. Von Bülow said jestingly, "Beethoven evidently thought that the friend could not live without the absent one and so divided the motive."

When at the piano do not make any exaggerated bodily movements. To be sure, it looks very fine and apparently awakens confidence, but it is very ugly.

Second and third movements (Absence and Return). Play the second measure stronger than the first; the foresaken one sighs, and the second time he sighs more deeply. If you play the second measure precisely like the first the public will say, "Good heavens! she must be practicing!"

Von Bülow said, "Fräulein, have you then never experienced longing (*Sehnsucht*)? Certainly we do not wish you to reveal your secrets here, but I beg of you, do not bring out the tones in such strict marching order. To be sure, the later Beethoven is not written for ladies; you should play things musically easier of comprehension."

Compare M. 21 with Brünnhilde's death-warning motive in the *Walküre* (piano score, p. 140); for that reason play the thirty-second note E in the right hand very clearly. The rapid figuration of the right hand in the last half of M. 33 should seem as delicate as flower dust.

When the lady began the last movement in a furiously rapid tempo and blundered, von Bülow said, "Hold! In your joy over the return you rush out, entangle yourself in your train, fall headlong, and throw down all the flower-pots in the garden!"

This movement must be played with excitement but it must be an artistically regulated excitement. "This sonata is an old acquaintance of mine; we have been friends for more than thirty-five years and it still has power to excite me. You must excuse my ill-temper at hearing it maltreated; when you play it badly it is a personal affront to me, since it is one of my best friends."

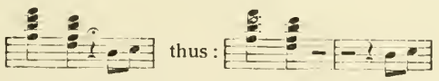
Note, at the beginning of the last movement, M. 5, 6, etc., the cry of "Huon (from Rezia's great scene in Weber's Oberon)!" and Isolde's signal (from Tristan and Isolde, beginning of the second act).

Sonata in B flat, Op. 106.

(*Sonata for the Hammerclavier*).

First movement. This sonata is the Ninth Symphony among sonatas.

Pauses must always be counted so that the hearer may not lose the rhythmic thread. Therefore play M. 4,



In Beethoven's orchestra each single instrument has its own individual life; the Italian orchestra is a monstrous guitar. In M. 5, counting from the signature of three flats, the subject knocks at the door as though it had been forgotten; what follows is music for the understanding.

Second movement (Scherzo). Play the dissonances forcibly; they must be heard by the ear of the understanding rather than by the physical ear. At the D, F sharp, F sharp, D, *pianissimo,* M. 12 before the signature of four sharps, von Bülow said, "Ladies and gentlemen, this comes directly from the spirit world."

As the young man (an executant of great ability) who was playing the sonata was about to begin the Adagio, von Bülow said, "No, you cannot play that yet; you are too young."

Fourth movement. This movement von Bülow declared, technically, and even more especially, musically, to be the most difficult work of all pianoforte literature. "This movement," he said, "belongs to the so-called impossibilities of Beethoven. To be sure, the melody does not rush forward and embrace us; but we must, on the contrary, win it by conquest. You have the ability to play this piece," he continued, addressing the gentleman who was playing, a Scotchman; "the Scotch are far more musical than the English. Mackenzie is a fine composer; his *Colomba* is the best opera that has been written since *Carmen*"

This last movement is a colossal task not only as regards technic, but much more so as regards movement, rhythm, melodic flow, outline, proportion. It is music really written for the eye; it is more for reading, as is often the case with Schumann, who must generally be read in order to be understood. The proper interpretation, however, will do much towards enlightening the listener. The fugue is a tonal fugue. After the episode in A flat the subject appears, M. 7, after the first signature of two sharps, read from the end backward. This will be more readily understood by those who can read the Talmud in the original Hebrew; it is the movement of a crab, and crabs are only for epicures. After this episode, beginning with the second signature of two sharps, there comes something new; a subsidiary subject which afterwards is combined with the principal fugue. This must sound as though played on the organ.

Thirty-two Variations in C minor.

This work belongs to the same period as the *Sonata Appassionata,* Op. 57. Take heed not to play the variations in such fashion that the hearer can keep count of them, one after the other, on his fingers, and at the sixteenth, cry out, "Good heavens! there are sixteen more to come!" Play them in groups, e. g., the first three in one group, the next three in another group, the next three in a third group. The tenth and eleventh will form a fourth group; the twelfth to the sixteenth, inclusive, a fifth group (C major).

Var. IV. The changing notes (notes foreign to the harmony) strong; the bass very clear.

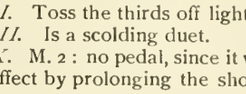
Var. VIII. The pedal is not to be held throughout the entire measure, but only during the first count. Be careful not to accelerate with a *crescendo* nor to diminish with a *ritardando.* You must transpose technically difficult passages into other keys and practice them with the same fingering. The doubtful place will then go much easier.

Var. XII. From here on new strings are to be touched; before it has been wild and daring, now it becomes tender and more feminine in character. In playing two repeated notes always change the fingers if one note is on the *Arsis* (accented count), and the other on the *Thesis* (unaccented count).

Var. XVII. Here form a new group. In playing a canon search for what is most characteristic in the theme and bring it out, so that the hearer may not fail to remark the imitation.

Var. XVIII. Start firmly on the scales which begin after the second sixteenth note. In M. 5 put the thumb on the highest F sharp.

Var. XXIII. This variation must inspire awe and supernatural terror; it must remind one of the flapping wings of the owls which, in *Der Freischütz,* flutter around Caspar's head in the Wolf's Glen.



Var. XXVI. Toss the thirds off lightly.

Var. XXVII. Is a scolding duet.

Var. XXIX. M. 2: no pedal, since it would destroy the staccato effect by prolonging the short notes; the same in M. 4.

Var. XXX. M. 5: bring out the alto.

THE PIANO CHAIR.

WILLIAM H. SHERWOOD.

I have been asked whether it is advisable to use at the piano a chair or a stool, and when are best results obtained: sitting high or low?

The few students of music who have the good fortune to obtain physiologically-correct habits of practice for the development of the arm, wrist, knuckles and fingers are scarce, and I am always pleased to answer such a question.

It injures a student's back frequently to sit high at the piano. The young lady who says it tires her to play with a low stool evidently has not yet developed enough muscle and method to stand the habit of sustaining the weight of the forearm. Correct methods whereby one may develop the best individuality and control of the fingers, knuckles and wrist are greatly aided by a low stool, and rendered almost impossible by a high one. Rubinstein, Liszt, and other great masters with whom I studied always sat low; but it is hard to do so until the strength of the arm has been developed.

I was on the stage at one of Paderewski's recitals last winter in Chicago, and his piano-chair, which is carried all over the world with him, was brought back to be fixed, as something had happened to it, and I took an ordinary chair and stood it up with the piano-chair. The piano-chair was at least five or more inches lower than the other. I regret to say the piano-stools are an American invention manufactured only for the sake of selling something more with the piano, and they generally develop bad habits for the student, as they are used in too high a position. Sit low at the piano, and always use a chair.

Young Composer's Column.

RULES.

1. MSS. marked "Young Composer's Column" must reach us by the 10th of the month to ensure notice in next issue.

2. Each MS. must bear the full name and address of the writer; the initials will be used unless a *nom de plume* is added.

3. Stamps must be enclosed if MS. is to be returned, but it is to be distinctly understood that the Publishers assume no responsibility for any MS.

4. No charge is made for the examination of any MS., and compositions of any nature may be submitted. The criticisms will be general and of such a nature as will be helpful to those honestly desiring frank and unbiased criticism.

5. No criticisms will be sent through the mail.

W. E. C.—(369). An excellent march of the Sousa type, rhythmical, "swingy" and catchy. Can you do anything else?

Chopin.—(371). We are very sorry, but we can make nothing at all out of your piece; it seems to us just a rambling—along without beginning or ending. You have, evidently, got the music divided wrongly into measures and we suspect you have omitted measures, so that the whole thing is impossible to get hold of. We print a little. Our readers may judge for themselves.

G. S. F.—(372). "My Sainted Love" shows a good feeling for melody and harmony, though both are sometimes vague or incorrect. We have indicated a few objectionable things by an X. A good musician could take your melody and write a good, artistic accompaniment (a single one, too), on the same lines that you select. We have trouble in making our friends understand that to write something which sounds fairly well is not enough: it must be grammatical and harmonically correct. You have talent, no doubt; but, study! Send us the Lullaby.

L. A. S.—(373). Your ideas about harmonizing a melody could not easily be worse than they are. Take A, for instance; here the harmony is plainly the dominant (g-b-d), but you have harmonized the passing-notes, g-e and e-c, by the tonic triad; mistakes of the same nature elsewhere are indicated by an A. At B there are two measures too many; at C, two; at D, two; the strain, E-F, is rambling and without form; these are bad errors and should be corrected; your ideas as to accidentals are hazy. Now for your good points: you make a clear MS.; you have a gift of melody and sometimes you hit the right harmony. You ought to study Counterpoint and learn how to harmonize melodies so that passing notes may have a strong, musical treatment. Make another waltz and send it to us.

L. O. E. 2d.—(374). You undertake a difficult task in setting the Te Deum and you do not succeed in avoiding monotony. It is not difficult to set the different sections to tunes and harmonize those tunes: anyone with music in their souls and a knowledge of Harmony can do that. It is quite a different matter, however, to make out of the Te Deum a musical *composition*. Of course, one may make a Te Deum of disjointed fragments sufficiently tuneful and varied in rhythm to hold the attention; but that power of holding the attention does not make the work an artistic one. The three processes that have marked masterpieces up to modern times are (1) Presentation, (2) Development, (3) Recapitulation. Your piece is fairly correct in harmony, tho' you have carelessly allowed much incorrect work to pass: that you understand something about part-writing, however, is evident. At A you have a melodic phrase of which you are unduly fond; many writers (as it seems to us justly) condemn writing the phrase, "The Glorious Company of the Apostles (solo) Praise Thee (chorus)"; the temptation to do this is strong, but is it right? You have a habit of writing F natural for E sharp, etc. The rhythm is very monotonous; say the words over and adopt the spoken rhythm. We are quite well aware that Smart in F and other Te Deums by English writers are often monotonous in rhythm; but this is often atoned for by a splendid march of the harmony or by a beautiful melody or by a churchly, devotional atmosphere. You need to *study* Te Deums more. Get Buck's in B minor for the rhythm and the placing of the words, Smart in F for the co ordination of the parts and the unity of the whole, any one by Stainer, Martin or Calkin for dramatic power and the relation of the organ part to the voice parts, and Arthur Foote's in B flat minor for study of effective writing for a quartet. Then try your hand again and send us the result. You've got good stuff in you; persevere!

Hyvalda—(375). We do not think you should be discouraged at our previous criticism; you send in your MS. in order to get beneficial criticism, not praise. Of what use would the latter be to you? It would be pleasant but valueless. The first thing that strikes us in your setting of "Yea, Though I Walk" is the sombreness of it; surely, you miss the true key-note. Is it not a joyful one? There is very little melodic charm to the piece—nothing that can be called tuneful. There is much invention and fluency of invention and much variety of harmony; there is also very little form or plan. You are much better schooled than most of those who avail themselves of privileges of this column and we see no reason why you should not do a good deal in composition. At present, however, what you do seems simply queer. Write us and tell us more about your study and what you are trying to do and we shall take pleasure in advising you.

Questions Answered.

[Under this heading THE MUSICIAN will be pleased to answer any questions submitted by its readers which may be of general interest. *All questions must be accompanied by the full name of the questioner.* Answers will be published without such names. Those who send questions should take care to state clearly what information is wanted. Only such questions as will be of interest to general readers will receive attention in this column. All others will be answered privately, for which purpose stamps should invariably be enclosed.—ED.]

I. B. B.—Mendelssohn wrote the overture to "The Midsummernight's Dream" before he was seventeen years old, the date on the work being "Berlin, August 6, 1826." During the year Felix and his sisters had been reading, at their new and charming garden-house, an excellent German version of Shakespeare, which is said to have resulted in this composition. It makes a distinct era of his teacher, Zelter. The incidental music for the whole play was not written until seventeen years later. A competent critic said: "That no one piece of music contains so many points of harmony and orchestration that had never been written before."

W. M. E.—(1) A plan for discovering whether a composition is major or minor will be found in Burrowe's Primer, Chap. IX, Hatch Edition. (2) The melodic minor scale has semitones between 2d and 3d and 7th and 8th sounds *ascending*, and between 6th and 5th and 3d and 2d tones *descending*. The harmonic scale has semitones between the 2d and 3d, the 5th and 6th and 7th and 8th sounds, both ascending and descending. The Primer also explains this in Chap. X. (3) The slur is one of the methods of indicating phrasing. (4) In "Day Dreams," by Williams, the notes connected from treble to bass show that the melody is transferred from right hand to the left, and *vice versa*.

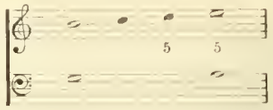
A. C. L.—The correct arrangement of the 24th measure of Field's fifth nocturne is here given.

The copy you quote is faulty in having the C a sixteenth note. It should be an eighth note, as given above. The 8th, 9th and 10th counts are syncopated in the treble.

L. D. H.—(1) Practical Harmony, by Ludwig Bussler, and Harmony Primer, by Dr. John Stainer, are both excellent and standard works on the subject. (2) Classical compositions are not necessarily ancient ones. There are plenty of classical writers who have lived in the past quarter of a century. Such works, being pure and scholarly, as are worthy of preservation and of being used as examples are classics. Custom has determined that they should be constructed in certain forms, like the movements of a sonata, etc. Brilliant *salon* pieces and ordinary dance rhythms do not come within the definition.

A. M. B.—The word *opus* has nothing to do with the order of writing, but refers to the order of publication of the works of a composer.

A. E. M.—Hidden *fifths* are said to be produced when two parts move, in similar motion, to a *fifth* to which at least one part proceeds by a leap! In this example



B, in progressing to E, is held (by some authorities) to pass the tone D, thus forming a *fifth* with the G in the bass; as both then move a tone upward to a *fifth* A-E, it is said that hidden or covered *fifths* have occurred.

E. W. B.—(1) In the Haydn Sonata (No. 9), the six notes in bass against four in the treble should be divided, thus making three against two: this is not difficult. Commence both together: proceed *steadily* with the second note of the triplet (L. H.), playing second *treble* note immediately after, then playing third bass note. Now the notes again come together, beginning the second triplet and a similar division takes place. Four notes against three is more difficult to play regularly. Do not attempt to make an arithmetical division. Count the time aloud, according to the value of the triplet, playing the three notes with a firm touch, accenting the first, until its rhythm is well impressed upon the ear: then—still counting the same time in a firm voice—play the group of four notes as evenly as possible. After thorough practice of each separately, put them together, still counting aloud the time at the same movement as before. In a little while they will work smoothly together *if* the counting is adhered to. (2) The harmony question has no value. It is simply an expression that such diminished intervals would be of no practical use. Theoretically the key of G♯ can exist, but practically we would use the key of A♭, obtaining the same result.

Reviews.

SONGS AND SONG WRITERS. By Henry T. Finck. Published by Charles Scribner's Sons. 12mo. 254 pages. Price, $1.25.

This book is an illustration of the effect of bias upon the work of a critic. Those who are familiar with Mr. Finck's writings need not to be told that it is interesting, forceful and, in many respects, invaluable. It is alone in its field and has a mission to every lover of songs and singing. Yet it may wrongly direct those whose opportunities for original investigation are limited. It is full of truth and it is full of Mr. Finck's prejudice. The limits which he has set to his predilections, the strength of his likes and dislikes, the surrender he makes to them, weakens the position of this volume as guide to the uninitiated. The bold assertion that most of Beethoven's songs are poor stuff and of Schumann's two hundred and forty-five, only twenty are first-class, can hardly be accepted as final. Schubert is generously treated and the value of his songs fully conceded, but others, in whom we have persuaded there is much good, receive quite scant courtesy. While we admire Mr. Finck's courage, we must receive his dicta *cum grano salis*.

Knowing Mr. Finck's idiosyncrasies, we can read "Songs and Song Writers" with profit. It is written in the entertaining style of which he is master, and contains a copious supply of valuable information. Its eight chapters treat of "Folk Song and Art Songs"; "German Song Writers Before Schubert"; "German Song Writers After Schubert"; "Hungarian and Slavic Song Writers"; "Scandinavian Song Writers"; "Italian and French Song Writers"; "English and American Song Writers"; Portraits of Schubert, Schumann, Franz, Jensen, Liszt, Rubinstein, Grieg, MacDowell illustrate the book. It is the second of the Music Lovers' Library issued by the Scribners.

THE MUSICIANS' ROSARY. By Mrs. J. Morgan Bruce.

This little volume of 33 pages is a compilation of short and pithy sayings about music. Nicely printed, with wide margins, it is an attractive book for the table.

A BUNCH OF FORGET-ME-NOTS. By Frances F. Penny. Published by The Neely Company. 12mo. 66 pages. Price, $1.00.

This is a collection of short essays, something after the order of "Reveries of a Bachelor." They are well written and chaste in style. Reminiscent in character, they provoke memories sad and tender. The book is unpretentious, but fills a place for idle hour musing.

THE PRACTICE HOUR.

CARRIE TEALE.

The trials of childhood? Could we, for one moment, enter into the young lives and select the *bete noir*, we should say with them, "the practice hour!" Childhood's trials, to my mind, receives too small an amount of sympathy. We see the little one cry over a broken toy, or for something it cannot have, but do we always stop to realize that these troubles are often as burdensome to them as those of real life to us? They look small—often we smile over them—but we should get inside the child-heart, feel for him in this cross, and lend a helping hand.

"Yes, but it is so hard!" I hear you say. Let me see—perhaps I have been hidden behind a door when such a conversation as this went on between grown person and child. We'll take a boy in this illustration—a boy with his play and fun first in mind.

"Willie, I want you to come in and practice now!"

The boy hears. A moment ago he was laughing with his playmates over some huge joke—now, all life has changed! The sky is full of clouds, a storm is about to come. Then the lightning strikes! It must be so, judging from the contortion of his face. What a change from the voice we heard at play.

"Oh, pshaw! That's just the way it always is! Come in from school and want to have a little fun, then I have to practice!"

"But, dear, you seem to forget you have had an hour's play since schooltime. Come in, put your mind on your task, and before you realize it your work will be finished! After you may play all you wish."

These comforting ejaculations are hardly heard by the same small boy. At least if they are the time for true appreciation of them has not yet arrived. They might be understood after the awful hour of pain and torture is over for that day, but not now. No!

The ideal grown person in our picture insists. We see the forsaken little bit of humanity stamping into the house, cast down, indeed—temper to the front. He is reprimanded for this last breach of etiquette, and cools down a bit. Then he washes his dirty little hands and stands around.

The countenance brightens. He hopes, perhaps, to escape this dungeon of woes by relating a small piece of boyish news—so he begins; Tom's sailboat or Jack's box kite being the chief topic of conversation. Our disciplinarian tries to appear interested, but soon an awkward pause ensues. Then he is once more reminded of his duty, assumes a "coming-back-to-life" expression, murmurs a pianissimo "Oh, yes!" and wanders off to the drawing room. Needless to say enthusiasm is not written on his countenance. Let us peep inside.

The metronome is taken down for those dreadful scales! How slow his movements all the while. Life has suddenly become a burden too heavy for his little back to bear. Finally, after he is seated on the piano-stool, a long, deep sigh is heard. Apparently in a brown study of his own, which no one else can know or understand, he gazes out of the window. The clock strikes. He jumps like a nervous horse over a firecracker, and before a few more moments have passed we hear the thud of a scale, the notes coming out one by one, like drops of rain after a wind-storm. Sometimes the notes increase in lightning rapidity, like a barrel rolling faster and faster down hill, and with a harsh "bang" the false ones ring out, as when the barrel strikes a rock. Once in a while, between the acts of the play, idle dreaming is indulged in by our culprit. During one of these dreams a member of the family might happen to be coming down stairs by merest chance. Not so thinks he. The "goblins" are after him, and his happy dream has hastily turned into a nightmare! He looks around, going to work again in double-quick time. If our guardian is musical we hear fragments of conversation in the shape of advice, viz.:

"Willie, you must not play that so fast!"

"Don't forget that place in your piece I mentioned yesterday!"

Or,

"That is a half note there, not a quarter!" and so on until the hour is over, leaving both weary indeed.

Now while I grant you some of this is unavoidable, the greater part can be prevented by careful study of the child by the older person Making these hours a greater source of pleasure than they are in the large majority of cases should be the aim, not only of the musical instructor, but the parent or guardian of the child. Patience is also required, and those in charge should endeavor in every way possible to persevere, bearing in mind the day when the little one, grown to manhood or womanhood, will be grateful for the interest and perseverance that has been shown. Pardon me here for a tiny chapter from my own life:

Toward the end of the first year of my musical education a time came when my interest began to lag. I had begun my study with much ardor. but too soon finding, like many others, that "Rome was not built in a day," and realizing, to some extent, what work lay before me, I began to lose heart. This fact was soon communicated to my father, who one evening called me into the library and said:

"You are not practicing every day, I hear. Is this true?"

A reply was given in the affirmative. He talked to me of the expense attached to my musical education, adding that my lessons should be discontinued should I fail again to accomplish my part of the work. Girl-like, I shed a few tears. To abandon my music was not my desire, and I resolved in my heart, then and there, to study constantly in the future. About twenty-four hours passed when my father had another conversation with me on the same subject. By way of note, the children of our household had always been taught to earn their spending money. My father said: "I have thought out a plan. For every hour of future practice I will give you two cents; you may practice as long as you wish each day, but any time this is not done one hour of the day you must forfeit four cents."

Some might call this strict discipline, but it was just the kind for me. Before another year had passed my father's ingenious offer had not only made me an interested student as long as I should live, but a fond lover of art. I have lived to see a day when gratitude was mine for all his concern and perseverance on my behalf. My mother was kind and sympathetic. Often when struggling over the most difficult passages, that most surely must have startled all her true sense of melody, a clapping of hands from the upper stairway greeted my ears, accompanied by an encouraging sentence or two at that particular moment, acting like some bright light on a dark pathway.

All children cannot be as Mozart was in his juvenile days, but music in the home alone is one of the sweetest gifts God gave mankind.

Perhaps a few suggestions can be used to advantage from my own little book of experience and observation:

1. Have a regular hour for practice, allowing no trifling excuse to interfere. On this point be strong, being careful to persist in a kind manner. Have this hour looked upon as an hour of pleasure rather than drudgery.

2. Secure the best instruction possible. The good derived from twenty lessons of a master far exceeds that gained by one hundred from an amateur. For young children select, if it be in your power, one who will simplify all work, making it almost like a story, viz: One instructor I know of tells the children, until they can understand better, that lines are telegraph wires, the notes little birds who come and sit there to sing. If the note should be "A" that bird's name will be Mr. "A," and he will sing A, etc.

(*b*) Some parents who are not particularly musical themselves have sometimes employed experienced young women to come an hour on days between the lessons given by the teacher, for the sole purpose of carefully watching the child's practice. This is an admirable plan if the right person can be obtained.

3. Read and simplify the lives of our great composers, and when the child asks for a story work in one of these lives. There are some books written in a comprehensive manner which may be used for older children.

4. Give children, and especially small ones, two lessons a week in preference to one. In the latter case the little engine has just been started, and if the engineer be not often there the steam may run down, the engine stop, before you know the cause.

5 Encourage all you can, being careful to speak of an error, and giving a word of praise if that error be rectified. Once in a while a tiny reward is not a poor plan. Find something you can give (even if self-denial has to be practiced on your part), then promise it, and if concientious practicing has been given fail not to hold your promise good.

Children are differently made up, and should be dealt with accordingly. Make this a study, be you teacher, parent or guardian. All work together and find the plan which will fit your particular *portégé*. Lay the apples in so they may come to a good quart, then regret will come neither to you nor to the child that "in days past his musical education was neglected."

F. B. Meyer says: "It is a great thing to give a child a sunny background to its life; as sunny as possible, so that whatever may be the shadows of after life, it may ever have a corridor of memory, a picture gallery, into which it may turn for refreshment and stimulus."

Let the "practice" hour be one of the beautiful pictures in that gallery.

RECUPERATION.

HARVEY WICKHAM.

That musicians, both professional and amateur, are nervous and overworked, or, perhaps, overworried, is a fact patent to all. How to recuperate is a vital problem, and one which the ambitious should be first to master. No good work can be done by one in a semi-exhausted condition, and any effort attempted under such circumstances is not only futile but dangerous.

Exercise used to be considered the proper medicine for a tired brain, but physicians—eminent ones at that—have learned better, and now prescribe rest. The idea that physical labor is a valuable alternative for mental labor arose from the fact that anyone weary from a day spent in the close confinement of the store or studio, feels immediate relief from a walk in the open air, or a spin on a bicycle, for example. The error lies in attempting the healing to the muscular movements indulged instead of to the oxygen breathed. Every movement of a limb exhausts vital energy, and the same kind of vital energy that a thought or an emotion exhausts, for the very good reason that there is but one kind of vital energy to be exhausted. When the store of vitality has for any reason run low the first thing to do is to cut off all further waste. The best conservator is sleep. Men who have accomplished great things, especially those who have shown wonderful powers of endurance, and have lived to a green old age, have cultivated the ability of sleeping soundly under almost any conditions.

The next thing to do is to get rid of the tissue which has been used up by the previous exertion, mental or physical, the presence of which in the system is responsible for that distressing sensation which popular language has canonized as "the tired feeling." Here is where fresh air and sunlight should come in. In our climate it is often impossible to get these, and at the same time keep warm, without moderate exercise, and of all exercises walking is the best. In the first place it is gentle, which is more than can be said of wheeling, and the good the *ozone* does you while you walk is not entirely undone by the labor of walking. The heart is quickened just enough to hurry the house-cleaning process which the blood is conducting, and gravity is helping to reduce the congested condition of the brain. If the vital forces are not at a very low ebb indeed, all will soon be well, and hunger will remind you that your body is at last ready to undertake the manufacture of more energy. If the overtaxing of the system has been going on for weeks or months, however, or if you are ill, or temperamentally weak, even walking is too violent, and a recumbent position out of doors, say a nap in a hammock, is the best thing for you if it can be had. When sleep is out of the question some occupation has usually to be provided, such as conversation or light reading, or better yet, an easy manual pastime. Otherwise, the mind is apt to go over and over its past tasks.

Recuperation is like speculation in this—it is not well to invest the small remaining capital at too large an interest, lest the capital itself be lost. Better recover while doing nothing at the rate of five per cent. per annum, so to speak, than by eating and working, endeavor to get ten per cent. better every day.

It was King Frederick William IV of Prussia who induced Mendelssohn to write his "Antigone" music. A Berlin paper recently printed a letter written by Meyerbeer to a friend in Paris which shows that the same King, who was a great admirer of the Greek drama (especially of Sophocles), also tried to induce Meyerbeer to set one of those old dramas to music. Some time after he had been appointed General-Musik-director Meyerbeer was invited to dinner by the monarch. To his surprise, he was the only guest, and the King tried hard to convince him of the charm of his plan of wedding modern music to the Greek drama. Meyerbeer, however, had little faith in it, and would not promise to do anything in that line to the obvious annoyance of the King.

THE MUSICIAN.

A Monthly Publication.

EDITED BY
ARTHUR L. MANCHESTER, A. G. O.

PUBLISHED BY
HATCH MUSIC COMPANY.

SUBSCRIPTION PRICE.

SINGLE COPY . . . . . $ 15
PER YEAR 1 50

Free of Postage in the United States, Canada and Mexico. Foreign Postage, per Year, 72 Cents.

Remittances should be made by Bank Draft or Check, Post Office Money Order, or Express Money Order. *Where none of these can be procured*, money can be sent in a Registered Letter.

New Subscriptions can commence at any time during the year.

Discontinuances.—The publishers should be notified when a subscriber wishes his paper stopped. In the absence of written notice to the contrary, subscriptions will be continued.

Communications are Solicited from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications intended for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned.

All Letters should be addressed and **Remittances** made payable to

HATCH MUSIC COMPANY,
Publishers of THE MUSICIAN,
Eighth and Locust Streets, PHILADELPHIA, PA.

The Publishers of THE MUSICIAN do a General Music and Music Publishing Business. They can supply anything in Music.

A NEW YEAR

When this number of THE MUSICIAN reaches our readers, they will have entered upon a new year of peculiar interest. New years, like all that is mortal, come and go. But among MUSICIAN subscribers there is not one who will be privileged to see the dawning of a New Year's day such as is that of 1901, for it ushers in a new century. To the present generation, the words "Nineteenth Century" have long been very familiar. Some of us have lived during a quarter, a third, a half, and perhaps, two-thirds of it; we are intimately acquainted with the progress its years have seen. We have participated in its increased facilities and opportunities, and have felt the effect of its strenuousness.

●

It is not necessary to consume space here in a review of its musical advancement. It seems but yesterday when the masters were giving to the world their great and glowing creations, and to go back to the beginnings of modern music requires but little mental effort. The historical methods of the Nineteenth Century have made us thoroughly acquainted with all the past. We have dug deep below earth's surface and resurrected the libraries of antiquity until we are in touch with the very beginning of earth's history. So much has the past hundred years done for us along these lines. As we contemplate the standard classics of the present, passing in review before our thought the lives, characteristics, methods, sufferings and achievements of the masters; as we meditate upon the instruction of the past, its crudities, its halting progress toward better methods, its evolution into system, we wonder at the fecundity of the Nineteenth Century.

●

But the Nineteenth Century is now a part of the past, the Twentieth Centnry is here. What of *it?*

It is eminently proper to believe that the forces which have developed the resources of human activity during the past hundred years have lost nothing of their power. Indeed, all signs point to an increase in the strength of these forces which will be productive of wonders far beyond those of the past. Occasionally humorous predictions detail as happening one hundred years hence what to us seem improbable accomplishments. Yet who dare say they are impossible? The story of past incredulity is too fresh in our minds to permit us to repeat the blunders of our ancestors. The inertia of barbarism is overcome, the momentum of civilization is gathering strength with each succeeding year, and we dare not limit the future.

●

In our own field of labor new ideals are influencing us. Whether we will or not, we are changing our methods. We look from different angles of vision and old things are becoming new. The purely technical processes of only twenty years ago are either being displaced or supplemented. Music education now means more, much more than *finger education.* The indispensable nature of ample technique is still recognized, but it has also dawned upon our consciousness that technique alone is not music education. The cry goes up for better players, better singers, and the answer comes back, "make better musicians." Train head and heart—and they both can be trained on definite lines—base technique on knowledge, wide, all-embracing and deep, on emotion, controlled and wisely developed; let music education be absorbed through many intellectual and emotional pores, and the better player or singer is an accomplished fact, all about us.

●

There are many sources from which music education can be derived that are not yet fully understood and therefore are going to waste. Conservatism is as dogmatic to-day as ever it was; it takes up new ideas, new methods, and utilizes new forces as slowly as in the past, but the trend of the last years of the Nineteenth Century has been unmistakably toward the new—without letting go the best of the old—and the Twentieth Century will see the new ideas triumphant, and better players and singers active as the result of more far-reaching methods of music education.

●

Will MUSICIAN readers have a part in this development? We believe they will. The journal purposes doing its full share in the promulgation of the new ideas; it will be found ready to advocate advance, when advance is right. Its readers are anxious for improvement and will surely keep their faces to the front. But all this means intense mental activity, increasing labor, constant watchfulness and unflagging courage. Are you ready to pay the price? With the blessing of the Nineteenth Century have come heavier responsibilities and necessity for greater skill. Competition has partaken of the general development and old methods of doing business will not pass now. Perhaps this is not the least of the Century's blessings, although we are apt to bewail it as a burden. At any rate it is a fact, and we must face it. Will you, then, pay the price?

●

THE MUSICIAN goes to its clientele this month desiring to bear with it wishes for the success and fullest prosperity of its readers. It may wish them a Happy New Year, but this will not preclude the opposite. Hence with its New Year and New Century greetings, it couples an admonition. Make your New Year happy, make it prosperous. How? Watch, study, grow. Fill yourself to overflowing with the power that comes from steady, persistent, well directed self improvement. Be conscious that you are moving forward with the Century, that you are participating in the development of new ideas. You can create as well as some envied great one. You can analyze your way of doing your work and discard ineffective means. Your mind can seethe with aspirations, until, from out its turbulence comes clearness of perception, strength of purpose and realization of plans.

●

Take advantage of a quiet hour to think over your work of 1900, examine your mental furnishings, find out what you have added during the year, and then formulate a plan of operations for 1901, with the highest ideals of musicianship and helpfulness to your pupils as the goal for which you strive. Having done this, lose no opportunity to improve yourself and your work.

A Happy and Prosperous New Year to you all.

●

RANDOM THOUGHTS

One's amiability is sometimes severely taxed, as the following anecdote of Joachim shows. The great violinist was walking with Thomas Carlyle, and the sage, in amiable mood, discoursed pleasantly of great Germans, and the violinist, to repay compliment in kind, spoke of famous Englishmen, mentioning Sterndale Bennett. "Eh!" said the sage, forgetting, or not forgetting, the vocation of his companion, "I don't like musicians—wind-baggy sort of people!"

There may be, and doubtless are, "wind baggy" musicians, but the average person can better endure a wind-baggy individual than one of those so-called philosophers whose chief claim to supremacy rests on the output of a sharp tongue. Joachim might have remarked that he did not like sages—they usually think they know it all.

●

The December MUSICIAN gave a preview of the coming concert and opera season. The number of eminent artists, who will play or sing in various parts of the country, is quite large and includes many whom our readers should most certainly hear. While it is an old story, we venture again to urge all who read these lines to take, and make if necessary, opportunities to listen to good artists. Get outside yourself and your routine, gather all you can that is fresh and inspiring, fill your mind with new ideals and let yourself grow. In listening, do so with attention, and not merely to derive pleasure. You may derive a sensuous pleasure from good concerts, but that will never increase your musical stature. The intellectual processes must be active, you must listen to perceive. Underneath the beauty of tone you must learn to see the skeleton of form and artistic workmanship, it you would hope to gain the greatest good from your investment in concerts. Then go to learn rather than simply to be entertained. Faulty deductions made at first will give way before a determination to obtain a correct insight of musical structure through hearing.

Hear all the artists you possibly can, but hear them with the understanding.

●

What are your plans for the coming year? Have you made any, or are you working along without directness of purpose? Have you taken account of stock? Do you know to a certainty the balance left in your mental and physical treasury? Are you adding to your investment, or are you drawing on the principal? These are New Year thoughts worth thinking. You should take them into consideration and come to some conclusion regarding them. There comes a time when activity lessens whether one wills it or not. A new year will dawn when your past will outweigh the future. Now is the time to prepare for the future that will stare you in the face then. Labor, long sustained and hard, taxes one's persistence, and temptation to lessen one's efforts often comes. Do not yield to it. Then, again, be careful what form your labor takes. You may labor diligently and accomplish nothing. Beware of this. It is well-directed labor that counts. So examine yourself and take account of stock.

●

What about your pupils? How do they begin the new year? They will not take a mental inventory unless you help and inspire them. After your balance sheet is struck, turn to them. Take each one in hand. Settle the nature of the characteristics that have shown themselves during the last twelve months, and diagnose present conditions. What mental, artistic or mechanical ills are in need of cure, and what remedies shall you apply? Have you failed to understand the needs, then correct that failure. Have you misjudged a condition, then set that judgment right. Are you not in touch with your pupil, then establish a close relationship of interest at once. Think, search, strive and the New Year will be the best you have ever had.

BOSTON SYMPHONY HALL

BOSTON'S NEW SYMPHONY HALL.

H. J. STORER.

Musical Boston is now rejoicing in the completion of a new hall which was primarily built for the concerts given in the city annually by the Symphony Orchestra. For this reason it has been named "Symphony Hall," and perhaps also another, and that is, a music hall (so called) is understood to signify, both in this country and in Europe, a place where variety entertainments, mainly of the "song and dance" order are given, and the new hall, in Boston, will be used for no such purpose as this, though the art of song in its best sense will often be exemplified within its walls.

The construction of the new Symphony Hall was the outcome of a necessity that had been felt for many years that the old hall, built in 1852, was inadequate for present day uses and ideas, being unsafe in case of fire, with poor convenience and ventilation and, further, lacked the important essential of a good organ. The new structure, situate on the corner of Massachusetts and Huntington Avenues, two of the important thoroughfares of the city, is built of red brick and limestone, in the style of the Italian Renaissance. The interior, the walls and ceiling of which are of a light gray color is, in size, about the same as the old hall, the seating capacity being a little over 2,500. Probably the most striking feature of the interior is the proscenium arch, which is square, being some 45 by 62 feet in dimensions; the frame is a broad gold band in a handsome design of fruits and acanthus leaves. The name of Beethoven being inscribed upon a scroll where the keystone of the arch would naturally be located. The balconies are two in number, the railings of which are of gold, in the manner of the proscenium arch, the tops of the rails being upholstered in crimson plush, which makes a very pleasing yet striking effect. The design of the ceiling is quite elaborate, being done in panels with curved beams, and the general effect is greatly brightened by the large number of bronze chandeliers, which contain hundreds of sixteen and thirty-two candle-power incandescent electric lights, those on the stage being behind the arch and removed from the view of those in the auditorium. The organ monopolizes the entire background of the stage, the decoration being of light gray with gilt pipes. In another article in this issue the organ will be fully described, and it is only necessary at this point to state that on the front of the organ are two small clusters of electric lights which, to a great degree, heighten the effect of the color and arrangement of the pipes.

What was the chief source of anxiety to the builders was the problem of acoustics, as this point could not be settled until the hall was completed and the test of an actual musical performance submitted. After the services of dedication, at which time Beethoven's Mass in D was performed by the Cecilia Society, with the Symphony Orchestra and the new organ, the question of acoustics was happily settled, as everything proved satisfactory in this respect, which cannot be said about many another hall in this country, some of the finest of which are wanting in satisfactory acoustics, though well-nigh perfect in all other respects.

Among other special features of the new Symphony Hall may be mentioned its wholly fire-proof construction, extra large corridors on each floor, sixteen exits from the floor and four from each balcony; a large foyer on the second floor with a high arched ceiling, situated over the main entrance on Huntington Avenue; its system of heating and ventilation, the most modern that could be devised, and also the conveniences for patrons in the way of four coat-rooms and spacious toilet-rooms for ladies and gentlemen. There is also an outside convenience and an important one in stormy weather, and that is a "marquise," or ornamental shelter, over the Massachusetts Avenue entrance, sixty-five feet in length, and principally designed for symphony patrons arriving in carriages.

It becomes quite an impossibility, within the limits of a brief article, to describe the many beauties and advantages of the new Symphony Hall, which is a fitting home for the concerts of the orchestra, which is well-known and probably unsurpassed throughout the whole musical world, and is the chief corner-stone upon which rests whatever reputation Boston possesses as a musical centre, being at present at the climax of its excellence.

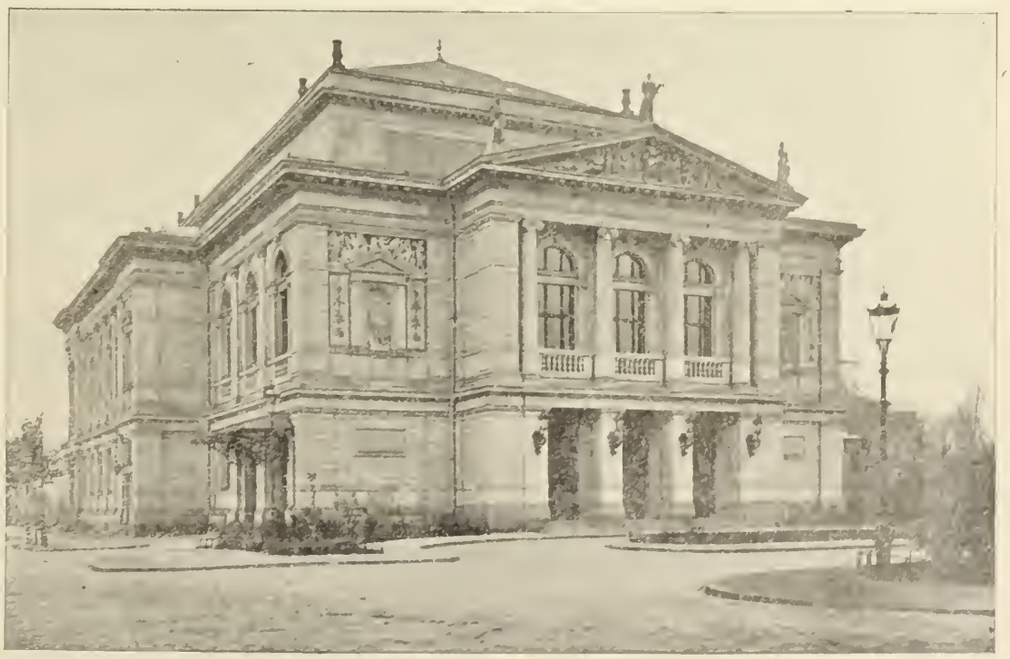
Residents of the city, while proud of the new hall and the orchestra for which it was designed and constructed will, none the less, have a pleasant remembrance of the old music hall, which was in use for nearly fifty years and where so many distinguished artists have appeared, including as it does the names of Albani, Sontag, Thalberg, Rubinstein, Wieniawski, Patti, Nilsson, Von Bülow, D'Albert, Joseffy, Paderewski, Rosenthal, Sembrich, Materna, and, in fact, hundreds of others. The memories of the earlier concerts of the Händel and Haydn Society, the Harvard Musical Association, the Cecilia, Boylston and Apollo Clubs, the Thomas orchestral concerts of the early seventies and the commencement of the symphony orchestra concerts are still vivid to many; and the names of C. C. Perkins, whose labors and public spirit built the old hall, and of Henry S. Higginson, which created and since has maintained the Boston Symphony Orchestra, are the shining lights in the musical history of the city—past, present and future.

"There 's an end to the reign of the lay inane,
But it 's weary the waiting, weary;
Where my darling dies, to my endless pain,
In the final verse, to a triplet strain,
With the organ pealing might and main—
But it 's weary the waiting, weary.

"There 's an end to all ballads some day, sweet day,
But it 's weary the waiting, weary:
And the critic dreams of a distant shore,
Where every concert is over by four,
And the daily allowance is one—and no more,
And no singer is suffered to give an *encore*.
But it 's weary the waiting, weary."

—*E. L. Ashford.*

The London *Musical Times* prints a sketch of Prof. Henry Hiles, of Manchester, who has fought all his life against musical pedantry. Three times, as a boy, he threw away his theoretical books in sheer disgust, as they contained mere dry rules unsupported by any reason, and contradicted by every composition of worth which he took up. In various articles on the "Absurdities of Musical Notation," "Are We Making Musicians?" etc., he has combated the stupidity of professionals who oppose progress and enlightenment. In one of his papers he says: "You are familiar with the arpeggiod chords in Bach's 'Chromatic Fantasia.' A recent critic has been bold enough to insinuate that even modern research does not justify them all. If so, so much the worse for the 'modern research.' To me, they seem to show a wonderfully modern insight into harmony." Regarding the craving for a mathematically perfect scale, he says that such a scale, if it could be devised, "would create such a multiplicity 'of false relations,' and would so utterly prevent the fairy-like transitions and delicately insinuated modulations, which give such charm to modern art, that music would be robbed of almost every shred of poetic character, and would degenerate into the dismal stereotyped and uninteresting condition of the monotonous lucubrations of Zarlino, Fuchs, Albrechtsberger & Co."



THE GEWANDHAUS CONCERT HALL.

THE NEW EDUCATION.

Arthur L. Manchester, Thomas Tapper } Editors.

FOREWORD.

The *New Education* offers its readers, for 1900–1901, the best plan for a year's study that it has yet presented. It will be the best in two particulars: in choice of subject matter and in manner of presentation. The hearty reception which this novel educational feature has met with makes it possible for THE MUSICIAN to continue to develop the idea of home music study and to offer the best advantages that are to be attained in this manner.

The general high degree of excellence is due to a widespread interest in the subjects treated and to the careful manner in which our contributors have sought to deal of the various subjects. Scores of papers sent in by clubs show the excellent results of that method of making much of the *New Education*. The club elects a presiding officer, conducts its meetings regularly, arranges definitely for the reading and discussion of the month's lessons in each subject; takes up the questions included in each lesson for study; and, all this having been done, each member, independently, writes up his paper and sends it in. The plan is feasible either with a club of two or of a hundred.

The editors of the *New Education* department hope to see the number of these clubs greatly increased during the coming year. Club work is an excellent stimulus to study, and as the work of this department is so well adapted to club uses, there should be many bodies of students banded together in its prosecution.

Let every club inform the department of its organization, membership, purposes and manner of work, reporting at stated times details of its existence. In this event, we will keep a roster of *New Education* Clubs. Intercommunication can then be established which would doubtless bring mutually advantageous results.

The series of subjects for the coming year follows. Each subject is in the hands of a specialist and will be treated practically and as fully as possible in twelve lessons. In order to meet the immediate demands of students who seek information on special points in the work the editors will be glad to furnish:

Suggestions for the further study of any subject.
A bibliography of any subject.
Information on any question in the lessons.
The consideration, and, if necessary, the presentation, for general discussion of any point that comes up in actual teaching.

The subjects for the coming year are as follows:

I. Advanced History of Music; twelve lessons, with suggested reading.
II. Psychology and Pedagogy of Music; six lessons in each subject; suggested reading.
III. Advanced Music Form; twelve lessons developing those already given in this department.
IV. Harmony and Melody; twelve lessons; six in each topic.
V. The Literature of Aesthetics and Criticism in Music, twelve lessons.
VI. The History and Development of the Piano, twelve lessons with illustrations.

It is desirable that the work be sent in as promptly as possible after the study of the month's lessons. Write clearly; explicit answers are requested. Do *not* write queries on your lesson paper; *send them separately to the editors for immediate reply. And send them in every case direct to the office of The Musician, addressed as indicated below.* Never send your work in lead pencil nor in pale ink. Aim at plain, straightforward, careful work.

The following conditions *must be observed:*

1. Address all communications for the *New Education* department, thus:

THE MUSICIAN,
New Education Department,
8th and Locust Streets,
Philadelphia, Pa.

2. Write your name on the envelop.

3. Write your name and address and the *subject of the paper* on the back of *each sheet* of your papers.

4. Write only on one side of the paper, and use paper 8 x 10 inches in size.

5. *Do* NOT *roll your manuscript.*

6. The answer for each month must be sent as soon after the issue of the journal containing the subject to which they relate as possible, and before the next succeeding issue. No papers are to be held until end of course. New members can join at any time by sending names and answering questions contained in current issue.

7. The editors are obliged to say that no paper will be read or rated that fails to comply with conditions 3, 4, 5 and 6.

8. No two subjects should be written on one sheet. All sheets pertaining to one subject—for example, History—should be independently fastened.

A few words should be said regarding answers to the questions. There exists a great temptation to read the text and answer questions in the words of the writers. This is not a good plan and in order to stimulate our readers to original effort, we will state that the ratings will be largely influenced by the following points:

Accuracy.
Clear, concise, yet smooth diction.
Grasp of the subject.
Originality of thought and statement.

As to the questions following each lesson, they have two purposes: First, to connect the readers mind directly with the text—the most fundamental, that is, lowest duty a question can serve, but necessary. Second, to suggest a thought beyond the mere expression of the words in the text; the most useful, that is, highest purpose a question can serve. If a student is to abandon one or the other of these two kinds of questions he should not hesitate a moment in deciding. The first is by far the least useful if he has a memory; the second the most useful if he has a reasoning faculty.

The editors will welcome letters from teachers which contain:

a. Suggestions as to what will make this department more valuable, the suggestion being dictated by the teacher's individual experience.
b. Statements regarding the application of this work with pupils as well as in one's own effort to secure a broader education.
c. If there is any line of thought of practical value to you, and likely to be equally practical to others, let us know it.
d. All such suggestions must be sent to the office of THE MUSICIAN, addressed according to direction given in regulations.

[NOTE—Despite the efforts of the Editors, it has been impossible to finish rating the papers in time for an announcement, in this issue, of successful students. While the delay it regretted, the editors feel that care should be taken and hence they have preferred to postpone the announcement until February rather than to make it prematurely.]

II. MUSIC AS INFLUENCED BY CHRISTIAN WORSHIP.

PERCY GOETSCHIUS, MUS. DOC.

The incentives to a refined and heartfelt musical practice that were wholly lacking among the Pagan races, were destined to be aroused by the birth of a purer and nobler religious faith. The momentous turning point in the world's history, when the first seeds of Christianity were sown in a soil from which hitherto so much evil and so little lasting good had sprung, was the turning point also in the history of the Arts; and the resulting influences were probably nowhere more significant than in the music art.

The new Christian belief with its purer, higher, more unselfish aims; its stronger appeal to the human heart through the example of divine love and sacrifice; its more immediate association of the individual soul with its Creator, and its powerful enlisting of all the tenderer and nobler impulses of emotional life and feeling—provided a soil peculiarly rich in precisely the conditions most favorable to the evolution of music, the "art of emotional expression." And not only the soil, but also many of the external agencies and opportunities necessary for this evolution were supplied, at least primarily, by the Christian Church and its elaborate forms of worship. It is not difficult to believe, in looking back over the slow, laborious, but steadily advancing growth of our art during all these hundreds of years since the death of Christ, that no other combination of influences and agencies could have prepared the foundations of modern music; and though, for the last century or two, the best and most genuine specimens of the art have no connection whatever with the Christian Church (as, for instance, the symphonies and other masterpieces of instrumental music), it is nevertheless undeniable that these are but the flower and fruit from branches that trace their common root to the vital soil of the early Christian Church.

These influences, it is true, were very far-reaching. So much so that they appear to have led to no significant changes in the character of music for 300 years after the organization of the early congregations. Not for over 600 years did they achieve the establishment of definite, characteristic forms, indentified with the spirit and ritual of the Church and capable of a certain crude—ultimately artistic—treatment and development. Not for nearly 1000 years was any such development successfully attempted; and finally, not until within 300 years of to-day, can the historian point to those peculiar consequences of these influences which gradually coalescing with the products from other secular sources, led up in rapidly accelerated stages to the marvelously rich and beautiful art that the modern sense enjoys.

The music of the earliest Christian congregations was, no doubt, of the simplest conceivable character—more severe and unadorned than much of the contemporary Pagan music may have been. Nothing is known, nor can ever be known, of its actual effect; but in all probability it was borrowed from the old Jewish Temple ceremonial and closely resembled those venerable recitative melodies, or chants—whatever they were like. Certain it is that they were *melodies* only (not like modern hymn tunes in full harmony). Sometimes, though surely not frequently, accompanied by an instrument or two, and as an almost invariable rule, sung antiphonally, that is, in alternation between two choirs (often male and female), or between leader and congregation.

This sober, devout, inartistic style prevailed for two centuries or more. Originating in the temple-psalmody of the only pre-Christian race that recognized Jehovah, adhering probably very closely to its traditions, but, not unlikely, catching up here and there some available fragment of old Greek theory reverently fostered by the Church, not as an adjunct, but as an integral part of its worship. These germs of the new art grew as the Church expanded in confidence and power. And, as the time came for founding the empire of the Church, music obtained its share of serious attention. History mentions Basil of the Eastern (or Greek), and Ambrose of the Occidental (or Latin) Church as promoters of a more systematic order of musical service—both of them near the end of the fourth century. The form established by Ambrose, Bishop of Milan, or at least at his instigation, and still designated the Ambrosian chant, was of far the greatest and most direct influence upon the subsequent *art* of music. Its nature is almost as complete a mystery as that of the earliest music, but it is at least known to have been systematized to the extent of distinguishing four "modes" (somewhat analogous to the modern distinction of "key"). And it is safe to conjecture that it was much like a recitative intonation, though from the fact that the entire congregation was still permitted to participate, it may be inferred that it preserved a fairly regular rhythmic form.

Thenceforth music kept steady pace with the growth of the Church ceremonial As the ritual became more elaborate and sumptuous, the musical concomitant advanced in importance and claimed closer consideration. The first fruits of this was the Gregorian system of "plain song" (end of the sixth century), whose influence extended down to the very threshold of modern composition (1600). This was followed, in time, by the quaint experiments of Hucbald (900), and the extraordinary achievements of the Benedictive monk Guido (1030) and his followers, in organizing

and perfecting systems of musical instruction and notation. Until about 1250–80, the zeal of learned monks led to the recognition of certain laws of tone-combination, out of which, at least, the great system of musical theory and the practices of composition were evolved.

All of this was attained within the shelter of the Christian Church. But, wonderful as it was, and so unlikely to have been realized under any other than just such auspices, it must not be confounded with *artistic* development. Such labors as were expended upon music concerned and affected its *exterior* conditions only, and it may be seriously questioned whether the Church, during all this period, up to the Reformation ever penetrated the outer shell, ever did anything that tended inevitably to disclose the true spirit and essence of "Music" as we now know it. It was, after all, reserved for the common minstrels to find and touch the nerve of true music, and to quicken it into the life with which it now pulses.

What music owes to early Christian worship was, then, the gradual defining of its outward forms. The moulding and strengthening of its corporeal elements, so to speak; the preparation of an *organic body*, into which, in the fulness of time and through secular channels, the spirit of Life was to be breathed.

QUESTIONS.

1. By what were the incentives to a heartfelt musical practice to be aroused and in what did they consist?
2. Was the operation of these influences speedy or slow?
3. What was the presumable origin or character of earliest Christian music?
4 In what did it consist?
5 Who were the earliest promoters of systematic musical service?
6 What is known of the Ambrosian chant?
7. What other salient advances are recorded?
8 With what must these not be confounded?
9. What, in brief, does music owe to early Christian worship?

VALUE OF MUSIC THROUGHOUT THE SCHOOL COURSE.

FREDERIC H. RIPLEY.

The subject which has been assigned me is capable of many interpretations, and under each interpretation a variety of divisions should be made, but for the sake of making a beginning I shall consider this to mean "What values are derived from a course of music which extends throughout the full time of school life?" and I shall consider also that this course of music is such as can be taken in classes under the usual conditions of the school room, and that individual study and instrumental practice is not included.

The value of music, of course, depends much upon the character of the course pursued and the skill which is exercised in its execution. The value, too, is individual and general, temporary and permanent, and under each of these divisions much must be said.

Let us for the present consider that the course includes a complete development of the subject, and that it is skilfully conducted under favorable conditions, and ascertain, if possible, first, the general benefits, and, secondly, the effect on individuals.

Every head of a large institution of learning in which the details of work are delegated to subordinates derives his power from certain dominant qualities within himself. He is respected and obeyed, either from his superiority in moral or mental power or from his ability as an expert along certain well marked lines, or from a combination of the two. The strongest principal is he who combines the two; that is, who adds to superior moral excellence the largest number of subjects in which he may be said to be an expert.

To gain the power to influence a large number of pupils at one time, and to be able to apply this influence, the principal must command some subject which is of general interest and in which all can participate simultaneously.

It is obvious that no subject in the school course is so well suited to the purpose as music, and those who have witnessed general exercises in music conducted by a successful teacher cannot doubt that as a means of general culture and a promoter of all that is high and pure and good in school, music must stand at the head.

I recently witnessed an exhibition of this use of music in New York City. Several hundred children were gathered in the hall. The principal, a lady, conducted the devotional exercises, and an assistant led the singing. It was one of the grandest exhibitions of power for good that I ever have witnessed. Every one was deeply impressed, and when the school separated for class exercises in various studies a spirit of attention, of respect and of personal responsibility was clearly present in every class.

Then we may safely assume without much danger of provoking a controversy, that as a means of unifying the efforts of a large number of people music is important.

From the general effect exerted on a large number at one time, we may proceed to a study of smaller groups, as of single classes in separate rooms. Here again we notice the same unifying effect and deepening of thought. We observe that the pupils become more docile and that they have greater regard for each other and for the teacher.

It may be noted in schools where music is a marked feature of the course that the general atmosphere of the school is superior to that in schools in which music is absent.

This is a general influence, and is temporary, so far as music itself is concerned. It may not be temporary so far as moral and intellectual development is dependent upon, or is made possible by, the receptive condition of mind which music creates, for the skilful teacher takes advantage of these conditions to emphasize her general instruction, so that music, in and of itself, is but a means, and the results in after life depend upon a supplementary effort not logically connected with the music.

But this statement is true when considered in its general aspect only. Music as an *individual* study has an influence on the individual pursuing it quite different from that produced by general class or school exercises.

We assume now a "complete development of the subject," to be a thing quite well in mind by the reader, and that a "skillful conduct" of the course is fully understood, and with this understanding we may consider what the effect should be on the individual first, while in school, and second, in after life.

Beginning with his first day in school, the ear is trained systematically and skilfully to discriminate between sounds of different pitches, duration and intensities. By a series of well-arranged steps he proceeds from the very simple to the more complex arrangements of tones, until he has at command all the musical relations of tones of different pitches, including major and minor scales, with chromatic alterations to and including the chromatic scale.

His study of the duration and grouping of tones, progressing in the same way from the simple to the complex, gives him the power to interpret what he sees and to express what he hears.

His study of the intensity of tones in relation makes him master of phrasing and appreciative of forms, as developed in larger compositions.

This work, conducted as a musical training, is so related to the other departments of art as to bring the learner into intimate relations with those foundations on which all art rests. His course in music is the means of awakening the artistic nature, and not only that, but it gives definite direction to the pupils' thought, and makes him able to see in every department of art the development of the principles of beauty which he has mastered in music.

And for this permanent benefit he possesses two invaluable treasures—one, the power to appreciate, the other, the power to do or create. For it is the creative faculty after all that we must look to for success and happiness in life, and it is to the study of art that we must look for the development of this faculty.

With proper musical development in school comes a consciousness of power—a feeling that we know, and hence can execute. This feeling is not confined to music. It extends to every act of life. The girl who can compose a good melody will, by the application of the same principles of arrangement, set the dinner table artistically. The further the study is carried the broader becomes its applications, and the freer the pupil is from petty rules. He goes into life with an ever present sense of proper relations, as existing between things of all kinds, in all times and in all places.

Again, the course in music thus conducted reveals the genius who, in some chosen line, will make the applications of its teaching his life work, and bestow on the world gifts which otherwise would be lost.

And finally, in the ordinary relations of life music, as an art, or as a basis of art, is a potent factor. When we observe some uncouth or ill-judged action of a person, in public or in private, we are apt to say "he has no sense," meaning, I suppose, that he has no sense of the proper relation or fitness of things—or, in reality, that he has no artistic sense. He is devoid of all knowledge of proportion, of the connections and relations existing between times and places, persons and things. He has no sense of unity and of harmony, and so he goes blundering along, always needing guidance, because never commanding himself, and all for lack of training in those habits of thought which a proper course in art tends to advance and to establish.

I am aware that all this may seem Utopian, even foolish, to those who have had experience with schools of art, and who study the career of those who make "art," so called, their vocation; but this is because most people are studying in what they call "art" have too small an end in view. They are usually striving to play a "piece," to sing a "song," to get before the public in a "recital" or as an opera singer; or in the other field, to paint a picture to be accepted by the club, to win a prize at the salon, and so on. They are not studying art as an entrance into life, as a means of greater manhood and womanhood. Ruskin says, in speaking of this phase of art: "I formerly addressed audiences expecting to be generally understood, but now I am gratified if I find one who understands me," and I feel very certain that one great mission of the music teacher, and of the course of music in school, will be a better, fuller and wider appreciation of those simple truths of art and of life to which Ruskin dedicated his powers.

QUESTIONS.

1. What powers must all persons in charge of large institutions of learning possess?
2. What are the sources of power?
3. What difference is there between the influence of music as a general excuse, and its influence as an artistic individual study?
4. What powers should the student possess at the end of his course?
5. What influence should the study of music excel on art and life?
6. What faculty of the mind should be cultivated by study of music?

FORM.

Second Lesson.

THOMAS TAPPER.

Interesting as Bach made the Suite, the Form, as a whole, was destined to arrive at a stage of arrested development from the nature of its inherent structure. The movements in the Bach Suites are highly contrasted and, individually, beautiful to the extent that the underlying dance rhythm becomes the pulse of the highest expression. And yet the Form proves so limited in certain directions that no one but a master greater than Bach, and yet a master after his kind, could no more with it than Bach did. I do not here overlook the fact that modern writers had used the Suite-form, but they have added to it little more than the possibilities which have come from the structure of the piano itself. They have not modified the Form in any important particular. And then, one may say, passingly, that masters of Bach's kind are rare.

Somewhat to review the principles set forth in the First Lesson we may recall that the Suite in its best sense at Bach's time—had a definite order of procedure: Allemande, Courante, Sarabande and Gigue. If other movements were used they were regularly introduced between the Sarabande and the Gigue. In the case of the English Suites of Bach, the dances are preceded by a Prelude which proves a fitting opening to the æsthetic use of dance rhythms. In its general structure the Suite is interesting.

We find that Prelude, if one is employed, that the four regular forms—Allemande, Courante, Sarabande and Gigue—together with any other movements the composer may care to introduce are one and all in the same key. Here then there is a sameness in color which could be relieved by key-change. The moment we look over half-a-dozen Suites another fact impresses us: the corresponding movements are ever the same in meter, rhythm, form, character, tempo, individuality. Here, then, there is a sameness in structure throughout, which may only be relieved by freedom in all that enters the individual and collective nature of a Suite. Indeed, in Bach's Suites there is always present an indication that the regular order is stilted and must be relieved and be sure to relieve it

by adding a Prelude and by bringing into the Suite other dances after the Sarabande. Now these dances are of artistic value in the Ensemble, not only in their individual traits, but also, and what is more important, in this, that just what dances they shall be is entirely at the composer's will, hence unknown to the listener. This brings in a pleasant, unknown, unforeseen element, entirely needed.

But still there remains this fact, true of all Suites: the numbers are dance-form; let them be made in the highest form of art, they are yet in a definite mould. To an extent they seem to suggest their rhythmic origin, less now with the unused dances than with those, like the Gavotte, that we know familiarly through physically expressing its rhythms in graceful motions.

The inference is, then, that if an art-work in music be made from a group of movements they must be highly individual, not on a stereotyped plan, and in a line of procedure which has at once some definiteness and some indefiniteness.

The pupil will do well to take up for study any one of the French or English Suites of Bach, and to note the points thus far brought forth. Comparison should then be made between several forms of the same kinds; thus, several Sarabandes, to set the mind to inquiring wherein the composer seeks to differentiate the type. The same should be done with the other dances. This study will acquaint the pupil with the Suite and be necessary for the comparative study which, in THE MUSICIAN for February, will be suggested in the Form Lessons.

Questions are reserved until the February issue for the reason that certain elements of contrast between the Suite and another movement group will be made then. It is well to suggest, however, that the student play, besides any one of the English or French Suites, one or two of the Suites by Händel. Number Sixteen is particularly pleasing; so, too, is Number Five, which contains the well-known Air and Variations. Every point of difference in general structure noted by the student should be written out clearly, for the sake of making each a definite impression.

HISTORY OF HARMONY.

DR. H. A. CLARKE.

It is always impossible to discover the beginnings of things. We know that everything must have a beginning, but we can never manage to put a finger on the spot and say, here is the beginning. Harmony, instead of being any exception to this law, is one of its best illustrations. Seeds always grow in the dark, hidden from sight, and it is only when we see the leaf that we know that growth has been at work. Harmony began when men first tried the experiment of sounding the notes of dissimilar pitch together. Possibly the ancient Greeks did it, as they had a word, Symphonia, which means sounding together; but the general consensus of opinion is, that they did not make a practice of it. The earliest authentic information we have of the attempted combination of two sounds dates from the tenth century, and is said to be the invention of a Flemish monk, Hucbald. If the decipherment of his notation is to be trusted, this "Harmony" consisted of a succession of fourths, fifths and octaves and was called Diaphony or Organum. A hundred years after Hucbald, another monk, Guido—one of the great names in the history of music—wrote a work on music from which we learn that the Diaphony of Hucbald was still in use. The next step was called Discantus. This was made by singing two melodies together, altering each slightly so as to avoid the clashing of discords too ugly to be tolerated. The laws of Discantus were elaborated by another monk, Franco of Cologne, in the eleventh century. Franco was apparently the first to admit the sixth, and he was also the father of all those who forbid consecutive octaves and fifths. The next clear light comes from the thirteenth century, Marchettus of Padua. He gives rules for the use of Suspensions, and was the first to class the perfect fourth with the dissonances. Jean de Muris, in the fourteenth century, gave to intervals the classification that is still maintained, that is, perfect and imperfect Consonances and Dissonances, but he excludes the *minor* sixth from the Consonances. The development of the art of putting sounds together received a great impulse in the fourteenth century from Wm. Dufay, the founder of what is called the Belgian School. The combinations and successions used at this time were exceedingly crude according to our notions. It is, therefore, with great surprise that we find that more than a century before Dufay, some unknown writer in England produced a Canon, "Sumer is icumen in," that may even yet be heard with pleasure. It goes far to prove that in the "wreck of time," more has been lost than saved, were it not that the genuineness of this composition is indisputable. It would seem incredible that it was written only one hundred years after the barbarous Diaphony of Guido.

All written music at this period was in the Ecclesiastical Scales. As the feeling for combinations grew, it was discovered that it was necessary to modify these scales by the use of accidentals. At first these accidentals were not written, but singers were provided with a set of rules which enabled them to supply them when necessary. The accidentals were first written by Josquin De Pres, a Belgian composer, the friend and contemporary of Luther.

All through the existence of the Belgian School, there was a constantly growing feeling for "Harmony," as distinguished from the combinations that resulted from the old Polyphonic writing based on the Ecclesiastical Scales. The idea of "Tonality" gradually came into existence; in other words, the major and minor Scales gradually took the place of the church Scales, these latter not being susceptible of harmony.

The production of the first Opera, in 1600, marks a great stride forward in the development of Harmony. The writer of the second Opera, Monteverde, was the first composer who used the dominant seventh chord. It was not long before musicians recognized the close relation that exists between the Tonic and Dominant chords, and the satisfactory effect of a close in which the final Tonic is preceded by the Dominant.

Foremost among the pioneers of harmonic writing were Carissimi and Viadana. In their works are to be found the earliest definite modulations from the principal key to the related keys. Musicians now began to experiment with various combinations and successions, so that by the time J. S. Bach began his work (born 1685), nearly all, if not all, recognized chords had been discovered. From Bach's time to the present time, the advance in Harmony has been, first, in the direction of greater freedom in the use of Dissonance. Second, in the various attempts that have been made to find a Scientific Basis in Acoustics for the Art of Harmony.

One of the most important steps in the growth of Harmony was the invention of the "Figured Bass," a sort of musical shorthand by which the chords that each note was to bear were indicated by figures. It served its purpose so well that it has been retained to this day as a means of teaching Harmony—in spite of the fact that, without a bewildering array of figures, it cannot indicate the complexities of modern Harmony. It is not known who invented it, but it first made its appearance in the works of the Opera writers at the beginning of the seventeenth century.

QUESTIONS.

1. How did Harmony begin?
2. What is the date and what the nature of the first attempts at combining Sounds?
3. What was this kind of composition called?
4. What was the next step? What was it called?
5. What was Franco of Cologne's contribution to the Art of Harmony? Where did he live?
6. What additional rules were given by Marchettus of Padua? Where did he live?
7. Who classified intervals, as we have them, and what exception did he make?
8. Who founded the Belgian School? What is the date of its foundation?
9. Who first introduced accidentals! What was the practice of singers before this was done?
10. When was the first Opera produced?
11. Who first used the Dominant Seventh Chord?
12. In what condition was the Art of Harmony when Bach began to write?
13. What advances have been made in Harmony up to the present time?
14. When was Figured Bass first used?
15. What is Figured Bass?

The New York *Tribune* calls attention to the fact that most musicians persistently mispronounce Smetana's name. The accent should fall, not on the second syllable, as it is sounded 99 times in 100, but on the first, *Smet-ana*.

A GUIDE TO THE STUDY OF MUSICAL LITERATURE.

ARTHUR L. MANCHESTER.

We are now dealing with a literature in which the author's personality, ability and sincerity are pre-eminently important. Our object being to acquire a knowledge of music and musicians as contained in statements of fact, the critique of our author must be based on truth, be conservative yet unwaveringly progressive in judgment and be free from personal prejudice, if it is to be a guide in the formation of our own judgment. If it be the duty of an historian to place before us in orderly succession, and with absolute fidelity to accuracy and true perspective, even to the utter elimination of himself, the events of the past, if the biographer should tell us the story of a life in an unbiased narrative, it is perhaps even more essential that the author of a book of criticism be sure of his facts, be absolutely impartial in their presentation, be of sterling judgment and keen discrimination. In no department of authorship is the saying of Dr. Noah Porter more applicable than in that of criticism. "A book is always written by a man, and is never by any magic or mystery any better than its author makes it to be." We may truthfully add that the book is never better than its author.

As was stated last month, musical criticism is supplementary to the creative activity of composers. When compositions had accumulated and the creative genius of a comparatively few favored sons of the Muse had infused into the tone language meanings deep and sometimes obscure, there arose need for someone properly endowed to interpret them for the mass of music lovers who are not able of themselves to analyze the work of the masters. But critics themselves differ as to the nature and office of criticism. The personal equation shows itself in this and no standard exists that has been adopted by those who contribute to this phase of music literature.

There are obstacles in the way of the writing of analysis and æsthetics, which are overcome according to the ability and the peculiar mental equipment of the writer. When a critic fails to perceive the trend of the time and of the art of his day, he is certain to make serious mistakes. The laws of music change. As we all know, progressions and intervals which once were considered irreconcilably wrong are now more highly esteemed than some which were considered eminently correct. A Beethoven or a Wagner arises, setting aside accepted tenets and striking out along new paths. The writer of criticism must be quick to perceive the essential principles of this pioneer genius's art, else his criticism is inevitably astray. Consequently a danger which closely besets the critic is his tendency to measure new creations with the tape line of an earlier art development. Perhaps this tendency is less pronounced to-day than it was in the time of Beethoven and Schumann, but it still not infrequently exerts an influence more or less prejudicial.

The possibility that the critic may write into a work his own interpretation rather than explain the ideas of the composer is not altogether remote. Indeed, it is frequently asserted that much more often is written than has basis in fact; that this imagination of the critic supplies much that has no existence outside itself. True it is that such an infusion should not be permitted to displace the original. Yet even when the critics' fancy is somewhat exuberant, the result may be a healthy stimulation, of inquiry and a final determination of worth which can only result in clearer ideas and a fuller understanding of the work in hand. The very exuberance of the critic's fancy often results in an original contribution to musical literature of more than ordinary value. As we will learn while proceeding with these articles, the thoughts that have been born in the imagination of the critic, having had their suggestion in the work under criticism, oftentimes prove the most helpful and stimulating to us. It is the sparks which fly, when the flint of the creator's conception is struck by the steel of the critic's thought, that enkindle our own originality and develop our own perceptional and judicial powers. There are critics whose writing is keen, cold, depressing; who rightly divide the perfect and imperfect, but rob us of the enthusiasm which should be our portion in gaining acquaintance with the product of genius. Their pedantry bewilders us in a maze of technicalities, all the while leading us further and further away from the true meaning of the work under consideration. The fact that music is not able realistically to describe, that its language is one of emotion over which the intellectual powers may, yes should,

exert control, makes the task of the interpreter one of especial difficulty. The attempt to translate tones into specific thought is attended with a liability to exaggeration if not total misconception. Yet the enthusiastic critic, whose imagination aids him in impressing upon us the beauties he sees is preferable to the cold-blooded pedantic scholar who, concerned with the letter of the law, is blind to its spirit. It is the critic who surrounds us with the atmosphere of the composer, who imbues us with the feelings which animated him, who does us the best service.

As good criticism is, perhaps, the most difficult form of musical literature to produce, it also requires most careful selection and thoughtful reading. If it is true that the book is no better than its author, the value of a book of criticism must largely depend on the mental trend of its author, which makes clear the need for discrimination in reading criticism. If we wish to gain information through other eyes, we must strive to be sure that those eyes are clear and well focused.

Then, too, our reading must be done in the right way. Memory must be alert, the attention fixed and concentrated, else what is read will not be understood and will leave no permanent impression upon our art life. Various methods for overcoming listless habits of reading have been announced, but when one is interested nothing else is required. If you are interested in the works upon which you read critical dissertations, and do your reading slowly and thoughtfully, you will master your subject and retain that which you gather from it.

QUESTIONS.

1. What is an important element in the literature of criticism?
2. What are the essentials of a good critic?
3. Why is there no standard of criticism?
4. What makes criticism difficult?
5. What dangers beset the critic?
6. To what extent should the critic's imagination enter into his criticism?
7. What good may result from the active participation of the critic's fancy? State how.

THE DEVELOPMENT OF THE PIANO.

ARTHUR L. MANCHESTER.

As was stated in last month's instalment, the monochord grew into an instrument in which the keys were used not only to produce the tone, but to determine the pitch as well. From the Psaltery, which was played by plucking the strings with a plectrum, came a keyed instrument called the virginal. This instrument was small, usually being placed on a table, and was of different shapes, oblong, square or wing shaped. Its keys was furnished with a jacks to which were attached quills, which, when a key was depressed, rose and plucked the string. This was properly tuned and did not depend on the key for pitch, as in the case of the monochord.

The virginal is said to have gotten its name from the fact that it was especially suited to young maidens. It was of limited capacity; while it had considerable power, its tone could not be varied by the touch of the player, and was therefore unsuitable for nuances. This was remedied to some extent by the use of stops, which, when drawn, made it possible to use one, two or three strings on a single key. This made some advance from piano to forte. Other combinations were made in the attempt to make the virginal, or spinet, a satisfactory instrument, but it was only a transition instrument. While it marked some degree of progress over its predecessors, its limitations prevented its ultimate development. Despite these limitations, it was very popular in England during the seventeenth century. Queen Elizabeth was a skillful player upon it. Its tone was metallic and glittering, its touch light and agile. Its compass was about three octaves. From the light tapping of the fingers necessary in playing upon the virginal to the arm, hand and finger touches of to-day is a long distance, but a good deal of music was written for it.

While the opera and oratorio were engaging attention, and music was striving to evolve logical art principles, this simple instrument was inciting composers to the preparation of music suited to its peculiar style. In England there were several collections of music written especially for the virginal. One was known as "Queen Elizabeth's Virginal Book," although it was never in her possession. It contains a composition by the Amsterdam organist, Sweelinck, and a large number by noted English composers of the seventeenth century. They were largely airs and variations. There were a number of other virginal books containing music similar in style to that just mentioned.

If we wonder at the influence of so imperfect an instrument, and seek to discover a reason for it, we can find it in the general tendency of music practice at the time. The bondage of Choral music was being broken and absolute instrumental music was taking an important position. The instruments of the time were imperfect and inadequate for the expression of musical meaning, and with the exception of the organ and violin, were really out of the race. The organ, which by nature was more comprehensive than the violin family, was still swayed by the heaviness of the Church Choral forms, and when an instrument, which combined something of its comprehensiveness with a more flexible quality, as did the virginal, came into being, it was at once seized upon by those who perceived, or thought they perceived, its mission.

In the virginal, spinet, clavichord and harpsichord we see the efforts instrumental music was making to free itself of the incubus that trammelled it and prevented its growth. Hence these virginal books with their stiff, and somewhat harsh, variations proclaim a pronounced advance toward the piano music of our day.

The technique of the sixteenth century was awkward in comparison with that of the modern piano. The nature of the instruments in use precluded sustained or sonorous tones, the lack of which had to be provided for by embellishments. This required light and rapid playing of passages within the scope of the compass of the instrument. With all this, the polyphonic character of music still lingered. Fingering was done principally with the third (middle) and fourth fingers ascending and with the third and second descending.

To England belongs the credit of developing clavier playing. Tallis, Byrd, Bull, Orlando Gibbons, Morley and Cosyn are represented in the "Fancies" with which the collections already mentioned are filled.

The union of string and key furnished a basis for further advance, and while the manner of setting the string into vibration was such as to require strings too light to give sonority, the movement was in the right direction.

QUESTIONS.

1. In what way was the plucking of the string utilized?
2. What instrument resulted?
3. Describe it and give capabilities.
4. In what was it weak?
5. In what country was it popular, and what did that country contribute to its literature?
6. State why the virginal exerted such an influence on instrumental music.
7. What was the technique of this period like?

There was a time when the enemies of Liszt tried to persuade the public that even his friend Wagner did not like his music. In doing so they relied on the belief that the public would not be familiar with the scattered pages in the ten volumes of Wagner's literary works in which he expresses his admiration for Liszt compositions. Further proof of Wagner's appreciation is now furnished, notes the New York *Evening Post*, in a letter he wrote to Hans von Bulow, in 1856, after a festival, in St. Gallen, where he heard two of Liszt's symphonic poems. The letter is printed in the *Musikalisches Wochenblatt* of July 5, and in it Wagner says, among other things: "I am quite taken with Liszt's new compositions; the asses —for that is what most of them are—will find it a long job to suppress the phenomenon. . . . I hold the first ('Orpheus') as a unique masterwork of the highest perfection. Even 'Les Preludes,' in which I could have wished for greater originality of subject matter, are beautiful, free and noble." One can imagine how great Wagner's enthusiasm would have been could he have heard Liszt's "Tasso" at that festival.

Quality is more important than quantity. One half-hour of concentrated study or practice is worth three times as much, if indifferently done.

MUSICAL REFLECTION.

THALEON BLAKE.

The coming of that very desirable time when Americans shall take a greater interest in classical music is not hastened very much by present methods of creating intelligent knowledge of such music. Until people understand classical music they cannot enjoy it. It has been suggested that the public must be educated to see and know its mysterious beauties just as a teacher would educate a pupil—by beginning with simple forms and gradually taking up the more complex. But no practical plan has been evolved.

The charge—sometimes made—that the symphony orchestras have not as yet done as much for art in America as was expected of them, is quite true. Aside from the too conservative management, non-appearance of representative American talent and exorbitant price of admission to symphony concerts, which prevents the attendance of many, the programs have often been miles above the comprehension of audiences, especially of the social element—the main supporters of these concerts—whose habitual self-sufficient complacency unconsciously takes on an air suggestive of a state of helpless boredom before many numbers are played. The wealthy faddists go because it is the fashionable thing to do, and their applause is guided by about as much reason or intelligence. How often, in looking over the usual audience of gilded butterflies, does one wish that the expressionless, upturned countenances might be exchanged for rows of earnest student faces.

When symphony concerts cease to be the plaything of society and are supported by and for the people, then we may confidently expect maximum results. The much-talked of musical atmosphere will begin to envelop us shortly after the day which sees the lighter compositions of the best composers given by generous managers, at popular prices, so as to be within the reach of everybody. Symphony concerts are necessary to any city which aspires to be a musical centre, but their influence is curtailed when for any cause they are placed beyond the reach of the people. What teacher in New York, Philadelphia or Boston has not dreamed of the day when his pupils can saturate themselves with ideas and ideals and get any amount of inspiration at such concerts for a merely nominal admission fee. Such organizations should have municipal support, if necessary, and liberal management that they may become popular in the true sense of the word. The musical atmosphere will come when we have long seasons of symphony, opera and concerts where teachers and pupils can mingle together and drink their fill of music any night in the week. The American city which can first bring this activity and interest in music about will have the "atmosphere" and reap the advantages to be derived therefrom and become the Mecca for musical people. With all its wealth New York is a long way from it, and whether this ideal musical city shall be in the East or West is a question the coming century will decide.

I had an opportunity several months ago to observe American and European music students under very favorable conditions for making a just comparison. What chiefly attracted my attention was the confident intelligence displayed by the young Americans at all times and in all places. Surely, they are not at all afraid to assert themselves! They seemed to have acquired a larger stock of all-around information than their European cousins of the same age, as a rule, but were handicapped much more by *impatience*. The desire to get along is not peculiar to any people; but it is the speed at which the American desires to go that marks him so distinctively. This celerity is accomplished at the expense of tremendous nerve vitality, and, as a consequence, "American nerves" have already attained an international fame. When students realize that haste is only made certain by slow, plodding work and not by brilliant dashes, they have already taken a long step toward success. Perhaps no study needs more patience to master than music, and if the American brings to his work the same restless spirit which dominates the business world, he is very apt to retard his progress by impatience. An ideal pupil is one having talent, patience and vivacity—"French *nerve*, German patience and American intelligence"—as one teacher put it. Such students are lively, painstaking and quick to comprehend. It is the teacher's business to develop talent, the pupil's to cultivate patience and perseverance, without which a great deal of instruction goes to waste. Teachers should drop a word here and there during lessons illustrating the value of patience.

FOR THE YOUNG PEOPLE

The Young Musicians' Perseverance Club.

Conducted by ARTHUR L. MANCHESTER.

Christmas is past and the New Year is begun. Let us hope it will be a successful and happy one for us all.

The Editor has received a delightful Christmas present from a number of Club members. One morning he found on his desk a pile of photographs with good wishes written on the back of each. It was a very pleasant surprise and, in return, he sends greetings to those who gave them. He hopes there will be other photographs, for he feels better acquainted with these members already.

Our Christmas Musicale was very successful, but only one correct list was sent in, and that came from South Dakotah; Miss Ethel C. Porter sent it. Here is the program with the composers' names added:

Overture, for four hands	*Mozart*
"Wayside Inn." Forest Scenes, Op. 82, No. 4	*Schumann*
Valse in A flat, Op. 42	*Chopin*
Invention in C, No. 1	*Bach*
Fantasia	*Schubert*
Rondo in G, Op 51, No. 1	*Beethoven*
Chaconne in F	*Handel*
Minuet in C	*Haydn*
Gavotte in D minor	*Bach*
Melody in F	*Rubinstein*
Songs Without Words, No. 1	*Mendelssohn*
"Santa Claus" (Album for the Young), No. 2	*Schumann*

Now we will have our monthly chat.

The November story must have been something of a puzzler, for quite a number of our members did not answer the questions. However, it is better to try and fail than not to try at all. The answers are printed below. I hope those who could not find the name will look up this musician, whose sonatinas are so widely played by young students.

1. Anton Diabelli.
2. Salzburg.
3. Any composition.
4. Sept. 6, 1781-April 8, 1858.
5. Michael Haydn.
6. Joseph Haydn.
7. Händel.
8. Music publishing.
9. Beethoven's.
10. 33 Variations, Op. 120.

Here are the names of those who sent answers:

Emma L. Olmstead.
Almo Young.
Ethel C. Porter.
Helen Weber.
Cora Overbaugh.
May R. Keefer.
M. Genevieve Overbaugh.
Estelle Keefer.
M. Camille Bunty.
Louise Keffer.
Mary McCann.
Annie L. Yantis.
Nellie Smith.
Violet M. Smith.
Mary Johns.
Liguori Hemler.
Marie Eldridge.
Ava Miller.
Corinne C. Johns.
Helen Johns.
Regina Poist.
Leia Busbey.
Genevieve Johns.
Marie Josepha Timmins.
Ida C. Price.
Mary Cleary.
Letitia C. Marlowe.
Margaret McQuirk.
Katheryn Landers.
Alma Kernan.
Maud A. Busbey.

Here are quite a good many belated October answers:

Almo Young.
John C. Johnson.
Marion Frye.
Hilda M. Maurer.
Geraldine Busbey.
Carol Robinson.
Ethel C. Porter.
Edna C. Maurer.

Here is a new member from that delightful State, California. Our members can be found all over this big country. What a helpful and pleasant society we can make. Let us all try.

OAKLAND, CAL.

Dear Sir—I am going to write to you and tell you I should like very much to join THE MUSICIAN'S Club. I am twelve years old and have been taking lessons in music for about two years and a half. I have learned the "Lark's Song," "Maiden at the Spinning Wheel," "Impromptu," by Gurlitt, "Angel's Lullaby," and a number of duets from THE MUSICIAN. I am going to try my best to answer the questions in THE MUSICIAN.

Your friend,
MATTIE HALBERT.

And here is another from Missouri. We see from this letter that our members are interested in each others' doings, so do not fail to send letters to the Club.

DE SOTO, MO.

Dear Mr. Manchester—I wish to have my name enrolled as a member of the Perseverance Club. I am very much interested in the composers. I am 11 years old. I am in the second book. I have taken the musical journal for so long a time and never miss reading it. I love to read about the clubs and the letters that are written in it. I want to compliment Corrine C. Johns on the letter she wrote.

Your little friend,
BIRDIE M. KITCHELL.

Here is a member who is fond of practicing. We hope there are many like her. Why should you not like to do the work which gives you power to do so beautiful a thing as making music?

WIDE AWAKE CLUB, IRONTON, OHIO.

Dear Mr. Manchester—I like the stories in THE MUSICIAN very much and expect to derive much benefit from the Perseverance Club. I am in the fifth grade, at school, and am eleven years old. I have taken Mother Hubbard Waltz and Fairy Polka. I am in the First Grade of the National Graded Course. I like music and am very fond of practicing. My sister takes THE MUSICIAN and I get the answers from it. Wishing the Club success, I remain,

Your little Club member,
OLIVE THERKILDSON.

Here is a letter from a member who is evidently interested. We hope the Club will do him good.

GARLAND, PA.

Dear Sir—I am a boy eleven years of age and have been a member of the Young Musicians' Perseverance Club since May. I have not answered any of the questions so far. I think that the "Messiah" was composed by George Frederick Händel, in 1741, when he was fifty-six years of age. I must close my letter. So wishing the Club success, I remain,

Its sincere friend,
MASTER LEE MICKLE.

These two letters came from friends. The pictures were received and are now on my desk.

ST. JOSEPH'S ACADEMY, MCSHERRYSTOWN, PA.

Dear Sir—I have been taking lessons since last September. I have learned the scales of C, G, D, A and E and several exercises and pieces. I like to practice sometimes, and I always love to hear music. I like to belong to your Club, and I hope you will be pleased with our pictures. Won't you please put all the pictures in THE MUSICIAN?

With best wishes,
LIGUORI HEMLER.

Dear Mr. Manchester—Liguori is busy writing to you and I will have this done to send with her letter. When I heard that Liguori was taking lessons I wanted to do so too. I practice pretty well, but if I had pieces I would like to practice better than the scales and exercises I have now. If I am very good, and work hard, I may have a piece after Christmas. I come to the Club every week, and when we had about Mendelssohn and Moscheles, I had a query to answer before all the girls. Now I wish you a Merry Xmas. Ida Price, one of the blind girls, is going to take you these letters and our pictures.

Your devoted Club-member,
REGINA POIST.

NOTES FROM A BOY'S DIARY.

This is the season when a good many people, big and little, resolve to keep a diary, but there are so many broken resolutions and unfinished diaries that it is no wonder that little books with their clear, white leaves and gold-lettered covers and tiny pencils, must be more and more bewitching every year, and what is more suggestive for a Christmas present than one of them? So there are plenty of people around the counters where they lie shining and dainty, and plenty who receive them as gifts and determine to use them every day in the year.

There was once an American boy who loved to write about the happiness of his life, and perhaps the reason that he persevered so well in doing it was because he did not decide to write every day, but only at times, but still the record was kept, even when he became a man. Extracts from it then were printed in a book and named *Notes of a Pianist*, but even the little paragraphs written in his childhood, and which he read aloud sometimes to his sisters, are full of interest. He lived then in sunny Louisiana, amid the orange groves, the fragrance of magnolia blossoms and the beauty of the scarlet pomegranates. He was a lovable child, but dreamy, and fond of rambling about by himself. One day when he was only five years old he went with his parents to visit friends who lived on a plantation where the poor negro slaves were cruelly treated. An old colored woman was being punished by the overseer, and the child, crying with pity, ran to the great mansion where its mistress was entertaining his parents and begged her to sell his father the slave. So the old negress, "Sally," went back with them and became his faithful friend and nurse, and he tells us of her, sometimes, in the diary. The old Creole ballads, which she sang to the boy and his sisters as they sat in the warm evenings with the moonlight shining down thro' the magnolias, he wove into the little pieces he began to compose as he grew older, for he loved music, and was never so happy as when practicing or writing these pieces. Even in the compositions which he wrote when he was grown up, and had left the beautiful Southern home to travel and play in concert, are snatches of the negro melodies. Sometimes he called one simply a "Nocturne," or another a "Berceuse." One, a dance, named the *Bamboula*, is full of the southern beauty of moonlit nights, when the negroes gathered and danced and sang under the banana trees. But let us read what he wrote as a child about these days:

Jan. 1st, 18—.

I ran away from Celestine and came up here to write. I am going to keep a diary like my beautiful mamma. How I love her; she is so good to me. She is tall and dark and speaks and sings to us often in French. I can play the songs, all of them, just from listening. We study French with Monsieur Mauroy and music with Mr. Letellier. I take violin lessons, too, of Mr. Ely, but I like the piano best. There, Celestine is calling for me all over the house, and I must go.

Feb. 3d, 18—.

Celestine and Clara are my sisters. Clara is very little yet, but Celestine and I play duets together. We have two pianos in the drawing-room, and sometimes I make Clara play some of her baby pieces on one piano, when we have company, and I play variations to them on the other. Our friends applaud, and I enjoy it immensely, for Clara thinks it is she who is playing it all.

March 12th, 18.—

There was a barn-dance last night, and we all went to see the negroes dance. Some of them play fiddles and some banjos, and they all sang, and the great barn is lighted with lanterns and trimmed with red camelias and orange boughs. Sallie carried Clara in her arms, and the neighbors came, and we all sat on high ladders to watch the fun.

May 10th, 18—.

I played last night at one of Mrs. Boyer's evening parties. She is the leading music teacher in New Orleans. I heard her afterward saying I should be sent to Paris to study, but mamma said it must be years before I can go.

Aug. 7th, 18—.

Sally sings to us a song that I love. I have written it down, and shall play it with the variations I have made on it, at a concert soon.

Oct. 2d, 18—.

To-day I was walking in the grove and a bird seemed to be following me and singing. I sat down, and there he lighted on a bow over my head, and sang his most beautiful warblings and trills. Then he flew away, and I ran home in a hurry and rushed into the drawing-rooms, scarcely noticing that they were filled with company, I was so afraid I would forget some of the bird's song. I sat at the piano a good while practicing it, and by and by I could make it sound like a whole bird concert, with warblings and trills and flute-like calls. The people all clapped their hands then, and I turned around surprised to see that they had been there listening all that time.

Jan. 1st, 18—.

A year since I last wrote, and I have been so busy! A few weeks ago I gave a concert, and had to practice hard, for I played some of my own pieces, and besides all the piano parts for Mr. Miolau, a poor violinist, for whom the concert was given. I was so glad the receipts were good, for I gave them all to him, and afterward he came with a good many of his friends and gave a most beautiful serenade that same night just underneath my windows.

1. What is the name of the boy from whose diary the extracts are made?
2. In what city did he live?
3. About what age did he go to Paris to study music?
4. When he returned to America and made a successful concert tour he was called "The greatest of ——— ———?"
5. What composition did he write for the piano which sounded like a certain stringed instrument?
6. Name the most popular of his compositions.
7. Was he greatest as a composer or a pianist?
8. What is the meaning of *Berceuse?*
9. What is the meaning of *Nocturne?*
10. Give the dates of this composer's birth and death.

WOMAN'S PAGE

Conducted by Miss S. C. VERY.

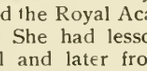
In view of the increasing activity of woman in all phases of music life, her aggressive and authoritative entrance into spheres heretofore monopolized by men, viz., orchestral and chamber music, and her important labors in the organization and development of musical clubs, which are exerting an ever widening influence on music life at large, THE MUSICIAN has felt it incumbent upon it to recognize this latest element of musical culture, and therefore announces with great pleasure the institution of this Woman's department. It has been placed in the hands of Miss Very, whose activity as a lecturer before many Woman's Clubs enables her to speak of them with authority. The object of the department will be to stimulate interest in the subject of woman's relation to music life, and inquiries from any of our readers who may desire information or suggestions in forming musical clubs will be gladly responded to. We hope our efforts to reach women throughout the length and breadth of the land may prove eminently successful.—EDITOR THE MUSICIAN.

ANGLO-SAXON WOMEN IN MUSIC.

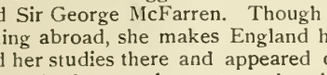
IV. Agnes Zimmermann, Pianist and Composer.

Miss Agnes Zimmermann, well-known to all those interested in music, though German by birth—having been born on the Continent July 5, 1847, is generally considered English, since she was taken early to England, and as a student, entered the Royal Academy of Music at the age of nine. She had lessons from Cipriani Potter and Steggall and later from Ernst Pauer and Sir George McFarren. Though occasionally traveling abroad, she makes England her home, completed her studies there and appeared constantly at concerts. At the age of seventeen she played with success at the Gewandhaus in Leipzig, after having made her début at the age of sixteen in the Crystal Palace. She is aptly described by the English as the Sir Charles Hallé of lady pianists and has always devoted herself to the Classical school. Thorough in all that she does, she has even been called severe, in evidence of which is her careful editorship of Beethoven's, Mozart's and Schumann's works. A few years ago she was a constant performer at the Saturday and Monday Popular concerts and says a writer: "No classical nor chamber concert was ever complete unless one read the familiar announcement: Pianist—Miss Agnes Zimmermann."

Few women choose the profession of music-editor or revisor but among the few Miss Zimmermann excels. Her editions of the Masters are well-known in Europe; they are published by Novello & Co. In the preface to her edition, she states that its justification as a help toward the better understanding and rendering of these great works is; first, by reason of its fingering; secondly, by its slurs; and thirdly, by addition of small staves in places. Regarding the fingering, the editress has, on careful consideration, selected the one most conducive to clearness in the phrasing. Slurs in innumerable places, stop short of the final note or resolution. In Miss Zimmermann's edition they are made to include such notes or resolutions. As to small staves, she declares: "The compass of the pianoforte was formerly much more limited than it is now, the highest note being at one time and consequently, passages which in the first part of a movement appeared in a certain form, were obliged when they recurred in the second part in a higher key, to be compressed for want of notes. In Sonata, No. 4, this



occurs, instead of this.

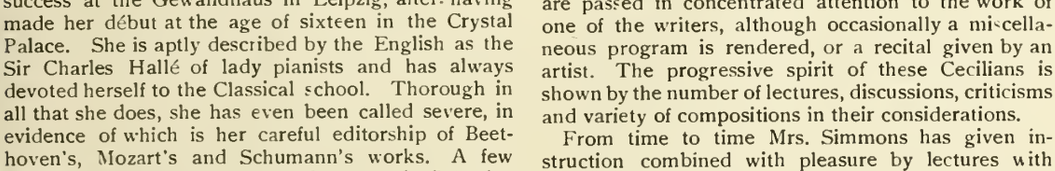


Such alterations are offered as suggestions only.

In Novello's catalogue Miss Zimmermann's compositions—for she is honored as composer also—amount to Opus, number fifty-six. Her edition of sonatas is obtainable in separate numbers at four shillings but complete in one volume, cloth gilt, twenty-one shillings.

An example of Agnes Zimmermann's editing, from her revision of Beethoven's works.

Beethoven, Op. 2, No. 1. Edited by Agnes Zimmermann



CLUB WORK.

ST. CECILIA SOCIETY, ROME, GEORGIA.

In 1898, generated by the musical atmosphere of Shorter College at Rome, the above society was organized, with Mrs. Simmons, Dean of the College of Music, as its ruling spirit.

On the programs of its semi-monthly meetings are the names Bach, Beethoven, Chopin, Schumann, Liszt, Tschaikowsky, Chaminade, Grieg, etc. Afternoons are passed in concentrated attention to the work of one of the writers, although occasionally a miscellaneous program is rendered, or a recital given by an artist. The progressive spirit of these Cecilians is shown by the number of lectures, discussions, criticisms and variety of compositions in their considerations.

From time to time Mrs. Simmons has given instruction combined with pleasure by lectures with following themes: Franz Liszt and Modern Pianism. Personal Reminiscences of Bayreuth. A Visit to Liszt's Home. Reminiscences of the Passion Play. Venice and Barcarolle. Discussion of the playing of Paderewski and Rosenthal. Personal Reminiscences of De Pachman. Two of the Programs of the Cecilia Society will show the scope of afternoon studies.

With American Song-Writers: Rosary, Nevin. Little Brown Thrush, Nevin. The Blackbird, Harris. When Love is Gone, Ah! 'Tis a Dream, C. B. Hawley. Love Me if I Live, A Ditty, Arthur Foote. Blessed Memories, H. W. Greene. Sunshine Song, Night, Morning, Laddie, Neidlinger. Bedouin Love Song, Jules Jordan.

An Evening with Liszt: Liszt as a Pianist (Essay). (a) Gondoliera. (b) Rhapsodie, No. 11. Liszt as a Composer (Essay). Liebes Traum, No. 3. Liszt as a Pedagogue. Transcription, Song to the Evening Star. Reminiscences of a visit to Liszt at Weimar. Rhapsodie, No. 12.

IN THE CLUB WORLD.

WANTED, A CLUB ESSAYIST.

We are told, by a New York librarian, of at least one woman who has been successful in obtaining lucrative employment by preparing essays for Clubs. Here is an opening for the musical-woman with the ready pen. That there is a demand for such work is proved by petitions for suggestions relating to subjects of Club study, and frequent requests for a paper thereon.

A LANGUAGE COMMITTEE.

In Clubs searching for novelty why not form a language committee? Through its efforts some foreign papers may be read for the Club, or their news translated, or a stimulus given toward interest in idioms, inseparable from Music's Art, History and Language. One has but to look over the files of Poole's Index to note the small share Music has in considerations of interest by editors of American non-musical magazines. Yearly therefore, subscribers augment for foreign publications in which the art shares space with other topics of general interest. Some delightful phases were given last year, suggestive because from the standpoint of writers not musical. Among these were Goethe and the treatment in music of his Faust; Acoustics in daily life; Patrons in History of Music.

FOLK LORE.

Under the head of Musical Ethnography one French paper discusses the art of Madame Sada Yacco, declaring her work the theatrical success of the Exposition. The same series of articles announces the phonograph's use in securing data for students of Folk Lore. In many Clubs the subject is but lightly treated, for its meaning is misty to many. To arouse interest therein, one enterprising Club in Northern New York has engaged the services ot some negroes in the vicinity for a Club meeting. Coincident with this, another Club in the Western part of the State, secured a Chinaman of the place to play upon a Chinese instrument, showing its capacity for tonal effect and illustrating typical music for the edification of Club members. Such study of local talent will lead to deeper investigations.

WAGNER CLUBS.

Clubs whose object is to study the works of the inceptor of the music drama, have an added zest given this year by the prospective Bayreuth festival of 1901. The Washington Club already mentioned in THE MUSICIAN, reports that renewed zeal and progress has been brought into it by Miss Mignon Ulké, who has just returned from a stay of three years in Europe. The Ring is the theme of study for the season, and illustrations are by means of the voice, the violin, piano and essays. This Club has opportunities for consulting scores at the Congressional library.

A New York Club is studying Parsival and utilizing the orchestral scores as well as the three different translations at the Lenox Library. Kleinmichel's piano-score with German words is the guide, and Lavignac's well-known work the text-book.

TO BACH.

Come let me plunge beneath thy mighty wave;
Immerse me in the current of thy mind;
Thy thoughts which spread like branches intertwined,
All let me know! Thy guiding hand I crave!
Thy voice shall cheer my pathway to the grave,
Like springing water in a cavern blind,
Or in white desert some oasis kind.
My care to live thy harmony shall save,
Thy meaning, Master, let me comprehend;
Upon thy giant form mine eyes would gaze;
Toward my basalt dome my feet would press!
O! Let my prayers thy Temple steps ascend,
Mine eyes enjoy thy heavenly Hymn of Praise
Till all my soul forget its weariness!

—*Carmen Sylvia (Queen of Roumania).*

Inspired by the recent abduction of the French writer Gyp, the *Gaulois* (Paris) relates an anecdote about the famous singer Malibran. One night after she had finished the opera and was resting from her fatigue before going home, a breathless servant appeared with the news that her mother was dying. The singer followed the flunky to a cab which soon was tearing along the rough pavements, but instead of taking her home, it stopped in front of a strange house. As she was about to remonstrate a hood was thrown over her head and she was forcibly carried into an elegantly decorated room. A harp was standing in the centre and on the music rack was a note in which the writer said that the reason for the abduction was that he wished to hear her sing alone and away from the glare of the theatre. Finding no means of egress she was compelled to sing. When the song was finished, the same servant reappeared and conducted her to the carriage. On arriving at her home she found a magnificent pair of diamond earrings on her table and with them a piece of paper with the single word "*Merci.*"

It has been estimated that $500,000 is the average yearly contribution of our largest cities for the support of their street piano "artists," the wandering orchestra which requires this generosity by ministering to what Dr. Johnson called "the gayety of nations." A hand organ manufacturer claims that $2.50 is approximate to the usual pleasant day earnings of the grinder, and that of late there has been even a considerable increase in this amount.

TEACHING.

DR. HENRY G. HANCHETT.

Taken in its broadest sense, the word I have selected as any title covers the highest grade of work that can occupy the mind of man. We are accustomed to rank poets and statesmen as foremost among the great ones of our race; poets and statesmen are engaged in guiding nations and peoples along the paths that lead to the highest good, that is but another way of saying that they are teaching. Preachers, editors, physicians—what are they but teachers? The word "doctor" means simply teacher, and the highest scholastic degree is doctor in law, medicine, theology, philosophy or letters. The very pinnacle and crown of all the offices open to mortals is that of motherhood (would that more of those who aspire to it would undertake to prepare themselves for it), but in how large a measure is the office of the mother simply that of the teacher. When one thinks of these things, how sad it sounds to hear teachers complaining of the drudgery of their work and wishing themselves tradesmen, bankers or mechanics.

But many who call themselves teachers are but little engaged in teaching; in fact, the work of the true teacher necessarily involves more or less of work that is of a lower grade and quality than real teaching. For instructing, training and criticising are not quite the same as teaching and are distinctly lower operations. Instructing is conveying information, which may be and often is absorbed in a mere sponge-like and thoughtless manner. Training is persistent guiding of a physical or mental operation until it has become habitual or automatic; it is a process that can be perfectly applied to the education of a dog or an idiot. Criticising is the comparison, item by item of any work with an ideal standard, and the pointing-out of its approximation to, or deviation from, such standard. But teaching is the operation that results in the education of the mind—the operation of "drawing out," by use, the powers of the most marvelous organism known to man, till they are capable of fulfilling their functions independently and completely. The true teacher must instruct, must train, must criticise, but he must do something more and higher than these things, and must so instruct, train and criticise as to make that part of his work conform to the higher laws and uses of specific teaching

As a class, music teachers have better opportunities for doing thoroughly good teaching than falls to the lot of the majority of teachers in general, because they so commonly give private lessons. Their close contact with an individual mind affords opportunities for the study of that mind that should lead to most brilliant and satisfactory results in its education. For the first and basic duty of the teacher is to familiarize himself with the laws of the mind—with psychology—and then to apply his knowledge of those laws to the development of the pupil's brain power. But it is to be feared that many members of the music teaching profession are so desirous of making a good showing, practically and speedily, that they lose sight of the higher and more important aims of their work. The best results are expensive in time and labor, and they are apt to be less appreciated by patrons and pupils than are the showy and superficial accomplishments that are comparatively easily won and that usually are evanescent. Pupils, as a rule, do not come to the music teacher to be educated—they come to learn to play or sing, and that is a very different thing. And it is so much easier to make a person play or sing in a superficial way by setting him a pattern and letting him imitate in parrot fashion, and then criticise his imperfections telling him this note is wrong and should be that, than it is to make him see for himself and teach him to think out processes for securing the best effects.

To make plain the differences between instructing, criticising and teaching, let us take a very simple illustration. Suppose the pupil is a beginner and the teacher is endeavoring to make him familiar with the names of the piano keys. The teacher can say, "This key is C, that one is F." He can similarly name the others and tell the pupil how the various letters are related to the black keys, or he may mark the alphabet-letters on the keys. All that is instructing. Then he may require the pupil to say "C" every time that C is struck, and may strike it again and again from different antecedents, or may have the pupil strike it over and over, giving its name. That is training. Or he may have the pupil seek for F, and if he fails to find it may say that he has struck two keys below F, or one key above it, and the like. That is criticising. By any of those methods the result desired can be attained, that is to say the pupil will learn the names of the keys. But by instructing the pupil that the musical alphabet consists of the first seven letters of the literary alphabet, that C is the first letter of the musical alphabet and is located at a certain point, that the letters follow in order up the keyboard, and then insisting that the pupil think out the relations of letters to keys and name the latter himself—by such plans the teacher will actually teach. Doubtless more time and labor may be spent over this simple fundamental step, doubtless more patience may be required, possibly the pupil may be wearied and dissatisfied and parents may find fault—and none of these things are desirable—but powers of reasoning and observation will be cultivated, independent mental grasp will be acquired so that later steps will be more quickly taken, and in every respect the ultimate result will thus be more enduring and satisfactory. It isn't a matter of any great importance whether one knows that a certain key is called "G" or not. Many persons can play very well who do not know that fact, and any other name would answer most purposes quite as well. But it is a matter of great importance that one should learn to observe and think. The greatest artist is the one who has the strongest mental grasp of his implements and their purposes. The greatest teacher is the one who gives his pupil the highest ideals and the clearest independent conceptions.

President Garfield is reported to have said that Mark Hopkins seated on one end of a log and a student seated on the other would constitute a university. What the student needs is a teacher. If the student is working at the piano, let him seek a teacher who can inspire and stimulate his every faculty to grow, to grasp, to accumulate, to express—it matters little whether the teacher can play or compose, whether he was born in Berlin or in Podunk, whether he is the "fad" filled with new methods or not. Can he teach? That is the question. Never mind the show, the flattery, the short cuts, the name; we want ideals, character, thought, inspiration.

THE "TANNHÄUSER MARCH."

MARIE BENEDICT.

On a wooded spur of the Horselberg, among the Thuringian Mountains, stands the Wartburg Castle. Strange stories might its gray old walls unfold, had they but the gift of audible language, of all the long centuries which have slipped "into the silent hollow of the past" since the frowning buttresses were first raised on the lofty spur of the mountain, not long after the year 1100. Stories of the day when its stately hall was the home of the Minnesingers, in their contests of poetry and song. Tales of many a knightly pageant in the days of chivalry, of the months when its strength formed a safe refuge for Luther from the enmity of the Roman Church, and sad stories of these latter decades, in which it has fallen from its noble history to the uses of a modern prison.

Not every student who carelessly thrums the measures of the simple piano transcription of the "Tannhäuser March," perhaps not every student who finds fancy led captive by the opera in its finest presentations, knows how deftly legend and history were interwoven in the making of the story, knows that at least two of its characters—Hermann, Landgrave of Thuringia, and Wolfram von Eschenbach—were not only living men, but men who left a marked impress on their century, and that the great hall of this old Castle Wartburg, where Hermann often held court, was many a time the scene of contests of poetry and song, in many points, probably, very similar to that of which the opera of "Tannhäuser" tells the story. To Hermann, the Landgrave who ruled Thuringia at the opening of the thirteenth century, history has accorded a high place among those whose liberality and whose enthusiasm for art made possible the first faint gleams of the dawn of German music and German poetry in the gloomy night of the middle ages—a dawn which was all too soon to be darkened by the lowering clouds of despotism and bigotry which swept over it with the changes in the ruling houses of Suabia and Thuringia, but which had, nevertheless, gained a step toward the day. For, faint gleams though indeed they were, when compared with the splendor of the development of later times, they exerted a marked refining and ennobling influence on the roughness and narrowness of the period in which they appeared.

The works of the German Minnesingers are said to have been decidedly superior to those of their contemporaries, the French Troubadours, "in delicacy of sentiment, elegance and variety of rhythmical structure and grace of dictation." As with the Troubadours, their ranks were recruited from members of the nobility, and even royalty; but unlike their French cousins of the family of art, they do not seem to have considered it beneath their dignity to play their own harp accompaniments as they sang their minstrel songs in the great castles of the land. The name of Wolfram von Eschenbach is one of the brightest in the list of Minnesingers handed down to us from that far-off country.

The scene to which the "Tannhäuser March" belongs is the stately hall of the Castle Wartburg decorated for a festal night. We may fancy walls hung with rich arrows, with armor, and with brave trophies of the chase, the rough stones of its floor strewn with rushes, after the custom of the twelfth century. To-night it is again to gather the Thuringian knights and nobles for the song contest in which they delight, and the prize is once more to be given the successful contestant by the beautiful Elizabeth, the lady of the manor, who has long withdrawn herself from these festal occasions, in grief for her absent lover, Tannhäuser, who is to-night once more present. With the opening strains of the march the doors of the great hall open, and the knights, nobles and ladies of the court enter in brilliant procession, singing as they come the chorus in praise of poetry and song, and of Hermann, the noble patron of both arts. After they have taken their places the Landgrave, rising in his seat, addresses them, bidding them welcome, reminding them of the high aims of their art, and telling them that, while the theme he is about to propose for their lays is love, the Princess herself will bestow as prize whatever the winner may ask:

"Therefore hear now the theme you shall all sing.
Say, what is love, by what sign shall ye know it?
This be your theme. Who so most nobly this can tell
Him shall the Princess give the prize."

In playing the march let us associate the Landengrave's theme with the trio, whose lyric beauty and exquisite changes of harmony form so effective a contrast with the principal march motives. By far the most attractive piano form of the march is Mr. Albert Ross Parsons's arrangement of the Liszt transcription. As edited by Mr. Parsons, the piece is shortened, all its effectiveness retained, and the anti-climax, caused by the excessive repetitions of the original Liszt version, avoided. I am uncertain as to whether this shortened form is yet published, as I have omitted to ask Mr. Parsons recently concerning it, but presume that it is in print by this time. But whatever version of the march is used, the student's rendition of the music must be characterized by beauty of tone, the gala spirit and that irresistible rhythmic movement which fires the blood of the listener, whether he is a musician or some one entirely unversed in music as such. Keep in mind the brilliant scene, the enthusiasm, the devotion of the Minnesingers to their art and to their noble leader, and throw yourself heart and soul into the music's every phrase.

These noble minstrels of the olden time, by the way, derived their class name from the usual subject of their lays, the word minne signifying love.

MARIA ANNA HAYDN

Like Bach, Haydn married a Maria, though not a Maria of his own choice. In the year 1760 he was twenty eight and passing rich on £20 a year, *plus* "board and lodging." What more natural than that he should think of taking unto himself a wife? Two of his pupils were the Misses Keller, the daughters of a wigmaker, to whose house he had been introduced by Mr. Keller, Jr., who was a violinist at St. Stephen's when Haydn was a chorister. He fell in love with the younger of the fair pair of pupils, but she took the veil in preference to taking Haydn. The wigmaker, however, being anxious to keep young Mr. Haydn in the family, persuaded him to marry the elder damsel, Maria Anna, who was three years his senior! Here we cannot do better than let the well-informed Carl Ferdinand Pohl speak as to the result of this unfortunate union. Pohl says: "The wedding took place at St. Stephen's (Vienna), Nov. 26, 1760—a bad day for Haydn, and the foundation of unutterable domestic misery. His wife was a regular Xantippe—heartless, unsociable, quarrelsome, extravagant and bigoted, who, as her husband said, cared not a straw whether he was an artist or a shoemaker. They had no children." But we may draw a veil over Haydn's conjugal miseries.

SUGGESTIONS TO VIOLIN STUDENTS.

H. W. HART.

(Concluded from December.)

To one who approaches the study of the violin with the idea of being able merely to gratify that inherent and almost universal desire to extract (without pain) sounds from some musical instrument, the choice of a teacher is an unimportant matter, because such a one will, probably, not go far enough to be either harmed by a poor or benefited by a good teacher. But to one who really wishes to *play* the violin, the selection of a teacher is really more important than the selection of an instrument.

A very grave mistake is frequently made by choosing in the beginning a cheap and incapable teacher, with the intention of taking a few "finishing" lessons later on from a proficient instructor. As this finishing off process cannot be accomplished without a good groundwork of correct principles, the effort meets with defeat, for the time is hopelessly spent in trying to correct previously acquired faults.

The first year or two under a poor teacher are sufficient to effectually spoil a student's future style, and all the after teaching can never entirely undo the effect of the first year's instruction. Only one who thoroughly understands all the details of violin playing, and who realizes the importance of his undertaking, wi I make a good conscientious teacher. Nor is the best advertised teacher, or the one whose name is the most widely familiar in town, always the best teacher. It is a question that must not be decided upon superficial evidence; the decision should be the result of careful investigation and consideration.

The strings—the vocal chords of the violin—should be carefully selected. By their vibrations the volume of air within the violin is set in motion and sound produced. They correspond to the "reed" of the clarinet or other reed instrument, and any imperfections in the strings is immediately communicated to the tone of the violin.

Bad strings are a constant source of annoyance. The perverse "whistling" of a string will spoil a performance, especially if the offender happen to be the E string.

Another difficult task is getting the strings all true in fifths, and the fact that the lower string will become gradually false after being on the violin any length of time, increases the difficulty.

As trying as it is to get strings true in fifths in all the positions, it is still harder to get strings free from the "whistling" tendency. A thin string is less likely to whistle than a thick one, but the use of thin strings lessens the sonority of the violin. The exact thickness of string suited to the particuiar violin in question having been found, it should be carefully marked off on a string gauge and carefully adhered to. Sometimes even thin strings will whistle in a muggy atmosphere. The thinner the string, of course, the clearer the tone; but, as stated before, a moderately thick string is best for the sonority of the violin, provided it does not whistle. In purchasing a string always refer to the string gauge and do not trust to the eye.

In order to discover if a string is true or false in its vibrations throughout its length, it can be tested by taking it at each end, between the thumb and finger of each hand, and twanging it with a finger on the right hand, holding it at the same time before a dark background. If it shows only two lines in vibrating it is a true string, but if it shows a conflicting number of lines it vibrates falsely and is of no use.

Strings should be kept in oiled paper and carefully rerolled in the rings, as they are bought, when not strung on the instrument

The violin should be kept free from resin and thoroughly wiped before being replaced in the case. The resin and dust will injure both the tone of the violin and the varnish, if allowed to accumulate. Oil of almonds rubbed on with a bit of silk is excellent to clean a violin, carefully wiping off all oil with a second piece of silk.

In newly stringing a violin it is usually best to put the D string on first, as a starting point, since it is the thickest, and consequently most likely to be true in itself. The perfect fifths in which the violin is tuned must be true throughout the entire length of the strings in all the positions. This must be tested by "stopping" each pair of neighboring strings and sounding them together. If not true the fifths will be out of tune quite noticeably above the third position.

A string may be in tune by itself and yet not when played in fifths. This is accounted for by the unequal vibrations. It occasionally happens that a length of string giving perfectly even vibrations under the preliminary hand test, previously described, will be slightly false when subjected to the greater tension of being "tuned up." On the other hand, it is possible for a string giving *slighlly* uneven vibrations in the hand to become true at the higher tension.

Some false fifths will be partially or wholly cured by reversing the ends of the strings. Another peculiarity is that strings become false by constant usage, and should be changed at least once a month during ordinary usage, and sometimes more frequently, depending upon the amount of playing.

It is evident from the foregoing that the ear plays a very important, though passive, part in violin tuning and playing. If it is naturally accurate, so much the better; but constant practice and listening to good music, thus accustoming the ear to correctness, will cultivate and assist very materially.

Delicacy of hearing, the ability to recognize the most infinitesimal intervals, is more necessary in playing stringed instruments than in playing wind instruments, either wood or brass. This is especially true of the violin and 'cello, which even in orchestral and ensemble playing are set frequently and kept considerable lengths of time, in the higher positions, where the ear is practically the only guide to correctness in intonation. The viola and double-bass are kept more uniformly in their lower and middle register.

The pianist must, of course, have a delicate ear in order that the nice gradations in tone, the fortes and pianos, may be properly observed, but he never has to consider whether he is playing in tune or not, because the notes on the piano are absolute; if you strike A of any octave it is always A, provided the piano is in tune.

On wind instruments the pitch of a note is either raised or lowered, according to the position in which the instrument is held, and whether the performer blows with force or only lightly. This is particularly true of the flute. By turning the mouth hole upwards and blowing across it the tone is sharpened; by turning the mouth hole inward and blowing more into it than across, the tone is lowered or flatted. In the same manner, by blowing very hard, as for a fortissimo passage, the tone is raised or sharped, consequently to nullify this and retain the instrument in perfect tune, the flute, when a loud passage is played, is turned slightly inward (the natural result of this being to flat the tone), but the hard blowing to obtain the fortissimo counteracts the flatting tendency, and in consequence the note is played in tune.

On the contrary, if a pianissimo passage is to be played, the mouth hole must be turned outward in order to counteract the flatting tendency of the very easy blowing. To adapt the position of the flute, therefore, to the countless gradations of blowing requires a good ear. But to play in perfect tune in the higher positions on the violin requires a much more delicate and susceptible ear. Of course, in tuning a violin the ear must be very correct.

In putting on an E string, the drawing it up to pitch usually pulls over the bridge a shade, and often when drawn up too suddenly the bridge is liable to be forced forward, down altogether and broken. This not infrequently knocks down the sound-post and causes other mischief. It is, therefore, always advisable, after having drawn up a string, to see that the bridge is in its proper position. Correctly the bridge should lean slightly towards the tail piece, and if drawn out of position in tuning the violin should be restored.

In the management of the bow see that the stick always has an inward bend, even when screwed up for playing, and never neglect to unscrew it to the lowest tension when it is not being used. The bow should always be well resined before commencing to play or practice.

In fixing the strings at the pegs the ends should be turned under the strings toward the side of each particular peg. If this is done an occasional application of chalk and soap (with not much of the latter) will be sufficient to make the pegs move quite easily and hold well without much pressure after being tuned. Neglected pegs move stiffly and wear the peg holes larger by the hard pressure necessary to make them hold; the difficulty attending tuning to a nicety is by such neglect much increased, not to mention the disagreeable grating sound that each turn makes.

Of great importance is the quality of the violin. Cremonese instruments are quite out of the reach of all but a few wealthy collectors; but there are sweet-toned, well-seasoned instruments that can be purchased for a reasonable amount of money. Old instruments, originally of good quality, are preferable, for a new violin is apt to have a more or less harsh, rough tone, which can only be overcome by time and use. It is seldom wise to purchase an instrument without the practical counsel of some reliable friend who understands the matter.

Good bows are cheap when compared with the price of good violins. The weight and strength of a bow is a matter of taste. The chief characteristics of a good bow are lightness without being top-heavy, and elasticity of spring combined with resisting power in the sidewise as well as the downward pressure. The hairs of the bow will need frequent renewing after hard playing, for if the fibre of the hair is worn out it loses its bite and brings out a dead and uncertain tone, very apt to whistle.

VIOLIN PRACTICE OF SCALES.

Let those violinists whose tone and technic are faulty, faithfully follow the following suggestions for the practice of scales and they wi l undoubtedly become conscious of great improvement.

If you have not yet reached the positions you can practice a scale of eight notes with the same benefit as a scale of two or three octaves Now let the following be strongly impressed on your mind: Practice slowly and give most careful attention to your intonation (weigh every note that it may be pure in value). Be sure of the following conditions:

First—A Light bow.
Second—A loose wrist.
Third—Heavy fingers.

Begin your practice the first day with C major scale, then its related harmonic minor and, lastly, the melodic minor scale, and so on until all the sharp keys have been practiced. After these begin with the flat keys. Practice first lower half of bow down and up strokes, then middle, and, last, with the point of bow. Then slur eight notes to a bow. In practicing up and down bow be careful that you give the last note full value or leng h of bow whether half, middle or upper half of bow is used. By heavy fingers is meant that your hand should remain as quiet as possible, the fingers only being moved, and as you make a note let the fingers be pressed *hard* upon the strings, but do not raise them too high. Let your tone be made with the fingers, the low being held lightly on the strings and the wrist loose. Be certain that the bow and fingers begin and end a note together. Again, I say practice slowly, let your fingers strike hard upon the strings without being raised too high. Direct your attention more to the fingerboard than to the bow. Let your bowing be broad and never detached in this scale practice. Make this be your honest, faithful daily beginning of practice. After you are through with it rest a half hour or so and then begin your etudes, etc., this scale practice should be at least a half or whole hour. Note your technic and tone in two weeks' time, and, lastly, remember this rule:

First—A light bow.
Second—A loose wrist.
Third—Heavy fingers.

A VIOLINIST.

Some of the best known violin makers in Europe live in the mountains; their fathers and their grandfathers made violins; also the children are taught the art. Thus, the work has become a second nature with them; in fact, it is in their blood. The father usually makes the body of the instrument, and the younger people are taught piece by piece. Thus, any one of these violin makers knows, in case of necessity, just where he can get each part of an instrument made; he also knows each maker's specialty and good workmanship. If a son or other employee leaves the violin maker, the latter always knows just where he can obtain other skilled help. In this country it is difficult to obtain good mechanics, for the reason that young men here are not trained to the work as they are in Europe. Most of the repairing to violins is done in winter, which is more or less necessary in this climate. Really fine work on a violin has got to be done by hand; there is no machinery that possibly could do it. One must love the art, for it requires much skill and great patience. The brain must do considerable planning. There can be no particular or regular hours for working; if in the mood, one may have to work from early morn until late into the night.

A BACH RECITAL.

JULIEN.

An autumn evening with a suggestion of winter in the air, followed a cool October day. A mist hung over the fields, and an icy wind arose and pitilessly snatched the brilliant autumn leaves from their beloved forest trees, and scattered them along the country roads and paths to be trodden on. Over all Nature was spread that quiet gloom which suggested to the poet "the saddest day of the year." But the town which lay in the middle of a large plain took on a brighter appearance; there the people snugly sheltered in their warm houses, defied the elements, and from the windows bright lights shone forth as a token of comfort and peace. It was somewhere about the year 1732, and the town of which we are speaking was called Leipzig. Deep ditches, high walls and stately linden trees surrounded the city, giving it an air of being well protected. The houses were mostly high and narrow with pointed roofs, with here and there a little tower peeping above them. But high church steeples were singularly rare. In the Cantor's dwelling, which was near the celebrated *Thomas School*, the hum of many voices was heard on this particular October evening, as though a large family was assembled there. By a large oak table, which stood in the center of the family sitting room, sat a large stately man, clothed in black garments and wearing a rather shocky wig. His complexion was bright, and around the corners of his firm mouth played a kindly smile. His flashing black eyes had an indescribable power which was irresistible to any one coming in contact with them. This man was Cantor *Johann Sebastian Bach*, celebrated throughout the entire city for his grand organ playing. The good people of the city talked of him as if he were a wizard, and one whom they could never approach with any familiarity; and shook their heads when the stately form of Bach sat at the organ and improvised. But no one thought of leaving the church when the mighty Cantor played, for the powerful tones of the grand organ shook the walls and even threatened to demolish the edifice. On the right side of the Cantor sat his wife, a woman stoutly built, with good features and kindly eyes. On her head she wore a white cap, and across her breast an immaculate kerchief. Her youngest child, Christopher, she held in her lap, while gathered about her were numerous lusty lads, who now and then stopped their games to play with the baby. Bach's eldest son, Friedmann, a large stout figure resembling his father, stood gazing thoughtfully at the group of jolly youngsters. At the left of the Cantor a slender young man had just taken a seat, who resembled the other members of the family in eyes and hair, though not in figure. He was Bach's second son, Phillip Emanuel, who had recently arrived from Frankfort on the Oder, after a long and tiresome journey, made to surprise the dear ones at home. He was relating to his father all about the new musical academy which he had established in Frankfort and was directing with great success. Presently he drew forth from his pocket a manuscript, and hesitatingly handed it to his father, saying: "Dear father, see if that is good for anything." It was a beautiful Sonata, which the father glanced through with moist eyes, and then handing it back to his son, he said: "Use well your time, my son, and with God's help you will succeed. The future will, I trust, bring you joy!" The two eldest sons listened like children to their honored parent's words, and tenderly expressed their delight by pressing his hand. Suddenly the sharp click clack of a horse's hoofs was heard approaching the door. The mother turned pale, the children forgot their games, and the two elder sons with frightened faces rushed from the room. Only Sebastian Bach appeared undisturbed and quietly remarked: "What is the matter with you all? Have each of you a guilty conscience?" After a few moments a postillion appeared covered with dust from his fast riding. He came direct from the royal residence of the Prince in Dresden, and desired to see Cantor Sebastian Bach, to whom he handed a letter direct from the minister of the much feared Prince, Brühl. Bach drew the large oil lamp nearer to him, shaded his eyes with his hand, and read the letter while Phillip Emanuel politely offered the messenger a chair. The letter ran thus:

My dear Cantor:

Our gracious prince and master, August of Saxony and Poland, wishes you, the distinguished organist, to appear at his residence, where he would be pleased to hear you play, and on Sunday, the 24th of October, he wishes you to play in a church in Dresden. Two days after you receive this letter, a royal carriage will be sent to carry you from Leipzig to Dresden, where we will await you with great expectation. Prepare yourself, my dear Cantor, for the great honor. In the name of my gracious prince, I greet you.

(Signed) Graf Brühl.

For some minutes after reading the letter, Bach seemed absorbed in deep thought. Scorn and indignation seemed to battle with each other. His eyes glanced from one to another of his beloved family. Friedmann and Phillip remained discreetly silent.

"Herr Courier," at last said the Cantor slowly and deliberately, "say to the minister that I, Sebastian Bach, Cantor of the Thomas Scool at Leipzig, will appear in Dresden according to the commands of my prince."

"I should like a written reply," replied the courier.

"Man," thundered Sebastian Bach, arising to his greatest height, "what right have you to tell me what *you would like?* Have not I, Sebastian Bach, given my word?"

"Dear father," remonstrated Phillip softly. "Silence, youngster, you know nothing about it," continued the father; and then turning towards the courier, he said somewhat more quietly: "You have my answer. You can tell the Count everything, it matters not to me."

The messenger very pale, had taken several steps towards the door. Bach caught him by the collar, and drawing him towards him said, in a more friendly manner: "Fool, that will be a wholesome lesson for you, will it not? But mark me, *the Court is not the world!* And now, Basta, if you will bring in our supper, and add a pitcher of beer, I will be highly pleased." The courier hastily took leave, and Bach, in a much better humor, took the vacated chair. The family gathered anxiously around him and Frau Gertrude exclaimed, "Ah my Bastian, will you leave us and go forth into the wide world? Will you leave us for the proud and sinful Dresden? Oh, the long, long journey!" The children who saw their mother in tears, commenced to cry and to cling to their father; in short the room was turned into a pandemonium.

At last the powerful voice of the Cantor called the family to their senses. He ordered the younger children to their nursery, and only the two sons with their mother remained. Then Bach, after taking a few rapid strides up and down the room, seated himself beside his wife, and in most gentle tones said, "You must not worry over the long journey, Gertrude. See in fourteen days at most I shall be back again in my old nest, and besides, I have decided to take these two boys with me"—he pointed to Friedmann and Emanuel. "They can look around the great city, and at the same time look after their father." The sons thanked him with beaming eyes. "So boys, we will once at least touch the heart of the worldly citizen with the sound of God's voice (he always called the organ tones God's voice.) And master Hasse shall also be made to know that there are higher grander musics than the sweet, light melodies of the beautiful Wales!" He seemed inspired as he uttered these words, and the members of his family gazed on him with a kind of awe.

But Bach now changed his mood, and in a brighter tone exclaimed, "Bring in the supper now, mother!" The table was set, a large stone pitcher full of foaming beer placed before the head of the family, a large loaf of bread placed b side it, to which father Bach, after a short blessing, helped every one from the eldest down, to a liberal supply, while his good wife distributed the noodle soup, and the humble meal was brightened by jokes and lively conversation.

The next day Bach made a visit to the rector in order to obtain the necessary leave of absence for the important journey. This was an unpleasant duty for the Cantor, for the reason that the Cantor and rector were not friends. The latter found fault with the musician for being so demonstrative and stormy in his manner. The former declared that the rector was a godforsaken, withered pedant. It was really the truth, for the rector's soul was dry and cramped like his body. He enjoyed neither tree nor flower, neither the birds of the air nor any living creature had any interest for him. He groveled in the dust of ages and enjoyed being the worm which he was. The organ playing of the Cantor he called devilish, and avoided on that account the wicked influence of the morning service.

[TO BE CONTINUED.]

WHAT IS A CLIMAX?

WILLIAM BENBOW.

It is interesting to know that the words "climax" and "scale" mean precisely the same thing. "Climax" is Greek and "scala" Latin and Italian for a ladder, staircase or a flight or series of steps. And one word serves to intensify the idea of the other, for in music the most common devices for leading up to a climax are the scale run, with its successive steps close, and the arpeggio ladder with its rounds placed at greater intervals.

We have come, from this tendency, to use the phrase "work up to" or "lead up to" a climax.

The most popular conception of a climax is a *ff* effect in the upper part of the piano; in other words, a thing that is approached only by an upward flight and a *crescendo.* And we readily admit that such an effect is the most consistent one for a large number of climaxes. Emotions of a joyous nature would naturally call for some such expression in the moments of their greatest intensity. But, even in that class, one can easily recall many examples where such a climax is reached by a downward sweep instead of an upward flight.

But what of the other classes of emotion? Do they not have a climax as well? What is the most natural expression of the supreme moment in sorrow, tenderness, and the like? Here we feel intuitively that flare and flourish are inappropriate, that sorrow does not end in a hurrah, nor tenderness culminate in a dash of blazonry. We speak rather of the depth of these emotions. We recognize that sorrow carries us as much downward from the usual level of our consciousness as joy lifts us upward from it. And, when we think of it a moment, we know there comes a certain instant of keen sorrow or a particular point of exquisite tenderness that marks the culmination. And this definite moment is the climax.

In its musical expression, however, how rarely do we conceive of such a moment as a climax. Yet it needs as careful an approach as the other more showy climax. In fact, just as the "slow movement" is the test of the genius of the composer, so the treatment of the climaxes of the more sombre and quiet emotions displays the artist. Perhaps no other point proves so decisively the difference between the mature artist and the would-be artist.

The reason for this will appear when we study such a climax in our own experience. Joy is contagious and social. When we experience supreme joy we want to communicate it to everybody and have them enjoy it. We even want the sun to shine brighter and the whole natural world to feel the spell. We want every sliver of the piano and orchestra to thrill and "shake with the swelling thereof." But we feel very differently in sorrowful times. We shrink within ourselves and welcome solitude and its shadows. The contrast has been well expressed:

> "Laugh, and the world laughs with you,
> Weep, and you weep alone."

In the latter case, we do not need such a mass of material to express our feelings. Indeed, we prefer the simplest and least ostentatious means of expression. Often in music we find the more plaintive and mournful moods coming to a climax in some single unaccompanied note (often recitative) in which the extreme poignancy of pathos seems to concentrate and utter itself.

But such a climax does not appeal to the would-be artist because it does not seem to call for any exhibition of technic, that is, technic as associated only with brilliant, highly-colored effects. And, judged from such a standpoint, the sombre type of climax is considered as having little or no intrinsic value, but perhaps necessary as a contrast and background to throw the more brilliant passages into higher relief. It receives, therefore, either of two false treatments. It gets a disjointed and hurried effect, as something that is there and must be gotten through with in a perfunctory way. Or it gets an exaggerated, sentimental effect, as something that must be painted as dark and lachrymose as possible, so that the following pyrotechnics may startle and dazzle us with all possible flash. And generally such a treatment thwarts its own ends, for we see that the contrast is forced and violent and lacking that mature reach of art that makes everything sound natural and spontaneous.

What are your plans for the coming year? Will you do systematic study?

LOWELL MASON AS AN EDUCATOR.

W. A. SMITH,
Superintendent of Schools, Ansonia, Conn.

While many noted American educators are receiving their share of praise for the part they have taken in the development of our educational system, it would be only just to call attention to the life and works of the man who paved the way to the teaching of music in our public schools.

Turn back the pages of New England history for about three score years and read of the efforts—and very strenuous efforts they were—of that great lover of music, Lowell Mason, to introduce the study of music in the schools of Boston, and you will perhaps be surprised to learn that he was opposed by many of the so-called educators of that day.

So skeptical were the people of that time of the feasibility of teaching music in the schools that Mr. Mason served as instructor for a whole year without pay in order to prove that his ideas were practical. The experiment was a complete success and Lowell Mason was engaged as superintendent of the department of music. From this beginning the practice of teaching music in the public schools took its root and is now firmly fixed in our educational system.

Lowell Mason early manifested a love for music, for speaking of his early youth he says, "I spent twenty years of my life in doing nothing save playing on all manner of musical instruments that came within my reach." Although his parents did not intend that he would take up music as a profession, yet his great talent was not neglected. In 1812 he entered business life in Georgia, going from his native state, Massachusetts, to a position in a bank; after business hours he continued his studies in music with an instructor and made very rapid progress. Mason first attracted attention by the publication of a number of hymn tunes and anthems which were given to the public in 1822 under the title of "The Boston Handel and Haydn Societies' Collection of Music." This book was an instant success and soon found its way into singing schools and church choirs throughout New England. The success of this venture led Lowell Mason to leave Savannah and settle in Boston.

The record of his life in Boston is full of inspiration. He entered upon his chosen profession with great ardor and enthusiasm. He was the pioneer of a grand advance in music teaching in whose blessings all New England and the whole United States participated. Alone he entered a field long neglected, and achieved results such as no other musical leader had ever here accomplished.

Lowell Mason will probably be remembered longer for his hymn tunes than for any other musical composition. It has been said that his missionary hymn "From Greenland's Icy Mountains," has been sung in more languages than any other sacred tune. Some of the other popular tunes which he composed are "Boylston," "Hebron," "Olivet," and "Bethany."

The popular story told in connection with the composition of the music for the hymn "From Greenland's Icy Mountains" is as follows: A lady in Savannah, Georgia, was struck with the beauty of Bishop Heber's noble hymn, but she could find no tune that could satisfy her. She happened to call to mind the young bank clerk, Lowell Mason, who was just a few steps down the street and who had even then a reputation as a musical genius. So she sent her son to ask him to write a tune that would go with the hymn. In just half an hour the boy came back with the music, and the melody dashed off in such haste is to this day sung with that song.

In order to fully comprehend the extent of Mason's work and his influence on the progress of musical education, it will be necessary to call attention to the condition of musical knowledge in early New England. Music was almost exclusively confined to the meeting-house, where it was practiced simply as an aid to worship, with no thought of art. The manner of singing was the simplest and consisted of the people singing in unison a psalm in metre, line by line, as it was "lined out" or "deaconed off."

New England people were too progressive to allow their music to remain undeveloped, so as time went on and the several communities became stronger in men and means, efforts were made to raise the standard of singing in the churches. But it was some time, however, before the people were permitted to sing by note. The contest between the defenders of note singing on the one hand and the more conservative adherents of rote singing on the other was bitter, and raged for a number of years in the early part of the eighteenth century. Each congregation settled the dispute for itself. Boston led in a general adoption of the new idea, and the example was followed by degrees elsewhere, in some places wholly, in others with various forms of compromise.

When the people began to sing by note it became necessary to teach music, and soon singing schools were organized. The first of these was established in Boston in 1720. These schools made printed music a necessity, so that in a short while a number of publications were issued. "Waller's First Book of Music," the first in which bars to divide the measures were used came out in Roxbury in 1721.

Taste in musical matters led to the formation of choral societies. Noted among these were the Stoughton Musical Society founded in 1786, and the Handel and Haydn Society, which came into existence about the year 1815. In all of these choral clubs, church music was about the only phase of the art that received attention; and even that was not carried far beyond the limits of psalmody.

Lowell Mason, coming from Savannah to Boston, became first the protege and afterwards the ruler of the Handel and Haydn Society.

Mason soon realized that the diffusion of improved musical knowledge must come about through the study of music in the public schools. He saw that if music in the church was to be lifted from the dead level of mediocrity the work must begin where all other work that is mentally elevating begins, with the children. He studied the problem carefully and in 1830 submitted his plans to a few educational leaders who had become interested in his schemes for cultivating talent and awakening taste.

Mason, let it be noted here, was not the first in New England to attempt to teach school children to sing by note, but he was the first to make such teaching a decided success. While still studying and talking about plans for popular education in music he became acquainted with William C. Woodbridge, a teacher of repute, who had been to Europe, and studied the methods of education practiced in Germany and Switzerland, and was very much interested in the Pestalozzian theory. He was certain that Pestalozzi's theory of teaching could be applied with success to musical instruction. Mason became a believer also in the great teacher's ideas and set about making a practical test.

A beginning was made when, in 1832, the primary school board of Boston voted to set aside a school in each district for systematic instruction in music. The experiment was not a complete success. Mason, however, was not to be defeated. He taught classes of children free, and gave concerts to illustrate the feasibility of his plans. His next important move was his withdrawal from the Handel and Haydn Society, and the organization of the Boston Academy of Music.

The experiment was a great success from the first. The pupils during the first year numbered over fifteen hundred. After a while, Mason succeeded in so arousing public interest in musical education that the school committee of the city of Boston, in answer to a petition, authorized the introduction of Mason's system in the grammar schools

When the city council refused to make the necessary appropriation for the teacher of music, Mason, strong in his conviction that he was in the right, offered his services for a year free of charge. The offer was accepted, and work was begun in the Hawes Grammar School, South Boston, under his supervision. In August, 1838, the committee on music reported that the experiment had been a complete success; and the result was the addition of music to the regular course of study in the grammar schools of Boston.

While engaged in the direction of the Academy and in the supervision of music in the public schools, Mason made his first voyage to Europe. While abroad he studied the various methods of teaching, paying particular attention to those practiced in Germany. Lowell Mason was always willing to learn from others.

The versatility of the man was exhibited in his plan for the assemblage of music teachers in classes, not only that he might expound his theories, but to give them opportunities of learning from each other. The convention idea for music teachers in 1838, met with great success, and it was not more than three or four years old when the convention was attended by a hundred and thirty-four teachers, representing ten States. The convention became a regular part of Mason's system, and the advantages of the plan were extended by holding similar councils in other cities under the direction of professors of the Academy. It is claimed that teacher's conventions, which are now a recognized factor in educational development, sprang from Lowell Mason's experiment.

Although the Academy was dissolved in 1847, Mason continued his labors as teacher and lecturer in various parts of the country, and placed the teaching of public school music on a sound basis.

Mr. Mason was as industrious as he was enthusiastic. It is said that for twenty years he was never known to spend even half a day in mere amusement. Such application enabled him to write fifty works, instruct thousands in music, lecture far and wide, travel extensively in the United States and Europe, amass a splendid fortune, and give away another fortune—for his industry was only equalled by his benevolence.

Lowell Mason's busy, useful and honorable life ended at his home in Orange, New Jersey, August 11, 1872. "His long life of more than eighty years," said the Rev. George B. Bacon in a funeral oration delivered in 1873, "spans almost the whole history of sacred music in this country."

Samuel Francis Smith, the author of "America," in writing of Mason says: "In studying the career of this remarkable man, it is found that his chief value in the development of music in New England was as an educator, and in that capacity he has commanded wide and general admiration, even from critics who have had small opinion of his ability as a composer."

Every music teacher in America should be familiar with the life and efforts of Lowell Mason, the educator.

THE TEACHER'S ASSISTANT.

EFFIE W. MUNSON.

Aside from a certain degree of musical ability, which must be possessed by the pupil, one of the most important factors in the success of that pupil is the work of the parent (or elder brother or sister), who holds up the hands of the teacher, encouraging the discouraged pupil, criticising the vain, applying the stimulus required to shorten the tedium of practice, and in many other ways affording invaluable aid to both child and teacher.

Rarely do we find a parent who has not a certain interest in the musical progress of his child, since from a merely business point of view he desires to know if he is getting value received for the sums paid out for tuition. But it is seldom the case that the parent displays a sufficiently intelligent interest in the work of the child to gratify the teacher.

I once had for a pupil a little girl whose mother gave the practice hour the most careful oversight, although she herself played a little. Her child made rapid progress, as all directions were closely followed, and a very intelligent effort made to have them carried out to the letter during the daily practice.

Many teachers do not like to have the parent present at the lesson, but those teachers who go to the homes of their pupils will find a valuable assistant in the person of the mother, if she is asked to remain in the room while the lesson is in progress. She there gets an idea of the task set the pupil and can give aid by seeing that the work is correctly done, especially if she has studied music at some time herself.

I scarcely know, however, which makes the work easier, a parent who knows a little music, or one who is entirely ignorant of the art. The latter class will sometimes give help by acting upon the hints of the teacher and watching the pupil at his daily task, while the former will often place a few more stumbling blocks in the already rough path of teacher and pupil, by insisting on certain exercises and pieces being inserted in the course of study because "I studied them when I took lessons," or because "Prof X. gives such and such a piece to Mary S. and she has not taken lessons as long as my daughter."

I sometimes wish that the parent, or elder sister, or other relative who is responsible for the practice of the child, would begin with the pupil and follow him in his first half year's lessons. The mature brain, retaining the teacher's directions, would be better fitted to aid the tiny fingers of the childish pupil in their task.

A diligent perusal of a good journal such as THE MUSICIAN, is about the only remedy for the lack of intelligent interest in the music teacher's work, and that teacher is wise who sees that a good journal of music finds its way to the homes of his pupils, and who calls the attention of the parents to the many valuable articles contained in its columns.

THE VOICE.

MR. FRANK HERBERT TUBBS, Associate Editor.

THE SINGING VOICE.

ARTICLE EIGHT.

FRANK HERBERT TUBBS.

HOW SHOULD FAULTS BE OVERCOME?

It would not be to the credit of vocal teachers if they were not alert to the inventive spirit of an active people. In all material things man has made great progress and invention improves his condition every day. It needs no prophet to foresee that inventions are to multiply greatly in the near future. Music teachers are in touch with the spirit of the times and they are as able to apply new thought to that material with which they work as are any other peoples. We find the science of voice culture has not stood still. The man who teaches on the same lines which he used ten years ago, is being outstripped by the alert young teachers who feel the spirit of change and improvement. In the old-fashioned way of teaching, faults were found, and the student was given a long course of training to overcome the faults. We know better than to do that now. Every fault pointed out is magnified in the thought of the student, and as his thought goes to it constantly he is more likely to perpetuate it than he is to remove it. In the old way it was an easy matter to make faults permanent and they would crop up again and again, and often at the moment they were least expected. A celebrated English contralto carries to this day evidences of wrongly directed early study and probably she will retain them as long as she lives. She could overcome them but, without doubt, she is too self-satisfied and too proud to submit to the course which would remove them. Rather, she is convinced that they cannot be removed.

If we are not to see the faults and aim to remove them, what are we to do with them? Let them alone? Yes and no. So far as directing thought to them we are to let them alone. But the skilful teacher selects the development of good, applies that which is larger than the fault, and by enlargement on that overcomes the fault. Good will overcome evil every time. For instance, some of the old teachers labored on the breaks in the voice for six months, and thought themselves good teachers to be able to master the breaks which are generally evident in the crude voice in so short a time. Now-a-days, we know those breaks are occasioned by overwork of the larynx in resisting upward pressures. We therefore pay no attention to the breaks but attend to breath control, with the result that in two or three weeks the worst cases of faulty registration are mastered. Again, if a student was not able to strike the notes perfectly in tune, the teacher labored to train the ear to hear better. Now we know that wrong intonation is most frequently the fault of bad voice production and not of hearing. We therefore pay no attention to singing off the key, but proceed at once to training the voice. Good overcomes evil.

The rule may be followed that faults are to be overcome by saying nothing of the fault, but by piling on the good work. Many students in the latter days has his worst faults overcome without knowing that he ever had them. We might specify faults and what the good things are to use in mastering them, but that would only magnify the faults. In general, teachers may adopt a definite policy, have certain rules and exercises which they know to be right, and proceed at once to their use. As they so proceed the faults will fall down before them. One of the worst cases of break between the chest and medium voice, in a ladies voice, which an old-fashioned teacher had labored upon for three years without success, disappeared in one day when "good" was applied to it.

HAS FACIAL EXPRESSION DIRECT INFLUENCE ON VOICE?

A long chapter might be written in answer to this question. Facial expression bears directly upon tone-quality, power, articulation and expression. More than that, the influence of the singer upon the audience is determined largely by facial expression. Of the latter, a word first. The singer steps before the audience. Unless he has become hardened to the gaze and mental influence of several hundred people he will be more or less nervous. The experienced singer generally feels trepidation. The situation is a trying one. That moment is one when the singer must have his wits about him If he has been well trained he can command his features to express something. If he does not command they will take the expression of trepidation, anxiety or even the fear which the singer feels. Express something they must. No face is so impenetrable that it expresses nothing. The preparation for this moment is in getting the eyes to look pleasant The student and singer does well to practice this before the mirror until he can command it. It is that feeling about the eyes which we have when we see something we want to laugh at and don't want to be caught laughing. Previous practice to secure the possibility of looking pleasant will not make us get more than good expression. No one need fear he will look silly. Really, he should have the expression of pleased interest when a singer goes before an audience.

Facial expression has direct influence upon quality of tone when we are singing exercises and songs. If the face is strained in any way the quality will be harsh and unpleasant. The strain on the face projects strain upon the pharynx. As tone quality is the result of vibration in the pharynx, it can be regulated through the face. The best kind of tone for general use in practice is the mellow, genial tone which is little more than agreeable conversation. Seek first the pleasant face and pleasant tone will follow.

Power of voice comes because of generous reverberation of tone. The tone vibrates at the vocal bands in the larynx and then unites with vibrations set up in various resonant chambers. Several of these are situated in the mouth and nose. The wideness of opening of the mouth and the looseness with which the jaw acts directly affects the shape and size of the resonant chambers. As the mouth and jaw are organs of facial expression the latter, through those organs, bears upon power of tone. A set jaw will not permit generous reverberation. Leave the jaw as loose and unconscious as possible in all exercise practice. But the jaw can be loose only as the face is pleasant, and, therefore, the facial expression is a determining factor in power.

Speech in song denominates tone as well as meaning. One can readily try experiments in speech with various expressions of countenance. Let one say the same sentence a dozen of times, with as many different expressions of face, and there will be as many different expressions in the tone.

It is probable that one skilled in training his voice might base the whole of voice culture upon facial expression, so strong is its influence upon all other organs and factors. This is certain: Breathing, the most important act in singing, will not be easy and comfortable until the face is easy, restful and expressive. Limp tongue and unconscious jaw will not be mastered until the face is all right. We have reason to believe, then, that the reverse is true. The face can be the means of reaching all the other organs of voice.

WHAT ARE REGISTERS?

Groups of notes made by the same laryngeal mechanism. The voice is divided by nature into several parts. Some theorists say there are three registers; others five; others, that there are no registers. There are those who say every note has several registers, but if we accept this we must think that registers are not only the result of laryngeal but pharyngeal mechanism. Scientific investigation does not show that the pharynx has anything to do with registers. The larynx does, as will be shown presently. Those who say there is but one register really mean that when a voice is cultivated the whole voice should sound as if completely joined together. It is true that there should be such complete union that no one can detect any divisions. It is the aim of all good vocal teachers to effect perfect union. But we can hear in all untrained voices that there are divisions. The various parts form the groups which are spoken of as registers. In ladies voices we find at least three groups. One of these (in the middle of the voice) has two parts. Recognizing this, it would appear that ladies have four registers. The various registers have locations of vibration. In other words, vibration set up in any group of notes can be felt in a part of the body which is made to receive such vibration. The names of these registers are given them from the place of vibration. The lowest notes made by women vibrate most in the chest, and they form a group called the "chest register." This group, as stated, includes all the low voice of woman. It is carried upward as far as D or E flat. Contraltos, therefore, have one octave of notes in chest voice. It will be supposed by some that contraltos cannot sing down to low D or E flat and that they have less than an octave of chest notes. If a voice has less, or if one cannot be carried down to low E flat, it is not fully developed. The notes are there, even if the singer cannot sound them. By cultivation she can secure them and she should aim to do so. It is the habit of many singers to carry the chest voice higher than the point named—D or E flat. Nature will endure this for a time. Some uncultivated singers push them up to G or A, and even higher. The first work of the teacher should be to supply the other register on the notes above E♭, so the chest notes will not be carried so high. At the point named—D or E flat—a change of action occurs in the larynx. Certain muscles which have been used in making the low voice, discontinue action, and the muscles which continue to act (of those already used) act in finer manner. The notes of the octave from E flat to E flat have their seat of vibration in the neck and face. They are termed the notes of the medium voice. This is the most used portion of the female voice and it can have a great amount of work put upon it. It is the register in which most conversation is made. The medium register is divided into two parts: the lower and the upper medium. The change from the lower to the upper occurs in all women's voices somewhere between A flat and C sharp. The change is slight in all voices. So slight that it can hardly be detected by anyone except a skilful teacher. It is so slight that it is seldom forced out of place. That is, it remains at the point where nature intended it to be. Observance of this place gives the teacher the best and most certain means of knowing just what the voice is. If the change is made at a low point (A flat or A) it is sure to be a contralto voice; if at C or C sharp, sure to be a soprano; if on one of the intermediate points, probably a mezzo-soprano. There are cases in which the change may be made on B flat and the voice a contralto, and sometimes when on B, it may be a soprano. When a crude voice makes the change at such intermediate point and has characteristics in quality and range of the contralto it is pretty sure to be a contralto; when the change is made at an intermediate point and the voice has the characteristics of the soprano, it will prove to be the soprano. Quality, power and range are secondary factors in determining which the voice is, and the location of the change from lower to higher medium voice is the primary determining factor.

The upper medium register extends, as stated, to D or E flat. All notes above this point are made in head register. The notes of this group vibrate in the head. The farther back they are made to vibrate the better the voice is trained. Contraltos often omit the development of head voice. If they sing to E flat they think they have reached the limit of the upper voice and suppose they cannot go higher. Sometimes one of them pushes the voice up to F, F sharp or G, using medium notes, but they seldom use patience to get the head notes. They think they cannot sing so high. The truth is that any contralto can sing to high C if she will take the trouble to cultivate and command the head voice. It will be seen then that contraltos can sing from low D to high C, a range of almost three octaves. (The fact that but few do so does not prove that all cannot).

Sopranos have the same number of registers as do contraltos and the changes are made in about the same places. The registers are chest, medium (lower and upper) and head. Sopranos do not sing so low generally as do contraltos. They can if they want to, but there is little music written for sopranos which goes so low and, therefore, there is little reason for cultivating the chest voice. Many teachers even tell sopranos to give up the chest voice and learn to make the notes from F (first space on the staff) downward, in the medium voice. While this practice is not so harmful to the voice as is that of carrying chest notes too high, it is not a wise thing to do. The notes D, C, B and A

should be chest notes. In the upper part of the soprano voice the head voice must be used. Often sopranos push up the medium voice to G or A flat (notes above the staff), but this is a dangerous thing. The change should be made on E flat. All notes above that point, even to the highest note sung by the soprano, is to be made in head voice. That voice is an essential to the soprano. The cases are common in which sopranos have not brought into use any head voice. But let it be distinctly understood, that every soprano voice can make head voice, and the height to which development in that voice can be carried has no limit except that of whether it pays to take the time necessary to cultivate very high ones. Let this matter be clearly understood. A soprano can easily make notes in head voice as high as B flat, and most sopranos sing high C without much practice. As little music goes higher than that pitch, it may not be needed to train higher notes. But any soprano can secure D, E and F with only a little practice. Notes higher than that can be obtained by any soprano, but it will take much practice to get them and to retain them after they are gotten. It is a question whether or not it pays to work for them. A soprano voice which cannot sing notes above G (first space above the staff) is probably not using head voice at all and is being wrongly cultivated. Every soprano can easily acquire C.

Registers in men's voices are the same as in womens' except there is no head voice. Men sing one octave lower than women. On this account chest voice is most used. In fact, nearly all the voice used by men is the chest voice. Now comes an important item: As there is a division of the medium voice in womens', there is a division of the chest in mens'. Lower chest and upper chest. The points of division correspond to those of the women in medium voice. That is, basses make the change on A flat and A; high tenors on C and C sharp; second tenors and baritones on the intermediate notes. The change is slight and hardly perceptible to any but skilful teachers. But it is the determining factor (or in the cases of voices which make the change at a middle point, the primary factor) in deciding whether a voice is bass, baritone, second tenor or first tenor.

In the bass voice there is a group of notes at the bottom of the voice including F (first space below the bass staff), and all notes below that point form, in the opinion of the writer, a distinct register which has never been recognized or named. It is a register below the chest register. No work on the voice, so far as the writer knows, refers to it at all. But it is there.

Now, to turn to the upper part of male voices. Chest voice is carried to D or E flat and should never be carried higher. Notes above that point should be made in medium register. (Please note carefully the instruction of this paragraph. It will give light to some young teachers on points which are in doubt to them.) The chest voice should never be carried above D or E flat. Basses seldom take the trouble to secure for use any medium notes. It is not laziness but ignorance. They don't know that they can. Baritones are not less ignorant and are much more to blame. Most of them do not cultivate medium voice and they could very easily. They generally force chest notes up to F and that point marks the end of the high voice. *Any* baritone can secure G and A flat if he wants to do so. But then he will think he is a tenor, probably, and stop singing baritone. Tenors must cultivate medium voice. All notes of the tenor above E flat are to be made in medium voice or the voice will be ruined. We hear people talk about tenors' high C in chest-voice. There isn't a man living who can sing high C in chest voice. We also hear people talk about tenors singing their upper notes in head voice. It is doubtful if that is possible. Perhaps a few can do so but the cases are very rare.

The ignorant public sometimes makes mistakes, and teachers who don't know so much as they think they do, often criticise the notes of tenors and baritones in their upper voices when those tones are the correct ones. Know this: When a crude voice begins practice on notes of medium register, they are always small and delicate. Ignorance has led some people to think them to be head voice or falsetto. On this account we are told to slum these notes and students are afraid to use them. This is the greatest cause of the scarcity of good tenor singers and the reason why baritones do such excruciating singing on their upper notes. They are not allowed to practice on the right kind of notes to develop for use. The medium voice must begin in small tone. If it is coaxed and made what it can be it will become so similar in quality and resonance to the chest voice that no one can tell the difference. That is why people talk about chest voice on the top notes. But it makes a great difference to the singer which register he uses on those high notes. Forcing chest voice above E flat will bring early decay and ruin.

It was said that any baritone can secure A flat. *Any* tenor can, without much labor, secure high C. He must do it by getting medium voice into use and then developing it so it sounds just like the rest of his voice. How many tenors can so sing the high voice? Every one of them can do so. Range of soprano, it was said, is limited only by the amount of time and labor one wants to put into it. The same is true of the tenor.

Here is a rule by which any baritone or tenor can tell whether or not he is using falsetto notes in upper voice: On F, F sharp and G start a note in the smallest possible voice and try to swell the sound upon it. Falsetto voice will not swell; medium voice will swell. When the singer finds he can make the swell on those notes, he is using the right voice to practice upon. He should then coax them into active life and carry that kind of voice downward. If he shou'd become able to use it as low as C (first added line above bass staff), it would be a fortunate thing for his voice.

In cultivating the voice all registers are united into one voice. When the change from one group of notes (register) to another can be felt or heard, there is a "break." It is to be overcome. Generally, the cause lies in insecure breath control. If pressure from the lungs against the larynx is normal the registers arrange themselves normally and breaks quickly disappear. The voice becomes smooth and of the same apparent quality from its lowest to its highest note.

OPERATIC ARIAS.

Che Gelida Manina. La Boheme di Puccini.

W. LOWES HEATH.

The sentiment of this piece is poetic and fanciful, and, while it is never dramatic, it still calls for a full volume of tone and the upper voice must be very round and free. What is needed is a lyric tenor with a splendidly-tempered and perfectly controlled voice, for it bears particularly on all the weak spots of an imperfectly educated voice.

Such a piece as this, while it is undoubtedly a very satisfactory and interesting study from an artistic point of view, will not help the voice so much as some of the older arias. In the first part it is true we have some sustained singing, but part of it should be accented in such a manner as almost to suggest speaking, while the rest of the aria is more or less broken up to assist in conveying the idea of the impulsive character which gives voice to the whole.

The effectiveness of the interpretation is dependent on the characteristic manner in which it is rendered, and this must spring from the singer's appreciation of the atmosphere in which Rodolfo and his companions live and move, with the impulsive hearts of children and the needs and desires of men and women.

We are in Bohemia where life is utterly irresponsible and the heart rules the head. Rodolfo is a poet by nature and a writer for the newspapers by force of circumstances. In his dreams his fancy is all-powerful and he creates and inhabits a rose-colored world of his own, but the dreams are not always with him and genius is awfully sensitive to hunger and cold, so that Pegasus has to get into harness, from which, however, he breaks away at the first opportunity.

Rodolfo's boon companions are an artist, a musician and a philosopher. It keeps their wits sharpened to hold the landlord at bay and still keep him in good humor, besides which they dine rather frequently off a bare board. But five or ten francs apiece is wealth enough to transform them all to millionaires and, while it lasts, they live as though there were never a cloud to dim the brightness of the sun.

The friends have gone out leaving Rodolfo to finish an article, but he finds he is not in the vein and as he throws down the pen he hears a knock at the door. It is little Mimi, who makes artificial flowers and lives in a little attic in the same house. On the way to her room her candle has gone out and in the dark she knocks at Rodolfo's door to ask for a light. He begs her to come in while he procures it, but scarce has she entered when she is attacked by faintness, for Mimi is very frail and the stairs to the attic are many.

As she faints the candle and the key of her room drop from her hands and Rodolfo catches her and supports her to a chair. As she recovers he notices how pretty and frail she is and his heart goes out to her. He insists on her taking a glass of wine, and while she drinks it he observes her again and says to himself: "What a beautiful child!"

But now Mimi is ready to go and Rodolfo picks up her candle, relights it and gives it to her. Hardly has she left the room than she remembers her key and comes back in great haste and anxiety to find it. As she stands on the threshold the draft from the open door extinguishes first her light and then Rodolfo's.

Left in the dark they drop to their knees and begin feeling round the floor for the key. Rodolfo finds it but puts it quickly into his pocket, for he has become greatly interested in Mimi and is not anxious to have her leave him so soon. He feigns to be still looking for the key, but all the time he is moving closer to Mimi till finally their hands touch, she gives a little cry of surprise, Rodolfo retains her hand and we have the tableau which introduces "Che gelida manina."

Softly and tenderly Rodolfo begins: "How cold your little hand is, let me make it warm in mine. To search is useless, in the dark we cannot find. But by good fortune we have the moonlight and here it shines right in through the window." Then, as Mimi attempts to draw away her hand, he continues: "One moment, little lady; in few words I'll tell you, truly, just who I am, what I do and how I live; do you wish it?"

He lets her hand go and Mimi sinks into a chair almost overpowered by emotion, for her heart goes out to meet his, she is silent and Rodolf continues: "Who am I? I am a poet. What is my labor? Writing. How do I live, then? I live——. In poverty I'm happy, beauteous ladies surround me, rhymes and hymns of love. In dreams and in illusions and castles in the air—in fancy I'm a millionaire. And sometimes from my storehouse all the jewels are stolen by two thieves—a pair of bright eyes. They entered here with you now and all my dreams are broken, all my beauteous fancies have vanished and disappeared; but for the theft I care not, because—because in their place there has come the sweetest hope! Now that you know my story, pray tell me yours—ah, speak, then! Who are you? I pray you tell!"

Pianissimo with a white quality of tone, and very legato and sustained the first phrase commences: "Che gelida manina." The very simplicity of the words calls for a corresponding simplicity in the delivery of the voice, there should be none of the singer's affectation which is too often fatal to artistic interpretation; the words should be pronounced very clearly but not thickly, and the white quality should be modified by the spirit of protection and tenderness which animates Rodolfo.

In the second phrase, "Se la lasci riscaldar," the white quality is still preserved, there is a very slight crescendo as the voice rises and the first E flat should be slightly accented; as the voice descends the white quality is rounded and filled out just a little. This phrase has also a touch of persuasive entreaty in it, for besides warming the little hand Rodolfo likes to hold it.

In the following phrase, "Cercar che giova," the voice crescendos naturally a little, but this must be kept well under control; the tone must, by no means, be allowed to thicken, and the simplicity of accent as almost to suggest speaking must be preserved.

In the next phrase, "Al buio non si trova," the voice diminishes somewhat, the first E flat receives a slight accent, but the white quality is more decidedly modified by a tone of persuasion that is almost coaxing. These first four phrases are all marked by simplicity of accent and an underlying tone of caressing tenderness

In the phrase, "Ma per fortuna e una notta di luna," the voice crescendos and the tone is more full-bodied, the words being clearly pronounced and well-sustained into each other.

ILLUSTRATION 1.

In the following phrase, "E qui la luna l'abbiamo vicina," the eighth notes are decidedly but evenly

accented, the voice crescendos to forte, the quality being kept free and light and the time ritards. Coming down to the E flat the voice opens and for one measure the time accelerates to ritard again in the next as the phrase finishes. See fig. 1.

In the next phrase, "Aspetti signorina," we return to the opening theme. It is given out pianissimo, with a white quality of tone, and the first three notes are in ritard, after which the original time is taken up. In the next phrase, "Le diro con due parole," the voice crescendos a little. Underlying these two phrases is the same tone of persuasive entreaty which marked the opening phrases.

The phrase, "Chi son, chi son," is well marked and given out with a certain amount of effusion, the B flat being held forte. The next phrase, "E che faccio, come vivo," commences forte from the preceding and diminishes after the second dotted quarter; in the succeeding measure the four eighth notes are slightly accented and accelerated.

ILLUSTRATION 2

The phrase, "Vuole?" is taken, pianissimo, in an open tone of a delicate white quality with a portamento from E flat to A flat.

In the phrase, "Chi son? sono un poeta," the first part is given out forte and the rest at about half voice, with a smile on the lips. The succeeding phrases, "Che cosa faccio? Scrivo. E come vivo," are also questions and answers and are best governed by the simple, natural inflection which they would take in speaking.

The next movement is practically a little recital in answer to the last question how, in dreams and beautiful fancies, he manages to be happy in spite of poverty. It is very expressively sung with a touch of playful touch running through it. The tone, at about half voice, should be well-sustained and never drop between the words, the time is kept even and regular, and the rhythmical accent of the words should be studied and preserved throughout. In the phrase, "L'anima ho milionaria," the time broadens somewhat and the voice comes out forte with a good breadth of tone and a certain abandon.

The next movement is taken very broadly, very sustained and calls for a full expansion of voice. In the first phrase, "Talor dal mio forziere," the voice rises full to the A flat and sustains the full volume in legato style throughout, the two eighth notes at the close being evenly accented. In the next phrase, "Ruban tutti i gioelli due ladri gli ocohi belli," the breadth remains but the weight of tone diminishes somewhat, the first beat of the triplets is well marked and the last part of the phrase is given out sweetly and tenderly.

ILLUSTRATION 3.

In the next phrase, "V'entrar con voi pur ora," the sustained legato is still preserved while the breadth yields a little, the triplets are accented and the voice is at about half volume in a caressing tone. In the following phrase the three-eighth notes are slightly accented. In the first part of the phrase, "Ed i bei sogni meie tosto di dileguar," the voice comes out forte, full and broad, and in the second part it diminishes to piano, the time is pulled back and the accent is well marked. The succeeding phrase is taken piano, very caressing and rallentando.

In the phrase, "Poiche v'ha presto stanza," the five-eighth notes received a decided accent and the voice expands in preparation for the next phrase, "La dolce speranza!" which is given out with all the breadth and power that can be brought to bear.

In the phrase, "Or che mi conoscete," the voice returns to piano with a sweet, persuasive tone, the quality being kept white, simple and open, and the words sung very deliberately yet well sustained and legato.

The same is true of the next, "Parlate voi," which has also an accent of entreaty in the following, "Deh! parlate chi siete," the eighth notes receive a decided accent of expansion and the portamento is well marked. The color deepens as the voice broadens and the accent of entreaty dominates the whole.

The final phrase, "Vi piaccia dir," is taken pianissimo, with the white open tone and very deliberately and simply. The D receives a hold and the final E flat is held and diminished to a mere breath of falsetto.

THE VOCAL STUDENT ABROAD.

ALAN GRAY.

Many tales have been borne to this country by students who have spent more or less time abroad, the gist of which, even when stripped of a certain amount of exaggeration, should surely serve as a warning and temper the enthusiasm of the rising generation.

For a long period Europe has been regarded as the Mecca of all vocal hopes, and much in the same spirit as the Mahommedan makes his annual pilgrimage, have the students flocked to Europe annually, being convinced of a special virtue in the very air of the place, which, combined with the fact of studying under a foreign teacher, shall make their voices glorious, so that all they have to do is to furnish the money and enjoy the novelty of life abroad.

Now, without doubt, most of the students have done their part, as touching money and the enjoyment of life abroad. The reputation of singing students, as a class, in many of the leading centres of Europe will certainly attest the truth of so much, but as far as singing is concerned, the same reputation tells us of a lamentable number of failures and very few successes.

Until the student has received the baptism of experience he is apt to think that almost any teacher abroad must be good, but, as it is with our teachers at home, and as it has ever been with all things, so it is with the teachers abroad, some are good and some are bad; also, I fear that American dollars have done much to increase the number of bad ones to a shocking extent.

Of the good ones, the far larger part are those who have proved their quality and made their reputation in training the voices of their own countrymen. There are a number of them who can point with pride to quite a splendid array of leading artists, and the effect on the mind of the student is prodigious when, as frequently happens, he finds that the master he is studying with has actually been the teacher of some of the great artists, to hear whom he has been content to pay a dollar for a gallery seat at home. But while these teachers are undoubtedly masters to a certain degree, it often happens that they do not understand foreign voices, and the treatment that has proved efficacious with their own countrymen is very rarely adaptable with the English speaking voice.

There are, or have been, other good teachers abroad competent to teach all voices, because they treated voices individually and did not subject all to the same regime. I have heard of such, and one sometimes reads of them, and to this day there are many in Europe who profess to teach the same methods as taught by some of the great masters who are dead, but if one is to judge by the results obtained, the conclusion is forced upon one that when the race of great masters became extinct their methods surely died with them.

There is another class, the bad ones. They are very numerous. By the students they are known under the generic term of sharks, and it would seem that they have done much to earn the appellation. The American or English student is to them synonymous with much wealth and thick-headed stupidity. When one of these students enters their studio they are supposed to regard him much as the Jew did the Philistine, and they proceed to despoil him, treating his voice in such a manner that it shall not be heard in the land when they get through.

Speaking from personal experience and observation, I am limited to Italy, and I have participated in the process of disillusionment through which the student generally passes in that country. Now, the fault of the maltreatment to which many voices have been subjected there, lies, perhaps, no more with the ignorance of the masters than it does in the blind faith and ignorance of the students. Many students seem to be simply psychologized by the teacher, and I remember very well one instance which will serve to illustrate this class. He was a tenor, intelligent and well educated, saving only in the matter of his own voice. The voice was of good compass, very large, awfully throaty, and seemed to be destitute of anything like sweetness. The teacher he was with treated the voice in such a manner that every fault in it was confirmed and increased, and after eighteen months of a lesson every day his singing was such that he had become a by-word even among his fellow-students under the same teacher. His lessons were a source of absolute agony to him, but he never thought of changing his teacher or thinking the matter out for himself. Friends spoke to him and told him what his singing sounded like (a hard thing to do), and suggested that his teacher was not doing the right thing by him. He spoke to the teacher about it, who told him his friends were liars and the truth was not in them. This sufficed him for the time, and he continued with that teacher for three years, until, finally, it took the united efforts of the English doctor and clergyman, who threatened to write to his home.

Now for an ordinarily intelligent English or American teacher the voice would not have been a very difficult one to handle; the faults were so very glaring that they suggested their own remedy. Had he been confined to a whisper for six months the whole character of the production would have been changed; but the teacher had but one way of teaching voices, and that was diametrically opposed to the treatment this voice needed. The result was ruinous to the student; he doesn't sing any more. He settled down to business in that city and is there yet.

However, he is only one among hundreds, and his experience lacks many of the shocking details which too frequently attend others.

The secret at the root of the failure of so many students who go to Italy is primarily tone production and the bringing of the voice forward, especially on the upper tones. The greater number of Italians have naturally an easy, effortless production and forward delivery; that is, they sing with no more effort than they speak, and they speak very freely and rapidly, the lips and tongue being remarkably flexible and obedient.

The student can get an insight into how much this flexibility means by hearing either the "Barber of Seville" or "Don Giovanni" sung by an Italian, and paying particular attention to the manner in which the recitatives are handled. They are given not with great rapidity, being half spoken and half sung, but the singing is only the singing voice sustained, and there is no break between the two.

But it is only in rare instances that this freedom is found in the English speaking voice, and more early in the male voice. It is, indeed, latent in most voices, but to draw it out and train it specially adapted exercises are needed.

Now, this part of voice culture is not understood abroad, for the simple reason that the majority of voices are naturally free, and what defects they have are of an entirely different nature from those with which we have to contend. They look at voices from an entirely native point of view, very good for Italians but very often ruinous to Americans. The treatment which gives good vocal control, stability and trained power to an Italian too frequently results in making the American or English student push, force and shout.

The teachers best suited to handle the American voice and prepare it for study abroad are those who, having been through the mill, have finally sat down and studied the matter out for themselves. A comparative study must be made between the methods as taught there and the peculiarities which we have to overcome, and from the comparison a method can be drawn which will really meet the difficulties and accomplish the great object of going abroad, which is to get the voice free enough to allow it to be developed without breaking or strangling it in the process.

As soon as an Italian teacher gets hold of an English or an American voice he begins at once to make it round and full. Now, if the production has been attended to beforehand, the voice will respond naturally and develop in breadth and body. But if the production is wrong, as it often is, then the student is not in the right place to get it corrected, and the process of development, as taught there, means "breakers ahead."

There is much to be learned abroad, but for tone production and voice placing, the American student will do better to find an American teacher and stay on

this side of the water until he understands his own voice and has it free and under control throughout its range. When such is the case he is in condition to be really benefitted by going abroad, because it broadens and develops the artistic sense, adds to the spontaneity and vitality of the voice, increases the capacity and understanding of what is meant by tone-color, and shows him that singing is, or should be, one of the fine arts, rather than a profession or a mere pastime, as it too often is with us.

If the student, after getting the best opinions he can, decides that his voice is worth the expense of a trip abroad then he should seriously consider what line of study he will take up. So many go without the slightest idea as to what they are fitted for, and many voices are ruined by being forced through an operatic training, which is too great a strain on them, besides being absolutely foreign to the temperament of the student in a great many instances. But he keeps at it as long as it is physically possible and the voice will stand it, because he thinks that must be what he came for, although he didn't know it when he started.

There is the German, French and Italian opera, the French and German songs and the English oratorio and songs, all of these are best studied on their native soil; but which ever the student decides upon, a certain amount of time under a good Italian teacher will not come amiss, provided the voice has been properly taken care of on this side. I say this because there is a freedom of delivery and vitality of coloring in the Italian voices which is not found to such a great extent in any other nation, and which serves as an excellent model if the student has had suitable preparation.

Think and study on this side of the water that you may not suffer and fail on the other, for the path across the Atlantic by no means constitutes the royal road to success in singing.

THEMES.

FRANK H. TUBBS.

A man who had worked long to accomplish any piece of work would be considered very foolish if he took just the steps to prevent its finish just as he reached the end of the labor incidental to successful issue. A student who has labored several years to make himself ready to take a church position would not intentionally take a step when he is quite ready for a position which would forever prevent his taking a place. Yet that is what many do. There is a law of mutual influence which works out success. To have the law do for us what we want it to we must hold ourselves in calm, hopeful and expectant attitude. This mood of mind works out for us that which we want, and the law is an exact one. It is as sure as is the law of gravity. Nothing need stand in its way. It will do for us more than we can do for ourselves. Intense desire and struggle of the mind upsets the working of the law. Striving and struggling will upset the even balance of mind which is behind the law. The very disturbance of mind prevents our getting that which we want. He who is ready for a choir position will prevent his getting that position which he would like by mutual striving. Churches want singers, and they want the best. They cannot find what they want much of the time. Singers are not ready for the place, even if they think they are. When they are ready, and have the right mind, the places will be given them.

Does this imply that they are to sit with folded hands and let the church come to them? Not at all. They must make themselves known, but always with the hopeful mind rather than the struggling mind. "All things come to him who waits" is true because of the working of the mental law, that in response to calm wish there is attraction of minds which are on the same plane. A church which wants a good singer will wait till a good singer comes their way. If they want a good singer they will not put up with a poor one longer than they are obliged to. The lesson is to prepare perfectly for a good place, make it evident that the preparation is complete, and then wait in calm mind for the coming of the appointment. Striving mind will prevent the latter, and it is to be avoided.

The Different Voices.

It is a singular incident in the teacher's experience that a great many students want the kind of voice which they do not possess. Sopranos wish they were Altos, and *vice versa*. It comes from the natural admiration of that which we do not possess, and if we had it we would want something else. Each kind of voice, with its own characteristics, has its own individual beauty. The higher voices, with their elastic and florid possibilities, are beautiful in bright and vivacious singing. The tender and refined sentiments of the happy moments fall to them to express. As the happy moments take up the larger part of life the expression of this kind of sentiment enters the largest share of music. There are more sunshiny days than there are cloudy and rainy in all thickly peopled sections. When we have it in mind that sopranos and tenors best express these sentiments we are ready to ask, "Who would not have a high voice?"

The deeply emotional sentiments of the heart are never expressed in art by loud or high-pitched music. They are never spoken in high conversational voice. These sentiments come from our lips when hearts are melted and when feelings are touched. At such time we express in song. Music becomes the language of the heart. Such expression comes best in low voices. When we recall that the most treasured thought and feeling is in songs for low voice, we involuntarily ask, "Who would not be a contralto?"

The truth is, each voice has its own sphere of usefulness, and it is hard to tell which sphere is greater. In either there is enough to satisfy anyone, if he can be satisfied. One should examine into what he has and learn what he can do with it, and each will find enough to prevent his sighing for what some one else has.

It is not safe to change a voice from soprano to alto, or baritone to tenor, or to reverse these changes. Every person who has a singing voice has his proper kind of voice, which belongs to himself. It is that in which he can best express his nature. It is possible by skilful training to make any voice do the work which nature has planned to be done by any other kind of voice. The singer can be trained to use only the characteristics which belong to any kind of voice. When one uses a voice which is not his own he fails to express his true nature, and his singing becomes counterfeit. Every act of man is expression of his nature, and every man's expression has individuality. You can change temporarily the handwriting. In school a given style of penmanship can be acquired by all students, but when the scholars get away from the copy their individuality asserts itself and the handwriting departs from the copy. So every one has his own individuality of voice. No two voices are just alike. You may mould a dozen voices with similarity, but in time each will revert to its own characteristics. This shows how unwise it is to attempt to change a voice because of whim of possessor. Cultivate all voices in the place made for them by nature. For each there is its own beauty, and the music written for each is filled with enough of art and true worth to satisfy anyone. Get educated in the music which belongs to you and your natural voice.

Humming.

Some of the vocal teachers of a quarter century ago had many exercises which, instead of being sung, were hummed with closed lips. Later teachers seem to think them worthless, or even worse. We cannot wholly agree with the latter teachers. Exercises in humming voice, if used, as they can be, are very beneficial. The custom some have of trying over songs, humming the melody, is not right. It cannot help the voice, and one can easily fall into the habit of cramping the throat while so humming. The use of exercises for training the voice which are not given good breath support is not wise. Humming in good support of breath calls into use the resonance chambers of the mouth and nose and forms useful practice in tone placing and in enlargement of voice. The rich orotund voice can best be obtained through just such vibration as humming induces. There are other practices which can secure the same result, but because that is so there is no reason for condemning a device which can well be used.

Whether students should be allowed to use humming, except under the direction of a teacher, is a matter of opinion. Of course, if they will do it correctly they may be allowed to do it alone. But there is no surety that they will do it right until they have used it so much with the teacher that they have beome fixed in the right way. After that they may work upon it alone. It will do good to the voice in the direction of roundness and fullness. In spite of what some modern teachers say, make up exercises on which humming instead of singing voice is used.

THE FAMOUS SINGING LESSON IN ROSSINI'S "IL BARBIERE."

It was an accident which gave to "Il Barbiere" the essentials of a scene which is oftener in the minds of the public when the opera is chattered about in the drawing-room than any other episode in it. When Rossini wrote his opera the activity of publishers was not what it is to-day. An opera might have hundreds of performances without getting into print. Publication, in the modern sense, did not at all enter into the negotiations between manager and composer. The latter delivered his manuscript at a stated time, and when the opera had been prepared conducted a prescribed number of representations. Then for a period the work belonged to the theater, in the archives of which the manuscript score and parts were preserved. Composers did not write for immortality, but for the stagione—the season—and were happy when a work outlived the carnival, the primavera or the Quaresima, for which it had been written. There was nothing strange, therefore, if entire manuscripts disappeared from the theatrical lumber room. So it happened that by the time that Rossini's "Barbiere" became a part of the musical assets of the world, two of its numbers had been lost. They were the overture, for which an earlier work by the same composer has been substituted, as has already been explained, and a trio, which filled the incident now spoken of as the "Lesson Scene." Very welcome, indeed, has the hiatus caused by the loss of the trio been to the Rossini's from the early days, for it has enabled them all to interpolate the piece or pieces in which they appear to the best advantage.

Amusing have been the anachronisms which have resulted from these illustrations of artistic conceit and vanity, and diverting glimpses do they give of the tastes and sensibilities of great prima donne. Grisi and Alboni, stimulated by the example of Catalani (though not in this opera), could do nothing nobler than to display their skill by singing Rode's air and variations, a violin piece, in the lesson scene. It grew hackneyed, but nevertheless survived till a later day. Boston, feeling that variations were necessary, threw Rode's over in favor of those on a polka tune from Alary's "Le Tree Nozze" ("Gia della mente involarmi"). Then Mme. Gassier ushered in the day of the vocal waltz—Venzano's of amiable memory. Her followers have not yet died out, though Patti substituted Arditi's "Il Bacio" for Venzano's, Mme. Sembrich, Strauss's "Voce di primavera," and Mme. Melba, Arditi's "Se saran rose." Mme. Viardot, with some sense of the fitness of things, but forgetful, possibly, or not apprehensive of the fate that befell her father at the first performance of the opera in Rome, introduced a Spanish song. Mme. Patti always kept a ready repertory for the scene with a song in the vernacular to bring the enthusiasm of her auditors to a climax and an end—"Home, Sweet Home," in New York and London, "Solovei" in St. Petersburg. Usually she began with the bolero from "Les Vepres Sicilliennes," or the Shadow dance from "Dinorah." "Qui dit Rosina, pense Patti," wrote Von Lenz, long ago, and many there be among the older opera-goers of to-day who find the saying apposite. Mme. Sembrich, living in a period when the style of song, of which she and Mme. Melba are now the brightest exemplars, is not as familiar as it used to be, has also found it necessary to have an extended list of pieces to satisfy the public. She may sing Proch's Air and Variations, but it will only be followed by a demand for more. Let her supplement it with "Ah! non giunge" from "La Sonnambula," the bolero from "Les Vepres Sicilliennes," "O, luce di quest anima" from "Linda," or the vocalized waltz from Strauss—still the applause remains riotous, and yields only when the Spanish lady of the last century sits down to a pianoforte of this and sings Chopin's "Maiden's Wish," in Polish, to her own accompaniment.

I wonder if critics and pianists ever realize what a wealth of two-edged remarks is contained in the technical vocabulary of musical criticism? What delightfully subtle sarcasm, for instance, can be cloaked in these phrases: "Mr. Slapbang played as only he can play." "Mr. Doublethirds had a fine house." "We have never heard anything like Miss Pinfinger's touch." "Mr. Soakem executed several pieces most effectively." "Under Miss Racem's nimble fingers the well-known piece was hardly to be recognized."—*Leonard Liebling.*

THE ORGAN.

Organ Study.

In this issue is given the eighth of a series of articles on Organ Study, by an organist of long experience both as a teacher, church and concert organist. This instalment continues the discussion of organ tone. It is the purpose of the articles to give practical suggestions so complete and comprehensive that they will aid students of "The King of Instruments" to acquire a mastery over its complications and inexhaustible resources. It is particularly hoped that all who are interested in this subject will send to the editor any questions that they would like to have answered. Due notice will be taken of all that are so sent.—Editor of THE MUSICIAN.

VIII.—REED STOPS.

WM HORATIO CLARK.

There are two classes of Reed Stops—the Striking and the Free Reed. The Striking reed is in the most common use in England, France and the United States, while the Free reed prevails mostly in Holland and certain sections of Germany.

With the Striking reed a brass tongue of tempered metal strikes or beats against the smooth, flat surface of a brass tube or mouthpiece when set in motion by a current of air which passes through the pipe. This mouthpiece is represented by Fig. 1, the actual size used in an 8ft. stop in the lower octave. The metal tongue is shown in Fig. 2. This tongue is properly tempered by hammering, then polished and given a specific curve when it is voiced, so that the vibrating point or end does not touch the mouthpiece when it is at rest, as illustrated in Fig. 3, at *g*, the opposite end, the heel, at *h*, being fastened.

The mouthpiece is inserted in a block of lead, Fig. 4, *b*, and a brass spring bears against the tongue, with its rod passing upward through the block, so that the spring may be moved for tuning. The tongue is held firmly in place by a wooden wedge driven into the block at the heel, *w*, Fig. 5. When the spring is moved downward the vibrating length of the tongue is shortened and the beats are more rapid, causing the pitch to be sharper. The mouthpiece of an orchestral clarinet, with its striking tongue of wood, embodies the principle of this class of reed pipes.

American builders are accustomed to call the brass mouthpiece an *échellot* and the tongue the reed. These are enclosed in a zinc boot through which the wind passes into the pipe through the mouthpiece. The block is surmounted by a pipe and the various parts are illustrated in Fig. 6, *a* is the pipe, *b* the block, *c* the échellot, *d* the tongue, *e* the tuning spring, and *f* the boot.

In the production of the required sound the current of air passes from the boot through the opening in the échellot and in passing sets the elastic reed in vibration, the pitch of which is fixed by the proper position of the movable spring. It should be distinctly understood that the brass reed tongue in itself produces no tone whatever, but is simply the mediator or agent which is employed to divide the current of air into the requisite number of vibrations to obtain the desired pitch. The specific quality of tone is produced by the shape, scale and proportions of the resonant tube or body above the block. Without such a body the reed vibrations give forth simply a buzzing sound or squawk.

When the reed is made to vibrate, so as to give the required pitch, the pipe above acts as a resonating chamber through which the current of air passes, differing entirely from flue pipes through which the air does not pass. There is not a contiguous molecular vibration of a passive column of air, but a resonant reflection of air in motion which pulsates with the vibrations which the reed has divided.

The pipe is scaled to produce the desired tone, and it is also regulated at the top as in the case of flue pipes, in addition to the tuning of the reed. This is done with the atmosphere at a given temperature at which the reed vibrations and the pipe resonance synchronize with each other. Should the temperature of the room become higher and the air less humid, the resonance of the pipe would require a sharpening of the reed-tongue in order to preserve the synchronic quality, as a higher temperature flattens the reed vibrations and sharpens the resonant vibrations of its pipe. Hence, it is only at a given temperature that a reed stop is in voice or tune with itself.

The pitch of flue stops is always sharper when the air is warmer, not that there is any relative change in the pipe itself, but the air of the enclosed vibrating column, as well as the surrounding atmosphere which conducts to the ear, is more rare when heated and sound waves vibrate more rapidly when the air is warm, which explains why flue and reed stops are not in tune with each other excepting at a fixed temperature.

When reed pipes are played in a very cold room the antagonism between the pipe-resonance and the tongue vibrations is so marked that with many pipes the speech is utterly choked. In large concert organs the reed stops are generally tuned before each performance. Reed stops are very liable to be thrown out of voice and pitch by minute substances which become fastened between the reed-tongue and the échellot, causing them to sound with a snarling effect if the speech is not choked by the obstacles. For this reason it is important that every organist should understand how to clean a reed-tongue, which is to be done as follows:

Remove the pipe from its rack to the outside of the instrument where the manipulation can be done in the clearest light. In removing the pipe see that the boot does not fall off and become dented. When in clear light remove the boot, then holding the reed-tongue firmly against the échellot, slide the spring entirely off of the reed. Next, using the blade of a knife as a lever, draw out the wooden wedge (*w*, Fig. 5), and gently take out the brass tongue, being careful not to bend it. Then wipe it with a clean piece of chamois leather and also the flat surface of the échellot. Then turning the pipe upside down jar out any substance which may have fallen down and lodged in the tube, which is liable to be a portion of a fly's wing or other insect, or perhaps a scale from the plastering overhead or bit of saw-dust. Cleanse the échellot again, and carefully replace the reed-tongue with the concave curve on the échellot with the point of the tongue just even with the lower end of the échellot. Holding the tongue firmly, insert the wooden wedge and, with the knife-blade, press it firmly in place. Then, holding the reed tightly on the échellot, replace the spring upon the tongue and draw it to its full height. Then put the pipe back in its rack and wait twenty minutes for the pipe to cool from handling it before tuning. With the spring drawn way up it will, doubtless, be an octave below pitch.

Never blow into a reed pipe with the breath, as the moisture condensing from the breath is liable to corrode the brass so that the vibrations will be impeded.

The bass pipes of reed stops are fitted into a socket at the block so that the pipes can be removed from the block. They are generally *mitered*, that is, turned and doubled in square mitered joints so as not to require so much height overhead, especially those placed in the Swell Section II.

Sometimes the bass pipes have only half length bodies, and in the lowest pedal reed stops the bodies are sometimes only the length of the diatonic fifth above. In modern organs it is the custom in powerful reed stops to make the treble pipes of double length.

With the Striking reed the more powerful the wind pressure is the smoother becomes the tone. The Striking reed is used in the Oboes, Bassoons, Trumpets, Tubas, Cornopæns and Clarinets in the manuals and also in the Vox Humana. In the Pedal Section they are used in the 16 ft. Trombones, 32 ft. Bombarde and 8 ft. Tromba. In the large organ in Sidney, Australia, there is a 64 ft. Contra Trombone. In some of the old foreign organs the lower pedal reed-tongues are made of wood.

Free Reed stops are so-called because the vibrating end of the tongue moves freely in a slot in a plate of thick brass, similar to the reed in an harmonium or cabinet organ, as illustrated in Fig. 7. The tuning wire is so arranged that it supports both sides of the tongue at the heel, which is fastened to the plate by a screw. The plate is screwed to a large block of wood, which is sometimes square, and is also enclosed in a large, square wooden boot. The tone is not so powerful as with the Striking reed and is even more liable to be out of tune with the flue pipes than the Striking reed. The tone is similar in quality to the harmonium reed, modified by the shape of the pipe employed.

Reed Stops are the most expensive of any in the organ, as the labor of construction is greater in detail and the voicing requires the skill and patience

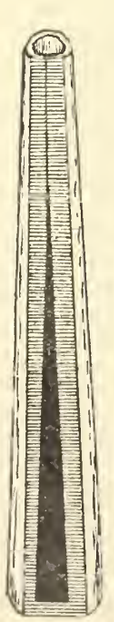


Fig. 1

Fig. 2.

Fig. 3.

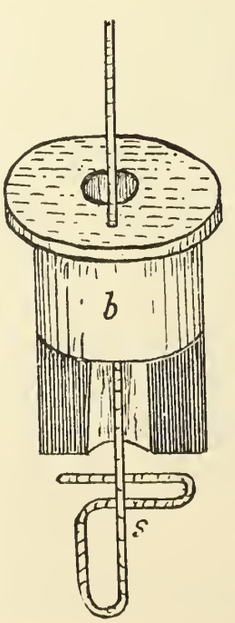

Fig. 4.

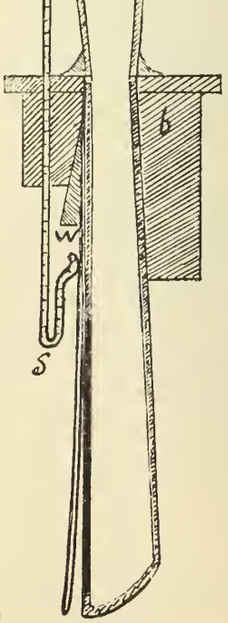

Fig. 5.

Fig. 6.

of a special expert whose wages are high. As they are so affected by atmospheric and adverse conditions which vary their relation to the flue pipes, they demand much attention in order that they may always be fit for use. These unfavorable conditions are inevitable concomitants of their structure and mode of speech.

Excepting immediately after tuning and with the same temperature at which they are tuned, they are seldom in tune sufficiently to play in chords, for if even a few pipes are slightly out and the effect will be detrimental. Such is the uncertainty of reed stops being in order, however costly and excellent in quality as such, that they are a bane to the builder and an aggravation to the organist.

These facts concerning reed stops should be carefully considered, so that in the purchase of two-manual organs for country churches it will be wise to omit them and for them substitute String Tone stops, which will always be available and which will not cast obloquy on any part of the musical value of the instrument. The fewer reed stops, with abundant 8 ft. flue work, the more satisfactory will be the general effect of the organ. In the full power of the instrument they should not be too prominent above the Organ, String and Flute Tone.

Oboe, 8 ft. A soft Striking reed stop with a body like Fig. 9 and is used when the organ contains but one reed stop and is placed in the Swell Section II. Combined with the St. Diapason it makes an expressive solo stop of a plaintive quality, but it has an organ-like effect when much played in chords. The English name is *Hautboy*, derived from the French *Hautbois*, which means High Wood, in reference to the orchestral position of the instrument as a member of the treble portion of the wood-wind section. The French organ Hautbois, with its narrow échellot is more imitative than the English stop. The bell of the latter is sometime entirely closed at the top, with a slot in the side of the bell for the emission of the tone, which is of a very delicate quality.

Bassoon. 8 ft. A name given to the lower octave of the *Oboe* when it is divided into bass and treble. The pipes are sometimes of half length, giving a more reedy and imitative effect than when full length, but uttering a somewhat unsteady tone.

Contra Fagotto. 16 ft. A smaller scale reed stop than the Oboe, of a similar but softer quality, an octave lower in pitch. On account of the limited space and height of the Swell box the pipes of the lower octave are often of half length, but when of full length they are mitered on. Fagotto is the original name for the Bassoon, its derivation being from its resemblance to a bundle or fagot of sticks laid together.

Trumpet. 8 ft. A striking reed stop placed in the Great Section I. It has a regular graded body without a bell (Fig. 8). When used alone it has a harsh and strident quality which is modified by being covered with all the other stops. It is effective as a solo stop, combined with the 8 ft. Open Diapasons in giving out a choral theme in the tenor compass, but otherwise is only used in the full organ.

Double Trumpet. 16 ft. Of smaller scale than the 8 ft. Trumpet, and is placed in the Great Section I and the Swell Section II of very large organs.

Trompete Harmonique. 8 ft. The same as the Trumpet in scale with the treble pipes, more sonorous on account of being double the length.

Cornopean. 8 ft. Of larger scale, both in the pipe and reed, giving a fuller and smoother sound. It is placed in the Swell Section II. In English it is called *Horn*.

Tuba Mirabilis. 8 ft. A large scale Trumpet placed on heavy wind pressure, from 10 to 15-inch pressure, used in the Solo Section IV. It is called by the name of *Ophycleide*.

Tuba Sonora. 8 ft. Of larger scale and of a fuller and smoother tone than the Tuba Mirabilis. The *Tuba Profunda* is an octave lower in pitch placed in the Pedal Section.

Clarinet. 8 ft. This is a pleasing solo stop with a cylindrical body, as in Fig. 10, or surmounted with a sliding bell, as in Fig. 11. It resembles the orchestral instrument in quality. It is placed in the Choir Section III and is used in combination with the Flute Tone. It is stronger in power with the sliding bell and, when placed in the Swell Section II, is very expressive. It does not combine well with any stops or with itself alone when used in chords.

Trombone. 16 ft. A pedal reed stop with four-sided wooden bodies of inverted pyramidal form. It is a powerful stop, and if placed upon heavy wind-pressure gives a smooth quality of tone. The échellot is made of wood and the reed tongue beats upon a smooth surface of thick leather, which prevents any clatter from the vibration. It is the French *Bombarde* and in the German *Posaune*, and in the largest organs is placed as a 32 ft. stop.

Vox Humana. 8 ft. A Striking reed stop placed in the Swell Section II and sometimes in the Echo Section, when it is played by electric action remote from the manuals. It has a short cylindrical body, nearly covered at the top, as in Fig 14, and in the treble the pipes have long boots. It is not so imitative, as the name suggests, excepting when used as a tenor solo, combined with Flute stops and sometimes in distant choir effects in contrasting or responsive effects, which should be sparingly used. When played alone it resembles the grotesque bleating of sheep. On account of the short body, which hardly draws the reed vibration into resonance, it is seldom in tune and unless tuned every time it is used it is quite likely to become a useless and dormant stop.

It should not be placed in small two-manual organs from a sentimental or vague idea that it is an excellent stop with which to accompany the voice, as organ committees have been known to express, because whatever amount invested in a small organ should be of musical utility in the service. It is only suitable for sensational effects where expense is not considered.

In German organs the bodies are made of wood, shaped with a bell turning on one side, similar to the tenor orchestral Saxphone.

Musette. 8 ft. This Striking reed stop has a slim conical body (Fig. 15), and gives a wailing quality of tone similar to that produced from the reed of a bagpipe. It is only used in concert organs where a variety of effects is desired and has no place in church service.

Cor Anglais. 8 ft. A free reed pipe with a body, as in Fig. 13. It is of a sweet quality of reed tone, but does not blend well with other stops, and is so susceptible to changes of temperature that it is not in condition to use, excepting when the air is of the same as when it is tuned.

Vox Angelica. 8 ft. A delicate Free reed stop with a wood body with the reed enclosed in a square wood boot, as in Fig. 16.

Euphone. 16 ft. A free reed stop with the bodies of wood, as in Fig. 16. The tone is of a pleasant quality, but its expense relegates it to the domain of the largest organs.

Physharmonica. 8 ft. A free reed stop using only the reed-tongues which vibrate in their plates with no pipes, as with the common harmonium. It is placed in a small box, the cover of which opens and closes for the crescendo and diminuendo. The tone is like an harmonium. It is seldom used, as the slightest deviation of temperature causes it to be out of tune with the pipes, so much so that in many instances where it has been inserted in an organ the connection is detached so that it cannot be inadvertently drawn.

MUTATION STOPS.

These stops are so-called on account of the change from the normal pitch to another note of the scale, so that the pipe is tuned to a fifth (quint), tenth (tierce) or twelfth (octave quint), above the 8 ft. pitch. The *Tierce* is now discarded and the pipes should be voiced with a soft flute tone so that they can be used with any 8 ft. stop without being prominent as harmonic overtones. As formerly voiced they did not blend well. The *Twelfth* is drawn with the *Fifteenth* to lessen the thin shrillness of the latter in combination with the foundation stops.

COMPOUND STOPS.

These consist of small ranks of pipes tuned to the natural overtones with from two to several pipes sounding at once. They are divided in their scale into *breaks*, that is, after ascending two octaves, more or less, the ranks break back to the octave below to prevent the pipes becoming too small as the scale ascends. They are prolific in old organs, and their retainment was based upon false pedantic theories of which a discussion would here be out of place. Advanced organ builders are recognizing that their place is better supplied by the greater introduction of fundamental stops, with varied scales and modern voicing, which obviate all tendency to monotony and which add to the grandeur of the instrument.

PERCUSSION STOPS.

These are sensational adjuncts which are foreign to the legitimate realm of organ music. They consist of mechanical devices for operating bells, steel bars, kettle drums, snare drums, bass drums, resonant gongs and, by means of electric action, the chimes in the belfry.

Ancient organs had numerous whimsical devices, such as movable figures, the waving of feather plumes, etc., and one organ in Germany has a stop knob which, if a strange organist, unaccustomed to the instrument should unwittingly draw, a stuffed rat would suddenly be projected across the keyboard with startling effect, both to the player and with a corresponding musical result! Often, in the United States, more attention has been given to the multiplication of mechanical accessories, which are seldom used, than to an improvement in the tone production and progress in musical possibilities.

REGENERATION OF THE ORGAN.

THOMAS CASSON.

In England, the general neglect of the orchestra had led to the organ being called upon to fulfil duties for which it was unsuited. In particular the ease and economy with which the *bizarre* old church orchestra could be superceded by at least a seemly display by one presumably capable musician was, perhaps, the prime cause of the *decensus*, ever to be deplored. Some day it may again be realized that reform, not destruction, is the true course even here. Certain it is that to the student of organ construction the modern normal English organ is hardly less uncouth than the old church orchestra, and that if in its turn it is not to be swept away, there must be immediate and thorough reform. For parsimonious reasons the English organ, as an organ, has never been properly developed since the adoption of the German compass.

The old organs were *only* organs, and were complete, so far as they went, as to the essential departments of Great and Choir, the Swell or old-form Echo being looked upon as a luxury. Thus the stops, loud, soft, octave, mutation, etc., had veritable basses of full compass. When pedals were added, they were a mere occasional reinforcement, practically the *timpani*, and answered well enough. When it was grasped that the only artistic method of organ playing was to play the bass with the feet, and that German compass was the only one possible if the most noble music was to be performed, the old basses of every sort were lopped off on the procrustean bed, and the then existing organ as an artistic entity was described. Instead of recognizing that the basses for the whole organ must be relegated to the pedal, the English builder retained his *timpani* "pedal pipes," and left the organ without any true bass whatever! Such reform as has taken place was thus described by the late Mr. W. T. Best in 1885, and it cannot be said that there has been any general improvement since: "Unfortunately, when organ builders shortened their key-board compass in the important region of the 'bass,' they have constantly neglected to supply the indispensable equivalent of an adequate pedal organ. Even in the largest instruments, where an attempt is made in this direction, it will be at once remarked that the pedal-bass is only suitable for the stops comprising the great or most powerful clavier; the varieties of delicate tone in the bass (to combine with the more frequently used Choir and Swell claviers) being almost invariably absent.' In Germany, whence we have the pedal, and pedal organ, the pipes of the pedal stops exhibit only a trifling advance in scale beyond those of the manual; but the minimum number of stops is one-third of that of the Great, *i. e.*, the largest, department. In an organ of pretension the proportion is one-third of the number in the whole organ, a proportion occasionally exceeded. The English builder ignores, and even repudiates this rule. Many organs retain their old pedal pipes, though they are, for some reason or other, labelled 'Open Diapason.' Most organs have them in modified form, accompanied by a 'Bourdon,' as the builder persists in labelling the sub-bass. In no case is the organ provided with an adequate bass. Of course, the destruction of the work of such masters as Green, Snetzler, etc., is absolute and complete. The sweet, mellow diapason seems weak beside the brutal pedal, reconstruction follows upon reconstruction in the vain attempt to make a satisfactory instrument, until at last the inevitable mogalomaniac new organ gives the absurd masterpiece its *coup de grace*. For the reassertion of the artistic position of the organ in England the first thing required is the abandonment of the notion that a few noisy, dull and monotonous stops can constitute a bass. Pedal couplers are more freely used in England than in Germany, and are legitimate and really economical features. The greater the number of pedal stops, too, the greater the opportunity for serving in numerous capacities. The following modest rule would therefore suffice, allowing the greater number where the margin occurs:

Organs up to 20 stops. . . . . 33 per cent.
Organs up to 20 stops and upwards . . . 25 per cent.

On no account must the Great organ be sacrificed to the secondary and inferior effect. It is a grave mistake to enclose the Choir organ. True expression involves a change of *timbre*; but this cannot be done by the Swell box. Another grave defect in modern English work is the neglect of the Great mutation and chorus work. Lack of variety in the 16-foot manual range is a third grave defect. There should not be more than three manuals, which may quite conveniently have a dozen organs, all that is necessary being that at a touch any one of them with its augmentative couplers be attached to its clavier, the other organs of that clavier being conveniently closed. A serious drawback of too numerous claviers is the enormous complication of couplers.

To sum up, here are a few proposals towards Regeneration of the Organ:

1. Provision of a dignified and ample tonal scheme entirely of pure organ effect, to include a Great Organ complete with doubles, chorous and chorus reeds, entirely free from the Swell.

2. Provision of a subsidary department in a Swell box.

3. Provision of pedal basses ample in power and variety, including pipes enclosed in the Swell, all furnished in the most economical way.

4. Provision of mechanism whereby any combination of manual stops and couplers may be instantly furnished with its proper pedal bass displayed on the drawstops.

5 Provision of some combinational method for facilitating electric registering.

Subject to all the foregoing conditions.

6. Free use of mechanical contrivances for increase of variety.

7. Provision of fancy and orchestral imitative stops in moderate proportion.

8. Provision of solo stops on the pedal with means to make them available when required."

On the wild rose-tree
Many buds there be,
Yet each sunny hour
Hath but one perfect flower.

Thou who wouldst be wise,
Open wide thine eyes;
In each sunny hour
Pluck the one perfect flower!

—*Richard Watson Gilder.*

LIST OF ANTHEMS.

N. J. COREY.

The following list of anthems is by no means a complete list of the anthems that have been used in the Fort Street Presbyterian Church, of Detroit, during the past ten years. It only includes those that have proved most acceptable among the members of the quartet. There have also been many occasions when oratorios, cantatas and services have been given with enlarged choir, but of these no mention has been made.

Andrews . . To Him that Overcometh.
Why Art Thou Cast Down?
Adams . . . If I Go Not Away.
Nearer My God to Thee.
Allen . . . . Return Unto Thy Rest.
He Shall Come Down Like Rain.
God Thou Madest Heaven.
Buck . . . . Fesival Te Deum in E flat.
Te Deum in C.
Te Deum in B minor.
Cantate Domino in C.
Benedic Anima in D.
Deus Misereatur in D.
The God of Abram Praise.
Rock of Ages.
The Strain Upraise.
Sing Alleluia Forth.
Come Ye Disconsolate.
The Lord Is King.
Magnificat in B flat.
O How Amiable.
Barnby . . . Ye Shall Go Out with Joy.
Barnby . . . How Sweet Thy Mercy.
O Lamb of God.
Abide With Me.
My God, I Thank Thee.
Brewer . . . O Jesus, We Adore Thee.
More Love to Thee.
Blair . . . . Guide Me, O Thou Great Jehovah.
Baldwin . . Des Misereatur.
I Will Lift Mine Eyes.
Brown . . . The King of Love My Shepherd Is
I Will Lay Me Down in Peace.
The Lord Will Comfort Zion.
Bulalrd . . . No Night in Heaven.
Sun of My Soul.
Immanuel's Land.
Chadwick . . Peace and Light.
God to Whom We Look Up Blindly.
Prayer.
Jubilate in B flat.
Art Thou Weary.
Awake, Thou that Sleepth.
Saviour, Like a Shepherd, Lead Us.
Behold the Works of the Lord.
While Thee I Seek.
Abide With Me.
O Cease My Wandering Soul.
O Thou that Hearest Prayer.
O Day of Rest and Gladuess.
Abide With Me.
Awake Up My Glory.
Cobb . . . . My Soul Truly Waiteth.
Coombs . . . How Lovely Upon the Mountains.
The Heavenly Message.
Field . . . . Whosover Drinketh.
Foster . . . . O God, Who Is Like Unto Thee.
The Souls of the Righteous.
O For a Closer Walk.
When the Lord Turned the Captivity.
Foote . . . . Venite in C.
Still, Still With Thee.
Te Deum in D minor.
Jubilate in A flat.
Awake Thou that Sleepest.
Arise, Shine.
Thy Way, Not Mine.
Lord of the Worlds Above.
Gounod . . . Now Thank We All Our God.
Ah! What We Then. (Mors et Vita)
Happy Are We. (Mors et Vita.)
Lovely Appear. (Redemption)
From Thy Love as a Father. (Redemption.)

Wood . . . . Jesus, Who from Thy Father's Throne.
Wareing . . . O Come Let Us Reason Together.
Warren . . . Cantate Domiuo in D.
Venite in C.

IN THE MUSICAL WORLD

AMONG OUR SCHOOLS AND TEACHERS.

Hiram College Conservatory of Music gave a studeuts' recital, December 13, under the direction of Eugene Feuchtinger, A. M. The program was of high order.

The first concert of the Philharmonic Club, of Indianapolis, Ind., Edward Nell, director, was given on the evening of December 5. Mr. Emil Liebling was the soloist.

Mr. Frederic A. Cowles directed a recent performance of Buck's "Couing of the King," at Louisville, Ky. His work, both as conductor and organist, was highly commended.

Miss Carrie Delle Hosmer gave two student recitals on December 15 and 17, at Orauge, Mass. The first by pupils in earlier grades, the second for more advauced students. Both programs were well selected.

Pupils of Mr. Jaroslaw de Zielinski was heard in a recital, at his residence, in Buffalo, on November 17. Mr. Zielinski's Russian proclivities were evideuced in the program, which contained a number of Russiau uames.

Mr. Wm. J. Hall has established in connection with the Cedar Rapids (Iowa) College of Music a training school for organists and choirmasters. Mr. Hall's well-known ability and energy will make the new venture an undoubted success.

Mr. Emil Liebling, of Chicago, Ill., played the following program at Milwaukee-Downer College (Wis.), on December 8: Sonata, Op 22, iu G minor, Schumann; Nocturne, Op. 48, Napravnik; Romance Dramatique, Second Meuuet iu E, Menuetto Scherzoso. Elfin Dance, Mazurka de Concert, Liebling; Three Oerman Dances, Beethoven; La Fi'euse, Raff; Autumn, Chauinade; A Day in Venice, Nevin; Polonaise in E, Liszt.

At the second faculty concert, November 29, of the Toledo (Ohio) Conservatory of Music, the following program was ably given by Bradford Mills, baritone; Jean A. Parré, violinist; Ernest Levan Owen and Edwin E. Sheldon, pianists: Sonata, Op. 21 (Allegro di Motto, Larghetto e Scherzo, Allegro Molto Vivace), Gade; "Das Weiss Nur Ich Allein," Riegg; Düfftet die Lindenbluth," Stange; Consolation in E, Liszt; Pas des Bacchantes, Bouval; Scene de la Csarda, No. 4, Hubay; Don Juan's Serenade, Tschaikowsky; Sonata, Op. 27, No. 1 (Andante e Allegro, Scherzo), Beethoven; Suite, Op. 27 (Romanza, Scherzo), Ries.

Mr. E. R. Kroeger, well known to MUSICIAN readers, is giving a series of five morning lecture recitals in St. Louis. Their scope is shown by the following synopsis of the first of the series on Johann Seb. Bach: His influence upon the art-life of his period: his influence upon modern art-life; his works for the clavichord and the organ; his sacred compositions; the Fugue, and Bach's treatment of it; the Suite. Compositions to be played: Prelude and Fugue in C minor, Book 1; Prelude and Fugue in E major, Book II; Invention in two parts in F major; Gavotte and Musette in D minor, from 6th English Suite; Passepield in E minor, from 4th English Suite; Chromatic Fantasie and Fugue in D minor.

At a lecture-recital before the students of Dane College, Crete, Neb., Mr. William Irving Andrus, director, gave the following numbers: Gigue, Allemande, Bouree, Sarabande, The Harmonious Blacksmith, Lascia Ch'io Pianga (Rinaldo), Violin Sonata in A (Andante, Allegro, Adagio, Allegretto Moderato), Dead March fram "Saul," "See the Conquering Hero Comes" (Judas Maccabens), Second Organ Concerto (Andante Maestoso, Allegro, Adagio, Allegro Ma Non Presto), Largo from "Xerxes." From "The Messiah"—"And the Glory of the Lord," "He Was Despised." Pastoral Symphony, "He Shall Feed His Flock," "Come Unto Him," "I Know that My Redeemer Liveth," Hallelujah Chorus He was assisted by orchestra and chorus.

At Mount Union College (Ohio) Conservatory of Music, Lyman F. Brown, director. A recital of Works by American Composers was given by Miss Dora Brown, assisted by Mrs. J. W. Moore, soprano and Mrs. K. F. Leet, pianist. The program included the following: 1. Prelude—Arabesque, John H. Rogers. 2. Silver Spring, William Mason. 3. A Song of Love, Mrs. H. H. A. Beach. 4. Three Selections, E. A. MacDowell. (a) Idyl, Op. 28, No. 4. (b) Poem (Scotch), Op. 31, No. 2. (c) Serenata, Op. 16. 5. (a) The Rosary, Ethelbert Nevin. (b) Ecstacy, Mrs. H. H. A. Beach. 6. Scherzo, two pianos, H. A. Wollenhaupt. 7. Hexentanz, Op. 17, E. A. MacDowell. 8. May Time, Dudley Buck. 9. (a) Last Hope. (b) Tremolo, L. M. Gottschalk. 10. Rustic Wedding Procession, two pianos (manuscript), Templeton Strong.

A song recital was given by Myron E. Barnes, tenor, under the auspices of the Olivet College (Mich.) Conservatory of Music on Thursday evening, Dec. 13. The program was as follows: "When the Land was white with Moonlight," "The Rosary," "Nocturne," Nevin. "In the Skies," MacDowell. "When thou art near me," Loehr. (Air) "Be thou faithful" (St. Paul), Mendelssohn. "Spring Night." Schumann. "Trinklied," (Cavalleria Rusticane), Mascagni. (Song Cycle) "Eliland," Op. 9, 'Silent Woe," "Her Name was Irmingard," "Roses," "Irmingard, thou fairest Maid," "On the Shore of the Lake," "Child Voices," "Moonlight Night," "Dreams," "To God thy Soul belongs," "Resignation," Von Fielitz. "Where e'er you walk" (Old English) Handel. "I'm wearin' awa" (Old Scotch), Foote "My Love's an Arbutus" (Old Irish), Stanford. "Mahac Field" (An Old Hungarian Melody), Korbay. "Vittoria" (Old Italian) (1601-1607), Carissimi.

An historical song recital was given at Wellesley College, hy the following artists, on December 17: Miss Edith E. Torrey, soprano; Melville Homer, baritone; Wolf Fries, 'cello; George Turner Phelps, accompanist. The program follows for the benefit of those who may wish to do similar work. Songs for Baritone—"Wait thou still" (1640), Franck. "Caro mio ben," G. Giordani (1744-1798). Der Wanderer (1815), Franz Schubert (1797-1828). Im wunderschönen Monat Mai, "Aus meinen Thränen spriessen," Die Rose, die Lille, "Wenn ich in deine Augen seh," "Ich will meine Seele tauchen," "Ich grolle nicht," Dichterliebe (1840), Robert Schumann (1810-1856). Songs for Soprano—"Qual farfalletta amante," D. Scarlatti (1683-1757). Das Veilchen, W. A. Mozart (1756-1791). Frühlingsnacht, Robert Schumann. Im Herbst, Robert Franz (1815-1892) "Auf Fluegeln des Gesanges," Felix Mendelssohn (1809-1847). Die Allmacht, Franz Schubert. Solos for 'Cello—Elegie, Caprice slave, Op. 98, P. Scharwenka (1847——). Wiegenlied, Ugo Afferni. Vlto, Op. 54, No. 5, D. Popper (1845——). Songs for Baritone—Pilgrim Song, P. I. Tschaikowsky (1840-1893). Herbst, Arthur Foote (1853——). The miller's quest, Clayton Johns (1857——). Birds in the high hallgarden, Go not, happy day, Arthur Somervell (London). Songs for Soprano—"Ich liebe dich," E. Grieg (1843——). Die Mainacht, Johannes Brahms (1833-1897). "Viens, mon bien aimé, Cécile Chaminade (1861——). "Orpheus with his lute," Arthur Sullivan (1842-1900). Deserted, E. A. MacDowell (1861——). "Dear love, when in thine arms I lie," G. W. Chadwick (1854——). Nachts, H. H. A. Beach (1867——). "The lark now leaves his watery nest," H. W. Parker (1863——).

AT HOME.

The M. E. Church of Mansfield, Ohio, gave an elaborate Christmas service Dec. 23. The music was of high order. The organist is S. Dwight Smith the choirmaster, L. A. Palmer.

The twentieth meeting of the Ohio State Music Teachers' Association was held in Cleveland, Dec. 26-28. The programs were of high order and the interest marked. N. Coe Stewart was president. A song by F. A. Williams was sung.

Mr. Eugene E. Davis, Musical Dirctor, Baylor Female College, Belton, Texas, has accepted the Musical Editorship on the *Daily Times-Herald*, of Waco, Texas. This is in addition to his duties as director of a school of over two hundred music pupils.

Elaborate preparations are being made by the Handel and Haydn Society of Boston for their Easter performance, when Haydn's "Creation" will be presented. Mme. Marcella Sembrich will be the soprano, and Jos. S. Baernstein the bass.

The third private concert this season of the Manuscript Society will be given at the Carnegie Chamber Music Hall, on Tuesday evening, Jan. 15, 1901. Special attention has been devoted this time to the preparation of an interesting program, which will include several important works in manuscript.

A successful and interesting memorial service for the late Sir Arthur Sullivan, on Sunday evening, Dec. 9, by the Choir of Central Congregational Church, Philadelphia. The choir was assisted by Miss McGuekin. The organ selections were appropriate to the occasion. Mr. Frederick Maxson is organist and choirmaster.

The most important number on the program of the first concert of the Musical Art Society, which took place in Carnegie Hall, New York, on the evening of Dec. 20, will be the celebrated Marceline Mass by Palestrina. The work was given about five years ago by the society and made a profound impression upon the audience.

With the assistance of Miss Emily Baxter, soprano, and Miss Jean McKensie, reader, Mr. John H Gutterson is giving an illustrated talk Scoteh Music, called the "Banks and Braes of Bonny Doone, and the Songs and Singers of Scotland." A strong parallel is drawn between the Scotch Folk-Song and the Negro melodies of our own South.

Ossip Gabrilowitsch, the pianist, was born at St. Petersburg, Jan 26, 1878. He was the son of a lawyer, but at an early age his musical instinct was marked. He studied at the St. Petersburg Conservatory under Tolstoff, won the Rubinstein prize, and then in Vienna he studied under Leschetitzki and composition under Nawratil. His virtuoso career began in 1898. His first appearance in America was at New York, Monday night, Nov. 12.

On Thursday evening, Dec. 11th, Spohr's oratorio "The Last Judgment," was suug by the choir of Dundas Centre (London, Canada) M E. Church. The tenor solos were sung by J. H. McKinley, of New York. The other soloists were Miss Eva Roblyn, soprano: Miss Beatrice McDonald, contralto; Mr. A. Eldon Westman, teuor; Mr. W. H. Skinner, bass. A solo "All Ye That Pass By," composed by W. H. Hewlett, was sung by Mr. McKinley.

The aunual meeting of the Pennsylvania State Music Teachers' Association was held at Philadelphia, December 27 and 28. Dr. Hugh A. Clarke, of the University of Pennsylvania, was president. A full two days program was furnished those who attended. The round table discussions for pianists, vocalists, organists and public school music were well attended and evoked much interest. The next meetiug is to be held at Readiug, with E. A. Berg as presideut.

Music is becoming a strong feature in the work of the Home School for Girls, Everett, Mass. Miss Carrie E. Sherrill who has charge of the voice department and Miss Alice Coleman the piano forte teacher, gave jointly their first recital, on the evening of Dec. 19, 1900. The program was from the best masters and was given in a manner to gratify both the teachers and the invited audience. The two-part song work of the smaller girls was particularly good.

The Trio Club, of Buffalo, N. Y., consisting of Jaroslaw de Zielinski, pianist, George A. Goold, violin and T. Amesbury Goold, 'cello, gave a morning concert, Nov. 28. The program was as follows: Trio in F, Op. 42, (dedicated to Mathilde Gade), Allegro Animato, Allegro Molto Vivace, Audantino, Allegro con fuoco, Niels W. Gade "Autumu Song," Clayton Johns. Andante from Op. 21, S. de Lange. (a) "The Star of Twilight," Claytou Johns. (b) "A Winter Song," James H. Rogers. Trio in D minor, Op. 25 (dedicated to Arabella Davison-Goddard), Allegro, Andante Espressivo, Allegro Molto ed Appassioneto, J. Edward Bache.

Mr. H. L. Yerrington gave an organ recital in the First Congregational Church, Norwich, Conn., Jan. 1. He was assisted in the following program by Walter F. Lester, baritone. 1. Chromatic Fantasia, Thiele. 2. (a) Caprice, D. R. Munro. (b) Communion in G, Scotson Clark. 3. "Arm! Arm! ye brave," (from "Judas Maccabeus"), Handel, Mr. Lester. 4. Allegro in F sharp miuor, Op. 18, No. 2, Guilmant. 5. Romance (composed for Violin and Orchestra), Op. 50, Beethoven. 6. "O for a closer walk with God," P. A. Schnecker, Mr. Lester. 7. Berceuse in D major, Walter Spinney. 8. March (from the Third Organ Symphony), C. M. Widor.

At the Presbyterian Church, Athens, Ga., an organ recital was given Monday evening, Nov. 25, 1900, by Dr. John P. Campbell, assisted by Karl C. H. Drechsel, baritone. The program was as follows: 1. Organ Sonata in C minor, (a) Allegro Moderato, (b) Largo. (c) Allegretto Grazioso. (d) Allegro Vivace, J. P. Campbell. 2. Aria—"It is Enough" (from the Oratorio, Elijah), Mendelssohn. 3. Grand Processional March (from the "Queen of Sheba"), Gounod. 4. Andantino, Caesar Franck. 5. Prelude and Fugue in D major, Bach. 6. One Sweetly Solemn Thought, Dudley Buck. 7. Lullaby, Vogt. Gavotte-Mignon, Thomas. 8. Grand Chorus, Du Bois.

William C. Carl began his annual series of free organ recitals on Tuesday, November 20, 1900, at four, in the afternoon, at the "Old First" Presbyterian Church, New York, assisted by Mrs. Genevra Johnstone Bishop, soprano, and E. Ellsworth Giles, tenor. The recitals fell on four successive Tuesdays, November 20, 27 and December 4 and 11, 1900. Mr. Carl's new volume, "Thirty Postludes for the Organ," by eminent composers, just issued, has already been eagerly welcomed by organists, for there is no other similar volume published. Among the foreign composers who have written pieces especially for Mr. Carl are M. Guilmant, Aloys Claussmann, B. Lnard Selby, Th. Dubois, Henri Deshayes, Samuel Rousseau, Eugene Gigout, Th. Salomé and Joseph Callaerts.

The following program was played by Mr. William B. Colson, assisted by Miss Jessamine A. Pike, soprano, at the Old Stone Church, Cleveland, Ohio, on Wednesday evening, December 12. Sonata Pontificale, Allegro Moderato, Adagio, Marche Pontificale, Fuga (Fanfare). Andantino, Lemare. Marche Religieuse (On the theme "Lift up your heads," from Handel's "Messiah," Guilmant. Hear my Prayer, Mendelssohn. Intermezzo, Op. 116, No. 6, Brahms-Lehmare. Pastorale, Foote. Andante Cantabile, (an organ transcription of "Day dreams" for piano, by Mr. Frederick A. Williams of Cleveland), Williams. I Trust in God (Credo), Faure. Fiat Lux (Let there be light), Dubois.

The Saint Cecilia Club, of Montreal, Can., gave a musical soiree Nov. 22. The program was interesting and varied. Miss Elvina Chênevert was the pianist, and Mr. M. Z. Monté, basso.

The Northampton (Mass.) Vocal Club, Ralph L. Baldwin, Director, gave the first concert of its fifth season, Dec. 12 The program was excellent and very attractive. The First Church of Christ, of Northampton, of which Mr. Baldwin is organist and choirmaster, gave its Christmas service on Sunday, Dec. 23. "The Story of Bethlehem," by John E. West, was sung in addition to a miscellaneous program. On Dec. 17, Mr. Baldwin gave his twenty-seventh organ recital. The program was as follows: 1. Epilogue, Russell King Miller, Op. 6, No. 2. 2. Lied, Gaston M. Dethier. 3. Noel: Prelude to "The Coming of the King," Dudley Buck. 4. Sonata No. 1 in C minor, Ralph L. Baldwin, Op. 10, Allegro Pathetique. Adagio, Moderato, Maestoso Un Modo d'un Marcia. Recitativo. Finale, Allegro Assai Organ Transcriptions. 5. Andantino in D flat, A. Chauvet. Pavane, Fr. Brison. 6. March from Tannhauser, Richard Wagner.

The Cecilia Society, of Boston, has perfected its plans for the Winter, and announces for its twenty-fifth season a remarkable program. In the event of obtaining Massenet's most recent work "The Promised Land," oratorio, it will be given. The list is as follows: Cantata, "Departure of Hiawatha," by Coleridge-Taylor, for chorus, soloists and orchestra, first time in America; cantata, "Phœnix Expirans," by G. W. Chadwick, for chorus, soloists, orchestra and organ, conducted by the composer; a rhapsodie by Brahms, for alto voice, men's chorus and orchestra; cantata, "The Sailor's Christmas," by Chaminade, for women's voices, first performance; Hallelujah Chorus, from Beethoven's Mount of Olives; "The Missa Brevis," by Palestrina, entire, first performance; a crucifixus, by Lotti; "The Cherubim Song," by Tschaikowsky; 119th Psalm, by César Franck, first time in America; cantata, "Samson and Delilah," Saint-Saëns, with Mme. Schumann-Heinck.

The Manuscript Society of New York is now engaged upon the Eleventh Season of its musical activities under conditions which, it is confidently believed, give token of very important progressive work in behalf of musical composition in America, and of a grade higher than ever before. The Society has already given two private concerts, in the performance of which some of the most prominent artists in America have given assistance. Four more of these private concerts are to be given on the following dates: January 15, February 12, March 12 and April 15. The programs at these events will continue to maintain the high standard involved in the policy with which the Society began its work this season. Two public concerts are also to be given, on January 19 and April 25, 1901, in which the services of a full and competent orchestra will be employed. Mr. Frank Damrosch is president and Mr. J. Hazard Wilson, secretary. The dues for non-resident members are five dollars with an initiation fee of five dollars.

We are pleased to make the following announcement, and hope it will be given wide attention: The Manuscript Music Society of Philadelphia offers a prize of $100 for an instrumental composition, not larger than a quintet nor smaller than a trio Each composition must be inscribed with a *nom de plume* or motto. The name of the composer must not appear on the composition. But an accompanying envelope must contain the true name and address of the composer, and must be inscribed on the outside with the *nom de plume* or motto. The work submitted must be absolutely new, not having been published nor publicly performed. The judges will be three musicians of national repute, not resident in Philadelphia. The successful composition will be performed at the first public concert of the society, after the declaration of the prize. All rights in the successful composition are to remain the property of the composer. All compositions must be in the hands of the secretary, Philip H. Goepp, 1524 Chestnut Street, Philadelphia, by April 1, 1901.

ABROAD.

The well-known baritone, Lassalle, has started a musical and dramatic school in Paris, which contains a small lyric stage, on which works composed specially for the pupils will be given.

A monument to Chopin was unveiled Oct. 17, in a corner of the Luxembourg Garden, Paris. It consists of a bronze bust supported by a pedestal in white stone, against which leans a semi-nude female figure.

The assets of the late popular composor, Millöecker, include the scores of thirty-three operettas, sixty-six Singspiele and farces, some overtures, twelve Walzer, forty other dance pieces, fifty-one Lieder and numerous sketches.

Sir Arthur Sullivan's new opera, written for the Savoy Theatre and called "The Emerald Isle," will shortly be produced there. Hibernian subjects are not often treated by these composers, but Villiers Stanford's "Shamus O'Brien" was successful and so was Sir Julius Benedict's "The Lily of Killarney," the popular drama, "The Colleen Bawn," supplying the story.

The Broadwood piano given to Beethoven in 1818, which he retained as long as he lived, was a present from the Broadwood firm of that day, and was due to Mr. Thomas Broadwood having made Beethoven's acquaintance in Vienna the previous year. It came into the possession of Liszt, who kept it at Weimar. He bequeathed it to the Princess Sayn-Wittgenstein, who presented it to the National Museum, Budapest.

Madame Adelina Patti made her only appearance this season in London at the Albert Hall, on Thursday, October 18 She sang Donizetti's "O luce di quest' anima." Desdemona's cavatina from Rossini's "Otello," and Grieg's "Solvejgs Lied." As encores she gave "Voi che sapete," Tosti's serenata, and the inevitable "Home, Sweet Home." Miss Ada Crossley, Mr. Ben Davies, and Mr. Santley were the other principal vocalists.

The late Professor Max Müller, the most eminent scholar at Oxford University, was an accomplished musician, and was probably the only great teacher in the famous university who had mastered the study of the divine art. Music was the learned man's recreation, and in this, it must be said, he had a great advantage over his brother professors. Friedrich Max Müller was the son of Wilhelm Müller, the German poet, and was born, at Dessau, on December 6, 1823.

At the instance of Signor Gallo, minister of public instruction, Rome, the State has purchased, for the price of 6,000 francs, the autograph scores of Bellini's "Norma" and "Beatrice di Tenda" for the library of the Academy of St. Cecilia. The same official has likewise ordered the photographic reproduction of the autograph score of Pergolese's "Stabat Mater," preserved at the Abbey of Montecassin, as a gift to the principal Italian and foreign musical institutes, as well as to the municipality of Jesi, the illustrious composer's birthplace.

"Les Cloches de Corneville," says the *London Chronicle*, have up to the present time been nothing more than a name, for this Norman village, despite its stage fame in every quarter of the globe, has never yet boasted the possession of a peal of bells. The omission has been supplied by the Marquis de la Rochethulon, whose efforts have been backed up by other natives of Normandy, not only in distant French provinces, but in other parts of the world. Funds were soon obtained sufficient to provide a carillon for this little township, and the inauguration ceremony, just lately given, was made memorable by an open-air performance of "Les Cloches de Corneville," in the presence of 10,000 spectators. The twelve new bells played between the acts the best-known airs from the operetta.

PUBLISHER'S COLUMN.

The music pages for this month are begun with a delightful Barcarolle, "Song of the Bathers," by Paul Wachs. Its rippling arpeggios are suggestive of the splash of the waves, and the melody which runs through them gives hint of the jolly humor of the bathers. It is useful for teaching purposes, as well as pleasing as a salon piece. "God's Flowers," by C. Mawson-Marks, is a good specimen of the popular ballad. In melody and accompaniment it is within reach of the average singer, and can be made very effective. "Cinderella," by Fritz Kirchner, is somewhat odd in rhythm, is sprightly in melody and movement, and interesting in harmonic treatment. It is a fine teaching piece. "Mother Hubbard Waltz," by Engelman, is a contribution for the younger players and will undoubtedly please them. "Manuela," by Arnold Sartori, is a characteristic Spanish dance, in which the quaint rhythm of the bass gives a guitar like effect. Well played, it will be very effective. "Tyrolienne," by Paul Kaiser, is a graceful waltz with three well contrasted themes. The supplement is closed with a popular song for soprano or tenor, entitled "I Love You So," by C. Paston-Cooper. It is singable and presents no difficulty.

***

This issue of THE MUSICIAN begins a new volume. We believe it may fairly be taken as indicative of the character of the coming volume. Its contents will be found to be exceedingly practical, each article having some specific purposes of usefulness or inspiration. Among the subjects to be treated in later numbers are the following:

FOR TEACHERS.

How to Teach. How to Handle Pupils. Making the Music Lesson a Pleasure. Selection of Music. Patience with Pupils. Method in Teaching. Self Culture for Teachers. Helpful Accessories in Teaching. The Cultivation of Memory. What is Teaching. Written Work. Enthusiasm. When and How To Teach Touch. The Habit of Observation. The Cultivation and Use of Tact. How to Avoid Being a Machine. What Makes Success and How to Obtain It. Teaching the Rudiments. Fingering. Relation of Musical Literature to Music Teaching.

FOR PUPILS.

Choice of a Teacher. Relation of Pupil to Teacher. The Responsibility of the Pupil. The Relation of the Pupil to Success and Failure. Patience and Persistence. The Effect of Ambition. Pupils' Excuses. Pupil's Duty to Teacher Cultivation of Taste. Ear and Eye Training. Repertoire. Playing in Public. Purpose of Music Study. Regularity of Lessons. Habits of Accuracy.

***

SOME THINGS OUR READERS SHOULD KNOW AND REMEMBER;

That We Handle and Supply Anything in Music.

That We Publish Upwards of One Thousand Pieces of sheet music—vocal and instrumental—all of which are listed and fully described in our Catalogue, which will be mailed free to any address.

That We Publish a Number of Standard Books, all of which are fully described in our Catalogue.

That All New Books Are Offered, in Advance of Publication, or for Limited Periods, at Special Introductory Prices. These Introductory Offers are worthy of your special attention.

That Our Publications Are Noted For Correctness and Beauty.

That We Carry a Complete Line of All Foreign and American Publications.

That We Supply All Music mentioned in the articles appearing in THE MUSICIAN; all music included in the lists of Desirable Choir Music; all publications mentioned in the advertising columns of THE MUSICIAN.

That we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all that has not been sold or used. Full particulars regarding this department of our business will be found on page 392.

That Our Facilities For Promptly Filling All Orders Are Unequalled.

That All Music is Supplied Teachers at More Liberal Discounts than those offered by any other house.

That You Should Have Our Catalogues and Professional Discounts, both of which will be sent upon request They will interest you.

That We Offer Numerous Additional Advantages which it is impossible to mention in the limited space of this page. *Write us!* No trouble to answer your letters and inquiries. It will pay you to correspond with a house that is progressive and up-to-date in all of its dealings. We can save you time, trouble and money. Allow us to demonstrate our ability in these lines.

Send for Our Descriptive Catalogue of Sheet Music and Music Books, including recently issued Supplementary Bulletin. Sent to any address for the asking.

***

Accounts Opened with Responsible Parties. If yon are not familiar with our publications, allow us to send you a package of music ON SALE. Our selection will convince you that we are progressive and up-to-date.

We solicit your trade, and are positive that we can save you both time and money.

***

Now is the time when our readers can demonstrate their belief in the value of THE MUSICIAN as an educational factor. The large percentage of renewals is an indication of the esteem in which its readers hold it, but they can do the magazine, themselves, and the large army of earnest students who are ever seeking additional help, incalculable good by securing new readers for it. It is not necessary to use space here in pointing out its value as an aid to teaching and study; our readers know it and are constantly writing us about it. We want them to tell others as well as the publishers. If you believe in THE MUSICIAN, tell your pupils and friends, build up its clientele and every advance made in the subscription list will be reflected to you in additional improvements in the journal. How many new subscribers will you send us.

***

GUIDE TO PRACTICAL MUSICIANSHIP.

By A. J. Goodrich. $1.00.

Under the above title, Mr. Goodrich's latest work will be issued at an early date. In his new system, the author does away with the old and slavish process of rote memorizing, *i. e.*, playing notes and repeating them until memorized, without attempting to master the composer's design; and he illustrates the means by which intelligent students may, in a comparatively short time, master any composition that does not present technical difficulties beyond their conception.

The results are three-fold:

1. A great economy of time.
2. An intelligent understanding of compositions.
3. An improved memory.

As it is the author's belief that compositions may be mastered in one quarter or one half the time required by old systems, he considers this his most valuable work. Professional musicians, practical teachers, amateur musicians and students of music have long felt the need of some improved method that would reduce the time required to memorize a composition, and Mr. Goodrich presents a method that he subjected to a thorough and exhaustive test, with eminently satisfactory results, before putting his ideas in shape for publication. Every musician needs a copy of "Goodrich's Guide to Practical Musicianship."

***

Dictionary Club. See page 1 of this issue. Both price and terms of payment are the most liberal that have ever been made on this great work. No teacher or student *can afford* to longer deprive themselves of this Great Reference Work.

***

Attention is called to our Special Offer to send Music On Sale to Schools and Teachers. Full particulars will be found on page 32 of this issue.

***

Agents Wanted.—THE MUSICIAN wants good, live representatives to solicit subscriptions. Those having a knowledge of music preferred. Full particulars, including sample copies, order blanks, other helps and terms, will be sent to all who desire to make a trial of this work. No other field of subscription work offers such liberal inducements.

***

If in need of a Metronome, one that will give entire satisfaction (all others are worthless) and last a life time, send your order to the Hatch Music Co.

We handle only the best makes, and guarantee every instrument for two years. All complaints receive careful attention and prompt adjustment. Our prices ($2.50 and $3.50) are very low—the same as those charged by others for cheaper makes—and we can offer an extra discount on orders for six or more instruments.

***

If you are not satisfied with the way in which your orders have been filled by other dealers, why not give us a trial, and test our ability?

It pays to deal with a progressive and up-to-date house. We can save you time, trouble and money—all of which are worthy of serious consideration. No trouble to answer letters and inquiries. Don't hesitate to write us.

***

Our Offer to send a complete set—seven grades—of the "National Graded Course" (together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course") subject to examination and approval, without any obligation to purchase, is still open.

The publishers of THE MUSICIAN have exceptional facilities for printing sheet music and music books. Upon receipt of manuscript, with full particulars concerning the style of publication desired, we will submit complete estimate.

***

As THE MUSICIAN is the broadest and best journal devoted to the educational interests of music, it should regularly reach teachers, pupils and all who are interested in music. The various departments are handled by experts, hence the subjects are fully and concisely treated. The contributors to these departments are writers of exceptional ability—recognized authorities. The miscellaneous musical literature is of a high order of excellence. Each number is a gem, worth many times its cost. It is the aim of the editor and publishers to keep the readers of THE MUSICIAN well informed on all new ideas in the art of teaching; to bring to their notice valuable aids and suggestions; to give helpful advice; to contribute to the accomplishment of more and better work. If a subscriber and reader, you know exactly what THE MUSICIAN can and does do for its readers. We earnestly request the co operation of music teachers in extending its circulation and field of usefulness.

***

Köhler's Practical Method—Hatch Edition.

Vols. 1, 2, 3. 75 Cents Each.

The Hatch Edition of Köhler's Practical Method contains valuable matter not found in any other reprint, and is vastly superior in every respect to the original. It is not surprising, therefore, that its sale is at least equal to the combined sales of all other editions. Progressive teachers appreciate up-to date features.

NEW PUBLICATIONS.

Herewith is begun the announcement of music recently published. We expect to give each month a list of the latest songs, instrumental pieces, studies, anthems, part-songs, etc. Our idea is to bring to the notice of our readers new music which we think will be of value to them. Nothing without elements of usefulness or musical worth will be included.

The following list includes some excellent songs, piano pieces, anthems and larger compositions for piano and violin and piano and 'cello. The piano pieces range in difficulty from Grade I to Grade VII. Most of them are about Grade III. The entire list is made up of good teaching and concert music.

SONGS.

Wake Not, But Hear Me, Love. Stephen Townsend. High Voice in D flat: D flat to A flat. Low Voice in B flat: B flat to F. 50c.

Spider and Fly. Intermezzo. Chas. Armand. Piano. 50c.
La Rose. Intermezzo. Emil Fischer. Piano. 50c.

Musical Rhythms for Piano. By Arnold D. Scammell.

With an Introduction by MRS. CROSBY ADAMS. Of interest to every Teacher. Pupils are delighted with them. Develops a refined musical taste. The Introduction is well worth the price.

Attractively Bound. Price, $1.00.

This book is the direct outgrowth of a need expressed by both teachers and pupils for certain definite rhythms which shall suit the times which come to all of us, when something "in lighter vein" is demanded. To supply this need, by giving marked rhythm as well as tuneful melody is the task set himself by the composer, Mr. Scammell. That these requirements have been met, the work itself is the evidence. The pieces lie well under the hand, do not require much technical equipment, and, best of all carry themselves easily along by the charm of the rhythm. Mr. Scammell has been fortunate in having the experienced judgment of Mrs. Crosby Adams in the preparation of his work. Teachers will welcome to their teaching list these compositions suited to the natural and healthy demands of a certain phase of the pupil's experience because, while the pieces are indeed "light" they are not commonplace, and will therefore help instead of hinder the progress of the pupil's development towards a refined musical taste.

Pretty Picture Songs for Little Folks

By G. A. Grant-Schaefer and Walt M. Dekalb. .75

What the Chicago Press says of it:

"Artistically there is not a more attractive juvenile book on the market."—Chicago *Times-Herald*.

"The melodies are attractive and catchy."—Chicago *Tribune*. "Should be in every Christmas stocking."—*The Elite*.

Wee Wee Songs for Little Tots

By C. H. McCURRIE and WALT M. DEKALB. .50

Nearly 5,000 sold and demand constantly increasing. Praised by old and young alike.

Songs That the Children Sing

By MRS. L. D. FESSENDEN and MRS. V. A. BARBER .75

Contains two charming operettas and six solos. Nothing better can be found for school and home use. Both words and music are captivating.

In addition to portrait, each sheet has the name of the Master, together with the dates of birth and death, neatly printed.

Price, Postpaid, Only 15c. Each.

Fletcher Music Method

(SIMPLEX AND KINDERGARTEN)

The aim of the Method is to eliminate the drudgery of the study of music and to give a fundamental, systematic and logical musical education in a thorough, natural and pleasurable way; and so make it possible for Music to exereise her three-fold power of development. The System was originated by Evelyn Ashton Fletcher, and the following are a few of the many endorsers and a partial list of the Conservatories in which the System has been adopted.

Dr. Wm. Mason, New York.
Mrs. John Vance Cheney.
Madame Hopekirk.
Philip Sousa.
Franklin Taylor.
Dr. Gerrit Smith, New York.
Wm. Tomlins, Chicago.
Dr. Hugo Riemann, Leipsic.
Thomas Tapper.
Dr. Wm. Cummings, London, Eng.
Kate S. Chittenden, New York.
And others.

University of the State of New York.
Institute of Applied Music, New York.
Departments—Metropolitan College of Music, Metropolitan Conservatory of Music, American Institute of Normal Methods, Synthetic Piano School, Fletcher Music Method.
American Conservatory, Chicago.
Gottschalk Lyric School, Chicago.
Mrs. John Vance Cheney School, Chicago.
Detroit Conservatory.
Broad Street Conservatory, Philadelphia. And others.
Also in the Eleven Leading Conservatories or Colleges of Music in Canada.

There are already over 250 teachers of the System, but the demand is greatly increasing Miss Fletcher studied for five years in Europe, and has already successfully introdueed her System in the European centres, Leipsic, Berlin, Brussels and Paris. Special advantages to those willing to go abroad with the System. The different sets of apparatus invented by Miss Fletcher are fully protected by patents in Canada, the United States, England, Germany, France, Switzerland, etc. This System can not be taught by mail, and the Fletcher certificate of authorization to teach is only obtainable, with the apparatus, by taking the course of instruction. Write for information and circulars with letters of endorsement, to Miss Evelyn Ashton Fletcher, 1125 Madison Ave., or Mrs. E. A. Sturgeon, 5155 Cornell Ave, Chicago, or to the Corresponding Secretary of the Fletcher Musical Association, Miss La B. Brown, the Nightingale, Dudley St., Roxbury, Boston.

Exercises, Scales and Arpeggios.

By HAMILTON C. MACDOUGALL.

This work contains exercises for the various technical points in piano playing; the scales (major and minor) with their fingerings; directions for the formation and fingering of arpeggi of the common chords of the keys, chords of the dominant and diminished seventh, etc., etc. It is, however, very much more than this. The exercises are entirely out of the beaten track, and are explained so that any pupil can understand the manner of practice. The same plan is followed with regard to the scales and arpeggi, making the work valuable for instruction in technique. We cordially commend it to all teachers who wish to get out of the ordinary rut of technical teaching. For purposes of self-instruction it will be found very valuable.

Paper Binding. Price, 50 Cents.

A Special Offer to Schools and Teachers Only.

MUSIC ON SALE

Our Plan: We offer to send, any time during the teaching season, a selection of Sheet Music, Studies, etc., etc., all of which may be retained until the end of the teaching season—until June, 1901—when payment is to be made for the music that has been used or sold, and all that has not been used or sold may be returned and credited. Various terms are applied to this method of doing business. We employ the term—ON SALE—to cover our plan.

[In order to avoid any misunderstanding, it may be well to state that while *On Sale Accounts* need not be settled, either by cash or by cash and returns, as noted above, until the close of the teaching season, *Regular Accounts* (those made up of items for music, books, etc., specially ordered) are due and payable monthly. Music specially ordered is not returnable.]

Its Advantages: While our plan of sending music ON SALE may offer the greatest inducements to those located in smaller cities, and in towns and villages where there are no large and complete stocks of music, it nevertheless offers advantages to those who reside in the largest cities. The possession of an up-to-date assortment of teaching material insures a supply of music suitable for all purposes and for pupils of all grades; avoids the necessity of hurriedly ordering music; makes one independent of delays in mail and express deliveries; enables one to become intimately acquainted with the latest issues—an important consideration for all who wish to keep fully posted—and puts the teacher who resides at some distance from a complete stock of standard music on an equal footing with fellow-teachers more fortunately located.

Selecting Music: Teachers may make their own selections from our catalogue, which will be mailed upon application, or upon receipt of the blank, printed below, properly filled out, we will make such selection as will, in our opinion, give a complete supply of most useful material. As a rule, the latter plan will be found more satisfactory. The best descriptive catalogues fail to give all of the information needed to make suitable selections. Catalogues are complete only when issued, and it is impossible to keep them up-to-date. Selections made by us will include our latest and best publications. Our experience in selecting music designed to cover all requirements gives us advantages possessed by comparatively few teachers. We make up more than 90 per cent. of all selections sent ON SALE, and the instances are rare, indeed, when they fail to give entire satisfaction. Our interests lie in sending music that can be used and sold. If we make poor selections, we have our work and trouble for nothing; if we make satisfactory selections, we are assured of payment for a considerable portion, or for all of the shipment; also of good will and future patronage.

Give Full Particulars: Teachers can materially aid us in making judicious and satisfactory selections by giving full information upon the following points: 1st, the approximate number of pupils to be supplied; 2d, the grades of difficulty (we grade all music from 1, very easy, to 7, difficult); 3d, the style or character of music desired; 4th, the kind of studies needed. If vocal music, name the voice; if organ music, let us know whether the music is wanted for pipe or reed organ.

[No matter *how often* ON SALE music is ordered, always give the information noted above. Instructions given with the first, will not answer for subsequent orders. On account of the variety and extent of our mail business, it is impossible to remember each individual case. Explicit instructions with each order will enable us to fill it in a prompt and satisfactory manner.]

Returns and Exchange: The original selection may be retained until the end of the teaching year, as noted above, or any portion that has not been used or sold may be returned any time during the year, at the option of the customer, and exchanged for another selection; we will add, at any time, such additional music as may be desired—all to be included in the final settlement.

Our Publications are noted for correctness and beauty, and as each subject has been selected because it possessed some special teaching merit, the entire catalogue is exceptionally useful. The value of our editions has been greatly enhanced by careful editing. Among the leading teachers of this country who do our editorial work, we mention the following: William Mason, William H. Sherwood, W. S. B. Mathews, Albert Ross Parsons, S. B. Mills, Emil Liebling, Robert S. Goldbeck, Richard Hoffman, Wilson G. Smith, Constantin von Sternberg, Bern. Boekelman, Jaroslaw de Zielinski, J. S. Van Cleve, E. R. Kroeger, Thos. a'Becket, Homer N. Bartlett, H. C. Macdougall.

Our Discounts: All ON SALE music is billed at regular cash discounts.

New Accounts: We solicit and open accounts with all responsible parties. Those with whom we have no accounts are requested to send references with first order. As references we prefer music dealers, but do not insist upon having them.

No Risk: *As payment is to be made only for music that is used or sold, acceptance of our offer to send a selection ON SALE involves no obligation to purchase.*

The blank printed below will, if properly filled out, give all the information needed to enable us to make up a selection that will please. Our publications are superior in every respect, and our discounts are more liberal than those offered by any other house. ANY OTHER INFORMATION DESIRED WILL BE CHEERFULLY FURNISHED.

HATCH MUSIC COMPANY, = PHILADELPHIA, PA.

Detach this blank and fill out carefully.

Hatch Music Company,
Eighth and Locust Streets,
Philadelphia, Pa.

GENTLEMEN:

Upon the conditions named in your "Special Offer to Schools and Teachers Only," you may send me a selection of music—ON SALE.

It is understood that this music is to be sent upon the following conditions:

1. That it may be retained until the end of the teaching season—until June, 1901—at which time I agree to return all music which has not been used or sold, and remit for the balance.
2. That I will not return any music which has been used, marked or soiled.
3. That I will pay all transportation charges.
4. That no music specially ordered by me is to be included in my return of ON SALE music.

(By filling out the blank spaces below, you will give all the information needed to enable us make a selection that will please you.)

Standard and Popular Books Published and For Sale by the Hatch Music Company

Franz Abt's Practical Singing Tutor

Op. 474. FOR SOPRANO OR TENOR. COMPLETE.

Revised, Edited and Adapted, with Practical Preparation for Singing, By FRANK H. TUBBS.

In a concise treatise on the voice, Mr. Tubbs leads the way to a correct application of voice culture to the vocalizes, making this one of the few practical and useful vocal instructors. Ask for the "HATCH EDITION," and take no other if you want the best.

Paper Binding. Price, $1.50.

Panofka's 24 Progressive Vocalizes

VOLS. 1-2.

Revised, with Preparatory Sketch, by FRANK H. TUBBS.

For the cultivation of pure *legato*, flexibility, *staccato* and the embellishments, it is doubtful whether there are any more useful collections of vocal exercises. In the editorial work, Mr. Tubbs has exercised his usual skill. His suggestions will be prized by teachers, and students will appreciate the Prefatory Sketch that he has supplied. Ask for the "HATCH EDITION," and take no other if you want the best.

Paper Binding. Price, $1.00 Each.

CLASSIC SONGS

A Collection of Gems by the Best Composers.

Includes the vocal gems of the great tone-masters from the time of Mozart to the composers of the present day. The contents are varied, both as regards style and grade, and the characteristic qualities of all musical countries are represented. Without exception, the best and choicest collection ever printed in book form.

Paper, with Cloth Back. Price, $1.00. Half Cloth. Price, $1.25.

ENGLISH SONGS AND BALLADS, LOW VOICE

Gems for Altos and Baritones.

Pinsuti, Tosti, Gounod, Tours, Denza, Mattei, Trotère and a host of other master song writers found the highest appreciation of their talents in England. Association with Cowen, Adams, Watson, Jude, Thomas, Rodney, Temple, Molloy and other leading composers of native birth, led to a blending of the merits and beauty of all the leading European nations.

Intended for altos and baritones, none of the songs in this collection extend above E, while several are especially adapted for very low bass voice. The best collection in print; unequalled for parlor or concert use.

Paper, with Cloth Back. Price, $1.00. Half Cloth. Price, $1.25.

ENGLISH SONGS AND BALLADS, HIGH VOICE

VOLS. 1-2.

Magnificent Collection of Popular English Songs.

England is noted for her songs and ballads and their popularity is world-wide. These two volumes contain the choicest works of a great number of the best known composers, and we are justified in making the claim that they are superior, in every respect, to any similar works. Each volume contains 162 pages. The cover of Vol. I contains an excellent portrait of F. H. Cowen, while the cover of the second volume is illustrated by a portrait of Ciro Pinsuti.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

Magnificent Editions of Standard Piano Methods

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of national reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

Köhler's Practical Method for the Piano. Op. 249. Vols. 1-2-3. Paper Binding. Each $ 75
Revised, Fingered and Annotated by Thos. a'Becket.

The only ANNOTATED edition; the only edition in which the PHRASING is presented in accordance with the latest and most advanced ideas; the only edition that has had a comprehensive and thorough revision.

Löw's Practical Four Hand Piano Method. Vols. 1-2 . . . . . Paper Binding. Each $ 75
Revised, Fingered and Annotated by Wilson G. Smith.

Designed as a companion to all books of instruction for the piano, this method is a favorite with teachers. The perfect ensemble players are those who blend their individual characteristics in order to form a perfect whole, and this important accomplishment may be obtained by careful and conscientious study of Löw's Method.

Wagner's First Instructor for Young Beginners. Vols. 1-2 . . . Paper Binding. Each $ 75
New and Revised Edition. English and German Text.

This work, designed for the instruction of young beginners, presents a thorough and exhaustive course for the systematic training of children. The original edition (published with German text only) is a great favorite with leading German teachers in this country, while it holds a commanding position in Germany where it is a recognized standard not only for children, but for adults who take up the study of the piano.

All works included in the "HATCH EDITION" are printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Ask for the "HATCH EDITION," and take no other if you want the best.

KÜHNER'S ETUDE SCHOOL FOR PIANO PLAYERS

A Model Collection of Well Graded Studies.

Book 1. Lower Elementary Grade.
Book 2. Higher Elementary Grade.
Book 3. Lower Medium Grade, Part 1.
Book 4. Lower Medium Grade, Part 2.
Book 5. Higher Medium Grade, Part 1.
Book 6. Higher Medium Grade, Part 2.

Kühner's Etude School embraces the entire technic of the piano in unbroken succession, represented by such models in etude literature as are calculated to elevate the intellectual as well as the purely technical knowledge of the piano player at each stage of his progress. To avoid all danger of a one-sided development, every variety of style—from the simplest study to the magnificent etudes of Liszt, Henselt and Chopin—is represented. It was a great idea to cull the best thoughts of the greatest instructors, but a much greater idea to progressively arrange them so that they comprise the student's first lesson as well as those that immediately precede his grade ation. Each study has been carefully revised, and explanatory notes have been added to many of them. Ask for the "HATCH EDITION," and take no other if you want the best.

Paper Binding. Price, 75 Cents Each.

MAGNIFICENT EDITIONS OF STANDARD WORKS

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by musicians of national and international reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

Chopin's Album for the Pianoforte Revised and Fingered by Carl Mikuli.	Paper Binding.	$1 00
Chopin's Nocturnes for the Pianoforte Revised and Fingered by Carl Mikuli.	Paper Binding.	75
Chopin's Waltzes for the Pianoforte Revised and Fingered by Carl Mikuli.	Paper Binding.	50
Clementi's Sonatinas for the Pianoforte Edited and Annotated (after Köhler's Latest Revision) by Robert Goldbeck.	Paper Binding.	50
Kuhlau's Sonatinas for the Pianoforte. Vols. 1-2 Edited and Annotated (after Köhler's Latest Revision) by J. S. Van Cleve.	Paper Binding Each	50
Mendelssohn's Songs Without Words Edited and Annotated (after Kullak's Latest Edition), by Jaroslaw de Zielinski.	Paper Binding.	1 00
Schumann's Album for the Pianoforte Revised, Fingered and Annotated by H. C. Macdougall.	Paper Binding.	50
Sonatina Album for the Pianoforte Edited and Annotated (after Köhler's Latest Revision) by W. S. B. Mathews.	Paper Binding.	75

The works included in the "HATCH EDITION" are printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Ask for the "HATCH EDITION" and take no other if you want the best.

CLASSIC PIANO SOLOS

VOLS. 1-2.

Superb Collections by Eminent Authors.

While the contents of Volume 1 is largely made up of the works of the older masters, with but few exceptions the pieces included in Volume 2 are the works of the more modern classical writers, many of whom are still living. All of the compositions of both volumes are within the capabilities of the ordinarily good performer and will be found most interesting whether used for purposes of recreation or instruction. We ask a critical examination and comparison with works of similar character.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

Classic Piano Solos for Young People

VOLS. 1-2.

ELEGANT COLLECTIONS BY WELL-KNOWN WRITERS.

Classics selected for the young are frequently of the dryest character and students are too apt to absorb the idea that good music *must be dull*. In the preparation of these collections the requirements of the youthful mind were kept in view, and the selection of works will prove that music of an advanced standard can be pleasing as well as useful in the formation of a correct and pure musical taste. These works are unequalled by any similar publications of corresponding grade. A critical comparison will establish our claims of superiority.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

Classic Gems for Four Hands
Popular Gems for Four Hands

These are not the only collections of piano duets published in book form, but with one or two exceptions they are the only books of similar character for which new plates were especially prepared. As they were not published for the purpose of finding new and profitable use for several hundred old and worn-out sheet music plates, the editor was not hampered in making his selection of subjects; material was selected regardless of anything other than merit—each piece being subjected to severe criticism.

"CLASSIC GEMS" contains works of standard grade and attractive style in which the difficulties are equally shared by the two performers. While compositions of extreme difficulty were excluded, the editor maintained a standard worthy the attention of players of average ability. A strong work; one that we can heartily recommend.

"POPULAR GEMS" is a collection of pleasing music of varied and interesting character. It entertains the listener, and performers feel that their efforts have been worthily expended. While brilliant, the works are not difficult; nevertheless each possesses sufficient difficulty to interest, without overtaxing the performer. The best collection of easy and medium grade four hand music ever published in book form.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

THE ART OF MELODY PLAYING

A COLLECTION OF STUDY PIECES.

Compiled and Edited with Special Reference to the Development of a Singing Style and Touch in Piano Playing, By WILSON G. SMITH.

The ability to present melodies in a singing style is a feature of vital importance in piano playing. The material comprising this collection has been selected by the editor for the especial purpose of presenting a series of piano pieces so graded and arranged as to develop a singing touch. In his preface, the author says: "To approximate the full singing tones of the human voice, or of a violoncello, is the highest attribute of an artist, and the pieces printed will, to a great extent, awaken in the mind of the student the method of acquiring this accomplishment." A handsome volume of sixty-four pages.

Paper Binding. Price, 75 Cents.

KULLAK'S SEVEN OCTAVE STUDIES

From the School of Octave Playing. Op. 48, No. 2.

Revised and Annotated, with Introduction and Practical Directions for Study, by WILLIAM H. SHERWOOD.

While numerous exercises for the practice of octaves have been presented to the musical world by virtuosi and masters, Kullak's is the only method or "School" of octave playing that has become a standard. But good as they are in their original form, it is remarkable how much the usefulness of these studies has been enhanced by Mr. Sherwood's revision and annotations. A broad foundation embodying the general principles involved and the method by which the end may be most satisfactorily attained is laid in his Preliminary Remarks; instructions and suggestions for technical preparation are given in his "Notes on the Studies;" each study is *treated in detail*. Each movement of the hand and arm is designated by an ingenious device and these characters, elaborately used throughout the text, show the student *exactly* how the hand should approach and leave the keyboard in performing various passages. The progressive teacher will appreciate the importance of Mr. Sherwood's editorial work, and especially so since he gives, for the first time, his system of of instruction in octave playing.

Regardless of the great expense involved in the preparation of this edition, the price is the same as that charged for the ordinary reprint.

Paper Binding. Price, $1.25.

Magnificent Editions of Piano Studies

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of national reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

Robert Bonner
Thomas a'Becket
Jaroslaw de Zielinski
Homer N. Bartlett
Sumner Salter
H. C. Macdougall
Benj. C. Blodgett
N. H. Allen
Chas. Davis Carter
W. B. Colson, Jr.
Henry G. Hanchett
Benj. L. Whelpley
Harrison M. Wild
Herve D. Wilkins
Arthur L. Manchester

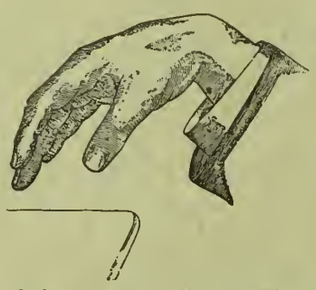
GRADE 1.

The Corner Stone of the Course.

Table Exercises: Instructions from the Very Beginning, Most Carefully Graded; Difficulties Introduced in Logical Order; Interesting Exercises and Etudes; No Octaves; Exercises for Free Wrist; Major Scales—*Written*, but *not* Played.

GRADE 2.

Introduction of Scale Playing: Exercises for Passing Under the Thumb; Minor Scales Written; Beginning of Arpeggio Work (Broken Chords); Major and Minor Chords Awakening of the Ideal of the Singing Touch; Interesting Etudes; Careful Grading of Difficulties.



The Preparatory Gymnastic Exercises, in Grade 1, are Practical and Helpful.

GRADE 3.

Velocity Assumes Some Importance; Attention Given to the Staccato, while Cantabile Playing Is Carried Aloug with Equal Care; Etudes Become More Like Pieces; Polyphonic Playing Introduced; Exercises for Weak Fingers in Each Hand.

GRADE 4.

Polyphonic Playing Carried Forward: Rhythmical Problems (Two Against Three) Introduced; Greater Richness in the Etudes; Etudes for Melody Playing, Rapid Runs, Trills, Arpeggi, Marked Rhythms, Extreme Agility, Fourth and Fifth Fingers Interest Maintained Throughout the Grade.

GRADE 5.

Musical Material of Great Beauty; Etudes for Left Hand, Octaves, Polyphonic Playing, Staccato, Double Notes, Grand Arpeggi, Fourth and Fifth Fingers. In Singing Tone, Touch, Velocity and General Intelligence, Much More is Demanded of the Pupil.

GRADE 6.

Etudes for Extended Finger Touches, Staccato, Doubl Notes, Extreme Rapidity in Staccato and Runs; More Attention Given to Octaves; Pupil's Task Steadily Increasing in Difficulty—Greater Requirements in Regard to Touch, Interpretation, Color and Phrasing.

GRADE 7.

Pieces and Etudes by Saint-Saëns, Henselt, Kullak, Chopin, Mendelssohn, Raff, Alkan and others. These, Making Greater Demands upon the Pupil, advance his Technical Skill to the Highest Efficiency and Insure Ability to Interpret the Greatest Works for the Piano.

Several Opinions.

WILLIAM H. SHERWOOD: I am happy to state that the "National Graded Course" is remarkably adapted to the needs of teachers and students of music. Your claim in regard to the excellent grading of the studies is a thoroughly just one. I do not think that I have ever seen as good a succession of topics and exercises arranged as they are from the beginning on, using the best kind of materials from all sources and without any superfluous pages.

WILSON G. SMITH: I have been particularly impressed with the practical value and uniform excellence of the "National Graded Course."

AD. M. FOERSTER: The "National Graded Course" is destined to hold a foremost position among the works of its class. I do not know of a better work, one containing a more interesting and valuable selection of studies and pieces for the various peculiarities to be mastered. A list of desirable pieces that may be added to each part, if found necessary, is given in each grade, also definitions of all musical terms used in this work. The work is bound to find favor with thoughtful teachers and students.

O. R. SKINNER: I like the "National Graded Course" much better than any other work I am familiar with. The editing seems to be thoroughly well done, and the print leaves nothing to be desired.

(Want of space alone prevents printing the opinions of hundreds of well-known teachers in all sections of the United States and Canada.)

It Will Help YOU in Your Teaching.

Because

- It embodies the work of the most eminent pianists and teachers in America.
- It can be readily adapted to your "method," no matter what that may be.
- It is the LATEST work of the kind.
- ALL of the studies are carefully annotated, fingered and edited.
- It is the most carefully graded of any course before the public.
- It begins at the beginning of study.
- It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.
- It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.
- Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

This complete work (7 grades) together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course," will be sent upon request, subject to examination and approval—without any obligation to purchase.

BEAUMONT, P.

Slumber Sweetly. Cradle Song 40
An exceptionally valuable teaching piece. Its difficulty lies in the technical requirements necessary to keep the cradle song idea prominent. Beautiful.

BENDEL, G.

Op. 108. Dream and Awakening (Traum und Erwachen) 40
Characteristic piece in which the first subject is given out by 1st and 2d fingers as the lower note of the chords. Excellent practice, and pleasing as well.

BLON, F. von.

Chat in the Spinning Room (Plauderei in der Spinnstube) 40
The chatting is done by the right hand, while the left develops the spinning effect. Effective and interesting.

BLUM, O. R.

Dancing Sprites 35
Graceful and melodious composition, presenting no particular difficulties, but certain to please the pupil.

BOHM, C.

Op. 265. Bright Green Fields (Frisches Grün) . 35
The music is as bright and pleasant as the fields. Good study in passage work and phrasing.

Op. 284. Dance of the Gnomes 35
An excellent teaching piece, full of melody and grace. Well worth using; easy but brilliant.

D'ORSO, F.

Op. 46. Dream of the Ball (Après le Bal). Valse Rêveuse 40
A short but attractive introduction leads to a waltz of dainty and dreamlike beauty.

Op. 47. Dream of the Angel (Rêve d'un Ange). Nocturne 40
Evidently this angel had pleasant dreams. The music is melodious and shows no trace of care. Good wrist study.

ENGELMANN, H.

Op. 356. Dance of the Snowflakes. Polka Caprice 50
The rhythm depicts the capricious whirling of the flakes as they fall. Good study and brilliant. Requires light hands.

Op. 415. Golden Road. Reverie 35
An attractive piece in the well-known reverie style. Good practice in octaves and chord playing.

Op. 370. Whirling Dervish. Tarantella . . . 50
Like these oriental fanatics, this piece certainly whirls. Splendid exercise in velocity. Plenty of tune to it, too.

ESPEN, T.

Op 35. Elder Blossoms (Flieder Blüthen) . . 35
These blossoms sway to the breezes with careless grace. The piece is not hard, but when well played is very pleasing.

FISCHER, L. H.

Op. 14. Dragon Fly (Libellenspiel) 50
Requires nice playing. Good study in finger work and light arm. Fully annotated.

FISCHER, O.

Op. 204. Flower of My Heart (Herzblümchen). Mazurka 40
Good mazurka, containing many elements of attractiveness. Variety of form makes it useful.

GÄNSCHALS, C.

Op. 78 Farewell Greeting (Scheidegruss) . . . 30
A typical piece of salon music of the better class. Melody and harmony will appeal to the listener.

Op. 27. Heart-Love (Herzlieb) 30
The melody is mainly expressed in octaves and sixths, combined and broken. Excellent and very interesting.

Op. 123. In Twilight (Au Crépuscule). Melodie 30
A very pretty melody by the same author. Nice study in double notes, and absence of octaves makes it extremely useful.

Op. 237. My Love Star (Mein Liebesstern) . . 30
Graceful and containing no especial difficulties. An interesting study for those who can play octaves.

GEIBEL, A.

Messenger Two-Step March 40
Brilliant two-step, by a popular author. Not hard to play. A favorite with the leading bands.

GIESE, T.

Op. 215, No. 1. In the Fresh Green Fields (Hinaus ins frische Grün) 40
The freshness of the fields exhales from this piece, which is characterized by airy cheerfulness.

GOERDELER, R.

Babbling Waters. Morceau de Salon 50
Typical example of this author's popular compositions. Certain to please, and it is useful for teaching purposes.

Op. 499. Dream of the Shepherdess. Morceau 35
An excellent piece of salon music. Not especially hard to play. Good exercise in finger work.

Yuletide Bells. Morceau de Salon 35
The jollity of Christmas is in this piece. Pretty cross-hand passage in second part is an attractive feature.

GREGH, L.

Op. 37, No. 2. Return to Me Soon (Reviens Vite) 35
Splendid study in melody playing, the melody being given to both hands. Very striking composition.

HEINS, C.

Op 184. At West Point. Marche Militaire . . 35
Good study in march playing. Dignified and attractive; requires octave playing.

Op 93. Enchantress (Die Zauberin) 40
Good practice in octaves and full chords. Arm and wrist must be well controlled. Brilliant and taking.

Op. 156. Gitana. Mazurka Brillante 40
Very brilliant piece of salon music, requiring considerable control of hands and arms. Grace notes should be light, and the staccato crisp, but firm.

JENSEN, A.

Barcarolle 30
A thoroughly good composition. Excellent for its technical training and for its musical characteristics.

LEGE, W.

Op 55. Elf Play (Elfenspiele) 35
Very characteristic. Will require practice to properly play it, but is well worth all it demands.

NIEMANN, G.

Op. 29 No 12. The Chase 20
Short, but sure to please. Wrist touch is required, and must be played crisply.

PACHULSKI, H.

Op. 12, No. 3. Phantastic Fairy Tale 35
Strong musically, of considerable difficulty, requiring a good legato, but well worth careful study.

PEACOCK, W.

Sweet Memories 40
Attractive and presents no particular difficulties. Brilliant concert favorite.

PULLAN, C. H.

Echoes of Spring. Morceau de Salon 50
A popular piece of salon music, useful as a study piece.

RATHBUN, F. G.

Op. 15. Danse Impromptu 50
Characteristic composition by a well-known writer. Besides being a pleasing salon piece it furnishes instruction.

RUBENS, F.

Romance 25
Wide skips in left hand afford excellent practice. Good musically and technically.

Op. 17. Spanish Dance (Danse Espagnole) . . 25
Original and brilliant. Will demand practice, but repays it.

SAMARY, F.

Op. 17. Song of the Flowers (Chanson des Fleurs) 50
Melody and accompaniment in right hand. Two well contrasted subjects. Somewhat difficult.

SCHEHLMANN, L.

Under the Village Linden. Peasant Dance . . 35
Characteristic dance, full of vivacity and good humor.

SMITH, W. G.

Op. 74. Danse Pittoresque. Scene de Ballet 35
A decidedly attractive composition. Somewhat odd in style, it holds the attention. Good study, without great difficulty.

SPINDLER, F.

Op. 306, No. 1. Till We Meet Again (Auf Wiedersehn) 30
Tender melody, capable of much expression. Is developed into a good finger study without losing its pleasing quality.

STONE, A.

Electra Scene de Ballet 40
A taking composition. Melody given out by right hand, left hand responding. Brilliant and effective; not difficult.

SUDDS, W. F.

Op 236, No. 1. As It Seemed to Me. Gavotte Sentimental 40
The sentiment contained in this piece is healthy. The music is strong, fresh and bright. Sure to please.

Op. 224. Our Brightest Days Gavotte . . . 40
Another of the same kind, and by the same author. Sprightliness and vigor are its characteristics.

TOURBIE, R.

Op. 206. Little Curly Head (Krausköpfchen) . 40
The curly-head must have been a lively little chap, if the music is at all like him. Gay and full of fun.

TOWERS, J.

Life's Springtime. Rondo 50
The title page says, "a joyous rondo," and the saying is descriptive. Thirds and full chords are interspersed with finger work.

WILLIAMS, F. A.

Op. 17 At the Twilight Hour. Nocturne . . 40
Very pretty descriptive sketch, well worked out and with well contrasted subjects. Good for study and the parlor.

Op. 20. Danse Fantastique 40
Another attractive teaching piece written by a teacher and sure to please as well as instruct. Good passage work.

Op. 27, No. 1. Day Dreams 35
Can be most heartily commended. A simple but thoroughly effective piece.

Op. 22 Fountain in the Forest. Mazurka Impromptu 40
Considerably more difficult than the preceding. Useful for teaching and pupils' recitals.

Op. 24, No 2. Water Sprites at Play 40
The sprites are active and sportive. The piece is full of grace and spirit. Pretty and useful.

BAUMFELDER, F.

Op. 215, No. 19 Harlequin (Der Hanswurst) . 20
A very bright piece, well treated and clear in form. The little figure of sixteenth notes is sure to attract. Good study in staccato.

BEAUMONT, P.

At the Twilight Hour 30
Of quite different character. A rather broad melody calls for a singing touch. The wide accompaniment in left hand will require care. Very pretty.

Spring's Delight 30
This must refer to the pleasant May days, for it is full of cheer and sunshine. Good for teaching and parlor playing.

Twinkling Stars 30
These stars twinkle very melodiously. A graceful melody without special difficulty characterizes this composition.

BIELFELD, A.

Bygone Days. Menuet 20
The days that are passed are not remembered in sadness, for this is a cheery little dance in ¾ measure. Some good practice for left hand.

BIEHL, A.

Op. 53, No. 3. Gretchen and Her Doll (Gretchen und ihre Puppe) 20
Another bright piece, full of tune and presenting no hard spots. Considerable staccato in both hands.

Rondo Militaire 35
A martial composition that will set the feet to marching. Needs spirit in its playing.

Op. 52, No. 18. Rope Dancer at the Fair (Die Seiltänzer auf dem Jahrmarkt) 20
An excellent finger study, with chords in left hand. Short and interesting.

BOLCK, O.

Op. 68, No. 5. Roguishness (Schabernack) . . 20
One would hardly look for roguishness to be expressed in the minor, but it is done—and well done—in this little piece. A nice staccato scale for left hand.

BURGMÜLLER, F.

Hunting Song (Kreutzer) 20
A good teaching piece, and pretty withal. Arrangement of a scene from the opera, "A Night in Granada."

DOLES, R.

Op. 10. Little Waltz (Une Petite Valse) . . . 20
A very excellent teaching piece. Contains opportunities for phrasing, finger and hand development, and when learned, is well worth playing.

EILENBERG, R.

Op. 46. No. 3. Come to the Dance (Komm' zum Tanz) Schottische 20
This invitation to the dance is alluring. Bright in its subjects and full of "go," it is sure to please.

ENGELMANN, H.

Op. 308, No. 1 Berceuse 20
A real bit of inspiration. A beautiful theme is interwoven between the two hands. A fine study in expressive playing.

Op. 430, No. 5. Jolly Parting Scherzo 25
These people must have parted in good humor, for the scherzo is a gem. Lightness of touch and nimbleness of finger are needed. Results will be good.

Op 430, No. 2 Out for a Day's Sport. Rondo 25
Excellent teaching piece. Full of all that attracts the young player, and can be made the means of material advancement.

FISCHER, O.

Op. 114, No. 2. At the Shooting Match 20
Good study in dotted eighth and sixteenth rhythm. Should move firmly and with well controlled arm.

GAEL, H. van.

Op. 83. Marche Guerrière 35
Stirring march. Good wrist study. Apart from its beauty, its rhythmic character is valuable.

GÄNSCHALS, C.

Op. 29 Our Loved One (Unser Liebling) . . 30
A sentimental piece, calling for good melody playing. Very tuneful. Without octaves.

GEIBEL, A.

Good Morning. Scherzo 35
Good study in rhythm and staccato. Melody work in both hands. Full of brightness.

Good Night. Berceuse 35
A good-night song, nice to play. It is simple in construction, the theme being principally in double notes, with bass of single eighths.

Pleasant Summer. Melody 35
An excellent study in melody playing. Lovely little melody with simple accompaniment.

HEINS, C.

Op. 224 Cuckoo Clock (Die Schwarzwälder Uhr) Salon Polka 30
The runs in this call of the cuckoo will be good training. Light wrist and flexible fingers are essential.

Op. 181, No. 2 Spring Wanderings 30
Good march. Excellent practice, and effective when learned.

HIRSCH, T.

Op. 44. On the Caroussel (Auf dem Caroussel) 35
A cheery piece, recalling summers at the shore, with the fun at the merry-go-round. Good practice, too.

HOLST, E.

Beach Promenade. March 30
Another seashore piece. A picture of the crowds on the board walk. It is a tuneful march presenting no difficulties.

Fresh Breezes. Waltz 30
A breezy waltz, easy, but pleasing and useful. Presents a great variety of melodic themes.

Restless Waves. Tarantella 30
The restless sway of the waters is well pictured in the never-ceasing movement of this composition. Worth study.

JOHN, F.

Op. 251, No. 3. Gipsies Are Coming 20
The wierdness of the gipsy is in this. Should be played quickly and with lightness. Good practice in left hand skips.

KAISER, P.

Op. 2, No. 3. Schottische 25
Graceful dance, full of melody. Not difficult. One of a set of five easy dances entitled "The Children's Ball."

Op 2, No. 4. Waltz 25
A nice waltz containing some good practice in run playing. Another selection from the same set.

KRENTZLIN, R.

Op. 4 Army and Navy March 35
An attractive march, presenting no special difficulties. Inspiring and brilliant.

LICHNER, H.

Lords and Ladies. Minuet 30
A graceful minuet, worth playing. Stately movement can be well brought out.

MERKEL, G.

Op. 31, No. 2. Merry Huntsman (Fröhlicher Jägersmann) 20
Typical hunting song, well written and brilliant. Attractively harmonized.

MUTTER, C. F.

Jolly Guardsmen March 35
Brilliant and stirring. Excellent for thirds and octaves.

NÜRNBERG, H.

Dancing in the Meadows 20
Meadows gay with flowers and children full of joy are apparent in this lively little piece.

OESTEN, T.

Op. 202, No. 4. Doll's Dream 35
A piece of descriptive music. Contains a cradle song, the dream, and a dance.

SARTORIO, A.

Op 229, No 9 Off to the Chase (Auf zur Jagd) 30
Another piece of musical description. A cheery 6-8 movement, and a real hunting song.

Op 229, No. 10. Torch Dance (Fackeltanz) . . 30
Characteristic piece of much merit. Excellent practice in wrist touch and syncopation. Can be made very realistic.

SCHILD, T. F.

Always Gay (Immer Flott) March 30
An attractive march with no troublesome places. Brilliant and joyous composition.

SCOTT, H.

Quiet Delight (Stillvergnügt) 35
A bright melody sure to please the pupil. Sprightly movement.

STREABBOG, L.

Columbine 20
An attractive piece presenting a good study of light, yet singing staccato Arms must be well controlled.

Harlequin 20
Useful and pleasing piece. Suggests tumbling of the clown.

TSCHAIKOWSKY, P.

Op. 39, No. 8. Waltz 20
Well worth using. It is healthy in sentiment, and thoroughly musical.

WANDELT, B.

Op. 12. No. 1. Doll's Waltz 30
Graceful and melodious. Excellent for phrasing study in simple forms.

WEISS, P.

Op. 19, No. 6. Evening Song (Abendlied) . . 20
Tender little song, calling for nice treatment. No technical difficulties.

WENZEL, H.

Bell in the Valley (Glöcklein im Thale) . . 30
A descriptive piece in which the chime of the bell is frequently heard. Presents no particular difficulty, beyond the light touch of the grace notes.

Brook in the Wood (Der Waldbach) 30
Brilliant tone piece in which the gurgle of the brook, as it rushes over the stones, is heard. Excellent practice.

Greeting to Appenzell (Erinnerung an Appenzell) 20
Tuneful and bright. Of no particular difficulty, and furnishes interesting practice of light chords.

WOOLER, A.

Little Cavalier. March 35
Graceful little march, without heavy chords or great stretches.

ZIESE, L.

Sweet Hope. Melody 20
Characteristic melody requiring a singing finger touch. Can be made very pleasing.

PRACTICAL
Time Lessons for Young Students
By M. S. MORRIS.

A series of practical exercises intended to teach beginners how to keep time independently of tone, by tapping the rhythm with finger or pencil. Among the valuable features of the book, are the following: Exercises without bar lines, which are to be supplied by the pupil; Exercises which are to be changed from one time signature to another; Exercises in dictation, which constitute a practical method of developing the rhythmical sense of the pupil. The limits for making different rhythms will exercise the invention of both teacher and pupil.

Paper Binding. Price, 25 Cents.

MUSIC PUBLISHING
WRITE US FOR FULL PARTICULARS.

We have every facility for the prompt and satisfactory publication of any musical work—no matter whether it be a piece of sheet music or a large book. Our facilities are unsurpassed and there is no kind or style of work in our line which we cannot do in the very best manner at the least possible cost.

Our printing is all that could be desired by the most critical and is equal, in every respect, to the finest European press-work.

New Teaching Material

FOR THE PIANO TEACHER

EASY PIECES IN EASY KEYS, VOL. 2.

Edited by E. L. ORTH.

Price, Postpaid, 50 Cents.

This volume contains forty pieces arranged in key groups, and progressively in technical difficulty. The book is, in brief, an experienced teacher's gathering of musical material from many sources. Every piece is fingered and phrased with care, taste and discrimination.

The pieces represent a broad range of styles; they are short, never exceeding two pages, represeut all demands for early pianotechnic, and provide helpful material. Rhythmically and technically they thoroughly exploit the grade for which they are intended. Besides serving for instructive material the book lends itself admirably for lessons in sight reading, a grade or so later.

ON THE WHITE KEYS.

AN INTRODUCTION TO THE PIANO.

Twenty-four First Grade Pieces Without Accidentals. For Two and Four Hands.

By L. E. ORTH, Op. 18.

Price, Postpaid, $1.00.

Exceedingly attractive in appearance, both within and without. The book contains twelve simple pieces, each with a distinct purpose clearly stated, and each twice presented, first in two-hand, then in four-hand arrangement. As the title states, the white keys only are employed. Thus, by reducing hand-difficulty to a minimum greater attention aud concentration may be given to the distinct purpose to be pursued.

In the four-hand section the admirable feature is that the little player may play either Primo or Secondo, Happily all words indicative of mood and speed are in English. The first 8 pieces pertain to note values particularly. No. 9 presents the Slur and Staccato; No. 10 Phrasing; No. 11, Expression; No. 12, Steadiness of Rhythm The pieces are short, interesting aud full of melody. A line of text is provided to indicate the mood. It serves as a key to the imaginative element of the composition.

In such variation of the solo part for its reappearance in the four-hand version, the pupil finds new matter for study. But it is new matter in a familiar object. New application to the familiar object, not to the unfamiliar, is a fundamental teaching law.

The hands are independent throughout.

FOUR LITTLE HANDS.

First and Second Grade Pieces for Equal Performers; Without Octaves; Various Composers.

Revised and Fingered by

HEINRICH KIEHL.

Price, Postpaid, $1.00.

This volume and the "THIRTY DUETS," by Gurlitt, are admirable volumes. Whether used by teacher and pupil or by two pupils they are desirable. Books of four-hand pieces for equal performers are particularly useful when the teacher desires to train pupils to play together. Again either part is equally available.

This volume is excellently graded for sight-reading; that is for sight-reading which is carefully planned and applied by the teacher. Played twice through by two pupils of the third grade, with an exchange of parts the second time, will prove helpful and enjoyable.

The book contains fifty-eight pieces by nearly twenty composers. Fingering, phrasing, marks of expression and of dynamics have been carefully added.

For description and table of contents of Books of Piano Music, send for Descriptive Circular B.

Circular "NEW MUSIC," containing analyzed and thematically illustrated list of new sheet music, mailed free.

MUSICAL KINDERGARTEN FOR THE PIANOFORTE

ASSOCIATE TEACHERS
MRS. GRACE YEAGER,
MISS KATHERINE SCHUSTER.

By FANNIE CHURCH PARSONS.

This system is most simple in outline and material.
It is most comprehensive and complete.
It is essentially a tone system teachiug the children how to write music "by ear."
The materials used are, while very durable, most suggestive of the beauty of the art of music.
The lessons are equally instructive to either child or adult beginner.
The students do much real piano work, thus no intermediate course is necessary.
The stories and songs do not savor of the grotesque, but tend to refinement and culture.
The price for normal work, including materials, is within the reach of all.
You can take the work by mail, or of a normal iustructor, or of Mrs. Parsons personally.

Correspondence should be addressed to Musical Kindergarten Company, Office, 6 W. Chicago St., Quincy, Mich.

Echoes from Music-Land

A Collection of Piano Pieces
(with words)

By MARY L. POWERS.

PRICE, 75 CENTS.

IN the above collection, teachers will find material which from many stand-points is a diversion from the material that is usually prepared for the early grades of pianoforte work. Each piece is founded on a little rhyme—mostly the familiar rhymes—the musical setting being intended to convey to the child a musical illustration of the verse.

The aim has been to put things where they would be easily playable, or, in other words, where the music lies well under the fingers. The writing is unrestricted enough to give free expression to the musical idea and yet technically very simple. They are mainly two-voiced exercises written in various keys up to three sharps and three flats. We consider them a most useful addition to the material suitable for first grade work.

SYMPATHY.

O earth! thou hast not any wind which blows
That is not music. Every weed of thine,
Pressed rightly, flows in aromatic wine;
And every humble hedgerow flower that grows,
And every little brown bird that doth sing,
Hath something greater than itself, and bears
A loving word to every living thing,
Albeit it holds the message unawares.
All shapes and sounds have something which is not
Of them. A spirit broods amid the grass;
Vague outlines of the everlasting thought
Lie in the melting shadows as they pass;
The touch of an Eternal Presence thrills
The breezes of the sunset and the hills.
Sometimes—we know not how nor why nor whence—
The twitter of the swallows 'neath the eaves
Will strike up through the thick roofs of our sense,
And show us things which seers and sages saw.
In the gray earth's green dawn something doth stir,
Like organ hymn within us, and doth awe.

—*Richard Realf.*

GUISEPPE VERDI.

It is the funeral march. I did not think
That there had been such magic in sweet sounds.

—*Southey.*

Guiseppe Verdi, who has been called the "grand old man" of music, died at Milan on the morning of January 27. He was born at the little village of Roncole, on October 10, 1813. He was the son of a poor innkeeper, and devoted himself to music at an early age. At ten he was employed by a grocer of Busseto, who encouraged his musical bent and finally secured him a grant of $120 from the village authorities, that he might have two years' study at Milan. The director of the Conservatory there, like many another, failed to see his talent and he went to Maestro Lavigno, the conductor at La Scala. It was only six months later that Verdi directed a performance of Haydn's "Creation." He had never seen the music, but his instinct and insight enabled him to bring out its beauties to the full. After this feat, which gained him many friends, he began to compose constantly. In 1838 he removed permanently to Milan and next year, when he was 26 years old, he made his first hit and began to realize the pleasure of securing money and applause for his operatic productions.

From the moment he succeeded with "Oberto," in 1839, to his great triumph with his remarkable work, "Falstaff," which was produced on Feruary 9. 1893, when the composer was an octogenarian, Verdi's career was one of constant success. The first performance of "Falstaff" evoked remarkable enthusiasm. Not only were all the seats in La Scala, Milan, sold out, but the best seats were sold at a premium of $50. People gathered at the opera house early in the morning and when at night the performance was begun it was jammed. The utmost enthusiasm reigned during its production and the demonstration which followed was remarkable. After the artists had appeared, the composer and conductor were summoned, then the composer alone three times, and last of all Verdi and Boito, his librettist, came together before the cheering and excited crowd, whose enthusiasm was uncontrollable.

This appearance practically closed his public career. His last years were occupied with the founding of a Home for Musicians at Milan, for which he left ample provision.

Verdi in all wrote twenty-six operas and lived long enough to change his style and method, yielding to the spirit of the age no less than four times. A full list of his works runs as follows: "Oberto, Conte di San Bonifacio," Milan, November 17, 1839; "Un Giorno di Regno," Milan, September 5, 1840; also performed under title "Il finto Stanislao;" "Nabucodonosor," Milan, March 9, 1842; "I Lombardi alia prima crociata," Milan, February 11, 1843, rearranged for Paris production November 26, 1847, under title of "Jerusalem;" "Ernani," Venice, March 9, 1844, "I due Foscari," Rome, November 3, 1844;" "Giovanna d'Arco," Milan, February 15, 1845; "Alzira," Naples, August 10, 1845; "Attila," Venice, March 17, 1846; "Macbeth," Florence, March 14, 1847, in revised version, Paris, April 21, 1865; "I Masnadieri," London, July 22, 1847; "Il Corsaro," Trieste, October 25, 1848; "La Battaglia di Legnano," Rome, January 27, 1849; "Louisa Miller," Naples, December 8, 1849; "Stiffello," Trieste, November 16, 1850; music afterward adapted to new text, "Araldo," Rimini, August 16, 1857. "Rigoletto," Venice, March 11, 1851; "Il Trovatore," Rome, January 19, 1853: "La Traviata," Venice, March 6, 1853; "Simon Boccanegra," Venice, March 12, 1857, in revised form, Milan, April, 1881; "I Vespri Sicillani," Paris, June 13, 1855; "Un Ballo in Maschera," Rome, February 17, 1859; "Don Carlos," Paris, March 11, 1867; "Aida," Cario, December 24, 1871; "La Forza del Destino," St. Petersburg, November 10, 1862, in revised form, Milan, February 20, 1869; "Otello," Milan, February 5, 1887, text by Arrigo Boito, after Shakespeare; "Falstaff," Milan, February 9, 1893, text by Arrigo Boito, after Shakespeare.

Besides his operas Verdi wrote: "A Requiem Mass," performed for the first time in May 22, 1874, at the Church of St. Marco in Milano for the first anniversary of Alessandro Manzoni's death. The performers were Teresa Stolz, Maria Waldmann, Giussepe Capponi, Ormando Maini, and an orchestra of 110 musicians and 120 choristers. In 1897, when he was 84, he wrote four sacred compositions as follows: "Ave Maria," enigmatic scale for four voices; "Stabat Mater," for chorus in four parts and orchestra; "Laudi alla Vergine Maria," from the last Canto of Dante's "Paradiso," for four voices; "Te Deum," for double chorus in four parts each and orchestra.

Verdi's melodies indeed were so catching that in order to protect himself even before the period of his greatest fame he had to take unusual precautions to keep his rehearsals secret. It is related of the first rehearsals of "Rigoletto" in Venice in 1851, that when they got to the fourth act Mirate—who was cast for the part of the Duke of Mantua—suddenly called out: "There is a piece missing in my part!"

"There is time enough; I'll give it to you," answered Verdi.

But rehearsal followed rehearsal and still the missing piece in Mirate's part had not been supplied. The tenor began to be impatient. At last, on the evening before the first orchestral rehearsal, Verdi stepped up to Mirate and, handing him a carefully folded sheet of music paper, asked him to stop a minute and read it. Mirate opened the sheet and saw the song, "La donna e mobile."

"Now, Mirate," said the composer, "give me your word of honor that you will not sing this at home, that you will not hum it, that you will not even whistle it—in a word, that you will allow no one to hear it."

Mirate promised sacredly. But Verdi's precautions against the new melody leaking out and getting all over Venice before the opening night did not stop here. He exacted the same secrecy from every member of the company at the last full rehearsal—the parts were not given to the orchestra till then—and, strange to say, the secret was kept. No single soul outside of the company heard a note of "La donna e mobile" until it was sung by Mirate on the opening night

Nor were all these precautions needless; Verdi knew well enough that should the catching tune leak out it would be all over Venice in no time, no one would know its origin, and when it came to be heard in "Rigoletto" people would not be slow in accusing him of plagiarism.

Verdi was twice married. The death of his first wife and children was a severe blow to him, nearly resulting in his abandoning composition. His habits were simple and he delighted in his country home, near his birthplace. He had acquired ample means, but lived simply and in retirement.

LEONORA JACKSON.

This young American girl has won remarkable triumphs both at home and abroad. Kings and Queens have paid tribute to her genius; the oldest and most renowned Musical Societies in Europe (Leipsig Gewandhaus, London Philharmonic, etc., etc.) have engaged her for their concerts.

Among the great Orchestral Conductors of the world under whose batons she has played are Nikisch, Joachim, Weingartner, Colonne, Lamoureux, Mackenzie, Gericke, Paur, Thomas, Vander-Stucken, Herbert and Ernst.

After an absence of six years, she has returned for a tour in her own country. In a short season of four months her engagements included, among many others, appearances with the New York Philharmonic, the Chicago, Cincinnati, Pittsburg, St. Louis Symphony Orchestras, and eight concerts en tour with the Boston Symphony Orchestra, under the direction of Mr. Gericke.

Last June this young virtuoso was booked to sail for Europe for another season on the Continent and in England, but such demands were made from all sections of this country for her appearance next season that she could not but heed them, and consequently cabled to Berlin and London cancelling her European engagements and signed a contract for a trans continental tour of America.

The following is an instance of her remarkable success abroad. In November, 1890, the German Empress commanded that a special musical and dramatic entertainment be given at the Royal Opera House in Berlin, with the most eminent talent in Germany participating. Great preparations were made, and on the evening in question a large and brilliant audience assembled. The Royal Family and Court were present, together with prominent government officials, diplomats, men of science and letters and the most notable personages of the capital. They noted on the program, placed between two of Germany's most renowned singers, an unknown name, announced for a violin solo. "Who is this?" they queried. "By what right here?"

Great was the surprise when the "unknown" proved to be a young girl in her teens, who came forward clad in white; modest, timorous, yet of rare sweetness and charm of manner. The hush of expectancy settled over the great Opera House. The little maiden in white grasped her violin, and soon the strains of beautiful music poured forth, touching the hearts of the immense throng with the magic power of genius. The solo ended, there followed a scene of enthusiasm. The young violinist at once became famous. Americans present that evening will never forget the triumph, for the little maiden in white was an American.

In honor of Meyerbeer's death, Casafa wrote a funeral march, and meeting Rossini, inquired what the latter thought of it. "Oh, yes," answered the composer of "William Tell," "your funeral march is excellent, but too bad you did not die first and let Meyerbeer compose the funeral march."

THE Teachers' Forum

Conducted by N. J. COREY

This department is inaugurated for the purpose of uniting the many teachers who read THE MUSICIAN in a bond of professional brotherhood. It is to be their medium for the interchange of ideas, experiences, encouragement, discouragement and difficulties. The fullest correspondence is invited. The questions will be answered and suggestions given by the conductor and the contributions of those who wish to gain new light or to present their methods will be printed. We propose helping ever teacher who will permit us to do so; we intend to do everything possible to overcome the isolation with which you are burdened. Will you co-operate with us?

No conditions are attached: the department is open to *all* MUSICIAN subscribers. Address all communications to the Teachers' Forum, care THE MUSICIAN, Eighth and Locust Streets, Philadelphia, Pa Do not hesitate, but be among the first to ask help, or to give some other teacher a suggestion. Let us know what you would like to have treated in its columns.—Editor of THE MUSICIAN.

"The gates of art are closed unto none; who so entereth thereat, though he seeketh perfection, yet shall he not find it."
—Ancient Egyptian Papyrus, 3580 B. C.

INSTRUCTION BOOKS.

The following extract from a correspondent's letter is of vital interest to hosts of teachers throughout the country, and one concerning which questions are often asked:

"I have heard and read much about the best teachers using no instruction books, but adapting their work to the needs of each individual pupil, inventing appropriate exercises for the correction of their special deficiences, etc. Although all this sounds well, yet in making an effort to apply it in my own teaching, I am seized with a feeling of helplessness as soon as I abandon the instruction book, as if I had no pilot to guide me over the right course. So I appeal to the Teachers' Forum and ask: "Is there any way in which a young teacher can acquire the sort of equipment that will establish confidence and security in one's own powers to do away with the instruction book, and yet be certain of guiding the pupil aright? It is the natural desire of the ambitious teacher to excel, and of course, this means the adoption of the best manner of instructing. Although I have been a diligent student of the pianoforte, and am called a skilfull player, yet I have not studied harmony, and have no opportunity of doing so here, and have been wondering of how much assistance that study would be in the teaching of the pianoforte. Can any suggestions be given that will be of assistance to one so far removed from the large centres as to be deprived of the advantages of intercourse with the progressive and best-informed teachers?"

An answer to such a question as is raised in the foregoing can be nothing more than suggestive. Anyone who attempts to give a comprehensive answer will have taken upon himself an uncomfortably large task, one with which he will quite likely find himself incompetent to deal. It will be nothing more than an attempt to supply everyone with a ready made experience. This would be difficult, for since the world began there has been no more trite fact staring man in the face than the universal neglect of individuals to profit by the experience of others. The man who could naturally and successfully profit by the experience of others has been so much of a rarity as to be held in age-long reverence—a genius in fact. The man of genius has within him the power of comprehensively grasping a situation, both as to past results and future possibilities. The larger his capacity for investigating past results, whether in his own career or that of others, and accurately summing up their relationship to future possibilities, the greater the chances of success in his work. Music teaching demands a large measure of this generalizing faculty, to which a specialized interpretation must be given, for the reason that the resulting probabilities in the cases of individual pupils are so various and oftentimes so surprising. Therefore the old aphorism, "find a way or make one," is of especial significance in the experiences of the teacher in any department. Making a way in music teaching means constant and inevitable pioneer work through unknown regions. It means no retracing, for the underbrush that is cleared away in front must be strewn in the path that stretches in the rear, thus impeding all retrogression. There is no such thing as retrogression in music. To turn back simply means to fall by the wayside. And when one falls by the way, hidden by the entanglements of the thickets, the chances are but one in a thousand that any other path-breaker will ever happen along to give a lift and start one again in the right direction. Hence the importance of making correct experience from the very start. Without it one wanders about in every direction, and often loses as much as gains from the mere accumulation of useless experience.

The fundamental advice, then, in answering the foregoing is, acquire experience and properly use it. "But," you will say, "this is so slow, when I want to start in at once and teach after the manner of the best teachers." Well, what of it! If you have not yet made the proper preliminary and experimental preparation, begin to do so at once. Take a whole year in which to lay out your line of action. Stick to your instruction book until you are sure of precisely in what direction you wish to go. Time spent in preparation is not wasted if wisely disposed. And it is a characteristic of all experience that it is made slowly.

But you are partially astray when you assume that the best piano teachers use no instruction books. Each one usually posseses two, one in his brain and one in his note book. Of course, the more he uses what he has transcribed in his note-book, the more it is transferred to his brain. But, indeed, few great workers in any department of human energy have become emancipated from note-books. Some of the best thoughts of genius are found in them; some have revealed their mental and spiritual development through them. Does the piano teacher seem to invent an exercise for a given condition? Perhaps he thinks of a certain exercise that he transcribed in his note-book ten years before, in case he should some time in the future happen upon just such an emergency. At first, your note-book will be indispensible, and it should always be open for the records of new impressions and new experiences. Your system of teaching will then grow, the same as any other plant.

But a plant needs plenty of sunshine and plenty of water. In the present case the sunshine will be the amount of earnest attention that you bestow upon your work, and the water you will fetch from whatever spring you may happen to find, and you will pause by each one until you have tested its merits. Be careful of how you test them. The water in some of them is pretty bad. Be careful to discriminate between those that are medicinal and those that are merely wholesome, one quite as essential as the other. These springs are the various methods that have already been published. Investigate as many as possible. If you have been teaching for a time, you will investigate them all the more intelligently in the light of the experiences that you have already had. But meanwhile don't forget your note-book, or you may find that you have forgotten the new and striking idea you ran across last week when you most desire to recall it. You must be as industrious as the busy bee, buzzing about from flower to flower, and dipping into them here and there. If you are not already exclusively devoted to the superior excellences of the Virgil Clavier System, examine it thoroughly and see what fundamental principles it contains that will be of assistance to you. If you do not belong soul and body to the Synthetic fraternity, what do you find to approve of in the Synthetic Method of Parsons? If you are not already pledged to use nothing but the Mason System, what valuable technical principles do you find in his exercise books? In order to broaden yourself, you will need to be constantly on the lookout, and always ready to investigate. "But this is stealing," you may say. Yes, it is stealing, a system of universal pillage, if you will, but a system indulged in by all of the progressive teachers whom you credit with so much fertility of invention. Invention in such matters is in most cases similar to the result obtained by passing a number of ingredients through a crucible. These books are published with the expectation that they will be stolen from in this sort of manner. But do not forget to speak a good word for the various sources from which you have obtained valuable information. If you appropriate another man's ideas, you must acknowledge him as one to whom you have been for instruction. Otherwise you may be guilty of a genuine theft.

Then you must systematize, systematize unceasingly. Plan each successive step with carefully thought out gradations. Begin by preparing a series of fundamental exercises for those just commencing, preparatory finger work for the table to be applied later at the keyboard, exercises that can be quickly written in pencil for the pupil. Do not teach the notes at first, but use figures until the pupil has acquired a certain amount of proficiency in finger action. For a pupil to start out at once trying to read the notes uses up all the attention that he has to give, and it is thus quite impossible for him to make correct finger movements. Make a progressive list of such exercises as the following;

$$\frac{4}{4} \;|\; 1\ 2\ 1\ 2 \;|\; 3\ 2\ 1\ - \;|\; 2\ 3\ 2\ 3 \;|\; 4\ 3\ 2\ - \;|\; \text{etc.}$$

Make this interesting to the pupil by an impromptu supplying of simple harmonies, after the fashion of an easy song accompaniment. These exercises are always insufferably stupid to the pupil that comes to the instrument with the desire of learning something that sounds well, but if they are supplied with such impromptu harmonies at the lesson, the surprise at the result will be almost like a revelation to the child mind.

But if you have not studied harmony, as you state in your letter, you may not be able to supply simple tonic, dominant and subdominant harmonies to even such incipient tunes as these. Such being the case, you are truly in an unfortunate condition. You have fallen into the snare that has been such a hindrance to hundreds and thousands of American pupils, that of insufficient preparation in musicianship. Like a great many others, you teach music and do not understand it, truly an anomalous position. Every pianoforte teacher ought surely to be familiar with the constructive side of his art. To play or sing without having any knowledge of even the elementary laws of harmony, is precisely equivalent to the man who should attempt to teach writing and yet not know how to spell; or to teach a correct use of English with no knowledge of grammar. Your laudable ambition is to make of yourself a better piano teacher, to advance yourself so that you can take a position that more nearly approximates that of the better exponents of the art. One possessing so intelligent an ambition, should recognize at once the necessity of musicianship as one of the prime requisites, and that the ability to play skilfully is not alone sufficient. Even a good talking knowledge of the literature of your instrument will only partially compensate you for your lack of information in regard to harmonic construction. You desire to formulate your own system of pianoforte instruction, to be able to invent such work as may be necessary in certain special cases. If you succeed in doing this successfully, you will need to begin at once the study of a more advanced musicianship. The fact that you live in a small city where you are unable to provide yourself with a competent teacher, need not deter you from doing something. As I have already hinted, invention often means nothing more than re-combination in new forms, for new conditions, of material that has already been used. Your inventive faculty will not be very responsive to your desires, unless you have already given it practical exercise. Along with the preparation that I have already suggested, you would better at once provide yourself with a copy of Bussler's "Harmonic Exercises at the Pianoforte," and begin its mastery. It is very elementary, to be sure, but it will be an excellent book for you to study by yourself and will help you to learn the application of elementary harmonic principles in your teaching. After you have thoroughly mastered it, from cover to cover, you will find that you are still sitting on the steps of the Temple of Music, but it will be time enough then to decide what will be best for your future musical progress.

But meanwhile you would better not drop your crutch until you are sure you can advance without falling. You would better stick to your instruction book until you are confident of having formulated it

your own mind a practical as well as practicable course of study. Better lean on the experience of some competent leader, assuming that the instruction book that you are using is by such a person, rather than run the risk of your frail experience not being sufficient to hold you up.

In suggesting the formulation of such a course of study, it must be understood that it applies mainly to the exercise side of the work, especially in the elementary grades. A properly graded course of studies and pieces will have to go along with it. To select such a course calls for a most extensive familiarity with the literature of the pianoforte. You will gradually build up a list of such pieces. But for the earlier grades, one of the various compilations already published will be found more suitable unless the pupil has an extensive pocket book with which to pay for the multitude of pieces that it will be necessary to buy. In the advanced stages of instruction, such aids will become more and more unnecessary.

It was stated at the beginning of these remarks that they could be little more than suggestive. It would be difficult to make them otherwise, except by laying out a course of instruction, step by step, and this would amount to nothing more than another instruction book. However, if an incentive is given to the teacher to classify his knowledge in his own mind, and arrange it in such a manner as to have it at ready command, without finding it always necessary to refer to a book, something will have been accomplished.

THE SINFONIA CLUB.

Male Students' Musical Fraternity.

RALPH HOWARD PENDLETON,
Secretary Alpha Chapter.

College fraternities, as everyone knows, are time-honored organizations, and a college man with any "get up" to him at all is more or less apt to find himself snugly encased in one or another of the local chapters at the institution which he is attending before he has completed his Freshman year. In college fraternities social standing and wealth are important factors in determining the eligibility of men to membership. The young man entering upon his musical studies in America, say three years ago, had little or no opportunity for such affiliation. Were he to take a course of theoretical work in any of the large colleges he was, of course, eligible to membership in the college fraternities, but few are the men who obtain their musical degrees in this manner. If he entered any of the large conservatories in this country he found any number of lady students, supporting their own fraternities, but a doleful lack of social interest among the men, if indeed a male student body was found at all. If the reader will pardon me for citing my own personal experience in the matter of college and musical fraternities and in my connection with the Sinfonia Club, perhaps a clearer idea of our organization can be given.

I was one of the young men of three years ago, before the day of a young men's musical organization in our conservatories, who left home and came to Boston to study music. Like many others, who afterward turned to music, I had prepared for college and had interested myself in several preliminary societies in my high school, one in particular, the *Beta Sigma*, occurring to me now. In the high school we also had an "official organ," published by the students, or rather by the clique that "ran" the senior class, and the work done on that paper gave one any amount of "college enthusiasm."

On arriving in Boston and becoming a student of the New England Conservatory of Music I found myself in a new world. The atmosphere was altogether different; there was no fraternity and little college spirit. I was thrown in with an odd mixture of men who had, apparently, little enthusiasm for their college, their conservatory, their *alma mater*. To one educated differently all this would, naturally, seem strange and unhome-like, and, perhaps, some would pack up and go home. Surely, a great many would have done this, before the days of the Sinfonia, had it not been for the girls. If the girls have not been a means of perpetuating music in America, surely their deeds in "interesting" their brothers must be recognized.

In the Fall of 1898, a circular was issued to all incoming male Freshmen by the "Old Man," which read something like this:

"You are cordially invited to be present at an informal reception given by the "Old Boys" of the N. E. C. to the "New Boys," in Elocution Hall, New England Conservatory of Music, on Thursday Evening, September 22d, 1898. A jolly good time is anticipated. Don't miss it. Curtain rises at 7.30.

GEORGE S. DUNHAM, *Chairman.*
F. LESLIE STONE,
HENRY T. WADE,
JOHN F. HARTWELL,
EUSTACE B. RICE,
HOWARD R. WOOD,
Committee.

P. S. No. 1.—All are requested to wear cards with their names upon them as a means of introduction.

P. S. No. 2.—The committee especially requests that those who intend availing themselves of this "opportunity of a lifetime" will kindly notify the chairman on or before Tuesday, September 20th, that a proper quantity of "rations" may be supplied.

P. S. No. 3.—Important! No "swallow-tails."

There were in the neigborhood of fifty or sixty men present on the appointed evening and, altogether unpremeditated, the idea of forming a permanent organization of male students was discussed. The plan met with such general approval that a meeting was called for October 6th, at 7. 30 P. M.

October the sixth came and found a good-sized attendance of young men to discuss organization. Henry T. Wade was elected chairman. On that evening it was decided to organize a men's club and call its name "Sinfonia."

Officers were elected at once to pilot the affairs of the new venture as follows: F. Leslie Stone, president; Fred. W. Briggs, vice-president; O. E. Mills, treasurer, and Shirley Frances Stupp, secretary. Messrs. Delbert Webster, William E. Tanner and Frederick I. Day were appointed a committee to draw up a constitution.

Up to this time the male student body had been totally ignored, socially, in the conservatory. It is being ignored in seventy-five per cent of the conservatories of America to-day where such a body exists. Young men, on leaving a high-school, crave for a college life, not only for the educational features, but for the social as well, for it is only the dull, narrow student who does not mix the two. Men, then, naturally select a college where their acquaintance is largest or where there are prospects of its becoming extended, as well as for its educational advantages, for oftentimes a man's broad acquaintance means much to him after the college days are over.

The management of the New England Conservatory at once placed a comfortable room, with light and heat, at the disposal of the members of their institution, comprising the Sinfonia Club, and it is only due the generosity of the management to add that this is and has always been entirely gratuitous on their part.

And now, perhaps, it will be well to explain what the Sinfonia Club stands for. To quote from the annual year book, which is just going to press:

"The Sinfonia Club stands for the development of the best and truest fraternal spirit; the mutual welfare and brotherhood of musical students; the advancement of music in America, and a loyalty to our Alma Mater."

One can readily see the advantage to all concerned of such an organization. Nothing like it had existed in the male student body of American musical institutions before its birth, and as yet no opposition has been encountered to swerve it from its course.

After two years of growth and activity in Boston the club sent Mr. Percy Jewett Burrell, the president, of last year, Mr. Henry H. Hall, the vice-president, and myself to New York, Philadelphia and Washington, in the hopes of imparting our plans to others and in establishing chapters of the Sinfonia in those cities. In New York and Philadelphia we were at once successful. In Philadelphia, where the *Beta* Chapter was organized, at the Broad Street Conservatory of Music, a large male student body was founded, for the most part those comprising it being totally unaware of the presence of each other in the institution. A most flourishing organization is now in existence and in touch with the male music-students of two other cities —New York and Boston.

In New York the *Gamma* Chapter was organized at the old Metropolitan School, now the American Institute of Applied Music, and these men, too, now feel the results of a union and of the brotherhood idea in neighboring cities.

Washington and Baltimore were disappointments because of total lack of material in the shape of a "male student body." Other cities have communicated with us, while others have preferred not to answer any questions and are presumably now putting in their time at organizing a "male student body."

Unlike college fraternities, the Sinfonia Club is not a Greek letter fraternity as yet, and probably never will be, for Greek is not a part of our task. The chapters are given Greek letters, however, according to acceptance. Neither are we as yet incorporated, which we hope to be, some day. It does not cost twenty-five dollars to become a member of the Sinfonia, the poor man's son being just as eligible as the man from Fifth or Commonwealth Avenues, provided he is, morally, a gentleman. A beneficiary department is also provided for the assistance of worthy members, and this has been taken advantage of with good results, at least in the Boston, or Alpha, Chapter, the other chapters as yet having made no report regarding this department.

What is in store for the Sinfonia one can only conjecture. Its growth during the past two and a half years has been so rapid, its course approved by so many of the leading musicians of the country, that there has been hardly time to stop and consider what is the next thing to be done.

While the governing power is now in the hands of the officers and members of the Boston chapter, it is hoped that there will soon be enough chapters organized to permit of the calling of a national convention and the election of a Supreme Governing Council to meet yearly and direct the affairs of the organization. A serious campaign will probably be undertaken shortly through the West—Cincinnati, Toledo, Detroit, Chicago, and, perhaps, St. Louis, being objective points.

What will be needed beyond all else in the foundation work of such an organization is advice and, perhaps, bequests to individual chapters in the formation of their chapter-houses and their equipments. The Sinfonia Club has its chapter-houses to build; other fraternities of forty and sixty years of standing have successful members now to look to for support. I can say that the public-spirited citizens of Boston have assisted the Alpha Chapter of the Sinfonia Club to the extent of $800.00 in the furnishing of their chapter-home in the New England Conservatory building. Will these bequests continue? Will the wealthy citizens of Philadelphia, of New York, and of other cities, where the Sinfornia will surely locate, interest themselves in the *student of music* to such an extent that they will make his student days attractive?

The actual expenses of these chapters are met by the regular dues assessed each member, the beneficiary fund being laid aside in the same way, but help may be needed in the formation of chapter-homes and houses in many instances.

During a season the club members come in contact with many musicians of note. Taking the Alpha Chapter, for example. During the past year the Kneisel and Adamowski Quartets have visited the club, likewise Victor Herbert, Mr. Horatio W. Parker, Madame Hopekirk and many others. Hezekiah Butterworth and E. Charlton Black have both addressed the club on Literary evenings. The Alpha Chapter has one member, Mr. Clifford Sprunt, in the Boston Symphony Orchestra. Mr. Sprunt is the only American born member of the orchestra. The Beta Chapter has four members in the Philadelphia Orchestra—Messrs. Witzenann, Dubinsky, Arkless and Fogg.

With the musical public better acquainted with the Sinfonia Club and the Sinfonia Club better acquainted with the musical public, we are sure that both will be positively benefitted by intermingling one with the other, for with the proper nourishment, we feel sure that the Sinfonia can produce abundant musical houghts to absorb the public mind of the next generation

Spontini, the composer of "Ferdinand Cortez" and "La Vestale," was fond of exhibiting his decorations. Upon great occasions he wore them all, and delighted thus in showing them in public. At a great music festival, Spontini, wearing his orders as usual, passed a group of musicians, and heard one of them say: "Look, there goes Spontini with all his decorations, and to think that Mozart had none at all." Whereupon Spontini turned quickly and said: "My friend, Mozart did not need any."

STUDY WITH HANS VON BÜLOW.

Handel.

THEODORE PFEIFFER AND J VIANNA DA MOTTA.

Translated for THE MUSICIAN *by F. S. Law.*

Variations in E major (*Harmonious Blacksmith*). Von Bülow was greatly dissatisfied with the Italian who played these variations. "H'm," he said, "you found it beneath your dignity to practice the left hand alone. That is too amateurish. I am not here to give private lessons. Come now, play fairly and squarely from the notes."

He did not allow him to play further than the second variation.

"The Italians have talent, no doubt, but no perseverance. Has anyone else something of Handel to play?"

Intimidated perhaps by the foregoing scene, no one ventured to respond. Thereupon von Bülow said, very quietly:

"Very good; Liszt had eleven thousand pupils, all ladies, and all his favorite pupils. Their one object was to play the second Hungarian rhapsody as loud and fast as possible. My task here is a different one. I am not giving up four weeks of my life in order that you may master a couple of pieces, but to educate you musically and from every side. Very good! Therefore, ladies and gentlemen, I recommend you not to neglect these masters (Handel, Mozart, Mendelssohn)."

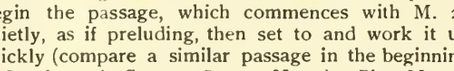
Prelude and Fugue from the Suite in F major. The theme of the fugue as though hewn from stone.

"In my edition of Handel I have given too much attention to detail and have introduced too many nuances. This does not suit Handel's style. At that time, however, I had to fight against the soulless hammering which was then in vogue."

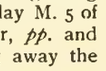
MOZART.

Fantaisie in D minor. M. 2, 4, 6 of the introduction may each be taken as the echo of the measure preceding. The Adagio should not be taken too slowly, otherwise it becomes tiresome. After the *agitato*, when the principal theme is heard in the dominant, beginning with M 29, it should be played a little stronger for the sake of increased emphasis. Begin the passage, which commences with M. 23 quietly, as if preluding, then set to and work it up quickly (compare a similar passage in the beginning of Beethoven's Sonata, Op. 37, No. 2). Play M. 5 of the Allegretto coquettishly, *i. e*, quicker, *pp.* and staccato, thus, to a certain extent, driving away the former impression with a jest.

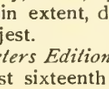
Sonata in A minor (*Peters Edition, No. 7*). In M. 33 and 34, accent the first sixteenth note of the left hand:



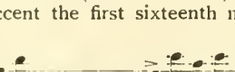
M. 13, after the double bar, right hand:



M. 17, on the contrary



M. 25:



M. 26:

M. 33:

M. 33, counting from the end, not *forte* but *crescendo*, and then *forte* in M. 3. In M. 20, diminish a little in the right hand before the last count

Third Movement. In spite of the *Presto* this movement must not be played too fast. M. 37–40; bring out the first eighth notes of the left hand so that the fourths of the right hand may not sound too empty. The same in M. 45–48; also in M. 45–42, counting from the end. In the *Maggiore* all the appoggiaturas are short. Omit the trill in M. 15 of the *Maggiore*.

Fantaisie in C minor. This fantaisie is in the closed sonata form. (The fantaisie in F minor, for four hands, von Bülow, also recommended for study.) Mozart has a better prospect of surviving the next century than many modern composers.

Sonata in D major (*Peters Edition, No. 13*). Here we have the style of the string quartet. Beginning with M. 16, thus:

M. 34 and 35, M. 36 and 37, *pp*, then again.

M. 49:

M. 51; M. 52 *p.*; M. 53 and 54, *f.* From M. 55 to the double bar, *p.* After the double bar, M. 6 and 7:

M. 14, 15 and 16:

Another lady began the Adagio, but von Bülow stopped her and said: "Mozart is confoundedly hard. The time is coming, and perhaps soon, when people will rather hear a Mozart sonata in the concert-room than the Liszt Rigoletto fantaisie."

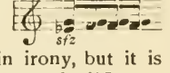
Sonata in F major (*Peters Edition, No. 1*). *Andante.* Beginning with M. 13, counting from the first double bar, we find for eleven measures many suspensions and cross-relations. These the master intends as a torture to create a burning thirst for the chord of the dominant seventh of B flat in M. 24, which then acts so much the more satisfactorily. In M. 4 and 3 counting from the end, the first two counts are played; the third is sung.

Fantaisie and Sonata in C minor (*Peters Edition, No. 18*). *Fantaisie.* The fantaisie does not really belong to the sonata, as is generally supposed. By chance they appeared in the same volume, and since then they have always been spoken of as the fantaisie and sonata.

Bear in mind that there is a difference between *p* and *pp*. In the endeavor not to be tiresome we have become entirely too flippant. The six-four chord is the favorite chord of the Wagnerians. They can write nothing else than six-four chords. I have come here to direct you in the study of interpretation, in what is generally known as style. My object is to prepare you to journey into the land of the poet. I furnish you with a kind of Baedeker—a Bach-Baedeker, a Beethoven-Baedeker, etc.

Adagio is not the slowest tempo, it means *ad agio*, *i. e.*, at ease, comfortably.

"Mozart has been called, is called and will be called the Raphael of music. Now it is un-Raphael-like to make the *sfz* so rough and hard. (This remark referred to the passage:)



In Mozart there is always a certain irony, but it is appropriate. It would be irony, for example, if I were to say, this morning, 'What heavenly weather!'"

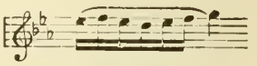
It was icy cold and had been raining incessantly. For von Bülow's views on humor and irony in music see the preface to his edition of Scarlatti's pieces.

"A staccato point indicates 50 per cent. Very good! Then give me 50 per cent. and not 25 per cent. That you do only when you are bankrupt. Consequently, legato-staccato, ... (portamento), is 75 per cent. The 25 per cent. staccato is indicated by the '. *Vide* Moscheles' preface to his Op. 70 and Beethoven's Letters, No 361, Vol. I."

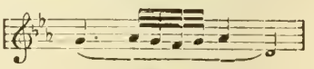
"Verdi's popularity is largely due to his often repeating one and the same tone, which is easily remembered." As illustration he played

Sonata. Allegro Molto. This is Mozart's *Sonata Appassionata.* Begin the trill in M. 2 with the upper tone. Such ornaments you should have sung for you by good singers. Unfortunately, very few can sing them nowadays. Singers ought to make us musical, but the contrary is the case; their influence is rather tends to make us unmusical. I play the piano much better since I have had nothing to do with the opera.

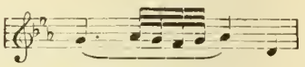
M. 15, right hand, first count:



M. 23,

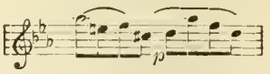


not



M. 25, similarly.

M. 15, before the second repeat mark:



The two chords in the left hand immediately before the second repeat mark:

M. 5, counting from the end, last count *mf.*; M. 4, last count *mp.*; M. 3, last count *p.*; the final chords, *pp.*

Adagio. This is in the rondo form. M. 1:

M. 24 begins the Trio.

Von Bülow said, among other things: "Fräulein, be sure to make a difference between a quarter and an eighth. This reminds one of a clever story: A tenor, who was very musical, but who had not much voice, once wrote in the album of another tenor, who was his exact opposite in both respects: 'I beg you note, dear . . . . (Wachtel), a quarter is no eighth note (*Achtel*).'"

Rondo in A minor. Rubinstein played many things wonderfully well—others wonderfully badly. His playing of this rondo was heavenly. We have not the fire, the passion, the might with which he transports his hearers; but we do not need to imitate what is incorrect in his playing. Yet it is more interesting to me to hear Rubinstein play incorrectly than to hear a thousand others play correctly. He is Liszt's rightful successor.

To a lady, who did not know the rondo, von Bülow said: "Even if you have not studied the piece you must say that you know it, for it is a reproach not to know it."

Of this passage he said: "This shows a finesse that can only be found again in Brahms. This passage is a touchstone for musical talent. If you find it difficult to learn by heart you would better let piano playing alone."

Sonata in F major (*3 4 measure*). "Mozart was not half Italian for nothing. You play him as though he had been born in Stockholm instead of Salzburg. It is too cold, too lifeless! The tone is too thin, too childish! Study his operas or play his violin sonatas with a violinist. There is always a dramatic vein in Mozart, even in these piano sonatas. Every one of his themes is an individuality. You must have a clear image before your eyes."

As the player began the last movement too fast, von Bülow said: "That is entirely too lively. Not Naples only Salzburg. So much can be learned from Mozart's string quintets that one really ought to carry them around with him. For your musical well-being it is far better to play Mozart than a Hungarian rhapsody."

MENDELSSOHN.

Variations Sérieuses. Mendelssohn is a model composer for the piano. He thinks and writes in the true piano idiom. You must grasp the basses clearly and practice the left hand alone; that makes one musical. In Mendelssohn *diminuendo* is to be taken as qualitative only and not as including *ritardando.*

Variation 3. The bass notes very light. The first four variations are to be considered as one group. In listening to variations the listener ought not to be able to check them off, one after the other; otherwise the thirty-two variations by Beethoven would drive one wild.

Variations 5. Espressivo means *cantabile*—in fact, *espressivo* never means anything else.

Variation 6. This must be considered as orchestrated, thus: wind instruments above, strings below.

Variation 7. More lightning than thunder; also, not too much pedal.

Variation 8. Here you must smell the incense. After the solemnity of this variation the next must begin quietly and mysteriously; the evil spirit is again aroused.

Prelude and Fugue in E minor. "The beginning of the fugue is similar in character to Beethoven's 'Song of Penitence' and requires the same style of execution. The acceleration of the tempo should be very gradual in order to avoid a too great wildness before the choral is reached. Too much impetuosity would also endanger clearness." Of other preludes and fugues by Mendelssohn besides this one, von Bülow recommended the prelude and fugue in F minor and the prelude to the fugue in B minor.

Variations in E flat major. Play the theme simply and in time. The first variation is a trio; the first person speaks, the second adds his opinion and the third resumes the subject. *Variation 2.* The theme discreetly; particular attention to the figures in the bass. *Variation 3.* In the third measure the G on the third sixteenth note of the left hand can be played by the right hand. In this variation a sharp distinction must be made between colon, semicolon and period. In the next variation both hands must increase together.

Capriccio Brillante, Op. 22. "The first four measures short as though trying the piano. In studying a concerto, or, in fact, any work with orchestra, it is necessary to consider whether it is to be played with the orchestra or as a solo. In this case I do not wish the latter since you, my dear young lady, cannot give the characteristic effect of the orchestra. You may put your thumb on the black keys with a good conscience. The idea that this is not allowable nowadays survives only with antiquated maiden ladies who teach the piano. Every piece must first be de-composed and re-composed. In legato running passages the wrist must respond to the movement with ease and elasticity."

Caprice in E minor from Op. 16. Consider this virtuoso composition orchestrated; it begins with the sharp tone of an oboe. In general, decided contrasts must be made.

As a youth Mendelssohn was a remarkable musical genius. In latter life his powers of invention failed somewhat. After Beethoven and before Brahms Mendelssohn's symphonies are the finest; as regards form, even better than Schubert's and decidedly better than Schumann's.

Songs Without Words. Spinning Song. This is by no means so hackneyed as Liszt s transcription of the Spinning Song from "The Flying Dutchman," only the latter bears poorer playing than Mendelssohn's. Mendelssohn's music needs no explanation; he wrote everything with scrupulous exactness just as he wished it. The master is known in his limitations; he never trusts himself to attempt more than he can accomplish. He writes such music as suits the piano and he follows the same principle in writing for the orchestra, for the voice—he is a classical master. Schumann's orchestral works do not sound well. They are piano pieces poorly arranged for the orchestra. His finest orchestral composition is the fourth movement of his third symphony—the Rhenish Symphony—in which he gives a musical illustration of the Gothic style of the Cologne cathedral.

After the player had finished von Bülow said: "Fräulein, the master is known in his limitations. You have attempted more than you could accomplish. I don't say that you have not played the piece well—but as the Frankfort people say: beautifully—that is another thing (*Schön ist annerschst*)."

Of the songs without words von Bülow recommended Nos. 3, 7, 10, 11, 15, 19, 20, 21, 22, 24 (in particular), and No. 25 to 30, inclusive.

"I can solemnly assure you," he said, "that Mendelssohn will enter into the next century, while many others will not. His symphonies will be played when Schumann's symphonies shall have been forgotten. His overtures, which I call symphonic poems, will live when other symphonic poems are played no more. A Mendelssohn song without words is, for me, as classical as a poem by Goethe."

He spoke very highly of the Capriccio, Op. 5, which he said contained "many inspired flashes." In one of the players he found so many faults—dragging tempo, false phrasing, poor fingering—that the poor fellow played only a single measure!

"I once had the honor," he said, "of being, for two hours, a pupil of Mendelssohn."

A trill is often a failure because one tries to make it too fine. What do I mean by too fine? When, after the principle of the eleven thousand virgins (*vide* Handel's *Harmonious Blacksmith*), one tries to make it as loud and strong as possible. *Crescendo* means *piano.* You cannot be at once what you wish to become.

Mendelssohn often follows the fashion, which was formerly more prevalent than at present, of putting an independent accompaniment and bass to a melody. Nowadays it is managed more conveniently. The composer chooses a couple of crazy harmonies and then, as far as possible, Tristan-izes or Walküren izes to them. Brahms does not do this. In him you always find an interesting accompaniment.

Appoggiaturas can be played angular or round. When Alberich appears in *The Rheingold* they must be angular, but in Mendelssohn they must be round and graceful. The ritardandos, which are introduced in Mendelssohn's music, have given it the undeserved reputation of a lemonadish sentimentality. It is, however, not lemonade but noble wine.

At the playing of the song without words in G minor, 6-8 measure, he grew very impatient. This was on account of the player's making the eighth notes of the melody a little too long. Von Bülow's sensitive rhythmic feeling was irritated to the utmost; he beat the measure with hands and feet and groaned like one on the rack. He said: "I can stand any quantity of false notes, but false rhythm sets me wild." When No. 1 in E major was played he remarked: "This must move us, but not to tears. That is not fine!" With this he assumed the tragic-comic expression of a sea sick person.

Rondo with Orchestra. It almost seemed as if on that day everyone tried to play his very worst and with this piece von Bülow's nervousness reached the highest pitch. He cried: "Ladies, you will do better to give up piano playing entirely."

We clip the following from a Kansas City paper: A rather homely Pole is Paderewski, with terracotta, chrysanthemum hair, but with much of the Grecian column style in his manufacture. To hear him play is educative, and to sense him feel his music as he *plays* is rapture. You forget the chrysanthemum head; the piano sinks into nothingness; a Master Hand scatters the music as a continual shower of perfumed flowers, and you live and breathe and have your being in the transport. An exchange gives a criticism of the great pianist, written by a countryman, and doubtless on the spur of the moment:

"The fellow is deceitful. He makes you think all the time he is going to play a tune, but he never does. He flirts all around a tune, but never plays it. His hair looks like a wig, but isn't. He deceives you in a hundred ways. He plays the sweetest sounds you ever heard that were not a tune. He has his piano so trained that it will keep right on playing when he is not touching it.

"He reaches out slowly and strokes it, drawing back his elbows. You see the moonlight, and 'the solemn spaces where the shadows bide,' and in the hush you hear that matchless music that is not a tune—no, not a tune! Ah, the fellow was dropped from Heaven for deceiving the angels with his playing!"

If the critic is not a musician practically, he certainly has a soul for musical harmony, and whether this review was inspired, or is a part of himself, as I judge, true it is that his language carries with it a certain element of grandeur and appreciation—*The Life.*

The Anton Rubinstein museum at the St. Petersburg Royal Conservatoire, containing memorials of the master's life and works, was opened to the public on November 21, the sixth anniversary of his death.

SHOULD EVERYONE STUDY MUSIC?

FRANCES C. ROBINSON.

The student of history finds that music has a place among all races, even the rudest and most barbarous, which would seem to argue that it belongs to all mankind. There appears to be an instinctive reaching out toward musical sound to express man's inner feelings. The more we study music in the history of races, the more we realize that it is the expression of a deep underlying force in the human mind.

A study of the national songs of various people is invaluable in considering race characteristics. The songs of each nation are found to differ and to be perfectly distinct from all the others. In each there is some little peculiarity in arrangement which is distinctly its own, and which reflects something of the temperament of the particular people who produced it. The more enlightened the nation the better the music. The above-named facts go to prove that music bears a close relationship to life.

The educational value of music is admittedly great. All who investigate the matter recognize music as an important factor in building character, and as a developer of man's spiritual nature. But it is easy to find many persons who still need to be persuaded that music is one of God's most powerful agents for promoting the growth of man's finer and better nature. They regard music as merely a pleasurable sensation admitted through the ears—simply an accomplishment and one of the luxuries of life. The consequence is that music is largely left out of the education of thousands of our people.

Music is as necessary for emotional activity as are words for intellectual activity, and a right and judicious training of the imagination and the emotions, or, in other words, of the *artistic* or *poetic* side of human nature, is equally important as the development of the other faculties. But music also appeals to and exercises the mental faculties; there is a mental discipline which begins with the very first lessons.

The writer believes that music *should be studied by everyone*—just as literature should—*not that everyone may become a musician or litteraleur*, but to the end that all may be developed evenly and roundly in character, and that all may become familiar with the best and highest works of human intelligence. Music should be studied as the other arts are studied. Begin with its origin and follow its development until its highest achievement is reached.

Many persons are of the opinion that *all* children are born with the latent faculty of song, just as all are born with the latent faculty of speech. If this is so, the importance of early training is obvious. Teachers and parents must try not to despair if all musical students do not become good *performers.* If their musical training shall have opened up much in their natures and characters that, otherwise, would have remained undeveloped, the time and money has not been misspent. It is something to know how to be an *intelligent listener* to music. There is a crying need, in this country, for *a more general musical culture.* In Europe, every little town and village has its musical organization, and men as well as women are the interested supporters. All are eager for a larger knowledge of music. The writer knows that the small towns, in this country, that will support (public) high-class concerts are few indeed; lack of appreciation prevails The people seem utterly lacking in ambition, so far as any desire for musical culture is concerned. There is certainly a chance for missionary work along these lines. If only people in general could be made to wish and strive to become *intelligent and appreciative listeners to music.*

This country has its great musical centres. For example the term "Musical Boston," is something more than an empty phrase. It is thought by many that the progress of musical art has developed to the loftiest height which it has attained in America in Boston. We find there, it is true, fine instrumental organizations, choral societies, eminent musical instructors, and excellent schools of music or conservatories. But we have only to go out of Boston to some of its neighboring towns, not over ten or twelve miles distant, to find abundant evidence of lack of musical culture.

Men and women may, if they will, begin the good work at any time of life. It is never too late to become interested in good things, and once people look into this subject and assure themselves of the importance of music in our lives, they will see the necessity for an *all-round* education for the children of this country, *which shall include a knowledge of music*, even though all may not excel as performers.

Young Composer's Column.

RULES.

1. MSS. marked "Young Composer's Column" must reach us by the 10th of the month to ensure notice in next issue.
2. Each MS. must bear the full name and address of the writer; the initials will be used unless a *nom de plume* is added.
3. Stamps must be enclosed if MS. is to be returned, but it is to be distinctly understood that the Publishers assume no responsibility for any MS.
4. No charge is made for the examination of any MS., and compositions of any nature may be submitted. The criticisms will be general and of such a nature as will be helpful to those honestly desiring frank and unbiased criticism.
5. No criticisms will be sent through the mail.

F. L. G.—(376 to 378). We are much pleased with the three piano pieces you send; the titles (both general and sub) are felicitous, and the MSS. are as legible as print. We append a few criticisms, mainly in regard to details. Measure 2, left hand, of "Beside the Brook," if fingered 2-4, 1-5, will be something of a practical stumbling-block. In measure 8, divide the notes so as to suggest 6 8 time. The double thirds will be troublesome for novices, but the piece both here and at the bottom of the page, will be excellent practice. "After the Shower," is open to criticism in one or two particulars; you can not justify the F♯ in l. h., measure 13. The chromatic scale, line 4, measure 1, whether judged by the Day-Macfarren-Prout system or by the generally received one, has an incorrect notation. We think your "bridge" at top of second page is four measures too long; it is out of proportion to the rest. "At Twilight" would be more practicable if some of the extended chords were divided between the hands. The pedal has to be used, as they stand, and it often blurs the melody badly. Your pieces, without being anything remarkable, are grammatically written and display a musical temperament. We think you have every reason to persevere as a composer; do you take pains to store your mind with the best music? Play the *Well-Tempered Clavichord* and Beethoven's *Sonatas* for their effect as musical literature, and Chopin's *Nocturnes* and *Waltzes* for their manner of piano writing. Play these over and over again until you are infected with their spirit, thus you will be broadened and built up in music.

H. W.—(379). We like your perseverance and we wish that we could say that "Parting" is improved. It is still rambling along without punctuation; you need elementary instruction in Form; get Cornell's "Form," published by Schriner, and study how to make phrases and periods. Cadences mark the joints of the musical sentence, do they not? Now notice where the cadence-points occur in your piece; see how irregular they are. You can not write acceptably without observing these fundamentals of rhythm. At A the chord with G♮ is incorrectly resolved; at B the G♮ should be F double sharp. Your nature is refined and musical and there is no doubt that you can do something in composition—*but not until you've much better ideas of rhythm.*

E. A. K.—(380). A musical, singable hymn tune. We do not care for the consec. fifths between soprano and tenor, measures 12 and 13, though some writers allow them under the circumstances. Measures 19 and 20 are harsh; the three last measures are not good, the covered fifth between soprano and bass coming out unpleasantly.

Scherzo—(381). Your piece is one of those simple, soothing sorts of compositions founded on well-tried formulas. The consec. fifths and octaves in measures 2-3 are bad. It would be well for you and H. W. (see criticism 379) to unite your forces; you have a sense of rhythm and proportion that he lacks, while his variety of harmony and elevation of style are much superior to yours. Your piece, however, is pleasant to the ear and sure to please the unlettered musician.

Eli Presto—(382 to 384). We do not care much for the three things you send; the flame of inspiration burns low and flickers feebly. The "Witches March" is the sort of thing that one hears at the theatre; theatrical music, like organ music, is a class by itself—*sui generis*. The Ave Maria is better, but your accompaniment interferes often with the voice part. Where you simply let the organ accompany and give up the idea of a vocal obligato (your technique is not adequate for the task) you make a good effect, as in last ten measures. The Sanctus has sacred words but is secular in style; "the hand is the hand of Esau, but the voice is the voice of Jacob." On page 2, measure 4, third and fourth beats, you ought to avoid B♯. For the B♭ in measure 5 sounds very harsh; for the two beats in question, use the dominant with the third suspended and the dominant. The Amen is very bad, we think; if you *must* have the sound represented by B♭, why not write the dominant chord with the fifth raised?

A MORE ANCIENT MARINER.

The swarthy bee is a buccaneer,
A burly, velvcted rover,
Who loves the booming wind in his ear
As he sails the seas of clover.

A waif of the goblin pirate crew,
With not a soul to deplore him,
He steers for the open verge of blue
With the filmy world before him.

Out in the day, hap-hazard, alone,
Booms the old vagrant hummer,
With only his whim to pilot him
Through the splendid vast of summer.

He looks like a gentleman, lives like a lord,
He works like a Trojan hero,
Then loafs all winter upon his hoard,
With the mercury at zero.—*Bliss Carman.*

HINTS TO A PUPIL ON THE SONATA FORM.

MARY ALLISON TIFFANY.

Has it ever occurred to you to compare the construction of a play with the first movement of a sonata? You will find they have much in common and, perhaps, the comparison may put fresh life into the rules in the musical dictionary, which seem rather arbitrary, and set one to wondering whether they are not a hindrance rather than a help to a composer.

A sonata, you know, begins with a theme in the tonic, followed by one of a different character in a related key. If the first theme is major, the second is often in the dominant, if minor, in the parallel major key.

Now glance for a moment at a play. Take, for instance, "The Merchant of Venice." Here we have Bassanio and Portia, the principal characters in the love story of the play, who will pass through many adventures before the close of the drama. So it is with the leading theme of our sonata. We shall have that presented to us from many points of view before we are done with it.

After Portia and Bassanio we have Gratiano and Nerissa, lighter personages, with a story of their own, naturally connected, however, with the others. In the same way the secondary theme in the sonata must, to avoid monotony, differ from the first, and yet possess possibilities of closer relationship in what is to follow.

Sometimes a composer, not content with two themes, introduces a third, just as Shakespeare weaves Lorenzo and Jessica into the story. After their presentation, with the necessary connecting modulations and cadenzas, the first part of the first movement ends. The first first act is over. Now, why should this section be repeated? It would be wearisome in the extreme to hear the opening act of a play over again before proceeding farther. But if you consider a moment you will see there is a very good reason for this repetition. At the theatre, if you should chance to forget whether Bassanio or Lorenzo was the name of the lover of Portia, you could refer to the play bill. Listening to music, however, is quite another affair. Stop a moment and try to recall what came before and the thread is broken. And so we find the rule a very good one that impresses the themes in their simplicity upon our minds before their development.

In the second act of a play comes the working out of the plot. The characters pass through many adventures, unexpected changes take place, dramatic episodes occur, new situations are introduced. So with the sonata. If it opened in a major key the second part will often begin in the minor, at once giving quite a different aspect to the former situation. Themes are now broken into sections, new combinations are presented, one is filled with a sense of expectation, of striving, of uncertainty, as to what may follow. This working out may be as simple or as complex as the composer pleases.

The third and closing portion follows without a pause. No momentary fall of the curtain as in a play. Now the separated bits must be united, and our leading theme appears, sometimes in its pristine simplicity, sometimes with embellishments, followed by the secondary theme, transposed into the tonic, as if to say that now the hurly-burly and strife are over the two are more closely related than in the beginning.

A play is wound up in much the same way. The intricacies of the plot have been unravelled and the characters are brought together that for a time were separated by adverse fortune.

Of course, a musical theme does not necessarily mean that the composer has some story in his mind which he has endeavored to present to us as a tone picture. The writer and the musician have distinct realms to work in and comparisons cannot be carried out indefinitely. The likeness is to be found only in a few fundamental points. They are sister arts with undeniable family traits and a wide divergence in personality.

Questions Answered.

[Under this heading THE MUSICIAN will be pleased to answer any questions submitted by its readers which may be of general interest. *All questions must be accompanied by the full name of the questioner.* Answers will be published without such names. Those who send questions should take care to state clearly what information is wanted. Only such questions as will be of interest to general readers will receive attention in this column. All others will be answered privately, for which purpose stamps should invariably be enclosed.—ED.]

J. F. K.—Many of the pronunciations of the following names are almost self-evident, but they are included for the benefit of our correspondent. *Rets*-kee; Man-chee-*nel*-lie; Tchy-*koff* skee; *Gaer*-ic-kee; Powr; Foot; Ter-*nee*-ner; *Furs*-ter; *Leeb*-ling; *Nev*-in; *Skot*-tee; *Sal*-er-zer; *Sun* brick; *Nor*-dee-car; Krem-o-*nee* nee; Van-*Dike*; O-*lils*-car; *Mool*-man; Ka-*ra* no; *Plan*-song; *Kal*-vary. The accent comes upon the syllable in *italics.*

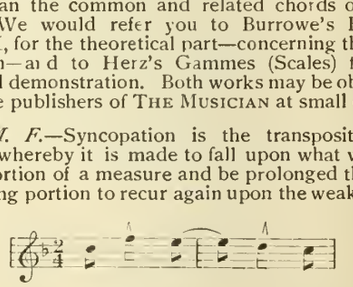
I. L. R.—The question about the "Fantasia" is not quite understood. Do you refer to the Fantaisie Caprice? If so, do you wish to know how the sextets and quadruplets are to be played? A letter to THE MUSICIAN, giving name and *address*, will have a reply by mail.

J. B. Vau.—So far as we can gather from some of his pupils, Leschetizky's *method* consists of certain gymnastic preparation through the medium of *etudes*, practiced according to special directions, designed to give force, delicacy and endurance to the fingers, hands and arms. It is doubtful if there are any great number of his pupils in this country, as many of those who have applied for lessons never got beyond the supervision of one of the *vorbereiters* or preparatory teachers.

Dundas.—Will Miss J. B. please send her *full* address, give State, county, etc. A letter has been received from her, but as there are several towns of same name we have not known where to address the reply.

M. K.—If your question is correctly comprehended we assume you wish a book explaining the construction of the major and minor scales and one containing the "scales and chords"; by the latter it is presumed you mean the common and related chords of each scale. We would refer you to Burrowe's Primer, Chap. X, for the theoretical part—concerning the construction—and to Herz's Gammes (Scales) for the practical demonstration. Both works may be obtained from the publishers of THE MUSICIAN at small cost.

M. M. F.—Syncopation is the transposition of accent, whereby it is made to fall upon what was the weak portion of a measure and be prolonged through the strong portion to recur again upon the weak, thus:



The climax of a composition is usually found near its end and may be recognized by the musically intelligent by the intensity, the bringing together of various subjects or figures and, somewhat, by the degree of force.

Unless specially marked, only the first of a group of four notes (to a single count) would receive an accent and that not necessarily pronounced.

Every scale—major *or* minor—must have a "leading" note, but only the minor has it marked with an "accidental." It is the seventh sound of the scale, a semitone below the octave, and derives its name from the fact that it "leads" so decidedly into the tonic. See the Hatch Edition of Burrowe's Primer for answers to these and similar questions.

H. R. C.—Unless there is some malformation of the hand, the habit of the fifth finger striking a key when the fourth finger is playing can be overcome by a *slow and persistent* practice of the two fingers mentioned, upon adjoining keys, say C and D, or F and G. For a long time the practice *must* be slow, and each finger lifted high. Concentrate the thought upon the motion of each finger. Lack of mental control is the cause of the fault.

While Cherubini was director of the Paris Conservatory, one of the professors, the composer, Berton, was never punctual, and always came late for his lesson.

At the funeral of Berton, owing to some mishap, the funeral cortège was late and did not arrive on schedule time at the church where the pall-bearers and other mourners were waiting. Whereupon Cherubini, turning to Auber, impatiently exclaimed: "That fellow, Berton, as usual, always too late!"

THE SNOWFLAKE.

It was a little snowflake
With tiny winglets furled:
Its warm cloud-mother held it fast
Above the sleeping world.
All night the wild winds blustered
And blew o'er land and sea;
But the little snowflake cuddled close,
As safe as safe could be.

Then came the cold, gray morning,
And the great cloud-mother said:
"Now every little snowflake
Must promptly lift its head,
And through the air go sailing
Till it finds a place to light;
For I must weave a coverlet
To clothe the earth in white."

The little snowflake fluttered
And gave a wee, wee sigh,
But fifty million other flakes
Came softly floating by.
And the wise cloud-mothers sent them
To keep the world's breast warm
Through many a Winter sunset
And many a flight of storm.

—*Margaret E. Sangster.*

HOW TO TEACH THE CORRECT USE OF THE PIANO PEDALS.

FRANCIS L. YORK.

"The longer I play the piano the more convinced I am that the use of the pedals is nine-tenths of piano playing." So said Rubinstein, whose "pedal effects" were the marvel of his generation of piano players. If this is true—and we can not lightly put aside the testimony of so great an authority—it is astonishing that so little attention has been paid to the piano pedals and to methods of teaching their correct use.

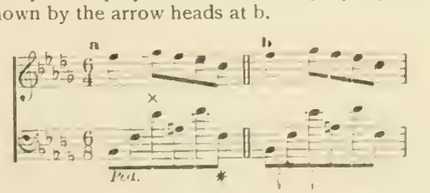
In the first place there is scarcely any edition, or even any single piece of music, in which the pedal marking is to be taken literally. In teaching, the teacher must either tell the student that the pedal marking is mostly wrong—a most discouraging statement for the pupil—or must say that it is insufficient and needs to be supplemented by many additional marks, nearly as discouraging as the other. The mark "Ped." indicating the use damper pedal with its complement ✱ indicating its disuse is not accurate enough for modern requirements and the sooner it falls into "innocuous desuetude" the better. An attempt has been made to introduce the use of a line of this form ▬ in place of the commonly received signs, but in teaching I have found this of little use, besides, this mark is found in very few editions. In my own teaching I find the arrow-point turned down, ▼ to indicate the depressing of the pedal, and turned up, ▲ to indicate the release, to be the most practical. It explains itself and has the great advantage of being placed exactly in the right position with reference to the note to be held.

I find the best method to teach the use of the damper pedal is to ignore the pedal marks entirely at first, telling the pupil that later on we will investigate them. Then I explain the mechanism of the damper pedal so far as is necessary to enable the pupil to understand how the tone is sustained by its use. The most important requisite for good pedaling is a quick ear. Most pupils possess this, but in a very undeveloped state. The outward ear hears the blurring, smearing effect produced by bad pedaling, but the inward ear takes no cognizance of it. The attention must be trained, the ear must be made sharp to hear blurred passages, and in pedaling even to anticipate them—to hear them coming as it were before they arrive and to forestall them. A friend of mine, an excellent piano teacher, has a very effective way of stimulating a pupil's perception in this direction. When a pupil blurs in pedaling he immediately shouts at him, "Nasty." This may not be elegant, but it has the desired effect. By playing for a pupil a succession of slow legato notes, sustaining the tones by the pedal, he will almost immediately perceive the difference between them and the same tones either blurred or played staccato. When he has once learned to hear the desired effect then comes the practical work. Require him to play a succession of (say) six-three chords, *very slowly*, sustaining each chord with the damper pedal without aid from the fingers until the next chord is sounded, when the pedal is instantly released. After he can hear clearly in his own mind and can produce a proper pedal legato, then the following rule may be of use. *Never depress the pedal with a tone*, always secure the tone first, then hold it. (Compare the time-honored recipe for cooking hare, "First catch your hare, etc.") *Always release the pedal exactly with the beginning of the tone.* Here the use of the arrow-points is valuable. Two weeks practice of such chord successions as just mentioned is usually sufficient to establish the proper connection between the mind and the foot so that the pupil will play legato with the pedal more or less automatically. Then give some simple piece in chords, such as the little Choral, No. 4 in Schumann's Album, or the numerous "Prayers" that are to be found in most sets of children's pieces. Insist on the pedal's doing the work. Require the pupil to lift the hands entirely away from the keyboard, listening to the tone sustained by the pedal. At first, pupils always want to depress the pedal at the same time as the keys, this being the natural sympathetic action of hand and foot. This may be easily overcome by a little rhythmical study as follows. Take the choral referred to and have the student play the first chord depressing the pedal on the second beat, releasing on the third beat as the second chord is played, and depressing again on the fourth beat. This establishes a rhythmical connection between the movements of the hands and the feet, and can be easily indicated by the arrow heads in their proper place. Thus:

When a pupil can play this simple piece with a proper use of the pedal, producing the legato entirely with the foot, he has really conquered most of the mechanical difficulty of good pedaling. To determine in every case just how long the pedal is to be held down, or whether it is to be used at all, requires constant watchfulness and the closest listening on the part of both teacher and pupil. Even the best of players may grow careless or their ears dull. I remember hearing a celebrated European pianist who made a tour of this country some years ago, play the last two chords of a composition, the Dominant Seventh and Tonic, with the damper pedal depressed, a proceeding which left the musical part of the audience in the same condition as the pedal.

When the pupil has thoroughly conquered the tendency of the foot and hand to move together, then he may begin to use the pedal in the pieces he is studying—not before. Here, too, insist that the pedal be used only in certain well defined places, not constantly, and usually not according to the pedal marking.

If space would allow, it would be interesting to quote samples of the extremely bad pedal marking often found even in good editions. If the pupil inquires why the editions are marked wrongly it must be explained that, first, composers expect the player to have ears and to hear the sounds he produces, not taking the pedal marking too literally, but as a general indication of what is wanted. Second, that we can not be sure just what the composer himself wrote, since editors and music engravers frequently misrepresent a composer. Third, a pedaling that would be admissible on an old Viennese piano, or even on a more modern Pleyel piano (similar to the one Chopin used) would not do at all on a modern Steinway grand. The tone of the pianos made fifty or seventy-five years ago was thin, somewhat wiry and of short duration, so that a tone might be held by the pedal during several dissonant treble tones with scarcely any bad effect. For example, the following (a) is marked as in Scholtz's (Peter's) edition, and would perhaps pass muster if played on Chopin's piano, but certainly not if played on ours. The proper pedaling is shown by the arrow heads at b.



It would lead us too far to inquire into the use of the other pedals, the una corda and the sostenuto pedal, or to decide whether the damper pedal may not be held over dissonant tones, as it certainly may be under some conditions and for special effects. Enough has been said to show in what way the student should approach the study of the pedals, and that both teacher and pupil must be unremittingly watchful lest harmonic clearness be destroyed or melodic outline blurred.

LOSING TIME.

HARVEY WICKHAM.

I do not use the above words in their musical, but in their everyday sense. In fact, it is borne in upon me more and more that students need to hear many words in their every-day sense, and often stand in greater need of life lessons than music lessons. Instructors do not strike deep enough or realize, as a rule, that success has its root in character and not in the fingers. I do not mean that a person of exalted morals is any more apt at art or at finance than a decadent. I did not refer to morals when I spoke of character. The word originally came from "to cut," and the street phrase, "a person's cut," expresses my exact idea. Success or failure depends upon one's cut; upon the nature of his inmost personality. Even technic springs from a profound mental conception of velocity. False notes are not always the fault of the fingers, but far oftener of the mind, or going deeper yet, of the heart. But I am becoming too psycological, and besides, I was about to speak of losing time.

"It is good for youth to bear the yoke," says universal wisdom. Why? That habits of industry may be formed, and that self-reliance may take the place of self-conceit. But it is not good for the old to totter under the same burden. The struggle for existence, which grows fiercer and fiercer as we approach the prime of life, should appreciably diminish towards the end of our days; and he who would look for fulness of years must look for a certain and constantly growing amount of ease—ease which is the well-earned reward of youthful toil. Nothing literally takes the life out of a man like looking forward with well-founded dread towards the latter half of his life. The reason that so many do, is because so few "get ahead," as the saying is, early in the race.

I am not in favor of slighting preparatory education in the hurry for practical work—I will take that back. I believe I am in favor of just that, or rather of abolishing preparatory education altogether. It is a mistaken idea that for a certain span a child can be sent to school to get ready for the battle of life, and then come forth and fight it, to retire later on victorious. The fight begins at birth, whether we will it or no. Let us not fight any unnecessary battles! I wish to emphasize that. There is a great battle to be fought against disease, poverty and darkness, the latter being of two kinds—mental and moral. It isn't necessary to push any of these enemies (unless it be the last) too far into their own country—and *slay* them we never can. It is folly to waste time in preliminary struggles with straw representations "for practice," while the real antagonists are laughing at us and diligently building entrenchments.

To drop the figure, there are so many things we *must* know, that there is no need to learn a single unnecessary one "for mental discipline." The successful man gets so much mental discipline in his regular business, that it is always threatening to degenerate into nervous prostration. If you think it will be of use to you in life to speak and read Latin, study the language. If you want merely the mental dexterity which comes from "finding verbs," as they used to say, study finance or commerce or whatever you are most likely to be busied with. It is surprising, after all, how many things we do not need to know. Think of the things you have forgotten which you knew at college! These are the things which time has proved you did not need to know. And think of the many things you have had to learn since, with enormous consumption of time and energy when time and energy were needed elsewhere, which might have been learned in those busy, useless years of long ago.

What are the useless years? The years in which we lose time acquiring unmarketable intellectual merchandise. And what are the things we do not need to know? Those which we do not find use for, and all that we do not learn well. A mastery, that is a conversational mastery, of Spanish might be used by almost anyone; but a smattering of a dozen languages stands for much squandered time.

And in music, why do we try to learn so many pieces? It is a great waste of time, and we never use any, save those which are particularly beautiful and which we have learned to play particularly well. They told us to learn this and that for technic, but which is better, technic for Czerny or Chopin?

"I've got piano-player's cramp."
"You don't play."
"No; the girl next door gives it to me."

THE MUSICIAN.

A Monthly Publication.

EDITED BY
ARTHUR L. MANCHESTER, A. G. O.

PUBLISHED BY
HATCH MUSIC COMPANY.

SUBSCRIPTION PRICE.

SINGLE COPY . . . . . $ 15
PER YEAR 1 50

Free of Postage in the United States, Canada and Mexico. Foreign Postage, per Year, 72 Cents.

Remittances should be made by Bank Draft or Check, Post Office Money Order, or Express Money Order. *Where none of these can be procured*, money can be sent in a Registered Letter.

New Subscriptions can commence at any time during the year.

Discontinuances.—The publishers should be notified when a subscriber wishes his paper stopped. In the absence of written notice to the contrary, subscriptions will be continued.

Communications are Solicited from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications intended for publication should be clearly written on oue side (only) of the sheet. Those which cannot be used will be returned.

All Letters should be addressed and **Remittances** made payable to

HATCH MUSIC COMPANY,
Publishers of THE MUSICIAN,
Eighth and Locust Streets, PHILADELPHIA, PA.

The Publishers of THE MUSICIAN do a General Music and Music Publishing Business. They can supply anything in Music.

UNLIKE YET SIMILAR.

Two unique personalities pass away almost together. A Queen, whose reign was of unusual length, and whose life was one of exceptional beneficence, laid down responsibilities and honors amid universal grief. A peasant, the son of an inn-keeper, whose life reached beyond the allotted span, and whose career led from the poverty-stricken home to a position of honor and affluence, departed from the scene of his labors followed by expressions of universal esteem and admiration. Victoria, Queen of England and Empress of the British Empire, and Guiseppe Verdi, the Italian composer of Opera, represent widely diverse forms of activity and exemplify the possibilities of attainment that lie open to earnest workers, whether of high or low degree. Very unlike, yet by different pathways reaching the same honored end.

•

Verdi, beginning his life without means, attracted attention by his talents and energy. Persevering in the face of discouragement and loss, at the age of forty, he had attained great success as a composer of Italian opera. His long life brought him, in his later years, in contact with the more modern tendencies of operatic composition, and, despite his age, his powers were equal to the demands of the new ideas, and operas written at the age of eighty were as full of the fire of youth as those put forth at forty. "Rigoletto," "Il Trovatore," "La Traviata," "Aida," and "Otello" and "Falstaff" represent the extremes of his Art. The first, filled with bewitching melody and striking choruses and expressing a fervor of passion that have kept them before the public for these years, and will for years yet to come, do not reach the dramatic excellence to which he rose in the latter, in response to the demands of the more modern school.

•

It is a significant commentary of his real ability, his reserve of power, that at the age of eighty he could produce, without sign of weakness, such works as came from his brain. It is this that makes him the "grand old man" of music. Just as Gladstone's ripe scholarship, earnestness of purpose and steady adherence to principle made him the wonder among statesmen and kept his powers fresh until their receptacle wore out through the processes of time, so Verdi's genius, modesty, thorough methods and concentration of purpose enabled him to rise to an emergency and amaze the musical world with "Otello" and "Falstaff."

•

And what a wonderful Art it is that can produce a Bach, a Beethoven, a Mozart, a Schubert, a Wagner and a Verdi! In all the fields of activity it will be well-nigh impossible to find a parallel for this Italian opera composer. One who reads his life, meditating upon the personality and mental characteristics of the man as well as the musician, will discover something that will aid them in the prosecution of their own life work. In his case prosperity accompanied fame, and he died a rich man. His thought was for those less fortunate and he founded a Home for Musicians, whose doors should be open to those to whom fame and fortune have been more capricious.

•

Surely we who are disciples of the Muse of music should be deeply gratified at the consummation of a life such as that of Guiseppe Verdi. And from it we should glean many a lesson of encouragement and faithfulness.

TEACHERS' FORUM.

On page thirty-six of this issue our readers will find the second instalment of the *Teachers' Forum*. Already letters are coming in response to the opportunity it affords. The possibilities for improvement and help which it opens up for our readers can hardly be estimated. It is through the communication of our thoughts, needs, difficulties and advancement that we make progress assured. The mere stating of a difficulty will oftentimes dissipate it. The mental action necessary to clearly state a trouble tends to clear our own view of it, resulting in the perception of a point that had hitherto escaped us.

•

There is a saying that it is possible to scatter and yet receive increase, to withhold and yet grow poor. The teacher who withholds help from one who needs it is more than likely to feel the retrograding influence of such a policy. He can scatter of his store of knowledge and receive an increase in power and knowledge. Dispense, then, of your store to others; ask for light on points that are dark; discuss points that are vague and unsatisfactory; reach out beyond yourself and make this department a veritable mine from which is gathered richest ore.

A very practical matter is brought forward in the inquiry and reply printed in this issue. The question of instruction books is one that meets every young—and old—teacher. The newer ideas, which advocate its relegation to innocuous desuetude, are troublesome ones to many who are in the position of the correspondent. What they shall do in the premises is puzzling. The comments on the letter of inquiry offer some exceedingly practical suggestions. What can you add to them from your personal experience? The conductor of this department would like to hear from you. Discussion is in order.

SUGGESTIVE.

It is estimated that 12,400 musical students are studying at the present time in Germany. Of this number 20 per cent. are foreigners and 5 per cent. Americans; 40 per cent. of them are vocal students, 32 per cent. orchestra, organ and solo string aspirants, 25 per cent. study the pianoforte and 3 per cent. composing. The average student spends 1,600 marks ($400) each year for living expenses and tuition, although some live on 900 marks ($225) including tuition. The average period of each student is three years. All of the students of the orchestra find immediate and paying occupations wherever they settle. The pianoforte students have a hard struggle to obtain a footing and 22 per cent. settle as teachers with varied but comfortable income. Of the vocal students (40 per cent.) 8 per cent. find engagements at the opera with an average income of 1200 marks ($300) per year, 2 per cent. find recognition as concert singers through their merits and 12 per cent. through a reserve fund for advertising purposes. Twenty per cent. of them can not be traced and are lost in obscurity. Of the 12,400 students 67 per cent. are female, 84 per cent. study in conservatories and institutions. Of the 4,960 singers which enter every year only a few rise to a high rank and the others—hope for better days.

•

The statistics above, reprinted from the *Concert-Goer*, are suggestive. Again and again it has been pointed out that the rush of students to the piano is poor policy. A study of the figures above should make clear the vital necessity of looking into the future before one leaps. If the aspirant for pianistic honors is so talented that success as a virtuoso is assured, then go ahead; but be careful of the premises; do not build up assurance on a false basis. If the peculiar talents required for virtuosity are certainly absent, but there is ability to play well, to understand the music played and to impart instruction, then there is ground for anticipating success as a teacher. If these are absent—don't.

•

So, too, with the vocalists. Those who attain success in opera or concert are comparatively few. There are open opportunities for those who have teaching ability, but be sure of the ability before going abroad. The writer has many times asserted the danger that lurks in the oft quoted saying, "There is room at the top." Undoubtedly there is room, but the pathway thither is too long and difficult for any but those of assured power. Test yourselves, then, thoroughly, conscientiously before setting out on the road to musical professionalism. If you can master an orchestral instrument your chances are somewhat better, but even here the way is rough.

•

These remarks are not intended to discourage music study. There are other motives for such study beyond these material ones. The lover of music can devote himself to it with even higher motives than these. The benefits derived from it touch the very essentials of an enjoyment of life. But the study will be upon other and quite different lines. *Music* will be studied, and not an *instrument* alone. In this connection an article, "New Ideals in Music Study," by Prof. Waldo S. Pratt, published in the *Atlantic Monthly* for January, is commended to our readers.

•

Another thought suggested by this clipping is, that American students will do well to study at home until they are sure of the course their future will take. The cost of study abroad, united with the deprivation of home comforts and associations, is too great to be incurred unless the results are practically assured. One who wishes to study music as a culture study, as a means of increasing the enjoyment of the refinements and higher pleasures of life, can do so to fully as great an advantage and with far greater comfort in America than abroad.

Teachers are as good, opportunities ample, and the musical atmosphere is growing better continually. Hence no one, who does not wish especial professional equipment and the glamour of foreign reputation, need go abroad.

A number of subjects have been assigned for treatment by competent writers. These subjects are of a very practical nature. We will be pleased to have our readers suggest points on which they would like help. State clearly what line, or lines, you would like the discussion to follow and we will do our best to provide for it.

THE TEACHER'S GUIDE-POSTS TO SUCCESS.

C. N. MCHOSE.

Knowledge is Power.

The successful teacher of to-day must be a man of ability who has developed his talents by study in various directions. He is one who recognizes the fact that his early study is insufficient to his needs, and is constantly seeking to broaden his horizon. He realizes that to occupy a place of honor requires culture above mere book learning, and the possession of a scholarship which will open a wide field of intellectual vision. He is one, also, who is capable of imparting his knowledge. To master ideas and make them one's own is always a sign of a healthy condition, yet to this end, continual study is necessary. The man of one idea, whose narrowness is not able to distinguish between an ant-hill and a mountain of thought, is incompetent to point out to others the beautiful and sublime in music. Mendelssohn, surely, never regretted his university course. Who will doubt the value of it? Every line of his music is full of the depth and breadth of his early training, as well as of the mature culture to which he was continually adding. Seek, then, to broaden your horizon by keeping in touch with all that makes for progress in literature and art, and as the right instrument in the sculptor's hands, when used thoughtfully, will give the marble statue the curve necessary to the desired effect, so determine to model your pupils that you may obtain through your efforts the best results possible.

Discrimination and sound judgment are necessary for every teacher. Many in their great zeal to do conscientious work, forget that they are overloading the beginner with scales and exercises, invaluable when rightly applied, but when used without discrimination, fruitful sources of evil. You may scorn the idea of giving a little tuneful music now and then, but you need not be surprised if many of your pupils leave you. It is well to keep in mind, that continually feeding your students on etudes and scales will no more be relished by them than would a seemingly unending sermon on practical theology, or a lecture on ethics. The young mind needs food that can be assimilated; wholesome food that will move the imagination, fill the mind with an overflow of simple ideas, and arouse its creative powers.

The Teacher's Manner.

Patience, kindness and encouragement are watchwords that pave the way to almost any child's heart. Children are usually keen observers. A teacher's manner must be attractive, pleasant and inviting; not narrow, unsympathetic or unmagnetic. Many a pupil hears only censure, or meets perhaps coldness, from the time he enters the teacher's studio until he departs. Even the pleasant greeting, as well as the parting word, is overlooked. Cultivate firmness and decision, yet never be severe; let moral principle be your only guide; do right because it is right. Pupils respect such a principle and honor it.

No teacher with a true standard will show favoritism; yet I meet teachers who are pursuing, although I trust thoughtlessly, just such a course. One after another the pupils come and go; no enthusiasm is shown; the teacher's position at the piano is a careless and indifferent one. Sometimes even a letter is written or read! But, behold, at length a more gifted pupil arrives, and the sleeping interest and enthusiasm have returned. He forgets himself, and thinking only of the pupil, is at once absorbed, heart and soul, in her welfare. He is not even satisfied with his criticism and remarks on her touch and technique, and on the harmonic beauties and grandeur of the composition, but he, himself, proceeds to interpret it for her, and seating himself at the piano, he plays as he only can play when thus inspired, with a rich songlike quality of tone, and with such a conception of emotional content that he touches the very soul of his pupil, arouses her imagination, and carries her into another world. Often, too, he stops, pointing out to her the best means of producing a desired effect. There is no lack now of the enthusiasm which should have been given equally to the preceding pupils. Such a method can scarcely be designated as honest. A uniform price was paid, and there should have been equally fair dealing with all.

Encouragement.

Encouragement alone seems to make for success. Legion are the teachers who can do no better than discern the faults in their scholars' work. When questions come, and they come in all forms, good as well as absurd, answer them fully and judiciously, and to the best of your ability. Offer the loan of books and suggest a course of reading.

How you will encourage your pupils also, if you will but afford them the opportunity of hearing good music. I have in mind, a teacher with whom it was almost a force of habit to encourage his pupils. Not only did he give his own recitals, or invite artists of note to play for his students, but he played for them when the lesson was over, and in this way made it clear that he was interested in them. Show appreciation of work well done, and commend it. It is a great inspiration, especially to a discouraged pupil.

A Teacher's Joy.

A teacher who can trace the success of a pupil to his special care and treatment, and that justly, finds his greatest pleasure in seeing that his work brings forth fruit. What greater felicity can a teacher enjoy than to know that he has done his duty every day in the year, by helping his struggling pupils and brightening their paths with earnest and heartfelt teaching. The end of man being to serve himself and his fellowmen, what better joy can he possess than to follow a course which will widen his chosen sphere of usefulness?

Whether your pupils climb the steep mountain of art, depends somewhat on themselves, yet you as teacher should act as sign-post, as guide. Be an artist in your teaching. True, you cannot always measure your progress inch by inch. Are we not elated and filled with joy and satisfaction, when, groping along in the darkness, possibly discouraged, suddenly the clouds lift and we find ourselves on a mountain top, far above where we started? And yet to reach a higher position means more toil, more seeming failure, more discouragement.

You may have talent, the gift for imparting, countless advantages, but unless you keep on climbing, keep abreast of the times, keep enriching yourself with that which is useful and good in music, you will hardly succeed.

Aim, then, to cultivate personal taste and join this with a strong desire to do the best you know. Never grow lax, careless or indifferent in your work, but burn with life, fervor and tireless energy. Seek always to present your arguments in the strongest and most impressive manner. Learn to know and love your pupils. Never show impatience or allow yourself to feel impatient. Be ever critical in all that you do and, finally, you will be blessed with the undoubted realization of an honorable and merited success.

But oh! what art can teach,
What human voice can reach
The sacred organ's praise! —*Dryden.*

HUMMEL AND FIELD.

In the year 1823, Hummel visited St. Petersburg, whither his reputation had already preceded him, and gave several concerts there, which were very numerously attended. In the course of these entertainments he composed extemporary variations upon themes suggested to him by his audience; in which he displayed such talent and readiness of invention as to waken up a perfect enthusiasm among his hearers. From St. Petersburg he proceeded to Moscow, where Field was at that time residing. These two great artists had never seen each other, and were only known to one another by their works and reputation.

On the morning after his arrival Hummel, whose appearance was somewhat heavy and somewhat slovenly, paid Field a visit at the hotel which that artist then inhabited. He found him in his dressing-gown, smoking and giving instructions to a pupil.

"I wish to speak with Mr. Field," said Hummel.

"I am he," said Field. "What is your pleasure?"

"I was anxious to make your acquaintance; I am a great lover of music; but I see you are engaged, so don't let me disturb you. I can wait."

Field begged him to sit down without any ceremony, merely asking him whether the smell of tobacco was offensive to him.

"Not at all," said Hummel, "I smoke, too!"

The presence of a stranger so disconcerted Field's pupil that he very speedily took his departure. During this time Field had been scrutinizing his visitor, whose general bearing struck him as being something remarkable; at length he asked him, "What is your business in Moscow?"

Hummel said he had visited Moscow in a mercantile capacity, and that being a devoted lover of music, and having long heard of Field's extraordinary talents, he could not think of leaving the city without having heard him.

Field was civil enough to gratify the wish of his visitor. And although he perhaps considered him as little better than a Midas, he sat down to the piano and played one of his Cappricci in his own surprising manner. Hummel thanked him repeatedly for his kindness, and assured him that he had never heard the piano played with so much lightness and precision.

Field answered in a sportive tone, "Since you are so very fond of music you certainly must play something yourself."

Hummel made some excuses, saying that when at home it was true that he played the organ occasionally, but that it was impossible to touch the piano after Field.

"That is all very well," said Field, "but such an amateur as you are always know something to play," and he smiled in anticipation of the performance he was doomed to listen to.

Without further parley, Hummel now sat down to the piano, and taking the very theme which Field had just played, he began to vary it extemporaneously in a manner worthy of his genius, and as if inspired by the occasion, and, indeed, altogether in a style so powerful and overwhelming that Field stood transfixed with astonishment. Dropping his pipe from his mouth and drying his tears he seized Hummel, exclaiming, "You are Hummel! There is nobody but Hummel in the whole world who is capable of such inspiration!" and it was with no little difficulty that Hummel released himself from the powerful grasp of his admirer.—*Musical Standard.*

ADVENTURES OF AN ACCOMPANIST.

My most happy amateur-operatic experience occurred at a certain performance wherein a duel was fought with swords instead of pistols. The stage manager and low comedian of the occasion, being the only professional actor in the company, was a little vain of his powers. He was an inveterate gagger; if he forgot his part he would invent it as he went along, if anyone else forgot, he would carry on the play himself until the defaulter recovered. He was a man of infinite resource, and if a horse was required on the stage, but could not be obtained, he would manage very well with a cart. So when, the company having arrived at the place of performance, it was discovered that the pistols for the duel were left behind, and could not be replaced, the manager exclaimed decisively, "No matter! You can fight the duel with swords. There is a pair here."

So it was decided to fight the duel with swords, unmindful of the fact that the playwright having decided on the use of pistols, had further embellished his dialogue with various jokes, ancient and modern, in respect to shooting. For instance, in one place occurred this brilliant idea:

Officer.—She has refused me. I will blow out my brains.

Comic Servant.—You may make a hole in your head, Sir, but you can't blow out your brains—you haven't any.

The officer at this point, having a sword in his hand, substituted the more applicable remark, "I'll stab myself." Thus the retort, obviously, would not fit, so the manager who was never caught napping, in his part of the comic servant, tried a variant as follows:

Comic Servant.—You may blow your brains out Sir, but you can't make a hole in your head—*you haven't got one!*

The remark was more humorous than it was intended to be, but there was worse to follow. In the original version, the duel takes place in a drawing-room, and the comic servant, who is hiding behind a screen, is in mortal fear of one of the pistols which is aimed point-blank in his direction. What actually occurred was this. In the midst of a very tame duel with swords at one end of the room, wherein both combatants were evidently endeavoring to avoid bloodshed, the comic servant suddenly jumps from behind a screen at the other end, screaming frantically, "Master, master, *I'm shot, I'm shot.*"

This was the climax. The possibility of a man being shot by the waving of a sword some dozen yards away was too much for audience and actors alike. The hero fled the stage, leaving the heroine to finish as best she might, and the concerted piece was performed by two principals instead of three, the hiatus being filled by the dexterity of the never-failing—accompanist.—(*Music, London*).

THE NEW EDUCATION.

Arthur L. Manchester
Thomas Tapper } Editors.

ANNOUNCEMENT.

Following are the names of those to whom certificates will be given for successful work during the course of 1900.

Mrs. S. Irving Allard.
Miss Ada B. Koehler.
Mrs. Nellie A. Porter.
Mrs. Mary E. Truman.
Miss Sybil L Avery.
M. M. Hall.
Miss Kathryn Baumgardner.
Helen L. Thayer-Bryant.
Carrie Delle Hosmer.
S. A. Wolff.
Mrs. F. W. Hewitt.
Bessie M. Gaskins.
H. C. McCollister.
Hattie M. Sears.
Chas. M. Dryscoll.
L. B. Marsalis,
Della Roberson.
Myrtie A. Butterfield.
Annie May Van Doren.
Lillian Boyle.
Kate L. Deering.
Bessie T. Holmes.
L. P. Dobbs.
Laura Myers.
Louise F. Howard.
M. Roxie Miller.
Adella G. Underwood.
Ella M. Powell.
Miss Inez Jay.
Rookh Atkins.
Emma Theus.
Lessie R. Jackson.
Dora Holstun.
Mrs. John Mahon.

The following are not granted certificates because they did not complete the course of study, but their work was of such character as to require special mention. No blame attaches to any who did not finish the year's study; circumstances often combine to prevent its continuance, hence we have pleasure in commending those whose names follow:

Lola Barton.
Mrs. James Steinson.
Mrs. Georgia Addis Stenger.
Mrs. H U. Nicklin.
W. L. Little.
Grace L. Buhlman.
Lena M. Blank.
E. A Churchill.
Edith A. Forbes.
Miss Millie Owen.
Lucy E. Ayer.
Jessie M. Shoemaker.
Sara J. Bushnell.
Miss Myrtle Love.
Mariette Newman Fitch.
Mrs. Fred. C. Stone.
Wm. H. Robinson.
Mary V Lazarus.
R. L. Ayres.
S. B. Cloud.
Susan Sharp Pratt-Adams.
Gussie B. Tooke.
Ruth Talbert.
Viola Stumpf.
Mrs. Elma Hunt.
Harriet F. Smith.
Annie Baldwin.
Miss Ada M. Aiken

The work of our students has very greatly improved, which shows both the value of the *New Education* department and the earnestness of its students. Each student is rated, and on receipt of stamped envelop for reply, anyone may have his or her rating. As the papers are not marked, we will not return them unless especially desired to do so, in which case postage should be sent. We do not think, however, that students will care for unmarked papers.

We congratulate those who have made so excellent a record and hope to include *all* these names in the next list of successful students.

FOREWORD.

The *New Education* offers its readers, for 1900–1901, the best plan for a year's study that it has yet presented. It will be the best in two particulars: in choice of subject matter and in manner of presentation. The hearty reception which this novel educational feature has met with makes it possible for THE MUSICIAN to continue to develop the idea of home music study and to offer the best advantages that are to be attained in this manner.

The general high degree of excellence is due to a widespread interest in the subjects treated and to the careful manner in which our contributors have sought to deal of the various subjects. Scores of papers sent in by clubs show the excellent results of that method of making much of the *New Education*. The club elects a presiding officer, conducts its meetings regularly, arranges definitely for the reading and discussion of the month's lessons in each subject; takes up the questions included in each lesson for study; and, all this having been done, each member, independently, writes up his paper and sends it in. The plan is feasible either with a club of two or of a hundred.

The editors of the *New Education* department hope to see the number of these clubs greatly increased during the coming year. Club work is an excellent stimulus to study, and as the work of this department is so well adapted to club uses, there should be many bodies of students banded together in its prosecution.

Let every club inform the department of its organization, membership, purposes and manner of work, reporting at stated times details of its existence. In this event, we will keep a roster of *New Education* Clubs. Intercommunication can then be established which would doubtless bring mutually advantageous results.

The series of subjects for the coming year follows. Each subject is in the hands of a specialist and will be treated practically and as fully as possible in twelve lessons. In order to meet the immediate demands of students who seek information on special points in the work the editors will be glad to furnish:

Suggestions for the further study of any subject.
A bibliography of any subject.
Information on any question in the lessons.
The consideration, and, if necessary, the presentation, for general discussion of any point that comes up in actual teaching.

The subjects for the coming year are as follows:

I. Advanced History of Music; twelve lessons, with suggested reading.
II. Psychology and Pedagogy of Music; six lessons in each subject; suggested reading.
III. Advanced Music Form; twelve lessons developing those already given in this department.
IV. Harmony and Melody; twelve lessons; six in each topic.
V. The Literature of Aesthetics and Criticism in Music, twelve lessons.
VI. The History and Development of the Piano, twelve lessons with illustrations.

It is desirable that the work be sent in as promptly as possible after the study of the month's lessons. Write clearly; explicit answers are requested. Do *not* write queries on your lesson paper; *send them separately to the editors for immediate reply. And send them in every case direct to the office of The Musician, addressed as indicated below.* Never send your work in lead pencil nor in pale ink. Aim at plain, straightforward, careful work.

The following conditions *must be observed:*

1. Address all communications for the *New Education* department, thus:

THE MUSICIAN,
New Education Department,
8th and Locust Streets,
Philadelphia, Pa.

2. Write your name on the envelop.

3. Write your name and address and the *subject of the paper* on the back of *each sheet* of your papers.

4. Write only on one side of the paper, and use paper 8 x 10 inches in size.

5. *Do* NOT *roll your manuscript.*

6. The answer for each month must be sent as soon after the issue of the journal containing the subject to which they relate as possible, and before the next succeeding issue. No papers are to be held until end of course. New members can join at any time by sending names and answering questions contained in current issue.

7. The editors are obliged to say that no paper will be read or rated that fails to comply with conditions 3, 4, 5 and 6.

8. No two subjects should be written on one sheet. All sheets pertaining to one subject—for example, History—should be independently fastened.

A few words should be said regarding answers to the questions. There exists a great temptation to read the text and answer questions in the words of the writers. This is not a good plan and in order to stimulate our readers to original effort, we will state that the ratings will be largely influenced by the following points:

Accuracy.
Clear, concise, yet smooth diction.
Grasp of the subject.
Originality of thought and statement.

As to the questions following each lesson, they have two purposes: First, to connect the readers mind directly with the text—the most fundamental, that is, lowest duty a question can serve, but necessary. Second, to suggest a thought beyond the mere expression of the words in the text; the most useful, that is, highest purpose a question can serve. If a student is to abandon one or the other of these two kinds of questions he should not hesitate a moment in deciding. The first is by far the least useful if he has a memory; the second the most useful if he has a reasoning faculty.

The editors will welcome letters from teachers which contain:

a. Suggestions as to what will make this department more valuable, the suggestion being dictated by the teacher's individual experience.
b. Statements regarding the application of this work with pupils as well as in one's own effort to secure a broader education.
c. If there is any line of thought of practical value to you, and likely to be equally practical to others, let us know it.
d. All such suggestions must be sent to the office of THE MUSICIAN, addressed according to direction given in regulations.

[NOTE.—*New Education* students are specially requested to avoid enclosing *anything* relating to their business with the Hatch Music Company with their *New Education* papers The failure to comply with this rule causes great trouble. Kindly keep this matter in mind]

III. SECULAR INFLUENCES, MINSTRELSY AND MUSIC.

PERCY GOETSCHIUS, MUS. DOC.

As was plainly intimated, there is a very significant reverse side to that which was presented in the preceding chapter, concerning the influence exerted by Christian worship upon the early development of music. It is very necessary indeed to learn and realize what the early Church did for music, but of equal if not superior importance to know what it did *not* do, and, in all its history never could have done, to promote the growth of the true art, as it flourishes to-day.

Within the Church, under clerical jurisdiction, music was restricted and hampered in many ways; and the limitations were of just such a nature as tended to retard most effectually the natural *inner* growth of the art. The austerity that environed religious devotion, the severity with which its holy offices and the entire ceremonial of worship were guarded, determined the character of ecclesiastic musical practices, and restrained them vigorously within the narrowest bounds. For any exhibition of the graces of art, or of simple-hearted, natural, free emotional expression, the ascetic Church had neither sympathy nor toleration. Softening feminine influences were precluded by the exclusion of woman from even the slightest participation in the exercises of its ritual. For many centuries no instrument whatever was allowed within its sacred precincts, and, at last, only the rudest organs; thus, the expansion of music in that direction, too, was foiled as long as the Church maintained its monopoly of scholastic music.

This should not diminish our appreciation of the quality of inspiration and sustenance afforded to the art of music by the early Christian Church, nor prejudice our conception of the truly wonderful results achieved during the first twelve or thirteen centuries of its existence—results which, I repeat, would probably never have been realized under any other than just such auspices of the Church provided. It simply demonstrates that there were certain other elements necessary to the full development of musical life, which the Church would not instil; and it is *these* elements, probably the most vital of all, that the secular world was peculiarly adapted, and therefore destined, to supply.

The musical practices of the common people, in outspoken contrast with, if not in direct opposition to those identified with Christian worship, were first of all free from every restraint. The untutored mind, quick to recognize the will of nature—ready to respond to true natural promptings, especially in all matters of sentiment—endowed with the same flashes of real genius in those earlier ages of history as in our own, and *free* to give untrammeled utterance to all it felt and thought, was far more likely to detect and grasp the true spirit of music than were those bishops and monks and ecclesiastic scholars who labored only to

establish its external forms. The shepherd sang and piped with a sincerity and simple-hearted truthfulness inspired by his close and free commune with nature; the swain, impelled by a passion which the Church interdicted, poured forth his love ditty with a fervor that gradually dissolved the fetters of Melody; and the strolling fiddler, stimulating the ardor of a knot of dancers, and being reacted upon by their enthusiasm, soon learned from nature's own lips the secrets of rhythm and cadence.

The secular poets learned to introduce rhyme, alliteration, refrain, and other devices of symmetric design into their verse, and these the singers strove to imitate in their melodic settings, until, in time, the Folk song, with its well-defined melodic strophes, its cadences, its exposition of the tonic and dominant relations, its correct scale conditions, and even its vague reflection of true harmonic instinct became a reality, and stammered its first timid confessions of a *spirit* of music.

The historic representatives of this secular class of music makers in the sixth to the thirteenth centuries of the Christian era are: the Celtic *bards*, the Scandinavian *skalds*, the *trouvères* and *troubadours* of France, the *trobadores* of Spain (Italy), the English *minstrels*, and the German *minnesingers*. Their occupation seems to have been the perpetuation of popular legends in verse and song, the recording of heroic and chivalrous deeds, and the poetic adoration of woman. The latter is particularly true of the troubadours, whose melody and rhyme were devoted almost wholly to the homage of the fair sex, the praise of womanly virtue and beauty. Similar, though more refined, were the effusions of the German minnesingers, whose love of nature, great sympathy for forest, flowers, Spring and the song of birds, lent a sentimental, deeply poetic hue to their own musical utterances. To their successors, the *meistersingers* (the last surviving generation of minstrelsy) music has been said to owe its introduction into the *home* life of the people.

The most efficient disseminators of these vital influences and the humble class to whom music possibly owes the greatest of its early obligations, were the *strolling players*, the lowest and most numerous grade of popular musicians. They were common to every country where music was cultivated, during the early and middle ages. These learned and sang the songs of the troubadours and minstrels; they wandered about from one province to another, singing, and playing on various rude instruments, chiefly to the dance. They accompanied warrior bands, entertained the ladies and nobles at court and castle, carried news, were the secret messengers of lovers, and the merry-makers of the people—in a word, they reached every class and grade of society, giving and gaining experience. It was they who spread the masters' songs, widely and efficiently, often no doubt adding some legitimate charm, establishing some natural melodic principle from the store of their own particular range of observation. Thus, the best that the instinct of the unprejudiced musical heart could produce, was preserved and popularized, and the *innermost* qualities of a true music art were quietly but steadily gaining strength and definite being.

Questions.

1. In what manifold ways was music restricted, within the Church?
2. What does this demonstrate?
3. From whence were these other elements to come?
4. What qualities characterized the music of the secular world?
5. What traits of the popular mind, and what surroundings, were conducive to natural musical utterance?
6. How was the Folk song created, and what are its features?
7. Name the historic representatives of secular music in the early ages.
8. What was their occupation?
9. Who were the most efficient propagators of secular music, and what were their habits?

In no other art is demonstration so difficult as in music. Science fights with mathematics and logic; poetry wields the golden, decisive spoken word; other arts have chosen nature, whose form they borrow, as their judge; but music is an orphan, whose father and mother none can name; and perhaps in the mystery of her origin lies half her charm. —*Schumann.*

VALUE OF MUSIC THROUGHOUT THE SCHOOL COURSE.

FREDERIC K. RIPLEY.

The value derived from a course of music in schools is determined ultimately by the benefits conferred on the individuals pursuing it.

It is doubtless true, that in most cases the benefits of school music are general, and conduce to the welfare of the school as a whole, rather than to the development of the individual in music; or as forming a basis upon which the individual may develop in after life. But this result is not necessary nor desirable. It is simply a consequence of conducting the course for general rather than for particular and individual good. That is, the pupils may be played upon, rather than made to become self directing individuals, and the benefit received by the school may thus be made reflexive and general rather than primary and individual.

The individuals in a school can receive permanent benefit from the exercise of their own mental powers only, under the direction of their own will.

Action en masse, directed by one ruling spirit, known as a conductor, or teacher, may not conduce to intelligent self-activity in any considerable degree. Hence, it is not enough to organize a chorus, and to have good singing.

Most of the misapprehension entertained by musicians in regard to school music arises from the fact that the tests applied by such musicians are special tests and refer to the application of general musical knowledge to some instrument. Thus the piano teacher receiving a pupil who has had a school course expects to find some traces of knowledge which will aid him in starting the pupil on a course of piano instruction. He condemns the school course because he finds the pupil deficient in this respect. He does not pause to consider (1) that the pupil may never had musical instruction of a personal and individual kind, or (2) that the instruction given in school is universal in its application and not directly applicable to the peculiarities of an instrument, however simple.

Disregarding now the first case in which no individual instruction is given, that is those classes that simply learn to sing in chorus, we turn to those who have received such a course of instruction as tends to develop individual knowledge and power, and inquire what this knowledge and power should be, or better, maybe, under the limitations of instruction away from and entirely independent of instruments.

First of all the pupil should receive full individual training in tone perception.

Tone perception in this connection refers to perception of tones in relation to the scale as a whole and to each other when forming melodic or harmonic groups.

The result of this training should be power to refer all tones heard in succession or together to their individual places in the scale.

To distinguish tones in melodic relation, that is sounding in succession, is something that the average pupil attains by the time he has been four years in school, receiving instruction for one hour each week. The perception of tones in harmonic groups cannot be taught without an instrument, and as instruments are rare in schools of elementary grades, it is impossible at present to tell what can be done in this line. The manner of giving this instruction and of making it personal is so simple and so entirely successful, that no pupil should escape from school without having developed his talent in this direction to its fullest extent.

Making instruction personal or individual involves the second step in musical knowledge and power, namely, the knowledge of musical characters and the power to use them for the expression (1) of what he hears, and (2) for the expression of what he thinks.

This knowledge of musical characters is, however, not the knowledge that the piano teacher is looking for. It does not enable him to connect each note with a keyboard, it simply makes each note stand as the representative of a tone which bears a certain relation to other tones of the same group. This knowledge, therefore, is relative not absolute—absolute pitch being an impossibility in schools devoid of instruments. The scale therefore has but two developments for pupils so trained, that is they simply distinguish between major and minor scales. The scale from E♭ is as natural to them as the scale from C. The key signature simply places them in communication with their key note, from which they judge all tone relations.

Having command of representation or notation in its simplest form, the instruction becomes individual by the use of written exercises. The teacher now sings simple tone groups and the pupils write them.

In taking their exercises the pupils keep their universal scale idea in active use, and having placed the first tone of the group to be written they write blandly on, regardless of the fact that in reality sharps or flats would be freely used were the same thing to be performed on an instrument.

The nature of the pupil's knowledge of tone relation is a thing of the very highest importance.

The scale exists in his mind as a *primary* unit, not a desired one. The importance of this will not at first appear to many.

If the scale is derived from the three primary chords the tones tend to crystalize in the child's mind in those chord selections, and his music thinking is consequently limited, and the older he grows the more fixed becomes his belief that certain tones, and no others, follow certain other tones. This produces what we know as "Three Chord Musicians," and it explains in a measure what has been remarked in audiences, to wit, that the new music appeals more quickly to those who have not made music a special study than to those who have. Music being the universal language appeals to every human heart in a way peculiar to itself, and it is by the narrowing results of a too sincere study of the first elements of harmony, that it is brought in narrow channels and deprived of its free play in the human mind.

Hence, in the child's study of tone he should be as free as the air, and refer each tone not to a chord, but to his primary unit, the scale. Some groups should be the result of the individuals in the group, not the individuals the result of the group. From this point of view he becomes unlimited in his tone thought, and accepts effects as they arrive, not anticipating progressions which depend upon a restricted view of the chord development.

The introduction of chromatic tones and the development of power to perceive the effects, as related to either major or minor scales, forms an interesting development in tone study, which comes easily within the scope of a school course. In this study great freedom is required to prevent the establishment of the progression to the dominant and sub-dominant as the only possibilities open to the young composer.

The study of meter comes in even in the first year of the school life, and should result in a complete mastery of each of the simpler forms. In an elementary course no compound meter beyond 6-8 can very well be mastered, but everything up to and including this should be so perfectly understood as to require no explanation by the piano teacher.

Each form of rhythm should become perfectly familiar to the pupil, and every possible figure in each meter be instantly recognized by ear and eye alike. Thus the ear and eye are trained in perception, and the hand is made skilful in the representation of these figures as they are heard.

This training is free from the wearisome and almost endless drill which is required for the execution of music on an instrument. It is a direct appeal to the intellectual faculties, and tends to make perception especially acute.

The question has been asked again and again whether such a course gives the amount of musical training that would come from the same amount of time spent upon an instrument. The two things are so different, however, that it is impossible to answer this question briefly, but the fact that thoughtful teachers make more and more of the mental development of their pupils, shows that there is something beside mere manual dexterity which demands attention in the development of a musician, and that a properly conducted course of music in schools *should* contribute to the growth of music students in after life is unanimously conceded.

Questions.

1. What powers of the mind are most strongly exercised in the study of music in schools?
2. By what means can the course be made to reach each individual?
3. Explain the dangers attending the teaching of tones as derived from chord relations?
4. What use does the beginner make of the key signatures?
5. What do you mean by relative tone perception as distinguished from absolute tone perception?
6. State the order of development in a course of music for schools.

FORM—THIRD LESSON

The Sonata Group.

THOMAS TAPPER.

Setting aside any consideration of the rise and development of either the Suite or Sonata, let us compare them to ascertain points of difference. In the Second Form Lesson (MUSICIAN for January) it was pointed out that, in many particulars, the composer must sacrifice some possibilities of creative freedom in composing the Suite; for each movement is on a fixed model in respect to Tempo, Meter, Rhythm and Character. The conditions of the dance establish this. For the expression of unusual idioms the composer must rely upon his skill in pianoforte resources, on the content of his writing; in brief, upon his genius.

Examining the movements of a Sonata we find that the above mentioned restrictive conditions do not apply, or apply to a very slight degree. The order of movements, it is true, is an established one. In the Mozart three-movement Sonata, it is usually Allegro, Andante, Presto or equivalents. In the four-movement Sonata (Beethoven, Op. 2), it is Allegro, Adagio, Menuetto and Trio (or an equivalent) and Presto. Beyond this firmly established order, however, the Sonata Group leaves every condition to the composer's choice: Meter, Rhythm, Variation in movement-lengths, Key groups, Form-successions, all these are free. In brief, all successions, all that makes for cumulative effect, the composer chooses as the painter does the colors; taking care only to group that which groups well. This it is that has caused the Sonata form to have received so great attention, and to present in the writings of great composers such a remarkably varied content.

In the First Series of these Form Lessons, two Lessons were devoted to outlining the Form of the Sonata First Movement. The structure is Ternary; there are two Subjects of contrasting nature; the movement is long and, despite following "structure lines," offers the composer unlimited opportunity for the free display of his genius. This is shown in the wonderful literature for the piano in the Masters' Sonatas.

The Second Movement, not infrequently in the same Form on the First Movement, is of different Character, Tempo, Key; in fact, it is made for contrast. In the Sonatas of Beethoven this movement rises to great dignity, both in content and in the opposition in which it is placed. Its Form is not restricted. It may be a Composite Form, a Rondo or, as above mentioned, a Sonata. In this movement also then the composer enjoys all the freedom a rational being could demand.

If the student will examine the Sonatas of Haydn, Mozart and Beethoven (add Philipp Emanuel Bach's if you can), it will be seen that the Opus 2, of Beethoven, is a new departure. Here there seems to be brought to a finished state a four-movement Sonata that previous writers had striven to reach. The Menuetto and Trio are found in Haydn and in Mozart; but Beethoven establishes them in their place and sets a mark upon them that they had not previously received. In a sense they make demands of the composer more restrictedly than the two movements which precede. The Tempo is fixed—to a degree; the Meter is almost always there; the Form is a Song Group of which the Menuetto is always Ternary and the Trio, Ternary or Binary. But these very restrictions are delightful in that they place in the composer's hands the best material for contrast with the slow movement that he could find. But even in this movement the Sonata is not as fixed in its demands as the Suite is; it is frequently a Scherzo and Trio; or a Maggiore and Minore. It is not *inevitably* a Menuetto.

The Finale *must* conclude the group fittingly. It is a Rondo or a Rondo-Sonata; usually in rapid Tempo, much less demanding upon the listener than the first and second movements; in brief, a brilliant end. It is the Sonata parallel of the Finale of the Suite, namely, the Gigue, which also is rapid in Tempo and, in general, brilliant.

The student will now see how much more freedom the Sonata offers the composer. Its individual movements are more characteristic, offer more play for the creative genius, they admit of greater contrast among themselves, and they rise to heights a Dance Form pure and simple may not reach particularly if it be oined with several other Dance Forms.

QUESTIONS.

1. What elements have the various Suite movements in common?
2. Why is this of limited artistic value?
3. What is the Form and Character of the First movement of a Sonata?
4. Briefly describe its Form.
5. State Form and purpose of the slow movement.
6. Why place it between two movements in rapid Tempo?
7. Why not place the slow movement at the end?
8. What may stand as third movement?
9. Who has placed the third movement especially well?
10. Describe the Form and purpose of the Finale.

FIGURED BASS—WHAT IT IS, AND HOW IT CAME TO BE.

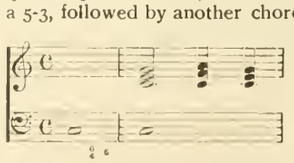
DR. H. A. CLARKE.

In the last article it was stated that Figured Bass came into existence at the beginning of the seventeenth century. Its originator is not known, but the first published treatise on it was the work of Viadanie (1605). Its first intention was simply as a species of musical shorthand intended for the guidance of the accompanist. According to history the strange agglomeration of instruments that were used to accompany the first operas of Peri and Caccini had no parts written for them, but each performer was furnished with a figured bass, and "came in" and "left off" at his own good pleasure. Figured bass is known by several designations that have been a fruitful source of misunderstanding of its real nature. In Italy it is known as Basso Continuo—Continued Bass, which has been Englished by the term "thorough-bass" or "through-bass," which word has unfortunately come to be synonymous in the minds of many people with "Harmony," which it decidedly is not.

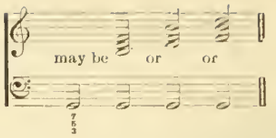
It would be interesting to discover why Figured Bass was used instead of a written accompaniment. It must have been either as a labor-saving invention, or which is more likely, because accompaniment was looked upon as such an unimportant matter, that it was left to the skill or taste—or lack of these qualities—of the Harpsichordist or Organist. Certainly the "Form" and the "Design" in the accompaniment that to the modern composer are essential as any other part of his compositions, were utterly unknown to his predecessors.

The principles on which Figured Bass is founded, are simple and comprehensive up to a certain point. The Diatonic Harmonies and plain Counterpoint of the old school of writing may be so represented as to present very little difficulty to the reader, but when the Harmony becomes Chromatic and changes frequently in each measure, the figuring becomes quite inadequate to its representation—first, because it requires a bewildering multiplicity of figures, and second, because the figures do not indicate the values of the notes of which the chords are composed. This inadequacy of Figured Bass to represent the complications of modern music has led to various attempts to improve on it, not because it is of the least use to the modern accompanist, but because for some unexplained and inexplicable reason, it has come to be regarded as the proper means by which a knowledge of Harmony must be obtained, in spite of the fact acknowledged in every other department of education that the right way to teach is to present the "Thing" first and the "Symbol" afterwards.

The figuring of a Bass is done on the following principles: If a note is without any figure it must have the common chord, that is, its third and fifth (and octave generally) written over it, but when a given bass note is to bear two or more chords, it is necessary to indicate the 5-3 chord by the figure 3 or 5 or 8. When the figures are placed *after* the note, it means that the note bears first a 5-3, followed by another chord, thus:



The arrangement of the chord is at the choice of the writer—the rule as to the order in which the figures are written is, the largest figure must be at the top, thus:



If the composer wishes to have any particular member of the chord at the top, that is *not* indicated by the largest figure, he places the smaller figure *above* the larger, thus:

Consequently if the writer wishes to have the 7 at the top, there is no way of indicating it, as it is the largest figure. It is not necessary to indicate all the members of a chord by figures, it is customary to omit some, thus: 3, 5 or 8 indicate the common chord root at bass, and 6 stands for 6-3, first inversion of common chord; the second inversion which may not have any figure omitted, is figured 6-4.

A seventh chord is indicated by a 7, the 5 and 3 being understood.

The first inversion of a seventh chord is 6-5, 3 being understood.

The second inversion of a seventh chord is 4-3, 6 being understood.

The third inversion of a seventh chord is 4-2, 6 being understood.

A ♯, ♭ or ♮ standing above, always refers to the third over the bass.

A ♯, ♭ or ♮ before a figure means that the note that figure stands for must be ♯, ♭ or ♮.

The sharping of a note is often indicated by drawing a line through the figure.

When a note or a chord is to be prolonged over several bass notes it is indicated by drawing a line after the figure, thus:

The above rules give the most important points. The introduction of suspensions produces further complications which may be learned from any text-book.

It will at once be evident that any intelligent person might, with a little practice, write or play any Figured Bass, and yet not have the least idea of the relations or origins of any of the chords he was using. The perception of this fact has led some authors to add to the figuring—Roman numerals—to indicate the degree of the Scale that is the root of the chord used, thus:

Means that the fifth of the Scale is the root of the chord. This is all very well as long as the music remains in one key, but if it should modulate frequently, it would task the powers of a "lightning calculator" to follow it.

One of the weak points of Figured Bass is, that it has but one figuring for every kind of seventh chord, thus:

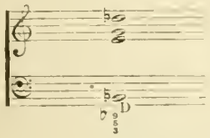
Every one of the above groups would be marked simply 7. This weakness is of no importance so long as the Figured Bass retains its original design, as a species of musical shorthand, but it becomes a serious matter when it is used as a means of teaching Harmony.

One of the rules for playing or writing Figured Bass is, that the parts must be made as connected as possible; an excellent rule when the object is simply to sustain a chorus by use of the organ, but apt to trouble the student of Harmony who has had this rule constantly drummed into his ears, when he looks at a composition and sees the chords leap about in the most perplexing way.

The player is often compelled to guess at the values of the notes the figures indicate. How many of the

readers of THE MUSICIAN can write the following passage correctly?

One of the most ingenious systems of figuring was the invention of Alfred Day. His plan was to write under the chord the letter A when its root was at the bass, B for the third, C for the fifth, and so on. Then indicate the *members* of the chord that were present by figures, not the intervals over the bass, thus:



This would mean that the seventh of the chord was the bass note, and that the other notes were the 3, 5 and 9 from the root, which in this case would be C. As an exact means for representing chords, it is much better than the old system, but it would be impossible to play from such a Figured Bass.

It is said that some English organists can accompany Handel's Oratorios from a Figured Bass more effectively than from written score. Very likely, but perhaps a lifelong familiarity with Handel's music has something to do with it. We strongly suspect that if they sat down to play a new score at sight from the Figured Bass, that they would be content to get in the chords smoothly and correctly without any "wondrous effects."

QUESTIONS.

1. What is known of Figured Bass? Of the first treatise published on it?
2. To what use was it first put?
3. Upon what principles is it founded?
4. How well does it meet the requirements of modern music? Explain.
5. Give figurings and their meanings.
6. What are its weak points?
7. Who invented a different system and what was its nature?
8. Can you write the illustration quoted?

A GUIDE TO THE STUDY OF MUSICAL LITERATURE.

ARTHUR L. MANCHESTER.

We have said that there is a lack of unanimity among critics concerning the nature and office of criticism. To this lack can be ascribed much, if not all, the confusion that arises when music is discussed or written about. Yet there is a starting point from which all true criticism must take its departure; existing beyond possibility of refutation, there are principles and laws on which the critic must base his criticism. With these principles the general student should also be familiar if he would extract the greatest pleasure and profit from his study of the divine art.

This starting point, these principles, are what we know as Musical Form. This definite, precise structure is the strength of all music, and therefore a perfect understanding and appreciation of all music must depend upon an intimate acquaintance with the elements of formal construction, which underlie the emotional side of our art. Text-books in plenty are at the service of those who desire to use them, but as they are primarily designed for special students, they do not appeal to the general reader. In our study of critical literature, then, it will be well for us first to turn our attention to such works as present the essential elements of music design in a popular and easily understood style. From these works we may gain an insight of the basis and structure of music, securing therefrom a knowledge which enables us to apply adequate tests to the music we hear and play, and giving us thereby power to recognize the good and to listen with discrimination and judgment.

Popular writing on a technical subject is not easy of accomplishment, and in our choice of books we should be careful to assure ourselves of the author's authority and reliability. It is comparatively easy for a specialist to prepare a text-book for the use of special students, but such a writer is usually unable to express his knowledge with such simplicity as to appeal to the general reader. On the other hand, a popular writer too rarely possesses the accurate knowledge necessary for a correct and reliable presentation of technical subjects. And it would seem that music especially suffers in this respect. Until recently there have been many technical works, but no reliable dissertation of a popular kind. But there are books now available which are thoroughly reliable and yet well adapted to the needs of the general reader.

"What is Good Music," by W. J. Henderson, may first be taken up and given an exhaustive reading. Applying the test suggested in the preceding paragraph, we find its author to be a trained critic of long and varied experience, whose mind, as shown by his other writings, is discriminating, analytical and judicial. He possesses in abundance the knowledge required to present the technical side of musical structure with fidelity, and his training has been such as to give him a clear understanding of the needs of the general music lover. Such an equipment should produce good results, and in this book it has done so.

The difficulty in estimating the value of music is fully realized by the author and to prepare the reader for the task, he enters into a simple, logical, yet untechnical, discussion of the essentials of Form. "The system of laws derived from the discoveries of the great geniuses of the Art," is presented to the reader that he may "learn them, and acquire the ability to perceive, in listening to a performance, when they (the laws) are observed and when they are broken."

The subject is discussed under the two natural divisions—the music and its interpretation. Part one deals with the qualities of good music. Part two takes up the question of its performance. This division is eminently helpful in that, it first makes clear the fact that music is a thing of law and order, about which (to use the author's words) there is no ineffable mystery and miracle which may not be understood, and then takes up the discussion of the interpretation of the music with whose structure we have become familiar.

In both parts, the author's wide experience and natural adaptation to the task have united in producing a model work. Unessentials are eliminated; salient points only are elaborated. The reader who makes a systematic study of the book will find himself possessing a clearer knowledge of music and of its performance. This volume can be supplemented with excellent results by "How to Listen to Music," by H. E. Krehbiel. The two books follow parallel lines but from somewhat different points. Its author is also fitted by training and experience to write for the non-technical reader. His discussion of the recognition of musical elements, of the contents and kinds of music, of orchestral concerts, pianoforte recitals, operatic performances, choirs and choral music is, in each case, original and forceful, certain to stimulate one's thoughts and increase one's capacity for understanding and appreciating good music.

QUESTIONS.

1. What is the basis of all good music?
2. Why should we be familiar with this basis of music?
3. What manner of its presentation is most effective?
4. What is necessary for its presentation to the mass of music lovers?

THE DEVELOPMENT OF THE PIANO.

ARTHUR L. MANCHESTER.

The instrument known in England as the virginal was elsewhere called the spinet. This name according to one authority, Scaliger, was derived from the quill points, which bore some resemblance to a thorn (*spina*). Another explanation of its origin is, that, as Venetian maker, Giovanni Spinetta, signed his name to such an instrument. This maker did not invent the instrument, but did change its shape to oblong. It is quite certain, however, that the spinet is much older than Spinetti.

Two spinets were found among instruments belonging to Queen Isabella, of Spain, and the instrument is mentioned in connection with the famous Chevalier Bayard. The Chevalier, being wounded at the siege of Brescia, in 1509, was nursed by the wife and daughters of a nobleman, to whose house he was carried. As he convalesced, they entertained him by singing and playing upon the lute and spinet.

The spinet was made of cypress wood. The workmanship varied, the internal work being but roughly done, while the outside was often very beautifully decorated. The tone was usually quite satisfying though light. The shape varied. They were sometimes upright. After the Restoration in England, the name virginal was dropped and the designation spinet adopted. There were several important English spinet makers, one of whom, Haword, made one for the noted Samuel Pepys, who paid twenty-five dollars for it. Another maker dates and numbered his instruments.

The principle of the instrument was that of plucking the strings. As was stated last month a jack at the back of the key contained a plectrum made of quill, sometimes of leather and even of metal, which plucked the string. The strings were very light and consequently the spinet could have little power. The action of the plectrum would always be the same, no matter what the strength of the blow. Thus the twang of the string was always the same.

According to one writer there were three sizes of spinets. One was 2½ feet wide; the second, 3½ feet wide and the third, 5 feet wide. There was a difference of an octave in the pitch of the largest and smallest, the medium size being tuned a fifth above the lowest. The octave spinets (the smallest), were played with the largest to give brilliancy to the effect. There were double spinets in which the normal, or largest size was supplemented by the octave, which could be withdrawn if desired.

Instruments of this class were played upon by some of the great masters. Handel gave one, made by Hitchcock and numbered 1676, to a friend named Leanox, who came with him from Germany and settled in England.

Despite the various efforts to heighten the effect of these instruments, their limitations were too pronounced to be overcome. Yet they were preparing the way for future developments. Two other instruments of this era are yet to be noticed. These will be described in the next instalment.

(Questions next month).

OF MOZART.

Anent the death of Verdi, the following estimate of Mozart, by H. E. Krehbiel, is interesting:

At the end of the 19th century "Don Giovanni" seems to be still young and lusty. In fact it meets less prejudice in the popular and critical mind now than it did 100 years ago. The revolution accomplished by Wagner has left it practically untouched, so far as appreciation of its beauties goes, and it is still a point of vantage from which to overlook the historical field in both directions. Only in Prague did it achieve instantaneous success; in Vienna "Tarare" (Salieri's opera) won a greater triumph when first brought forward. But no work has kept pace with it in the admiration of the great ones in art. Under its influence Goethe wrote to Schiller that Mozart was the man to compose "Faust." Schiller, in a letter to the poet of "Faust," wrote that he had a certain confidence in the operatic form, a belief that through it tragedy might develop into a nobler form than that existing, as it had been developed out of the choruses in the ancient Bacchic festivals. Goethe answered: "You would have observed a realization in a high degree of the hopes touching the operatic form if you had recently seen 'Don Juan;' but this work is completely isolated, and all prospect of something else of its kind dashed by Mozart's death." Tradition says that Beethoven kept a transcript of the trombone parts in the second finale before him on his writing desk as he did the Egyptian inscription. Shortly after Mme Viardot-Garcia acquired the autograph score of "Don Giovanni" Rossini called upon her and asked the privilege of inspecting it, adding, "I wish to bow the knee before this sacred relic." After pouring over a few pages of the score he placed his hand on Mozart's writing and said, solemnly: "He is the greatest—the master of them all; the only composer who had as much science as he had genius, and as much genius as he had science." On another occasion he said: "Vous voulez connaître celui de mes ouvrages que j'aime le mieux; eh bien, c'est 'Don Giovanni.'" Gounod celebrated the centenary of the opera by writing a commentary on the work, which he characterized in the preface of his book as "an unequaled and immortal masterpiece," the "apogee of the lyrical drama," a "wondrous example of truth, beauty of form, appropriateness of characterization, deep insight into the drama, purity of style, richness and restraint in instrumentation, charm and tenderness in the love passages and power in pathos—in one word, this finished model of dramatic music."

FOR THE YOUNG PEOPLE.

The Young Musicians' Perseverance Club.

Conducted by ARTHUR L. MANCHESTER.

We are going to have a good chat this month, so all the space that we can spare will be given to letters. They are coming in splendidly, and the editor hopes to have one from each Club member.

Here are answers to January questions:

1. Louis Moreau Gottschalk.
2. New Orleans.
3. 14.
4. "The Greatest of American pianists."
5. The Banjo.
6. The Last Hope.
7. As a pianist.
8. Cradle Song.
9. Midnight Hymn.
10. 1829-1869.

And here are names of those who sent answers:

Herbert Eckert.
Ruth Willard.
Mary Maxwell.
Ethel C. Porter.
Jeannie C. Davis.
Helen Weber.
Maud C. Busbey.
Violet M. Smith.
Helen G. Johns.
Mary Johns.
Corinne C. Johns.
Ava E. Miller.
Mary McCaun.
Liquori Hemler.
Regina Poist.
Mary C. Smith.
Leonide Timmins.
Alma Kernan.
Katheryn Landers.
Ada R. Marsh.
Rose Hoffman.
Lydia Carolyn Heller.
May R. Keefer.
Genevieve Overbaugh.
Cora Overbaugh.
Estelle Keefer.
Genevieve Johns.
Lorena Timmins.
Marie Josepha Timmins.
Lela V. Busbey.
Anna M. Kinder.
Annie L. Yantis.
Ida C. Price.
Mary C. Cleary.
Letitia C. Marlowe.
Margaret McGuirk.
Annie Dornberger.
Bessie Downey.
Margaret J. Owens.
Eva May Edmonson.

Now for our chat.
This is a new member.
Yes, her name is the list of those who sent answers.

CORPUS CHRISTI SCHOOL, CHAMBERSBURG, PA.

Dear Sir—I take music lessons from the Sisters. I am anxious to join the "Young Musicians' Perseverance Club." I like the stories in THE MUSICIAN, as Sister gives us the paper to read. I have tried to answer the questions. I hope my name will be in THE MUSICIAN next month.

Your little friend,
MARGARET J. HOFFMAN.

Here we have another new member, one of several from this school. May they all find it a pleasure and a help.

CORPUS CHRISTI SCHOOL, CHAMBERSBURG, PA.

Dear Sir—As this is my first letter to you, I want to tell you that I take music lessons from the Sisters and I like it very much, and anxious also to join the "Young Musicians' Perseverance Club." Sister gives us THE MUSICIAN to read. I have tried to answer the questions, and hope my name will be in THE MUSICIAN next mouth.

Your friend,
ROSE HOFFMAN.

Here is a letter from the prize winner. We always value what we earn. Let this encourage you when you have to work hard at your music.

VOLGA, S. D.

Dear Sir—I was surprised to see that I was the only one to get the answers right. I am not quite sure about two of my answers this time, though. I think I would like "Melodic Sketches" for a prize. I will think a great deal of it because I earned it in this way, and some day I hope to be able to play the pieces in it.

Yours truly,
ETHEL C. PORTER.

Here is a good long letter, which will do us good to read. I wonder if we all do not "calmly give up" sometimes. And we are fortunate if we have some one to give us an "overhauling." I hope none of our members are backsliding. They cannot afford to lose the pleasant companionship of the Club. Stand up to the work, every one.

CECILIAN CIRCLE, MCSHERRYSTOWN, PA.

Dear Sir—Enclosed are my answers to the December Club work. I know it is rather late, but I do not like to begin the new century with the ghosts of last year's unfinished duties haunting me. When the December MUSICIAN came I started, as usual, to answer the questions, but being very busy and finding the work rather hard I forgot our watchword, Perseverance, and calmly gave up, but on Saturday several of the girls, myself included, were rather startled by a vigorous overhauling from our sweet-tempered directress. Now please don't be impatient with this lengthy explanation, but I thought you might be surprised at my sending answers in so late. It is now one year since our Circle joined the Perseverance Club and the work has been both a pleasure and a benefit to us, as I am sure it must have been to every member of the Club. I am afraid some of them are doing a little backsliding lately, for I have missed several familiar names from the list. Each one of our girls has a clubmate, selected from the names in the Perseveranee Club, who do not belong to our Circle and, naturally, we are very much interested in the regular appearance of their names. My clubmate is Miss Regina Gissy and I do hope she will be good. My club name is Chopin, who is my favorite musician, if one can really love any particular one of the great masters more than the others. I received Chopin's Book of Waltzes from my teacher, at Christmas, and certainly was delighted. Now, Mr. Manchester, you asked the Club members to tell you their plans for the year, but, really, I am afraid, if I should see mine on paper, that I would certainly grow faint-hearted and thus accomplish nothing, so I suppose you will have to guess at them. With best wishes for a happy and properous new century to you and THE MUSICIAN and that all your Club members may become famous musicians, I beg to remain,

A devoted Club member,
MAY REGINA KEEFER.

This letter is from one of our blind members. May her sight, her perceptive powers and Ear-Gate be doubly active. We are glad she is one of us.

ST. JOSEPH'S ACADEMY, MCSHERRYSTOWN, PA.

Dear Mr. Editor—I am Margaret McGuirk, one of your little blind girls. I am almost ten years old. By this time I guess you must have my picture. I am about middling smart in my music. I guess if I could play hard pieces right off fast, like Ida Price and the other big girls, I would, indeed, be very happy. I think you must have a kind heart to get up the Club for us. I feel like getting acquainted with a good many of the composers now. My Club name is Robert Schumann and I have one of his compositions. I played Mozart's Minuet with Corinne Johns for Commencement. This is my second year and I have five scales and four exercises. Ethel Porter is my club girl. I will wish you a Merry Christmas.

MARGARET MCGUIRK.

THE THREE B'S.

Elsie Geyer was fond of slipping into the studio on the recital afternoons. There were cosy window-seats at its far end, heaped with cushions, and one which she usually chose for herself was shut entirely in by curtains; there she could sit snugly among the pillows, listening to the playing of her father's pupils, and to his own lectures or talks, which always came before the music. Prof. Geyer's Saturday Musicales were attended by all of his class in the Western village, but only three pupils were chosen to play at each recital.

Elsie peeped out from the heavy curtains one afternoon when the class sat waiting for her father to begin his talk about the composers whose pieces would be played by the three pupils. The players sat in the front row. Prof. Geyer stood by the piano, a tall, spare man with a pleasant face and eyes that smiled encouragingly upon the anxious pupils who were to take part, and kindly upon the thirty students sitting in rows back of them. On the blackboard to the right of the piano the program was written out in large letters. Six numbers in all, for each pupil played twice. Elsie could read the words through the space between the curtains and without moving from the cushions against which she was lying.

"Gavotte in D, arranged by Mason, that is the first," said the child. "Cecilia plays it." She glanced toward the young girl in the front row—Cecilia Morse—whose friends called her "Saint Cecilia," because of her devotion to her art. "It's sure to be splendid, she plays Bach so well," went on Elsie. She had a way of talking to herself in a low tone, but she was too far away from the others to be heard, even if she had talked aloud. "Then next comes Arthur Maxson; he plays Bach, too—'Invention in E minor, No. 7, of the Three-part Inventions'—then Madeline; she looks worried, and is studying her music (she always worries and then plays finely, after all), 'Rondo in G, Op. 51, No. 2,' Beethoven, and Beth Alden plays a Sonata, then Cecilia again—but there, father is beginning," and Elsie settled herself to listen. Not a word escaped her, nor a note of the playing that followed, up to the last number on the program, and then—I will tell you what happened then—but first, let us, too, give our attention to Prof. Geyer's talk about the composers:

"There are many musicians," he said, "but few masters. Of the many names which have been handed down to posterity as belonging to creators of musical art works, there are two which shine with greater lustre and stand for all that is greatest and best in the history of the musical art. Beethoven and Bach are the masters of the masters and remain the lofty mountain peaks in music by which all present greatness is measured. Yet there is now to be recognized a third composer, a third mountain peak of greatness, and it is fitting that the three be considered as standing together in solitary and majestic grandeur. And so to-day the names which you see upon our program are those of the 'musical trinity,' the three B's—Bach, Beethoven, and this last composer, who is not so familiar to you all, and for this reason I will give you a short sketch of his life. His father was a musician and thus his musical education was begun early, as was the case with Beethoven and Bach, although these masters, with whom he is now ranked, suffered, from their youth up, many hardships and endured trials from which this composer's life was exempt. His student days were passed pleasantly and among favorable surroundings, and his principal instructor, who was Eduard Marxsen, introduced him early to the works of Bach and Beethoven, his great predecessors. At the age of fourteen he gave a very successful concert, then went into retirement and studied hard for five years. At the age of twenty he arranged a concert tour and played in the principal cities of Europe in company with one of the world's greatest violinists. An incident, which has now become well-known of him, shows his great ability at this age. They were to play the Kreutzer Sonata, when it was found that the piano was a half tone below concert pitch. Although disastrous to the effect, the violinist saw no way out of it but to lower the tone of his instrument, when the young man whispered that he would transpose the piano part to a higher key. This was all the more difficult, as he was playing from memory, but he accomplished it easily, and both the violinist and all his musical friends were astonished and enthusiastic at the performance, and a great musician of the time, the editor of a magazine called the *Neue Zeitschrift für Musik*, published an article in which he prophesied the greatest future success for the young musician. This was verified although many critics have refused to grant it, and the city to which he finally removed and made his adopted home for the remainder of his life, misunderstood and treated him almost as cruelly as she had Beethoven, Mozart and Schubert before him."

The recital began, and Elsie listened and enjoyed the music, as she always did on these afternoons, lying back among the cushions, with closed eyes, but just before the last piece was ended she found herself looking out of the window toward some unusual objects, which seemed to have loomed up in the far West, and her curiosity about them became very great as she looked.

"I must find out what they are!" she said, "there was only the great, wide plain there before. How strange it is!"

She slipped down from the window-seat and was soon out of doors, hurrying down the street and then into the long meadow beyond her home. It was early in February and the air was very cold. She was glad that she had thought to put on her coat and hat before starting, but the short, brown grass was frozen hard and hurt her feet as she hurried along. Far over toward the West the outlines lay against the sky, reminding her of the pyramids about which had lately been studying in her geography.

"How grand they are," she said, "now that I am getting nearer them. This is like Alice in Wonderland, only she never came upon any Egyptian pyramids in her travels. Father will be surprised when I tell him where I have been and what I have found!"

She talked to herself in her usual fashion, as she hurried on, coming nearer all the while to the objects, which she found out at last, indeed, great mountains, a sight which she had never beheld before, as she had lived all her life in the Western town. Suddenly she seemed to find herself just at their foot, gazing far up toward their grand peaks that seemed to touch the sky.

"Why, they are the ones father was talking of," she exclaimed, "and there against the sky are even the names above them! BACH, above the first, over the second BEETHOVEN, over the third there is such a white mist, I cannot see plainly, but that, too, begins with B! B—."

"Elsie! Elsie, come, the recital is over, and you may have the room to practice now." Her father's voice, and Elsie aroused herself from the window-seat. She looked quickly out of doors, but there was only the wide plain, and above it great rose-colored banks of clouds where the sun was setting.

"Then it was only a dream," she said, thoughtfully, "only a dream, after all!"

1. What is the name of the composer who is compared to the third mountain peak in music?
2. Give the dates of his birth and death.
3. In what city was he born?
4. What is the name of the city which he adopted as his home and which treated him cruelly, as she had his predecessors?
5. Who was Saint Cecilia?
6. Who was the great violinist with whom the composer of our story travelled?
7. Who was the editor and founder of the *Neue Zeitschrift für Musik?*
8. Who wrote the Kreutzer Sonata?
9. Mention a composition written by our composer.
10. In what form of composition did he excel?

WOMAN'S PAGE

Conducted by Miss S. C. VERY.

ANGLO-SAXON WOMEN IN MUSIC.

V. Lady Halle (Wilhelmina Norman-Neruda), Violinist.

England to Lady Halle, as to her husband, Sir Charles Halle, was an adopted home. Having been associated with the music there since 1869, the present generation of musical club-women regards its music as inseparable from her career, nor could the musical influences of the Anglo-Saxon women be computed without reference to her. Herr David writes: "Owing to her immense success it is that so many American and English ladies have taken up the violin."

We make a digression, therefore, this month from records of the Anglo-Saxon born, to those of one whose artistic work is inseparable from England's growth in music, during the present generation.

Sir Charles Halle left Paris to settle in Manchester, and although identified with the orchestral concerts there as conductor, he was as well known in London by his annual recitals given in the metropolis. It was in 1869 that Madame Norman-Neruda took the first violin at the series of London Monday Popular Concerts, where she has since appeared regularly.

Born in 1840, Wilhelmina Neruda was the daughter of an organist in Moravia and became a pupil of Jansa. From childhood she was a prodigy and appeared at concerts as early as 1846. The family traveled with some other gifted members about this time through many German cities. In 1849 she played at the London Philharmonic, and at the Pasdeloup and Conservatoire concerts in Paris. She married a Swedish musician, Ludwig Norman, and was called Norman-Neruda. In 1888, on July 26, she married Sir Charles Halle, the same year in which he received the honor of knighthood.

It was to Lady Halle that Vieuxtemps dedicated his last concerto, the sixth in C, and it was first played by her. She plays a fine Stradivarius, is not only a brilliant soloist, but an admirable quartet player and a thorough musician, versed in the whole range of musical literature.

Lady Halle recently visited America and played in all the large cities, commanding the same admiration here for her musicianly qualities as she does abroad. News of her from the latest journals, coming from the continent, tells us that she has left England, retired from concert life, to devote this season in Berlin to the quieter occupation of teaching.

CLUB WORK.

A Trio Club, New York City.

In October, 1900, nine ladies met at a first monthly meeting for practice of ensemble music written for piano, violin and 'cello. The services of two gentlemen had been engaged for the strings, and each club member had prepared one movement of the piano part. Mendelssohn's D minor—favorite among trios—was the work under consideration. At the close of each individual's rendering, the artists, members of the Philharmonic Society, criticised the performance, thereby giving benefit to the members, added to the enjoyment of the music.

Beethoven's Trio in C minor, Op. 1, No. 3, was the next work studied, and this was followed by Gade's Novelletten, Op. 29. A month elapsing between each meeting gives ample time from other duties to perfect the piano part. By January, Mendelssohn's Trio, Op. 66, C minor, had been reached, when experience had shown club members that, in ensemble study, there are opportunities for wider excursions into music's field of melody than pianoforte literature alone, and for better acquaintance with the composers of the "Moonlight Sonata" and "Rondo Capriccioso, Op. 14." As interest in the study constantly increased, some expressed a wish that a whole trio should be studied by each and perfected, rather than one movement, enabling each to add to her *repertoire* trios well known. A compromise was effected by which the club rules allow members to study one movement of the new trio or continue study of trios played in previous months.

The latest trio, interesting to all, is Bargiel's Op. 6, in F major, and to this will be added before the season ends, the Schubert B flat major, Op. 99, No. 1, and the Beethoven B flat major, Op. 97. Some New York members (of the teaching profession) are Miss Huse, Mrs. Keeley, Miss Nicholson and present writer.

Club women who also are embracing opportunities for such study in other localities enthusiastically testify to its gain over solo work that often becomes, in women's maturer days, monotonous, so gradually lessening their interest in the art. Besides the pleasure taken in these trios, music, and the closer acquaintance made with music's masters, such ensemble study renders the ear more sensitive, and many an object lesson in legato playing do the strings give the pianist.

It would seem as if more of our clubs might cultivate interest in trios, quartets and quintets, for in nearly every locality is a player of violin, viola or 'cello; yet from hundreds of year-books the reader notices that nearly all the string music in clubs is relegated to professional quartet organizations.

Here is a novelty worthy of adoption—a proposition for the club in which zeal is flagging. One season devoted to performance of string music would stimulate activity in a club, while renewed interest be given to all individual lovers of the art of music.

Symposium for the Discussion of Woman's Work in Music.

The Musician invites club-presidents and musical women to a symposium here begun, at which the present dangers and future prospects in the field of woman's work will be discussed. Contributions from them will surely obviate repetitions of many failures, caused hitherto for club and individual by lack of the wisdom which comes from experience, and new interest be given in musical club-life.

The Club in the South.

In this great land of clubs, there are none to whom greater good can result by organization than the musical women of the South. As a proof that we are feeling the need of this, there are yearly springing up new clubs throughout the Southern States—some to die, but most to gain new strength and to build on firmer foundations.

In my experience as a club-president I learned that the need of the Southern club is women of broader thought and deeper study. We lack the inspiration and broadening influence by which women of the Northern cities are surrounded; the South needs a higher standard. We certainly have enthusiasm enough, but could not a greater effort be made to hear artists, and great music works given in the nearest large cities? To bring artists and lecturers to our clubs who can show us a better way to study, and give us higher ideals? We are in danger of being too well satisfied with what we know, while so much still is there to learn, to add to our mental growth and yet farther onward to lead us?

I believe that the music-clubs of the future will do more to educate the Southern people musically than any other influence. Let us support them and let their aims be the highest!

January, 1901. Miss Nelle V. Winn,
Ex-President of the Philharmonic Society, Versailles, Ky.

Program of the Music Section of Amherst's Woman Club 1900-1901.

A GIFT TO THE MUSEUM OF FINE ARTS, NEW YORK CITY.

Within a few days the walls of a room at Fine Arts Museum, New York City, have been hung with specimens of musical brass instruments of every time and of great variety. In centre cases of the room have been placed a rare three banked harpsichord and other treasures. Soon the doors of this room will be formally opened to the public. Then will New York's treasures of musical instruments completely fill four large rooms, a collection due to the munificence of Mrs. John Crosby Brown.

Chief among America's similar collections are: The Collection of the National Museum, under the control of the Smithsonian Institution, numbering nearly 1400 specimens, of which the majority is from savage and semi-civilized nations. A Collection of Mrs. Frischmuth, at Philadelphia, of 600 instruments. The Steinert Collection, recently given to Yale University, one rich in keyboard instruments. A Collection worth $25,000 recently bestowed upon Michigan University by Mr. Frederick Stearns of Detroit.

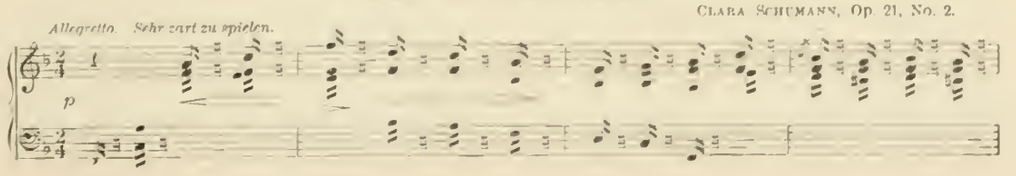
Mrs. Brown commenced her work of collecting in 1884; her effort has been to bring together within the compass of a single collection the most notable types of musical instruments which have been used by man since the dawn of musical history. Beginning with the most primitive forms which are found among savage men, the development of the musical instrument is traced down to modern times. With the opening of this new fourth room America's collection rivals, numerically, any of the Old World. Several of its treasures are coveted in Europe, especially is the Christofori piano. Regarding this, Grove states:—"There is in the possession of Signora Ernesta Mocenni Martelli, in Florence, a grand piano made by Christofori in 1720, etc." A future revision must announce, however, that this same instrument has crossed the ocean to become one of America's treasures. The general disposition of this collection is as follows: in the East room are instruments of America; in the inner East room the fascinating Asiatic instruments; in the North room, specimens of wood wind instruments, reeds, bagpipes, etc. Some of the new curios in brass are the so-called Bells Over the Shoulder. Very recently were these used as the regiments marched down Broadway in New York, but mechanical clumsiness, necessitated in their construction, has banished them. Helicons, and a set of Russian Horns, each horn sounding but one tone, are among interesting specimens shown. The quartets of to-day's orchestra are complete.

This Collection, which has become well known in Europe, is to have its value augmented soon, by publication of a hand-book now in hands of the printer. No club-woman visiting New York City should fail to make a visit to it. "Mrs. Brown's search," wrote Dr. Isaac Hall, "has extended over Asia to Thibet, China and Japan on the North, to India, Siam and the out lying islands on the South, with a great gathering on the way from Turkey, Syria, Persia, Russia, Armenia, Arabia and the countries between. Africa has sent specimens Semitic, Hamitic, Barbarous and Boer."

One club in Southern New Jersey is planning to visit this collection as a body, and many another now interested in the subject of the History of Musical Instruments is indebted to Mrs. Brown's thought in her exhibition of the different actions, reeds, etc., which have proved valuable object lessons. One of the latest to attract attention is the collating side-by-side of the Dulcimer, ancestor of the modern piano, and the Psaltery, ancestor of plucked instruments, the harpsichord, spinet, etc.

DIE ROMANZE.

Clara Schumann, Op. 21, No. 2.



SOME FACTS AND FALLACIES.

GEORGE LEHMANN.

Beyond all question of a doubt, violin playing, or, still better, violin teaching offers the charlatan and the ignoramus peculiar and innumerable opportunities of foisting absurdities on an unsuspecting public. It is not only because the general public is unsuspecting that imposition is, and may so easily be, practiced; but it is also, and chiefly, attributable to the fact that the average person is not in a position to distinguish between honesty and deception, or between rational methods and downright chicanery.

For the very reason that the widest and wildest misapprehensions exist in regard to everything appertaining to music, fraud is perpetrated every day with little risk of detection, and people of general good sense and culture are no safer than the illiterate dolt.

But aside from deliberate misrepresentation, injury is frequently wrought by the promulgation of fallacies which the incompetent teacher blindly and gladly accepts as so much truth. Often, the facts are easily ascertainable; but with a high regard for his teacher's unfailing wisdom, it is only natural that a pupil should reverently accept the most puerile fallacies as solemn facts.

Who has not run across the conscientious, painstaking amateur who, on all occasions when he may do so with convenience, either lowers the pitch of his instrument a full tone or more, or completely relieves his fiddle from all tension of the strings? Our amateur has been told that his fiddle, when not in use, suffers from the continuous tension of the strings; or that the loosening of the strings is a most wise and excellent measure for their preservation.

All of which is absurd, and for reasons that must be obvious to any intelligent player.

In the first place, when a fiddle is relieved from all tension, there is always the strongest possibility of a mishap to one of its vital parts. That is, the sound-post, freed from the pressure of the belly and the back, has but slight support in its perpendicular position and, most generally, falls. This, it is true, is neither a very serious matter nor an irreparable injury. certainly not very serious if viewed from the standpoint that the sound-post is easily re-adjusted, and that such an operation is but a trifling matter for any good fiddle-maker and requires but a moment of his time.

Such a question, however, should not be regarded from the viewpoint of time lost and actual injury inflicted. Insignificant a part of the fiddle's anatomy as the sound-post may seem to be, it is indeed so delicate a part of the whole mechanism of the instrument that the French have poetically termed it, "the soul." As everybody knows, a fiddle without a sound-post is hardly a fiddle at all. Whatever power and beauty of tone it once possessed is gone. And its proper re-adjustment is a matter so nice, so delicate, that none but a capable workman should be entrusted with the task. Is it not, then, highly important that string tension should be maintained in order to keep this mysterous little stick of wood in its proper place?

Now, regarding the question from the standpoint of preserving the strings, there is somewhat more of sanity in our amateur's procedure, but surely very little virtue. The A, D and G strings are fully capable of sustaining prolonged tension; and, not infrequently, an E string, when not played upon, endures the strain of a high pitch for many weeks without apparent injury. There can, therefore, be no real advantage, under any circumstances, of loosening the strings.

On the other hand, frequent changes of pitch must inevitably prove a great annoyance to the player, and, as inevitably, must affect the tone of the instrument. Old fiddles, in particular, protest against changes of any kind; and a fine old Cremona is more sensitive than a hopeless spinster.

The generally adopted position of the thumb on the neck of the instrument is a widely encouraged fallacy even among our best instructors. This is most unfortunate, inasmuch as many of the difficulties of left hand technic admit of more certain and rapid mastery when a more logical position for the thumb is chosen and maintained. It is not always wise to follow in the footsteps of our ancestors. It is not necessarily an indication of either wisdom or good sense to adhere to certain principles on the ground that a great artist applies such principles to his own work and finds them advantageous.

In the case of the thumb, careful experiment, under reasonably favorable conditions, must prove that the position adopted by Joachim and the great majority of teachers *may* prove desirable for the proper development of left hand technic, but that a position nearer the nut is more logical and far more natural to every hand. Paganini, perhaps the greatest technician the world has seen, did not place his thumb opposite to the second finger. Ole Bull, though a feeble imitator of the great Italian virtuoso, was shrewd enough to experiment with Paganini's thumb position, and finally, as certain pictures prove, adopted it in his own work. Added to these, I am personally acquainted with several artists, high authorities on all questions related to technic, who, in their own playing, reject the much favored position. Strange to relate, however, these artists ignore this question in their pedagogical work; though this may be explained away by the fact that their pupils are generally far advanced in the art of violin playing; too far, at any rate, to undertake so serious a change with perfect safety.

View the question as we may, the position of the thumb now in vogue is a fallacy and a serious obstacle in technical achievement.

Then we have that extraordinary fallacy perpetuated by most teachers and coddled by all authors of "methods" to the everlasting perplexity of young students. I refer to the question of the proper distance of one finger from another when a half-tone is to be played. The authors gravely declare that the playing of a half-tone necessitates the close proximity of one finger to another; and the teacher as gravely commands, "fingers close together!" when the inexperienced player discovers that in music there are half-tones as well as whole tones.

Such an injunction is, to say the least, remarkably inaccurate. It may mean much, may even be perfectly clear, to the boy with chubby fingers. But how strangely inconsistent it must seem to the delicate little lad whose finger tips are barely broad enough to cover two strings! How amazed he is when, after having done precisely what he was told to do, his teacher informs him that the tone thus produced is too low!

All didactic work requires precision and perspicuity. The teacher who is careless in choosing words to express what he wishes to impart, lays up a store of trouble for the majority of his pupils. Nothing could be simpler than to make it clearly understood why some players must bring their fingers close together, others slightly separate theirs, in the production of the very same interval. But this ancient fallacy is dragged forth every day to bewilder the poor novice and increase his technical burdens.

When the economical pupil utilizes a string so rankly imperfect that it turns his work all topsy-turvey, he is simply putting into practice the fallacious reasoning of many men who argue that, while perfect strings are indispensable in concert work, almost any string "will do" in study and the privacy of the student's home.

Of all violinists, de Beriot was one of the most conscientious of men in the selection of his strings. Before playing at a concert, he would sometimes spend many hours selecting, testing and clipping strings. Only those of absolute perfection would satisfy him; the rest were unhesitatingly consigned to the waste basket. How wise de Beriot was with all his apparent wastefulness, no one can better appreciate than the violinist who must play before a critical audience on strings so imperfect that they defy every attempt to remove the obstacles which they create.

But the very same care which is exercised in the selection of strings for concert playing should characterize the pupil's efforts in his choice of strings for home study. A poor string is always more or less of an impediment. It can be put to no good use on a violin. It should be cast aside without hesitation or regret.

How many students—more especially among the vast number that flock to Europe to "perfect" their playing—how many students of the six-hours-a-day variety appreciate the absurdity of their methods of work? Arrived at a certain degree of proficiency, and fired with the ambition to achieve great things, they resolutely determine to practise six, yes, even seven and eight hours every day.

At best, how foolish is such an attempt! How many are mentally and physically capable of enduring such a strain? The earnest minority fight the battle as long and as best they may. The thoughtless majority practice six hours for three consecutive days. Then they collapse; and during the next two days, they practice an hour or two, perhaps not at all. It is all a spasm, a serious fallacy.

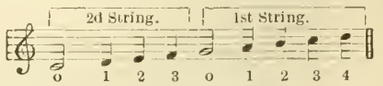
EARLY VIOLINISTS COMPARATIVELY CONSIDERED.

What Each Contributed to the Technic of the Instrument.

H. W. HART.
Author of "Arranging Music for a Small Orchestra."

Probably the first violin method ever written, certainly the first of which anything tangible remains, was that of a Dominican monk of Paris, who, in the thirteenth century, writing of the small two-stringed instrument of his day, says:

"Hold it close to the head, between the thumb and forefinger of the left hand." He then minutely describes the fingering which was as follows:



From this it is apparent that this early ancestor of our violin had two strings tuned in fifths, practically corresponding to the present second and third (A and D) strings. A third string was shortly afterwards added, a fifth above, which gave to this embryo fiddle the practical equivalent of the three upper strings of its descendant of to-day:

Thus the *elements* of modern violin technic were present and beginning to take form as early as the thirteenth century. For nearly three hundred years, however, they remained merely elements, almost lost in a chaos of contradictory opinions and widely different experiments. It was not until the middle of the sixteenth century that players on bowed instruments began to shake off the domination of the lute, with its tunings by fourths and thirds and its excessive number of strings, usually seven:

Other strings had been added to those already on stringed instruments, only to be again relegated to oblivion in the evolution of the violin. This would seem to be the natural course of all mechanical development; from crude simplicity, through innumerable changes of ever increasing complexity, to finished and perfected simplicity. The utmost possible simplicity compatible with the desired result is always the goal of mechanical invention. This applies equally to what we term complicated mechanisms, such as watches, locomotives, typewriters, etc. The path to perfection is always by way of simplification as far as possible.

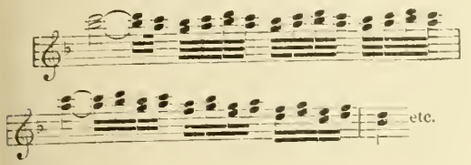
So with stringed instruments. Starting with *one* string (the Monochord), string after string was added until, on some instruments with "sympathetic" strings, we find the awesome total of *thirty-six*, twelve primary and a double set, twenty-four, of sympathetic strings! These, by slow process of subtraction, were finally reduced to the four found on all the present day violin family—finished simplicity as against crude simplicity. Other details of violin structure went through a similar evolution with a like result.

The technic of stringed instruments naturally went hand in hand with their constructive development. In order to gain some idea of early violin playing, we turn to the scores of contemporaneous composers and find that as late as 1600 the technic was simplicity itself, since, until that date, stringed instruments were utilized almost exclusively to accompany singing and the vocal parts were used alike by the singers and the instrumentalists. On early scores is found such information as: "Most convenient for the voice, as for all kinds of instruments;" "for voice as well as instruments;" and again, "psalms for all kinds of instruments and the voice," and many similar directions. In fact, on English madrigals as late as the seventeenth century the phrase "apt for voyals (viols) and voices" is to be found. Until the latter part of the sixteenth century, therefore, we find that instrumental music was almost universally vocal in character and never exceeded the compass of the human voice.

The first to depart from this order of things were Andrea Gabrieli (Venice, 1510–1586), a celebrated contrapuntist and organist of St. Mark's, and his nephew and pupil, Giovanni Gabrieli (Venice, 1557–1612). In the scores of the former, mostly for church use, are the germs of modern instrumentation, for he not only differentiated the instrumental parts from the vocal, but took into consideration the individual *timbre* or tone-quality of the various instruments then in use. These were limited enough, to be sure, one score being written for cornetti (now obsolete wood-wind instruments, prototypes of the oboe family) trombones and

strings. Gabrieli's music never demanded more than the third position.

Only a few years later, however (1610), the fifth position is required in a score by Monteverde:



closing as follows:

The use of the violins divisi (divided), as shown in the second quotation and which is characteristic of the whole passage, is to be noted as a daring inovation at that time and one among the many advances in orchestral writing inaugurated by this remarkable musician.

Claudio Monteverde (Cremona, 1568–1643), began his musical career as a violist. So far in advance of his time were his ideals and conceptions, he might be termed the Wagner of the sixteenth century; and his reforms brought down upon him as bitter a storm of acrimonious criticism as that by which the later master was well nigh overwhelmed. He was one of the most daring and active of the innovators of his day that helped to lay the foundation for the modern style of composition; and his dramatic works, remarkably rich in orchestral coloring and effects, considering the period in which he worked, have gained him the title of "the father of modern instrumentation." He enlarged the orchestra, and selected and combined with skill the instruments accompanying the voice. Among many other new ideas, he was the first to introduce the tremolo effect in the strings.

The players at first refused to attempt this passage, saying it was impossible. Monteverde's reputation was, however, too well established and his will too powerful to resist and the passage was played.

The earliest known solo composition for the violin is contained in a work of Biagio Marini, published in 1620. It is musically uninteresting except that the shake is therein used for the first time.

The works of Carlo Farina represent a much more important advance, for, while light and superficial in character, there are to be found among them (1627) some of the first attempts at tone-picturing, the representing of sounds in nature. They are also characterized by a considerable variety of bowing, double-stopping and chords. The third position, however, is not exceeded, and the fourth string not yet utilized.

Tarquinio Merula (about 1640) shows a technical advance in frequent changes of position, and especially in introducing octave-passages.

Paolo Ucellini (1649) goes up to the sixth position and employs a great variety of bowing.

Prior to the middle of the seventeenth century, the violin occupied but an unimportant place as a solo instrument and it was only with the development of the Sonata-form (in the old sense of the term) that it assumed a position of importance in the history of music.

[TO BE CONTINUED.]

Brahms dined one day with one of his fanatic admirers, and the latter, knowing the master's predelection for fine wine, had a bottle of renowned quality brought to the table toward the end of the repast.

"This," he exclaimed, "is the Brahms among my wines!"

The guest sipped of it, saying:

"Excellent, wonderful! Now bring on your Beethoven!"

A BACH RECITAL.

JULIEN.

(Concluded from January.)

As Johann Sebastian Bach now stepped into the study of the petty tyrant, the latter arose from his leathern chair, fixed his little gray eyes on the visitor and demanded solemnly, what new complaint brought the Cantor to him "No complaint at all, sir rector," answered Bach. "I came to inform you that I must go on a journey to-morrow, by order of our prince, and therefore, I wish to get from you a leave of absence for fourteen days."

"What do I hear?" exclaimed the rector breathless from anger and astonishment, "A journey—must—prince? And I have not been informed of this first! Go, Sir Cantor, that is a little cunning plan from your artist head, I suppose! How should Prince August ——"

"I am to play in Dresden," quietly interrupted Bach. "The prince has commanded it."

"That sounds very unlikely to me," laughed the rector scornfully; "but I will say in answer, that for the next four weeks I cannot spare you. Later I will make no objection."

The clear expression of Bach's face during this speech betrayed no emotion, but after the rector had finished, a smile more of pity than anger played about the Cantor's mouth. After a short pause, Bach exclaimed loudly and clearly, "Give me a decided answer if you please. Will you give me fourteen days leave of absence?"

"No——no——and for the last time, no!"

"Very well; then I inform you that I go without your permission!" and turning he left the room of his raging enemy.

Never before in the ostentatious city of Dresden was there assembled a more brilliant audience than was seen on the Sunday when Cantor Bach took his seat at the organ of the large Catholic church of that city. The cavaliers in their brilliant court costumes, the grand dames in elegant attire, formed a sparkling picture in the midst of which was enthroned the royal figure of August of Saxony. August conversed softly with his favorite—Brühl, who in elegant attitude, stood beside the prince, and listened most attentively to the remarks of his lordship.

"So this droll Cantor would not present himself at the court last night. Well, as soon as the concert is over I wish to see him. He must appear at our ball and supper; and some of our finest court ladies must invite him to dance with them." Brühl bowed submissively but silently. "We are all very anxious about this celebrated organist," continued the prince. "The suspense betrays itself in the manners of many; for instance, Hasse shrugs his shoulders and looks very wise, and even the charming Faustina looks around the church in such a restless manner as though she expects to see a ghost. But look! there are three new faces in the choir. Do you see them Brühl? Two very young men, who have modestly taken seats; what innocent, fine faces they have!"

"Those are the two eldest sons of the Cantor, your majesty," answered Brühl.

Just then arose the tones of the grand organ like a heavenly choir, pure and clear. Deep silence prevailed; all eyes were directed upwards. A grand prelude poured forth like a golden stream, in whose banks the flowers of heaven were blooming and on whose mighty waves the longing soul was borne higher and higher until the all powerful choral "A Firm Mountain is our God" (the sublime song of the Evangelical Church), filled the air.

Father Bach seemed inspired, and every tone was accompanied by a heavenly smile. Like a crowned victor, the heroic melody of the grand old hymn rang through the church as if an invisible angel chorus was singing the prize song. At last it seemed as if the angel voices grew weaker; sweet warm tones from one voice invited all sinners to repentance. Then arose again in confident faith the voices as of millions uniting with the angel choir.

The organ stopped. Johann Sebastian Bach sat with folded hands on the organ bench. Pale and trembling with emotion, his two sons approached him and silently stood beside him. A side door of the choir presently opened, the prince appeared, and behind him at a respectable distance, the ladies and gentlemen of the court. Bach was so absorbed in his own pious dreams that he was unconscious of his presence, and at first he did not dare to disturb him. At last he laid his hand softly on Bach's shoulders. The Cantor arose, and with a smile looked his prince full in the face. The great soul of the master was so filled with the majesty of God, into whose heaven he had just mounted on the wings of music, that it took him some moments to bring his thoughts back to earth. "Your gracious majesty," said he after a pause, "the voice of God speaks to you, that I see. Is it not a wonderful and holy emotion, and at the same time a fear? Does it speak to you as it does to me, of greater and more beautiful worlds than this where there is eternal light?"

"Bach"—answered the prince with trembling voice as he approached more closely to him, "when I heard you play, it seemed to me a foreboding of my death. The thought, however, was presented to me like a good genius; and all sense of fear was lost. Oh master, may I hear such sounds in my last hour." Bach answered not one syllable, but gazed on the prince with a look of mingled tenderness and joy. A noise at the door now attracted their attention, and a woman in the bloom of life, with a proud Juno like head, pressed her way through the followers of the prince; it was Faustina Hasse, the distinguished singer and pet of the city. With all the passionate emotion of the Italian, she threw her arms around Bach's neck and kissed him on both cheeks. "Blessed, Oh ever blessed be thou, great master."

Bach did not know what had happened to him. The company smiled. Hasse then stepped forward, drew his wife away, and introduced himself, pressing the hand of the great master with great respect. Others followed his example until Bach was surrounded by admirers eager to press his hand.

But the master had had enough. Suddenly his giant form arose, and in a voice that sounded like thunder in that immense choir, cried out, "Enough! no, such delicate flowers and praise must not be the reward of earnest organ playing."

"Your majesty," he exclaimed to the prince, who stood smiling at the scene, "let me go! you can well see that this is no place for old Sebastian Bach."

"But you cannot go until you have demanded some favor of us," announced the prince good naturedly.

"It is impossible, my prince! I thank you, but I am richer than you are!"

"But remember your two sons," persisted August.

"Well yes, your majesty, I would like it if you could do something for Friedmann"—and he drew the blushing boy towards him. "But not for the next two years, however, for I need him. We are working together on the passion music. My Phillip—here he nodded to his second son—is already provided for. I thank you from the bottom of my heart."

The prince took leave now of the good master with brilliant promises for Friedmann's future. The cavaliers and friends escorted Bach and his two sons to the carriage with all the honor of the greatest prince of the world.

A few days after, when Bach and his sons approached their dear home in high spirits, and when the beautiful Elbe region like a panorama appeared before them, Phillip exclaimed: "Dear father, Dresden is a most beautiful city! But the most beautiful woman in it is —Faustina Hasse!"

"Nonsense, youngster"—replied the Cantor at the same time a smile played around his mouth——"of such things you know nothing."

Deep in a forest stands an oak,
A swollen, sullen stream beside,
High in its branches sings a bird,
And lo! the earth is glorified.

Eleanor Evins.

There are many who regard the rag-time rage as an unfavorable omen. In a recent newspaper article entitled "The Story of the Century," the writer points to the culture and achievements of past ages, and states mournfully: "In the worlds of literature and art" (as at present conditioned) "we do not look for progressive development." Possibly the strains of 'At a Georgia Camp Meeting' were assailing his ears as he wrote. But he presently adds more cheerfully that in music the nineteenth century "has fairly held its own."

If it has held its own we may surely look for "progressive development" in the century at hand, and may consider the very fact that the army of rag-time players prosper to such a degree at present among us as a guarantee of the good faith of the masses, and a pledge in itself of their future development.

EVENING SONG OF THE BRETON FISHERMAN.

A singing breeze in the yellow sail,
Crisp white foam on the Summer sea,
Sunset shadows and moonlight pale
On yonder haven where I would be.
The toils of the day are over and past;
The fisherman comes to his rest at last!

The bells are ringing the vesper chime
In buried cities beneath the sea;
And the calm of the holy eventime
Has wrought its peace on you and me.
Ave Maria! In mercy keep
The resting land and the restless deep.

The light-house flashes the beacon high—
A golden path on the dark'ning sea;
A star shines out in the dusky sky,
And faint lights glimmer along the quay.
And I know what the Star of Home is worth
When the heart of heaven beats close to earth.

—*E E Ohlson, in Chamber's Journal.*

HINTS FOR THE NEW YEAR.

How to Keep Your Pupils.

EVELYN G MARSH.

If some scientist should prepare an elixir, warranted to make teachers retain their pupils by administering a certain amount once a month, he would, undoubtedly, make his fortune. We would read of "studio teas" by various teachers and in each cup would be a small portion of this charm-working potion. But, unfortunately, there is no such recipe, yet I believe each teacher has it within his power to administer to his pupils such stimulus and help that they will not dream of leaving him.

Being aware that this subject is not a new one, although most practical, I do not wish to use points that are familiar to us. That the model teacher should be energetic, earnest, enthusiastic, tactful, social, you have heard before. Certain characteristics that lie behind these are important and on these stress should be laid. Each includes much that is left unsaid. Personal magnetism is one general quality that pervades them all. To this, however, we are largely indebted to nature. As a first ingredient I would recommend:

BE PREPARED TO TEACH.

You have your class started, you wish to keep each pupil, not only for the sake of your reputation, but also for the sake of your pocketbook. For this a thorough and practical preparation for your work is a prime requisite. You may deceive yourself in thinking you play like Paderewski and know all there is to be known, but it will not be so easy to deceive others. Their eyes will be watchful, their attitude critical. You will be tested on what you profess to be! Can you teach successfully? Is your foundation sure? Be sure you are able to stand the test.

To this end have the best instruction you are able to procure. Cheap lessons are a false economy. The teacher who has spent years of his life and much money upon his musical education is the one who commands good prices, and who, by his long experience, will be able to do the most for you. Study as long as you can afford it, if it is only a few months each year, with a superior teacher. It will repay you if you have to borrow the money to do it. Your own teaching will be the better for it, the fact that you have studied with Prof. ——, of Chicago or Boston, will help you in getting pupils, and you will be able to command better prices. Be prepared, not only as regards teaching material, but study with a teacher who will show you *how to teach*. This is a most important factor in your education.

In addition to such preparation good sound health is another thing necessary to successful teaching. Be thankful if mother nature has so favored you. A sickly or weak teacher seldom has the magnetism that attracts and holds pupils. It is not expected that such an one will be full of eager enthusiasm. Music teaching makes demands upon one's nervous force as few other things do. You are not only continually giving of your knowledge but giving of yourself, of your force. In addition to this the noise of a piano, played by beginners of indifferent grades of intelligence or even by more advanced pupils, is wearying and wearing, to say the least. You may love your art, music may be your delight, but it draws from you all the time and sound health and good recuperative powers are adjuncts to successful teaching. Much of the impatience, sarcasm or discouraging remarks which, I am sorry to say, characterize some teachers, have their source mainly in weak nerves or overtasked minds. There is a limit to one's endurance, don't try to do too much.

You will meet the "Quick Method" teacher, whose sign reads:

"The Renowned,

PROFESSSOR G. PRESTO,

will teach you to play the piano or organ in three months. He employs a new and superior method, discovered and used only by himself, whereby much of the preliminary and uninteresting work ordinarily required is dispensed with and you are enabled to become a finished and proficient player *at once*. Number of pupils received limited. Don't fail to see him *to-day*."

Truly his "days are as grass" and "the flower of the field as he flourisheth." The pupils who will leave you to go to him you may as well lose, first as last, for unless your style resembled his you would undoubtedly fail to satisfy them. Don't fear him as long as you are a live teacher. The "dead teacher" never reads musical journals; he never exchanges ideas with other teachers; he is never on the lookout for new ideas or new pieces, nor does he investigate new methods. He sees nothing in his teaching but dollars and cents, and the beauty of his art is lost to him. He does not grow enthusiastic about music nor does he inspire you He does not help the community in which he lives to a higher musical plane. Be sure you do not belong to this class if you wish to keep your pupils.

As a second ingredient I suggest:

Make each pupil a study. The successful teacher in any line of work never treats every pupil alike, he has proper respect for their individuality. What appeals to one child may mean nothing to another. There is a special way of governing, even a child, of arousing his interest and getting him to work, which is distinctively personal. Your aim must be to discover this. Not only adapt your method of instruction but adapt your material to each pupil. "One man's meat is another man's poison." Your material may be lawful, but is it expedient?

A pupil recently said, in speaking of her former teacher: "She gave every one the same pieces. We never had anything different from what he had heard the other girls play." The pieces may have been all right, but it was hardly wisdom to never teach any outside of an old, much used set. In giving sonatas this can hardly be avoided, and I think pupils will not object to these. But a piece to be played in public one feels should be distinctively one's own. A teacher often finds an admirable teaching piece and gives it to every pupil of that grade. He must watch carefully for new ones equally as well adapted. Fit the piece to the tastes of the pupil, when you can, to the requirements always. You need not give Exercise 5 after Exercise 4, if Exercise 7 or 11 suits present needs better. Be independent; be judicious and use judgment in selection of material.

Meet your pupil half way on the question of classic music. Comparatively few people really enjoy classic music. Many more openly abominate it and call for a "tune." You will never keep pupils in your class by never giving anything that appeals to them. I mean by thinking it a disgrace to use anything but "classic." No one but an extremely precocious child will find pleasure in Schumann's "Kinderscenen." They are not for children as we ordinarily find them. He will not enjoy classic music because it is the "proper thing." The child will openly express his likes or dislikes. He must learn to see what there is in it that appeals to us. Why not use the best of the style that your pupil can enjoy and understand trying to lead him gradually to the enjoyment of better? In learning the English language we learn short words, "mamma" and "papa" first. We do not immediately begin to read Shakespeare. Do we not fall into the error of giving too severely classic music, expecting our pupils to see in it what we do when they have not as yet passed the intervening grades? Fit your pieces to the pupil's need and grade of advancement always and to his taste as much as your conscience will allow.

Strive to make musical pupils, emphasizing the musical side of a piece as its most important feature. If the time bothers a pupil there is a danger of continually harping on that fault until he thinks that correct time is the one most desirable feature of playing. If pieces used are beyond the technical ability of the player, you fall into the trap of never being able to properly emphasize the musical side of the composition, because these technical difficulties are never overcome. A pupil will become discouraged if too often given music he cannot really master and will decide that music is not for him. Or worse yet, if anything, he will become, for all time, a careless and superficial player because of this very thing. Often choose music where the musical feeling is plainly the predominant feature and have it practiced until the soul of the pupil is put into its rendition. Then will music mean something to him and he will delight in the new world you are opening up to him.

Give your reasons for requiring certain work. You should exact nothing unless you know why it need be done. Music is not an abstract thing; it is an exact science. Each exercise is required because you deem it the way of attaining desired ends. A pupil will work much more readily and understandingly if he sees what you aim to accomplish. Show a wrong way of practicing as you explain a correct way and the pupil will not fall into the error of thinking that "it does not matter, one way is as good as another. The teacher won't notice, anyway." Reason in all things, especially in music. Make thorough explanation of part of your teaching equipment.

Why not give music in season? Give some vacation time during the Summer when music has been studied faithfully for nine or ten months. But if you want to keep your class part of the Summer you must give recreation in their music. Announce special plans for Summer work. Let the heavier studies and classics go until Autumn, and use only melodious studies, such as Heller, Op. 47; give enough scales to take the place of studies in part; commence a simple study in harmony, with triads and like interesting features at first. Give pieces bright and sunshiny in character. Use a "Spring Song" in early Spring, lead on to "Robin's Return," "Bubbling Spring," "In the Mountains," etc., ad libitum. You will be much more apt to keep your pupils during the Summer, especially if the rest of the year has been one of earnest study. This I call making a study of your pupil.

Make friends with parents. Enlist their sympathy and aid. Mothers are either the greatest help or hindrance a teacher may have, as they are interested and willing to second a teacher's efforts. Some parents expect a teacher to do all the work, not only to give the lesson, but to make the child learn it. That is, they want no responsibility in the matter, "no bother" in looking after practice hours, to do no nothing but to pay the bills. The result is the child is sent to a poorly-heated room to practice on cold keys with little feet dangling from a high stool where they might be comfortable on a footstool. Or, it is, "Why don't you play that right," with a room full of people; brother and sister playing a game near by and father discussing politics with neighbor Smith, and, perhaps, mother running a sewing-machine in an adjoining room. Who, indeed, could concentrate his mind under such circumstances? Of invaluable aid is the mother who looks after regular practice hours and gives always loving sympathy and encouragement. It is the exceptional child who *loves* to practice. The average pupil must be helped and encouraged to find enjoyment in it.

Not only enlist mother's aid about practice, but talk over with her the pupil's work or progress. If you wish to enforce anything you will avoid many a rebellion by securing her aid first. Tell her what you aim to accomplish and what you consider the best way of doing it. Then she will have more confidence in you and allow you to have your way without any suggestions as to what the child should study.

Father pays the bills, but get him to show appreciation when the new piece is nicely learned. I recently saw this suggestion: That a pupil may be induced to memorize a piece to be played for "papa's Christmas present," that he might, in fact, be kept busy the whole year with various "birthday pieces" for the family. It is a good inducement for work, I find, only be sure that father is going to praise the effort and show his appreciation.

Many teachers lose pupils through not giving a chance for public performance, which means so much to most pupils. After considering all these points, the fault may be with the teacher himself. Some teachers lack the personality that attracts and holds pupils. Without this it is useless to expect success. Pleasing manners, staying powers, above all, enthusiasm are necessary. Be a live, reading, thinking progressive teacher and your pupils will stay by you if you unite this with a winning personality and a teaching talent.

FOR "AULD LANG SYNE."

AIMEE M. WOOD.

Otto Geyer was not accomplishing the five flights of stairs in the rather dingy tenement with the agility that might have been expected of three-and-twenty. To the German youth the last part of the ascent seemed particularly wearisome; he had not tasted food for several days, and the past night had been a sleepless one, yet it was with a little brightening of heavy eyes and pale face that he beheld at last upon the door opposite the topmost landing a placard on which was painted in dull vermilion:

HAROLD LESLIE,
Scenic Artist.

In reponse to his knock a voice, seemingly from some inner distance, bade him "come in," and with a continued vibration of gladness that he had found the artist in his studio, the young man entered, bending his height somewhat under the sloping doorway, and removing his gray, slouch hat. He stood, a rather awkward figure, holding the hat before him with both hands, his head still bent and his eyes roving about the garret like place in search of its occupant. Of pictures there were many, filling easels and covering the rough walls, one in particular hanging straight before him, holding the visitor's eye. It was a large and picturesque view of the Campanile of St. Mark's, in Venice, with the placid water, gondola-dotted, at its foot, and occupied a half side of the attic wall, the scene one-fifth of the size of its counterpart, well known to frequenters of the old theatre. The curtain had been saved when, a year before, the building had burned to the ground, and with it much of the scenery of operas then popular, and would hang soon in the new and modern edifice nearly completed. Leslie was said to have received a fabulous sum for the drop-curtain, which was considered by theatre-goers, and still better judges, the board of managers who had ordered it, a masterpiece of its kind. He came slowly forward to the door of an inner room, a bent, listless figure, eyes still bright and piercing that had not forgotten their cunning, though the brows and hair above them were white, and the face from which they looked out was wearied and wrinkled. The pause at the doorway was abrupt, half impatient.

"Well?" he queried, gruffly.

The light, which had been brief, of hope and of gladness, went out of the young man's eyes.

"I come to see you," he muttered, fumbling clumsily with the hat, "for atvice, if you would be so goot—some lessons—"

The artist interrupted him curtly; a strange look had crossed his face with the first sound of the German accent.

"I give no lessons," he said.

"I am a painter," the visitor proceeded, eagerly. "I haf designs made; a touch more here, shatings more tere, I know not—"

"Designs!" repeated the elder man scornfully.

"Tey not bad, not bad," said the German earnestly, emphasizing the long-drawn-out negatives. "Te Tannhäuser storees—I know tem, luf tem from boyhood. Tree year I haf been in tis countree; daytime, night-time I vork in my attic. No von buy my pictyures. In te Vaterland I sell many, many, and ten alvays tere is the vood-block, te etching; but here—" He gulped down something like a sob; there was a little mist before his eyes. The old man stood listless.

"It vas tree monts I vork at te Tannhäuser; I haf tem made, te designs; eef I knew tifferent touch, here, tere; eef you would come, egzamine close. None haf seen tem—but von other." A light, the reflection of some inner emotion of tenderness and felicity illuminated his face as by a passing sunbeam. The momentary change was only half-consciously observed by the artist. Afterward he recalled it and its accompanying words.

"I have no time," he said, with an impatient wave of dismissal. The man was beginning again, imploringly, when, as the finale of his part, the artist turned back into the inner room and closed the door testily. The act was a personal blow to the other. He staggered, and, turning, felt along the wall for the door as one blind. Some time had elapsed after it closed behind him when the painter came, muttering to himself, into the other apartment. The people of the growing city where he had spent the latter half of his life spoke of him as the "crazy artist." He often went hurriedly, mumbling to himself, about the streets. He was no man's friend, not even his own. The younger generation of the thriving place avoided him; children fled from him. Why he owed the world in general, and descendants of the Teutonic race in partfcular, a personal grudge, had never appeared a problem of sufficient moment to invite analyses. He had lived alone, still clinging to his attic studios after recognition of his talents, which were versatile enough to include every branch of his art, had brought him absolute wealth. Through the open doors he passed now from room to room. There were three of ample size, the middle apartment softly brilliant with a radiance from the white skylight. At times his footsteps strayed here, lingering, ere he took up his walk again, before the work he had finished to day. They covered the four walls of the middle room, the great designs for the scenery of "Tannhäuser," the opera with which the new theatre would open at the beginning of the year. Once, twice, in the pauses, he lifted a crayon from its box, changing a perspective, a proportion, stepping back to view the swift correction. Constantly in his walk he gazed upon the finished work; finished, although one month would elapse before the cartoons must be submitted. There would be many competitors, but he need well have no fears; he had none. They were rarely beautiful, these creations, covering rolls upon rolls of gray paper. The work had occupied brain, hand and soul for three months. Ha laughed a little loud in the silence of the chamber. That was the time the German had spoken of expending on his own designs; worthless things they were, in all probability. Shabbily arrayed would-be artists seeking his aid were not an unusual occurrence.

He would have forgotten the incident except for the cartoons. To the committee who had visited him months before, commissioned with an order for the Tannhäuser scenery, he had made it known he could do no more work of the sort; hence their later arrangement for an open competition. The German visitor had known of his refusal of the order, no doubt, and he, among the rest of the competitors, together with the committee, the general management and the city at large, would receive a surprise. He laughed again. He intended to send in the magnificent work, the greatest that his genius had even yet accomplished, simply with his name attached as a competitor for the order; he had no doubt of the result. In the ensuing months he would be occupied with the painting, but the colors were already covering the canvas, imagined in his thought, from the roseate light illuminating the enchanted grotto, to the evening dusk, the star-lit sky lending their solemnity to the mourners' procession and the funeral chant of the last scene.

When the long August day was on the wane Harold Leslie had thrown aside his crayons. The outlines, he felt, were wholly completed. He turned away and entered the third room, pausing before a little desk which stood always there beside a curtained easel. Unlocking the lid he lifted and held in his hands, as he often did in his daily solitude, a few keepsakes. There was an ancient book-mark, worked evidently by feminine hands, the silks outlining "Harold," with its interlacing forget-me-nots faded to whiteness; a ring wrought of brown hair still lustrous. A letter, the paper yellowed with time and worn with frequent reading, lay beside the treasures. He knew its contents by heart, but if he had not he could still have deciphered them in the dusk of the room; he was not very long past his prime, despite his whitened locks and bent form. The missive, scarcely legible, was headed with the name of an Austrian village. It was an appeal of a dying woman that he would come to her in that land of strangers to which she had gone after her marriage, that she might entrust to him her new-born, fatherless child, which had been christened with her name. Would he take the little one and care for it for the sake of "auld lang syne," if he arrived too late to receive the child from her arms? The letter read thus. It was the only one he had preserved from its writer since an earlier missive, from the hand of the girl's grief-stricken mother, which had told him of the desertion of his betrothed to become the wife of a German pianist.

He had reached the Austrian village too late; the mother was dead. The child, the neighbors said, had been taken in charge by a woman who had gone to America.

The ceremony of unlocking the desk, of taking out its contents, and of turning to throw aside the curtain from before the easel, was gone through with many times a day. The picture, as disclosed, was worthy the homage given it. A woman's face looked out; the eyes large, of a gray which deepened into violet; the hair dark brown. The suggestion of a smile was about the lips, the whole expression piquant, charming. Leslie, in his one attempt along this branch of art, had proven himself a master.

He went out in the cool of the evening into the city streets, and wandered, as was his custom, toward the river. A wooded terrace, rising abruptly above the water, had once suggested to him while outlining the cartoons a scene for the wayside shrine, because of a certain picturesque beauty hanging about it, the path down the slope curving inward toward a pile of stones from a ruined wall, covered with lichen and vines. In his translation of the place to canvas the setting would become Thuringian, the effect one of greater height and of misty distance and grandeur, with the added glimmering of the towers of the Wortburg Castle in the sunlight.

People were passing to and fro on the walk leading to the terrace to-night, and, as usual, the painter was giving no heed to them. His thoughts were busy with the Mediæval legend which Wagner's genius had, at that time, but recently wedded to music and given to the world; the dream of human destiny, of love and death, of selfishness and sacrifice. He stood by the place that he had adapted to his sketch, and that had seemed to him an actual shrine. Beyond and above him the evening mists lay along the hill. So might they have hovered about the enchanted mountain where Spring reigned eternal, and where Venus ruled her court with her captive from the world. And the moon had risen, flooding all—the hill, the shrine, the distant terrace—with a brilliance.

[TO BE CONTINUED.]

AN ESTIMATE OF HANDEL'S INSTRUMENTAL MUSIC.

Handel's instrumental music, it is true, ought not to be underated, as it certainly is at present, says the Nineteenth Century. In his opera and oratorio overtures, cast as they are in what now seems an antiquated mold, there is a wonderful variety, vigor and freedom of style; even in adopting what were already old forms he gave a new life to them; the opening of the overture to "The Messiah," for instance, though it is exactly in the form of the French overture of Lulli, has a gravity and seriousness of expression, and a boldness of harmonic progression too, which place it quite above its models, and renders it an appropriate prelude to the great work which it opens; just as, in a quite different manner, the overture to "Acis and Galatea" is an almost ideal overture, for the date at which it was written, to a mythological pastoral of nymph, shepherd and satyr. And at his best he is beaten by no one; there are few fugues even in Bach's celebrated "Forty-eight" which, for originality of conception and brilliancy of effect, can stand beside that which opens Handel's "Suite in E Minor." Still, his instrumental compositions in the main are not models for all time, as those of Bach (according to their school) are; nor did he ever produce any instrumental works of such importance as Bach's great compositions for the organ, which, totally unknown as they are to the fashionable musical world, are really the only instrumental compositions which, for greatness of scale and sustained elevation of style, can be fairly paralleled by Beethoven's symphonies. But in the illustration of scenes and characters by vocal music for choruses or for solo voices, with instrumental accompaniment, Handel is absolutely unrivaled. In his extraordinary range of expression and feeling, in his realization equally of the sublime, the pathetic, or the humorous suggestions of the situations, ideas and characters suggested by the words, he has something of the universality of Shakespeare, he is more than a mere musician, he is a poet—the greatest poet of all the musical composers; and it was in respect to this poetic genius, no doubt, that his works awakened such a strong and unswerving sympathy on the part of Beethoven, the greatest musical poet of the modern period, who in spite of all the differences in style and type of art which separated them, evidently recognized in Handel a genius kindred with an even greater than his own. And Handel's piano music, where has it flown? The suites contain beautiful music and the E minor fugue, foolishly named the "Fire fugue," is as interesting a specimen of the form as anything of Bach's. Pianists seemed ashamed to play Handel in public, possibly because he seems too easy. What a pity!

THE VOICE.

Mr. Frank Herbert Tubbs, Associate Editor.

THE SINGING VOICE

Article Nine.

FRANK HERBERT TUBBS.

Humming.

As exercise for use in cultivating the voice, humming can be used to excellent advantage by intelligent students. The custom of humming a melody when one is engaged in other duties is not meant. It is practice only when one concentrates his mind upon what he is doing and attends to the details, as well as the general plans of his act. Cultivating the voice through humming was quite a fad at one time and, as fads generally do have, it had its friends and its enemies. The latter thought it nonsense because it was so simple. An enthusiast in breathing asked, "How can one have breath control while humming?" The very simplicity makes the practice particularly good and breath control *can* be secured while humming. The lips should be closed but not pressed tightly. The tongue should be very limp. But little breath should be taken.

Instruction upon this exercise is negative rather than positive. Rather, it is a series of cautions. The tendency of most students is to take too much breath. Humming will not bear it. There will be resisting effort if much breath is taken. The exercise might be preluded by, "Take little or no breath, and have some left after you finish." Were it not that some who are wont to take all instruction literally would ask, "How can you take no breath, sing something, and yet have breath left?" Pupils are so prone to overstock with breath that even permission to "take little breath" makes them take too much. Father Young, the acknowledged musical leader among the Jesuits, is reported to have said, "I'm looking for the vocal teacher who trains pupils to sing without taking breath," and he is a wise man. Another caution is, "Do not press the lips firmly while humming." That creates resistance at the larynx and leads to forced tone. The purpose of humming is to increase resonance in the front of the mouth, lips and face, thus focussing tone forward and securing the tone where good speech can be added to it. The notes of Exercise Thirty-five should be used by the student until he is sure he is placing his vibrated tone well forward. Then he can extend the phrase until it has five notes, thus:

The last note is sung with lips parted. The parting of the lips requires readjustment of the several organs in the mouth, with most students, and that is liable to disturb the breath control. Therefore, when the last note is entered upon, there must be a glance made at breath control. The last note should be sustained from four to six seconds. When one can extend humming over the phrase of five notes, make further use of the idea on the notes of the full scale. One may then apply the same idea on other exercises and upon vocalises. In the latter (take Panofka's Opus. 85, Book 1, in preference to any others), use the hum on first measure of each phrase of the exercise and then pass to "ah" for the remainder of the phrase.

Secondary Resonance.

Among the ideas which have come to the fore in recent years is one which is entitled to special respect. About thirty years ago, a writer announced that voice was produced by organs other than the vocal bands. It had been generally supposed that voice was all produced in the larynx, and most teachers still think so. When the writer (Dr. Charles A. Guilmette) announced his discovery he was attacked from all sides. The matter was dropped, but other men have since made bold to defend the idea. In one form or another it has come out, and now many are adopting it. It is, therefore, well to be informed upon it. The French teachers are building their system of vocal training upon it, although they are working blindly. Like all blind teaching their way injures many while a few get good.

During all voice production the vocal bands vibrate. As voice at the vocal bands is constant we may call that primary vibration. The voice can have but one vowel sound and should never be loud. From experiments with the larynx removed from the body at the Clinic, it would seem that this tone is much like the vowel "a" in the word "man." All that variety of vowel sound and power which we hear in the concert room, is secured by vibration in various chambers. Part are working at one moment and others at another. These chambers are in the mouth (front and back), the nose and balls of the eyes, and in the head Every place which is lined with mucous membrane has power to make a voice, under certain conditions. A homely illustration, but one which all will readily understand, is had in the act of making sound in blowing the nose. That "voice" is not made by the larynx (or vocal bands), but by vibration of mucous membrane in the nose. In similar ways all mucous membrane linings of the various chambers can produce voice. Teachers have misunderstood this and have supposed this voice to be placing of the tone made at the larynx. Their instruction has been, "Direct your tone to the hard palate or teeth or nose," as the case might be. Really the reverse of this should be the instruction. "Arouse vibration at the vocal bands; arouse vibration, during any specific exercise, at a point of mucous membrane vibration and connect the two vibrations." When this is done, tone will be focussed at the desired point. One will ask what value this has over the old idea, and in our practical day it is a fair question. Just this: Primary tone should never be increased; secondary vibrations (those of the mucous membranes) can and should be increased. That is a very important point in voice culture and constitutes one of the ways by which great progress can be made quickly with safety. Any attempt to increase force on the larynx and vocal bands produces throaty and uncouth tone. The aim of all teachers is to secure free and untrammelled tone emission To do so, all effort must be taken away from the larynx. But we must obtain power and enlarge the voice. If no force may be placed on the larynx, what may be done? Increase the number of places of secondary vibration and magnify those vibrations. It is a fact, one which ought to prove that the voice of the larynx and the voice of the mucous membranes is not one voice, is that with beginners there is often difference in pitch between the two voices. A trained ear can detect that they are not in unison. It is like the strings on a grand piano. There are two or more strings for each note. If one becomes relaxed or contracted it is not exactly in tune with its mate. The tuner regulates them by bringing them into exact unison. The first work of a teacher who is working for enlargement of voice (although most teachers don't know they are doing it), is to bring into perfect unison the voices of primary and secondary resonance. Then he should increase the latter and make that resonance ample. It will extend as the mind wills it to all parts of the body. It is this extension of secondary resonance until it possesses the whole body which constitutes the work of enlarging the voice. It remains then to utilize reverberation of the chambers around the body to secure the greatest possible results to any given voice.

Sopranos and Contraltos.

Whether or not there should be different treatment of the various classes of voices presents a question to young teachers. The general training should be the same. There are principles of voice culture which apply to all persons. But there are individual characteristics which must be taken into account. No two persons can be led in exactly the same way and he is a wise teacher who has learned to read the nature of his several students and can bring the best out of every one. No young teacher will be able to do this. It takes years of study of human nature to know how to deal with character. When one does reach after the best in the individual he will not follow any set rules. On the principles which apply to all singers he will devise a method which fits each one. Two things may be set down as wise regulations: The first can be stated in a few words; locate all practice at lower key for contraltos than for sopranos and run exercises downward for contraltos and upward for sopranos. The second takes longer to state: Lower voices express deeper and fuller emotion than do high voices; music which expresses much feeling lends itself best to low voices and that which is bright and vivacious to high voices. Therefore, cultivate contraltos on large vibratory reverberations; sopranos, on elasticity and flexibility. Reference may be made once more to the vowel scale. That is, "oo-oh-aw-ah-e (as in ever)—i (as in will)—ee (as in meet)." It will be seen that "ah" is in the middle. The organs of voice production are nearest, while making "ah," to their position when doing nothing. That reason is why "ah" makes the only vowel to use in early study. Then, contraltos should be given many exercises which use the vowel sounds to the left of "ah" (aw-oh-oo), and sopranos those to the right of "ah" (e-i-ee). These two things have some elaborations and extensions and they carry the only exercises which need to differ as between the two classes of voices.

The same things can be used in training mens' voices. Exercises for men are sung one octave lower in pitch than they are by women, and the same exercises should be used for men as for women with that difference regarding pitch. On some accounts men can be more easily trained than can women. The fact that they sing an octave lower than do women, means that for corresponding octaves they have just one-half as many vibrations per second when making tone as women have. Action is, therefore, not so fine and delicate as with women.

What Can Relieve Throatiness?

To hear a voice which has pure tone emission is so rare that hearers have become hardened to bad use of the voice. Nearly every singer produces tones which have more or less throatiness and the public endures this fault. It is even ignorant of its own understanding of tone. Only when the throat is so badly cramped that all the tones sound strained do we accuse the singers of being throaty. In reality, the slightest tension upon the larynx causes throaty tone. The question then becomes, "What causes tension?" Any pressure from below or from above the larynx affects that organ. Pressures from below arise from imperfect breath control; those from above, from stiff muscles in tongue and jaw. The first (pressures from below) can be removed by better breath control; the second (pressures from above), by releasing the tongue and jaw. It might be said that the whole of voice culture is contained in relieving pressures upon the larynx.

In spite of all the directions upon breathing there remains in the common mind the idea that to make tone, there must be a large amount of breath used. Most people even go so far as to suppose that large voice depends upon the amount of breath employed in making tone. The truth is that breath has little to do with the size of the voice. Large voice comes from amble vibration of tone after the tone is created. In the general error, students are trained to take enormous breaths. They are taught to breathe deeply and take a lot of breath. For singing purposes very little breath should be taken; for physical culture one may take deep and large breaths. Many teachers are telling pupils to breathe down to the abdomen—just as far down as they can. Not a person who obeys this instruction will ever make a good singer. Sing they may, but will do it badly and it were better that they never sang at all. The error of these teachers lies in their ignorance of the location of the diaphragm. That organ is a large, broad muscle which passes through the body almost on the level of the end of the breast bone. That is higher than most persons think. Now, when one takes a breath he feels the waist below that level distend. That is because the diaphragm has pushed down the organs upon which it rests and these organs have pushed out the soft walls around the waist. The muscles which constitute these walls naturally resist such action and as soon as the dia-

phragm stops pushing organs against them they resume their normal position. That is, they push the organs back against the diaphragm. They become, therefore, *ex*piratory muscles—the ones which expel the breath. The deeper we breathe when we inhale, the harder these expiratory muscles push out. Every particle of their pressure is resisted at the throat and that is the first cause of throaty tones. Before throatiness can be relieved, deep inhalations and the consequent forcing out of breath must be abandoned.

One will ask how any breath, which we know is necessary to make tone at all, can be sent to the larynx. If the muscles below the diaphragm must not be used, what can be? Those above the diaphragm. When we inhale there is always some expansion of the chest, sides and back. The release of this expansion sends enough breath to the larynx to make all tone. Such muscles (those of the chest), together with the diaphragm, constitute the inhaling muscles. These allowed to return to their relaxed position send all the needed breath to the larynx. If they are allowed to resume that position slowly (so slowly that their motion cannot be seen or felt), there will be no pressure upon the larynx, and therefore no throatiness because of pressure from below.

In the above instruction the cherished system of many teachers has been shown to be wrong. What we would now state regarding pressures from above the larynx which produce throatiness will attack the cherished theories of many more. It was stated that stiffness of jaw and tongue causes pressure on the larynx. Teachers have told their pupils to let the tongue lie flat in the mouth or even to hollow out, spoon-shaped, the tongue. The tongue which lies flat or is hollow is ever a stiff tongue, and he who employs it must be a throaty singer. It is a depressed tongue and the depression strains upon the larynx. The remedy lies in letting the tongue up. One should even go so far as to allow the whole upper surface of the tongue to rise so that it is almost up to the roof of the mouth. Then the tongue will grow limp and its tensions will be relieved. The larynx and tongue are so intimately connected that when the tongue is relieved the larynx is released and pressure from above is removed. It is only when such pressures (from below and from above) disappears that throatiness disappears. Is it any wonder that we so seldom hear good singing? Two classes of teachers are working in ignorance just in the way to make singing bad. It is not easy for them to break away from old beliefs, but they must change their systems before good tone-production will become general.

Should One Practice with Open or Closed Tones?

Practice should be upon that which will best allow the student to see what he is doing. Closed tones cover faults which, not being seen, will not be remedied. Also, closed tones draw the muscles quite tightly so that it is not easy to sing into the upper voice. In making notes of high vibration, most students close tones so much that they soon reach the limit of ascent and think they have no high tones. The upper half of the voice, used in open tones, reveals itself better and permits upward extension. A student who has always used closed tones will find that by changing to open tones in his practice, he can add from two to five notes more than he supposed he possessed. They were already his best—he was covering them up. The following exercise will assist in getting open tones and general practice is better in open tones than in closed.

Exercise Thirty-six.

Use slowly. A quarter note should equal metronome beats at 46. The letter "l" must be made with limp tongue and the stroke should be prompt. The upper note must have the same quality that the lower has. No matter how high one sings there must be the same sensation, or absence of sensation on, the higher as on the lower note. This exercise may be carried by altos and baritones as high as E; by sopranos and tenors, to G.

There is a difference between open tones and "white voice," although some people confound the two. Open tones have round and vibrant quality; white voice is blank and without resonance. The latter is silly and cannot be used to any advantage. The difference between open and white voice is one of quality.

In singing scales, and these from very difficult exercises, it is the custom of some to have the lower tones open and the upper closed. This should not be. Use the same quality all through the scale and let it be the open quality. This permits the scales to be sung more rapidly than they will be when part of the scale is in closed tones, thus conducing to flexibility and elasticity. The latter allows the comfortable action of the entire vocal apparatus, so necessary to enjoyable singing.

THE COTTAGER TO HER INFANT.

The days are cold, the nights are long,
The north wind sings a doleful song.
Then hush again upon my breast,
All merry things are now at rest,
Save thee, my pretty love.

The kitten sleeps upon the hearth,
The crickets long have ceased their mirth.
There's nothing stirring in the house
Save one wee, hungry, nibbling mouse.
Then why so busy thou?

Nay! Start not at that sparkling light,
'Tis but the moon that shines so bright
On the window-pane bedropped with rain,
Then, little Darling, sleep again.
And wake when it is day.

—*William Wordsworth.*

VOICE AND TEMPERAMENT IN SELECTION OF SONGS.

ALAN GRAY.

For teachers with a large number of pupils, the selection of music is an ardous task, involving as it does, time, thought and experience. The majority of pupils by no means appreciate the importance and significance of this branch of the teacher's work, and when by chance they hear at a concert some song or ballad which pleases them, they generally want to get it at once and study it with the teacher.

The only thing they think about is whether it may be too high or too low, and oftentimes the first information the teacher has of the matter, is when the pupil brings the song to the studio, and amid a gushing description of the singer, the song and the manner in which it was sung, together with its effect on those who heard it, begs that she may study it at once, reinforcing the request by remarking that it only runs up or down to such a note and its just simply lovely.

Now that is all very well, and it is possible that the student may at times hit upon a song just suited to the voice and temperament, but it is not the way to select a song. A student taking up a song in such a way is generally in a hypnotized condition, as far as that song is concerned. By which I mean that the picture constantly before his mind during the study of the song, is that of the effect made on him at the first hearing, and all his study resolves itself into a mere effort to reproduce the same impression on himself, under the idea that he is producing the same effect on his hearers.

In this way the song is never really studied on its own merits at all, and its value as a factor in the musical education of the student is lost.

It is just from its value as a factor in the musical education of the student, that the selection of songs is to be considered.

The teacher in the course of his experience, finds that certain songs are good to induce certain effects, and others are best sung by a certain quality of voice, while others are good for all voices; these songs he regards somewhat in the light of supplementary exercises. They are designed to correct certain defects, which declare themselves as soon as the student begins to use connected words, and there are generally a number of such songs for each quality of voice, adapted by the experience of the teacher to correct such defects, as the differing temperaments of the pupils may bring to light in the effort of expression and interpretation.

Not enough attention is given in this country to the individuality of temperament, and the not less marked individuality in the quality of voices. We treat voices too generally, for instance sopranos should be divided into three classes, *i. e.*, light, dramatic and mezzo-carattere; this last being between the two former, leaning more to one or the other as the case may be, although generally having more of the quality of the light than the dramatic.

These voices should be developed along distinct lines as soon as songs are reached, and it is here that the discriminating power of the teacher is called upon in the selection of suitable pieces.

The students when left to themselves, as they too often are, make the mistakes incident to bad taste and a poor musical education. They want to get something popular and within their range, and the result is that a light soprano often wants to study the "Holy City," and such is the vitiating effect of popularity on musical taste that she is often allowed to do it.

The education of light sopranos is best carried on by a judicious selection of florid arias from the old operas, interspersed with some of the old English songs, like "Bid me Discourse," by Bishop. Then there are many effective waltz songs. These perfect the musical mechanism of the voice, and very often the temperament of a light soprano stops here, but if it gets beyond and develops any depth for the expression of sentiment, then a selection of Schubert's songs is a splendid thing to develop the artistic sense.

After such a course the student will be better prepared to make her own selection among the modern composers, and the wish to shine in the reflected glory of a popular song will be modified by the knowledge of what the voice appears to the best effect in.

For a dramatic soprano the selection of songs will be entirely different, but in order to give the student a comprehensive idea of what the dramatic quality of voice can be made to portray, some arias from the Verdi operas should be studied, then, for artistic word expression, Schubert is again in order. Dramatic sopranos sometimes develop splendid agility, and this should be considered in the selection of songs, together with the dramatic temperament.

A certain amount of operatic work is strongly to be recommended for all voices, with the exception of those to which the operatic style is entirely unsuited; and this is so because the study of arias and scenes from the old operas is eminently calculated, not only to give greater development to the voice, but also to broaden and develop the musical temperament, as well as to impart comprehensive ideas of musical phrasing and breath control to a far greater extent than can be attained when the student is limited to songs and ballads.

The effect of a little judicious operatic training becomes quickly perceptible in the manner in which the student treats a song. He manages to get more out of it and give it a touch of reality by imbuing it with his own individuality for the time, instead of singing with a false and strained affection, to which so many of our young singers are liable.

This affectation is the result of self-consciousness; the student cannot forget himself while singing, and in the study of songs it is difficult to overcome this and develop the proper feeling of naturalness and spontaneity, but a little operatic training is a great help in this respect.

The difference in tenor voices is naturally very marked between the lyric and tenor robusto, but I fear this difference is too often lost sight of in the training and development. They are both allowed to sing the same order of songs, the only difference being that the robust feels more or less obliged to shout, while the lyric is sorry he can't; but he gets a sort of revenge by singing falsetto.

We have but few good tenor soloists in this country, and it is not enough explanation to say that tenors are rare. They may indeed be somewhat more rare than the other voices, but if enough attention were given to developing the individual quality of the American tenor, they would be by no means so rare as they are.

The American tenor is generally lyric, and it is only in rare instances that he appears well in descriptive ballads and stormy songs with shouting refrains. They should be trained on Italian solfeggi and lyric songs, of which there are so many in the French and German music, besides some of the better modern American and English composers.

Our tenors generally sing with a woful lack of temperament when they appear as soloists, and this in great part can be traced back to bad judgment in the selection of their first songs.

Teachers should give great attention to this branch of their work, because a student of singing after the rudimentary work has been successfully performed, means more than a mere voice.

There is the æsthetic side of the nature to be considered, the temperament or lack of it, the quality of voice, its strong and comparatively weak points, limited or extended range, capacity of expansion, musical intelligence of the student; all these things come up in the experience of the teacher and influence him in the selection of work for the pupil,

OPERATIC ARIAS.

Caro Nome. Rigoletto di Verdi.

W. LOWES-HEATH.

This aria is one of the most difficult for sopranos, both in technique and sentiment. It demands long and patient study, but it repays that study a hundred fold in developing the artistic temperament, and giving the student a rare control of the voice.

Its difficulties of technique are so great that most sopranos in the study of the aria, fall into a grave error; that of dedicating their whole attention to the technique, to the almost total neglect of the sentiment. To study the aria in this manner may make one a singer, but not an artist.

It is true that runs and trills should be perfectly executed, but they should never be merely mechanical. They should always be full of the expression of the sentiment they are called upon to adorn. They are embellishments, but that which they embellish should never be lost sight of.

In the duet preceding the aria, Gilda asks her lover his name; for although she has seen him in church, she knows absolutely nothing of him, nor have they ever met before. He answers, "I'm called Gualtier Maldè, and I'm a poor student."

The name is a sweet one to Gilda, for she loved him silently long before they met, and the name marks the epoch when first she knew herself beloved of him.

After the departure of her lover she muses on the name, and her musings form the recitative which precedes the aria: "Gualtier Maldè! name of him so beloved, engrave thyself in this enamoured heart!"

The first phrase, "Gualtier Maldè," is taken in a clear, sweet piano, for Gilda is singing to herself, and in her first possession of the name, she would keep it all to herself and let none other hear it.

The second phrase, "Nome di lui sì amato," commences piano, but beginning with the half note on C sharp there is a crescendo, the voice swelling with tenderness and love as it rises to the F sharp. The third phrase is taken up full and rich with the thought of the preceding. The fulness is retained through the first half, "Tit scolpisci nel cor." On the B flat the voice diminishes, and the second half, "Innamorato," is taken piano as Gilda breathes the sweet secret to the air, that she is no longer the mistress of her own heart.

This brings us to the aria, the opening strains of which are given out in the introduction in a beautiful succession of sixths.

The name and what it stands for still occupy all Gilda's thought as she sings: "Thou dear name that first caused my heart to throb, thou shalt ever remind me of the delight of love! With the thought, my desire will always fly to thee, and to my last breath, dear name, thine it shall be."

The delight of this great love which has blossomed in her heart, makes Gilda almost breathless as she contemplates it, and the musical arrangement of the opening phrases is adapted with a masterly hand to portray this feeling. It is an alternation of eighth notes with eighth rests. In rendering it the student must be careful, while giving the value of the rests, that she doesn't fall into the temptation to cut the notes short. The purpose of the arrangement is to assist the expression of the strange, almost incredible delight which o'erflows the heart of Gilda.

The first phrase, "Caro nome che il mio cor," opens piano, and the student must strive to produce a piano tone absolutely pure and spotless, and full of sweetness. Each note must be clear, and sung with just a suggestion of lingering, while the rests give a slight hint of hesitation, almost as though she would hold the words back, so precious are they. The last note of the phrase on F sharp is held piano and carried over to the following phrase by means of a beautiful piano portamento.

The second phrase, "Festi primo palpitar," is treated in the same manner as the first, the beautiful piano being preserved, and is carried over to the following phrase by the same means. The portamento in this covers an octave and a third, and must be beautifully regulated and controlled, both in speed and volume, else it will degenerate into a mere slur. The faultless piano quality of tone must be preserved throughout, and as the interval is from E to high G sharp this will require patient and careful training.

The ideas given above control the first four phrases. The piano tone never varies; beautiful, sweet and full of tenderness always, it is a rare lesson in control for the student.

The phrase "Col pensier il mio desir," commences piano, but the C sharp occurring twice in the phrase, receives a decided accent and crescendo, diminishing in each case as it descends to the B. The final B is held and carried over to the next phrase by a diminishing portamento. See Fig. 1.

ILLUSTRATION 1.

This phrase. "A te sempre volera," again commences piano and crescendos as it mounts to the trilled notes. These notes are both well accented in the attack and crescendoed in the trill, diminishing as they ascend. The final F sharp of this phrase is held and from the diminuendo with which it starts, it crescendos to full and is carried up to the G sharp of the following phrase. See Fig. 1.

This phrase, "E fin l'ultimo sospir," opens full from the crescendo of the last, diminishing to the F sharp which in the next measure is repeated with an accent, which again diminishes to the E and D. The two trilled notes following are slightly accented in the attack.

ILLUSTRATION 2.

The final note of this phrase also is carried over to the next with a light portamento executed with a slight crescendo. The final phrase of what may be called the first part of the aria, "Caro nome tuo sarà," is similar in construction to the preceding phrase and receives practically the same treatment. The accents in both these phrases come on the first, third and fourth beats of the measure, and should be well marked. See Fig. 2.

The next phrase marks a somewhat different state. Gilda has been almost holding herself back, and each note has been sung as it were with a tender caress, but now she allows her feelings freer vent and the phrases seem to gush out.

The phrase, "Col pensier il mio desir," breaks out with a little arpeggio sweep of four sixteenth notes. These are accelerated and sung with a light crescendo, and the four following notes are held back and diminished. While these notes are marked staccato, they are not to be sung full staccato but rather with a sort of staccato accent, diminishing into each other.

In the following phrase, "A te sempre volerà," the sixteenth notes are sung lightly and very quickly, but with clear pronunciation. The jump to the octave F sharp must be clean; it is then held and crescendoed, diminishing to the succession of eighth notes on which the time is held back, culminating in a decided ritard "a piacere" on B, B sharp and C sharp.

ILLUSTRATION 3.

The G sharp of the following phrase, "E fin l'ultimo sospir," is attacked full and held. As it comes down to the F sharp it diminishes, and the sixteenth notes which follow are sung lightly and quickly, but with tenderness. The dotted eighth note on C sharp receives a decided accent, the time ritards and the voice crescendos, each note being well marked to the end of the phrase.

The next phrase, "Caro nome tuo sara," commences full voice with a slight hold on the A. The time is still held back a little until we reach the next measure. The first four notes of this are sung very quickly, and while the voice is not piano, the quality must be light and well tempered as it mounts to the high C, which receives a short hold. The voice drops down quickly with the same light quality, and the last six notes of the measure are accented, the final B being held a little before dropping to the E.

In the following phrase, "Col pensier il mio desir," the two arpeggio passages are sung with a quick, light sweep, and the high B with grace note is cut off almost to staccato, the voice dropping directly to the octave.

In the succeeding phrase, breath should be taken after the F sharp and the A attacked clean. The run must be performed with precision, but with lightness and grace, the two quarter notes at the end being taken "a piacere."

In the phrase which follows we have tied eighths and sixteenths, with an accent coming on the second half of each beat. This phrase is taken piano, and the student must be careful in marking the accent that it be not made jerky. Sweetness of tone and graceful vocalization must mark the phrase.

The three following phrases consist of couplets of sixteenths, and the first note of each is accented. Each phrase begins with a crescendo and diminishes to the close. The first two of these phrases have each an eighth note which receives a decided accent, the voice lingering on it a little.

The third phrase, (fig. 4) mounts and descends four times, it successively crescendos as it mounts and dimishes as it descends, the accent of the couplets being preserved.

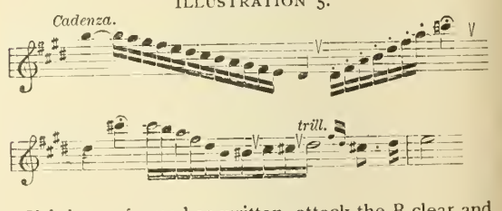
ILLUSTRATION 4.

The run which begins the next phrase commences piano and crescendos to full voice as it mounts, the succeeding couplets being well accented but sung lightly. The closing part of this phrase is sung with a decided ritard, very legato, and the voice replete with tenderness and love. The C sharp is held and comes down with a portamento. See Fig. 4.

The next phrase is sung in time with the beat slightly accented; at the close the triplet is held back a little. The final phrase is ritarded and each note well accented.

In singing the cadenza the student should always remember that she is perfectly mistress of the situation. Attack it with perfect security and sing with great deliberation.

ILLUSTRATION 5.



If it be performed as written, attack the B clear and full and run down the scale lightly, but feel every note, and be careful that in trying to execute it quickly you do not rob it of its individuality. Take breath after the lower D and sing the upward scale staccato to the high C, breathe again and sing the interval from the D sharp to the high C sharp without portamento, the latter note being attacked clean and held with a clear tone which must not be forced into shrillness, after which the voice drops lightly by arpeggio to the B and proceeds deliberately to the trill.

The beauty of the technical work in this aria will be doubly enhanced if the artist have the ability to appreciate and interpret the depth of tenderness, and the delight of love in the heart of Gilda; for this reason it demands a certain maturity in the singer who would give it a full and artistic interpretation. But even apart from this it still remains an excellent exereise in practical vocalization for the young student.

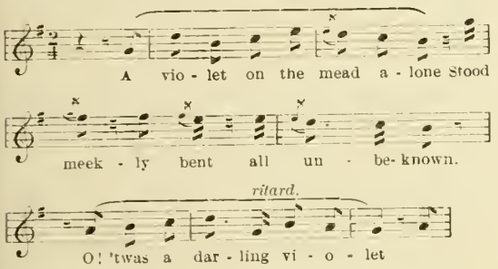
People must be educated—it is wonderful how little the average man or woman knows of things concerning which they are credited with full knowledge.

"THE VIOLET"—MOZART.

FRANK H. TUBBS.

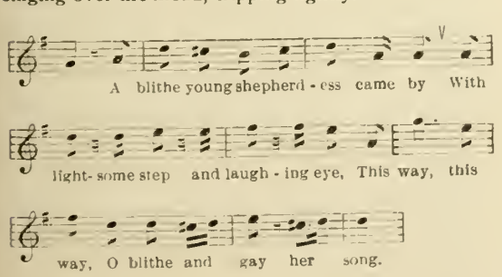
It was an interesting time in musical development that Mozart lived. The classic period was closing. Writers were foreshadowing the new school of writing. Mozart (1756–1791) was the most conspicuous man of his time in shaping things for the change. Haydn, Gluck and Weber carried out much of what Mozart planned. It is in view of the situation that we bring forward one of Mozart's songs for study. There are suggestions in it which point to romanticism. Quite singular is it that it is almost the only song which Mozart wrote which has lived a century. The "Lullaby" and "The Violet" of his hundreds of songs are all which last. Many of the others are quite weak from every point of criticism. When we demand that every song which a composer makes, let us recall that even a Mozart could not always be at his best, and be charitable.

The introduction to "The Violet" has six measures, which are those of the first period of the voice part. It is somewhat unusual to make a period of six measures. But if you examine the poem you find that the poet was making a picture. He drew one figure—a violet—and he needed but two lines to do that. All Mozart could do was to set those two lines to phrase, and its answer, making a section. Then, as the poet stopped to comment on the violet, Mozart did too.



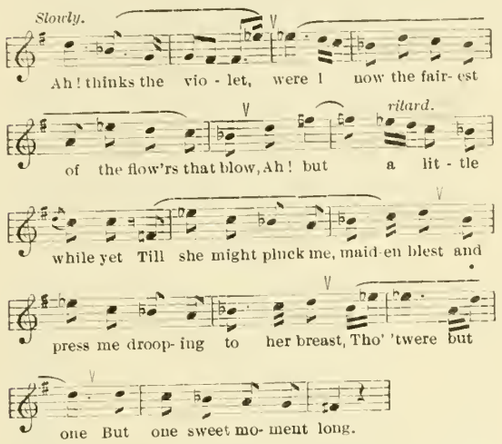
As so many would not understand the German words, the English is here used, the translation being that of the Ditson edition. The first phrase is sung connectedly. Real tying together of words and music. It is good study to secure voice vibration on the "v" of "violet" and "m" of "mead." The next phrase, which answers the first, presents two points of difficulty for real study. The notes of the high voice do not come easily. Repeat them many times, in practice, making them on the pitch in speech-voice. That is, speak them there instead of singing them until they can start easily. Then sing them and go on. It will help release notes of the upper voice. The other point which needs attention is the appoggiatura, or leading note. Generally, this grace note has no short line through it. Mozart often mixed his grace notes. That which has a line through it is called an "acciaccatura," or jumping note. It was evidently the intention in this song to have the leading note used in each case. That takes the accent and special stress and is to be joined without a shadow of break to the note which it precedes. It (the grace note) almost eliminates the principal note, or the one it precedes. The last two measures, on a closing cadence, are to be sung with tenderness and sympathy with the sweet flower.

Now, poet and composer add a new figure to their picture. A young woman, a shepherdess, comes singing over the mead, tripping lightly.



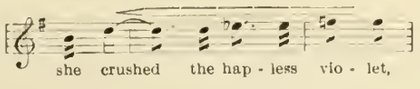
The music is made sprightly and in marked contrast to that used in telling of the violet. This, by the way, is characteristic of music of the romantic school and which reached its height in the *leit-motif* of Wagner. Mozart was a fore-runner. It is hardly necessary to tell students how to sing about the shepherdess. "Light-some step" is enough hint. Observe those sixteenth rests. Emphasize "laugh" and let the "l" of that word be specially loose. It paves the way to making a good note on high G with the note "way." You may know, too, that the word "way" is most excellent for placing the tone forward in the mouth. It is good practice to repeat that word "way" on its proper notes, as they are in the song, many times In Germany it is considered quite a feat to sing this song well. The above passage, it should be noted, has a complete period of eight measures.

Then, Mozart has a little "symphony" of four measures for allowing the situation—two persons in the picture—to be understood. After that the violet is personified and speaks; rather, it tells its thoughts.



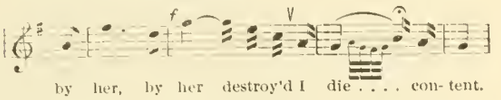
Here are two periods, each having eight measures. The first has good theme for its purpose, but it is not worked out in accordance with accepted rules. It is irregular and unusual, but it makes good music, and that is all we care for. The second period is more strictly in good musical form. The first of these changes the key abruptly. It takes that sad, mellow key of *G minor* for a time. Sing "Ah! thinks the violet," quite slowly. It is soliloquy and very plaintive. Retard the words, "a little while yet." As a rule, the closing words of a period, especially in a minor key, will be retarded. This applies, too, to the words "But one sweet moment long." The words "Till she might pluck me, maiden blest," and the other words which fall on the repetition of their notes are to be sung quickly and earnestly. They are in the major key (*B flat*), which is the near relative of that plaintive key, *G minor*. See how Mozart gets variety by wandering from key to key. At the end of the above period, we might have gone back at once to his original key (G), for he arrived on its dominant chord. He chose, however, to keep us in waiting a little longer. In truth, the key of G would be too bright for the sentiment of what follows.

Description is now taken up The thought shifts from the violet to the maid and back again while our sympathy for the little flower is appealed to. Slowly must we sing. Tenderly must we express sympathy. The quality of tone with me mellow, loving and appealing. The key selected is one of tenderness and not of assertion. "Ah! ah! poor thing. The maid came by. It never caught her "roving eye." The more sympathy the singer can present in his voice, facial expression and manner the better. It furnishes a background for the somewhat dramatic passage which follows:



In this there must be vigor and *crescendo* till the word "violet" is sung very strongly. Then comes quite a long pause. Singers do not fully value the effect of the pauses. They permit the strength of the situation to be understood by the hearers. The next words "It sank and died; made no lament," are to be sung very slowly and once more the tender voice comes into use.

Then, the pure *legato* comes into use with the next phrase. The words "If die I must, I die content," need no other word of instruction. But, let it be remembered that pure legato means the delicate joining of the consonants and vowels of the words as well as joining the notes of the melody. The next phrase is written out to suggest the best way to "phrase" the passage. It will be seen that in the cadence an embellishment is introduced. It is always open to criticism, the matter of adding to or changing anything that the composer has written, but we may remember that Mozart lived in the time when much was left for the singer to add. Previous to his day singers were at liberty to make any changes they choose and in certain lines of composition—Italian opera, for instance, even down to our own generation singers were supposed to devise embellishments and *cadenzas*. So when we take a song of Mozart's we may expect he left something for the singer to do. The embellishment introduced is quite in Mozart's style.



The next words "The poor, poor violet," are more spoken than sung. They are supported by the dominant seventh chord which permits the introduction of a phrase already used for closing the first period. This phrase closes the song. It must be sung in the same way it was when first introduced but with infinitely more tenderness and sympathy. A song is a composition with which to move our hearers. The ending must be such as will have the most effect. A story which ends without any "point," falls flat. The more zest and expression there has been in the song the more finish in good art must there be. Mozart's "Violet" is a most excellent study and it is so interesting as a song that it serves well for the drawing-room and concert program. It may be to many students the first of a series of songs which can be arranged from that period which lies between the classical and romantic schools.

CALVE'S ECCENTRICITIES.

Calve's absence is a load off Mr. Grau's mind and a blessed release to the other singers. The fiery Frenchwoman is as eccentric as Mme. Bernhardt, but does not possess half the common sense of Mme. Sarah. However mad Bernhardt may be—and there are those that think she is mentally unbalanced—the great actress still keeps her oddities for private life and never obtrudes them on the stage. Mlle. Calve is of different disposition. In private life she is the most demure and conservative of creatures, hut the moment she enters the opera house her eccentricities develop. The footlights, the music, the dramatic conception of her role, are so many intoxicants to the prima donna, and when the performance begins nobody knows what oddity will possess her humor. Humor it always is, for Calve is the spirit of fun, and art seems to be one grand, sweet joke to her. Like Naughty Blanche in Belasco's farce, she is a divvyler, and nothing, nor dignity, nor fame, nor the stage manager, nor the audience, nor the wrath of singers, quells her enthusiasm for a jest On one occasion she pulled off the wig of Jean de Reszke when he was in the middle of an impassioned air, leaving the tenor bald, helpless and furious with indignation before his admirers. On another occasion she smote Escamillo in the face with a handful of rose leaves and one of them flew into his throat, nearly strangling him in the Toreador song. She made a Don J se chase her around an apple cart in the last act of "Carmen" until the tragedy was converted into comedy, and everybody was roaring with laughter over the tenor at a moment when he meant to make his most thrilling impression.

True to the traditions of her history, Calve raised Cain on the benefit night and made her last appearance at the Metropolitan as memorable as its predecessors. She was on the stage only half an hour during the second act of "Carmen," but within those 30 minutes she kept the audience in astonishment and singers in apprehension. Just as the curtain went up she climbed on a table and struck a statuesque pose there, to the terror of everybody, for the table was rickety, the prima donna is weighty and an accident was imminent until, realizing her danger, she leaped back to the stage. She wound up the Bolero with a loud Hurrah! that startled the house. After that she fell into trouble with her hair, which was done into a gigantic pompadour, and throughout Signor Scotti's admirable delivery of the Toreador's song Calve rushed frantically around the stage hunting for hairpins. Her action completely spoiled the baritone's best scene and his rage was noticeable even through his grease paint. To add to his discomfiture, Calve suddenly discovered that she had interfered with his success, and, creeping to his side apologetically, she kissed him, thereby throwing the audience into another roar of laughter.—*New York Press.*

THE ORGAN.

Organ Study.

In this issue is given the ninth of a series of articles on Organ Study, by an organist of long experience both as a teacher, church and concert organist. This instalment continues the discussion of organ tone. It is the purpose of the articles to give practical suggestions so complete and comprehensive that they will aid students of "The King of Instruments" to acquire a mastery over its complications and inexhaustible resources. It is particularly hoped that all who are interested in this subject will send to the editor any questions that they would like to have answered. Due notice will be taken of all that are so sent.—Editor of THE MUSICIAN.

IX.—REGISTRATION.

WM. HORATIO CLARKE.

Registration is the art of selecting and using the stops and combinations which will best interpret the musical idea of the composer. It requires a discriminating sense of tone qualities with their blendings and contrasts, generally termed tone-coloring, and it also demands a knowledge of musical form in regard to sections, phrases, periods and thematic construction.

German organ music is founded upon a standard form in which a theme is classically treated, containing musical thoughts independent of a specific tone quality other than being indicated by the usual dynamic terms, the combinations being left to the judgment of the organist, and the themes do not require many changes of stops.

It is only within the past half century that the Swell Section, as a means of expression, has been introduced in German instruments, so that the grades of power in all German organ compositions up to that time were simply indicated by the loud and soft signs, and when the hands played upon two manuals for the sake of obtaining a contrast of parts, the indications were simply I, II or III in the treble or bass clef.

The changing of stops with abrupt and marked contrasts, without regard to the musical idea, should not be cultivated, as it panders to a sensational and pusillanimous taste.

French organ music of the popular class is in direct contrast to the German school, being light and brilliantly melodious, and emotional rather than intellectual. It is more operatic than ecclesiastical in its structure, and too much use of it in American church services weakens the appreciation of solid organ music. This criticism refers chiefly to the music of Wely, Batiste and others of that class, and not to the compositions of Guilmant, Widor, Dubois, Salome and Saint Saëns.

The vivacious French music is entertaining rather than devotional. It gives scope for a variety of solo effects with a light and unorganlike accompaniment, with imitations of a theatre orchestra bass in the pedal part. It belongs to the sphere of entertainments, lecture preludes and festive occasions.

With the exceptions alluded to, there is no systematic development of themes nor progression of parts in their individuality, and this sentimental style should not be first studied by a young student. The musically uneducated public like this style in preference to the serious German school, and are pleased with a brilliant organist who caters to the uncultivated tastes, but the aim of every student should be to foster in himself and his auditors a reverence for dignified organ music.

In the study of registration one of the first things to consider is, that *the organ is not an orchestra*. It has its own individuality as an instrument in interpreting music especially adapted to its capacities. At first there is a great temptation to indulge in ephemeral orchestral imitations which are unworthy the noble instrument. A true artist would not descend to the performance of waltzes, polkas and mazurkas upon a grand organ!

As outlined at the opening of this series of articles, the characteristic quality of each stop must be learned so that it may be recognized when away from the keyboard, and also the comparative power of each.

In drawing stops, each new or succeeding combination should enter at a section or phrase of the music, and no stops should be brought on so as to be perceptible to a hearer in the middle of a phrase or while a chord is being held.

In order to have a model for reference, the first study in registration will be illustrated from a specification of a modern medium-size Two Manual organ, presumably constructed with the most recent improvements in wind-chests, pressures and artistic voicing, far beyond the possibilities of instruments of part defective construction, the scheme having the present compass of 61 manual and 30 pedal keys.

(*f*) Pedale Forte.
(*g*) Pedale Piano.

FREE SWELL MOVEMENT.

*22. A mechanical coupler giving the octave of No. 20 separately when desired.
*23. Pneumatic action giving the 30 lower pipes of the Swell 16 ft. Bourdon without interfering with the manual valves.
*24. A mechanical coupler giving the octave of No. 21, separately or in combination with.

Such an organ has sufficient capacity and power for the most effective rendering of all legitimate organ music and for choir accompaniment, and also for sustaining the voices of a large congregation, every stop being of practical use in giving variety to the tone-color without getting out of tune or ever becoming dormant.

The art of registration is not surrounded with mystery. Any combination is appropriate which sounds well to a refined musical nature and aids in translating the thought with clearness, introducing such variety as will relieve tendency to monotony. But the musical idea must be predominate in the mind like a photo-gravure picture, which an artist afterwards colors, and thus aids in bringing out the sentiment of the design with greater intensity on account of the natural variety of the tints.

Having learned the quality and power of each stop separately, some of their combinations will be considered in the order of the numbers of the specification. When two manuals are played upon separately in solo effects the accompaniment should be of different quality from the solo combination, thus with a Flute Tone solo stop the accompaniment should be either of Organ or String tone.

SECTION I.

1. TIBIA MAJOR. A clear Flute Tone stop which gives a depth of sound when used in the full organ and adds much variety to other combinations. When used alone it serves as a Stopped Diapason in chords when played an octave higher or as a solo with suitable swell accompaniment. A very dignified and solemn effect is produced when combined with the Open Diapasons. With the Forte Gamba it blends well either in chords or as a solo, accompanied with Nos. 12, 13, 14, 15, 18. With the Doppel Flöte in chords it gives a powerful rich Flute Tone quality, and especially brilliant if played an octave higher, and it becomes excellent in all solos in Section I where an under octave to the melody is desired. With the Melodia it may be used in chords or as a solo combination. With the Dulciana it gives a delicate effect in chords, especially when played an octave higher. It does not combine well with the Octave, as it is two octaves lower in pitch and needs the intervention of an intermediate stop of the normal pitch to avoid the unpleasant thinness. With the Flauto Traverso it gives a brilliant solo effect in rapid passages, but does not blend in chords. It may also be used with any of the Swell combinations by coupling I and II manuals.

2. FIRST OPEN DIAPASON. A robust loud stop of large scale, sustaining all the combinations in the full organ. It may be used with all the other stops, but as it covers the softer ones they are not apparent when drawn with it, but the Flute and String stops modify and add to the power and richness. This stop alone will sustain the voices of a large congregation. Combined with the Tibia Major and the other 8 ft. stops of Section I it is excellent in giving out the theme of a choral with full Swell accompaniment.

3. SECOND OPEN DIAPASON. A more mellow stop than the First Open and blends well with every other stop in forte combinations.

4. FORTE GAMBA. A very strong String Tone stop with a draft beard and is a more valuable stop in many ways that the old reed Trumpet. Alone in chords it is very pungent and is the extreme contrast of the Flute Tone. It adds crispness to the Open Diapasons and to the full organ. Combined with the Tibia Major in chords, the under tone gives a peculiar effect without being vague. With the Doppel Flöte it produces a quality resembling a loud clarinet and is thus effective both in chords and solo work. With the Melodia the string quality is somewhat mellowed and the combination is pleasing. With the Octave it is not pleasant, lacking body of tone. With the Flauto Traverso the effect is excellent either in chords or solo. It may be used with the Swell stops coupled with additional tone colorings.

5. The DOPPEL FLÖTE is the most powerful Flute Tone stop and may be used alone either in chords or solo. With the Tibia Major it gives a deep rich combination. With the Open Diapasons it gives a full body of tone. With the Melodia the tone is a little thickened by the addition of another flute quality, but it quite covers the addition of the Dulciana. With the Octave the tone is penetrating but not pleasing. With the Flauto Traverso the effect is very rich and liquid, but on account of the strength of its sweetness the ear soon desires a change to the Organ or String Tone. It may also be combined with the louder Swell stops coupled.

6. The MELODIA possesses an open Flute Tone of a milder and entirely different timbre from the Doppel Flöte and is effective either in chords or as a solo stop. It combines well with the Tibia Major on account of being of stopped and the other of open pipes. It thickens the quality of the Open Diapasons and has a pleasing effect combined with the Forte Gamba, modifying the incisive quality of the Gamba.

United with the Dulciana it has a good effect, and in the tenor sometimes resembles the quality of a French horn, and this combination forms an excellent accompaniment when the Swell String Tone stops are used as solos. With the Octave the notes of a chord are distinct, but the combination is not pleasing. It combines well with the Flauto Traverso in giving a rich Flute Tone contrasted with the String or Organ Tone and blends well with the Dulciana added.

7. The DULCIANA is the softest stop in Section I and its tone in chords is delicate. It is the accompanying stop when the Soft Swell solo stops are played. In all loud combinations it remains drawn so as to be in readiness for use and combines well with the Melodia and Flauto Traverso. It is only used with the Octave when played an octave lower, giving the effect of an Open Diapason with a 16 ft. Double Dulciana.

8. The OCTAVE is principally used in giving clearness to the power as a whole, without being too prominent. It gives distinctness to the pitch when accompanying many voices and is not used alone. It may be used with good effect, combined with the Gamba, Doppel Flöte, Melodia and Flauto Traverso, contrasted with the Open Diapasons alone.

9. The FLAUTO TRAVERSO is a wood harmonic stop and is used both as a combination and solo stop. It blends well with the Gamba or Dulciana. It has a fine effect with the latter when played in chords an octave lower. It adds a fluty coloring to the Open Diapasons, making them more mellow without the 4 ft. pitch being obstrusive.

SECTION II.

10. The BOURDON is a very useful stop in many combinations, giving a mysterious undertone without obscuring the normal pitch. It is not divided into Bass and Treble, as in former instruments because, by means of pneumatic action, the lower 30 pipes may be played by the pedals for a pianissimo Sub-Bass for the softest stops without interfering with the manual action. It combines well with all the Swell stops, excepting the Violin and Flageolet, and is sometimes used with the Flute Harmonique in brilliant solo effects.

11. The VIOLA DIAPASON is a loud string Open Diapason and is used in any desired combination where strength is required.

12. The SALICIONAL has a delicate String Tone quality and is used for soft accompaniments and piano passages. It blends well with the St. Diapason and all stops excepting the Flageolet.

13. The ÆOLINE is the softest stop in the organ, being so delicate in power that it does not affect other combinations. It adds a meditative effect to the service when played during the reading of psalms and poems, and is used throughout the marriage service.

14. The STOPPED DIAPASON is very mellow and flute-like and blends well with every combination.

15. The QUINTADENA has a peculiarly attractive tone of a double intonation, consisting of a ground tone united with a fluty quint. It adds to the richness of the full Swell and produces many combinations with all the stops. United with the Salicional and Flute Harmonique a fine solo combination is produced.

16. The OBOE GAMBA when used alones resembles the plaintive orchestral Oboe and combined with the other Swell stops adds much to the variety, both in harmony and melody effects. It is much more useful than the common reed Oboe on account of always being in order and tune.

17. The VIOLIN D'ORCHESTRE, with a draught beard, has an incisive string quality and combines well with all the stops, excepting when used alone with the Bourdon. A very expressive solo combination is formed with the Flute Harmonique and Salicional when played in the tenor with the Tremolo.

18. The FLUTE HARMONIQUE is a very valuable stop in coloring all combinations and for expressive solo effects. A brilliant solo combination for rapid execution is formed when united with the Bourdon.

19. The FLAGEOLET gives a sparkling quality to the full Swell, but is not used with single stops other than in light arpeggio effects combined with the St. Diapason with the folds closed. This gives only a sensational music box imitation not in harmony with legitimate organ music.

PEDAL SECTION.

20. The 32 ft. SUB-BOURDON is one of the most useful stops for giving profundity to the bass of any combination and its pervading quality is of such a nature that the deepest tones may even be used with the Salicional, while being very effective with the full organ. It has 42 pipes so that, by mechanical action, it may be played either as a 32 ft. or 16 ft. stop separately or as both together.

21. The 16 ft. OPEN DIAPASONS of wood gives grandeur to the loud combinations, and unless an instrument contains this stop in the Pedale organ music will lack its fundamental support. It is the stop which produces the thundering reverberations which vibrates the walls of the building and which may be heard quite a distance from the edifice. On account of its ponderous resounding quality it should be used with much discretion, as if continued too long with any combinations other than the full organ, it wearies the ear and deadens the effect. It is to be used where strength and majesty are required and for a ground work in sustaining the voices of a large congregation and full chorus.

22. The 16 ft. BOURDON is a continuation of the pipes of the Sub-Bourdon of the same power, being drawn as a distinct stop in effect by means of a switch movement. It is not a subterfuge, but is a legitimate method of saving the room which pedal pipes occupy. It is the most useful stop in accompanying a choir and for all piano combinations.

23. The 16 ft. PIANO SUB BASS plays the lower 30 pipes of the Swell Bourdon independent of the manual action. As the pipes are enclosed in the Swell chamber it is a very valuable stop with the softest combinations, and is a beautiful distant Sub-Bass for the Æoline.

24. The 8 ft. OPEN OCTAVE is a continuation an octave higher of the pipes of the 16 ft. Open Diapason with the same result as though it consisted of an entire set of pedal pipes throughout. It is used in the full organ to give strength and distinctness to the pedal part.

25. The 8 ft. VIOLONCELLO is a String Tone stop which is used in combination with the other pedal stops, or it may be used alone in pedal solo work. It is valuable as an accompanying stop with the Bourdon.

26. The 8 ft. DOLCE is a mild Dulciana, very useful in soft accompaniments where it is desirable to play the pedal part without the Swell manual coupled, combined either with No. 22 or 23.

In addition to the regular pedal stops, any stop or combination of stops in either Manual Section may be coupled to the pedals, but in many compositions the pedal part should have an utterance distinct from the manual stops.

MECHANICAL STOPS.

27. Coupler II to I manual, by which every combination in II may be added to the stops of I, enriching their quality with expressive power.

28. Coupler I Manual to Pedale, by means of which any combination of the basses of the Great Section may be played with the pedals.

29. Coupler II manual to Pedale, by means of which any combination of the Swell basses may be played with the pedals.

30. The Swell Tremolo is a vibrating valve mechanism which gives a tremulous motion to the air which passes through the pipes of the Swell Section. It is used when chords are played with the soft stops and gives an individuality to Swell solo effects so that they are presented as distinct from the accompanying stops in the Great Section. It should be sparingly used to avoid having a too mechanical effect. It is sometimes operated by means of a pedal instead of a stop-knob.

COMPOSITION PEDALS.

These are small levers which project through a panel board just above the pedal clavier which bring on certain combinations without removing the hands from the manuals. When pressed down they are held in position by a notch in the side of the slot until released, upon which the combination remains the same as with the knobs drawn.

(*a*) Brings on the full Great and Pedal Sections with Nos. 27 and 28.
(*b*) Brings on Nos. 5, 6, 7 and 9.
(*c*) Takes off all I stops excepting No. 7.
(*d*) Brings on the full Swell Section.
(*e*) Brings on Nos. 12, 13, 14 and 15.
(*f*) Brings on the full Pedale.
(*g*) Takes off all pedal stops excepting 22 and 23.

FULL SWELL MOVEMENT.

This is a practical mechanical and pneumatic arrangement for operating the Swell folds for crescendo and diminuendo by a simple movement of the body, so that both feet may constantly be employed in pedal execution while giving the desired expression to the Swell stops.

The organ seat is provided with a back rest. To this is attached a simple mechanism which, upon the slightest pressure backward when a crescendo is desired, communicates with a pneumatic or electric leverage and opens the Swell folds or closes them for a diminuendo by releasing the pressure at will. This gives full control of the Swell expression, without any apparent motion of the organist, with a movement which is entirely natural and unconstrained. This device may be attached to any organ in present use, no matter how distant the keyboards are from the Swell Section.

In organs of the past the Swell folds are operated by means of the right foot pressing a projecting pedal lever or by a balanced shoe pedal, which only allows the player to use the left foot in pedal passages when the Swell is being used.

In closing this article on Registration it should be understood that a description of the various tone qualities of organ stops, without hearing them and their combinations, is quite as vague as the effort to illustrate odors without an opportuity of their inhaling their perfume, or to understand the blending of colors without a practical experience in mixing them from the primary hues.

According to the temperament and imagination of different individuals, the tone qualities of musical instruments often assume various colors. For the sake of comparison, the Organ, String and Flute Tones may be likened to the primary colors: Blue (*Organ Tone*), Red (*String Tone*) and Yellow (*Flute Tone*), from which the secondary and tertiary tints are formed.

With the secondary the combination of blue and red produces the purple hue which is analogous to the unition of the Organ and String Tone. Yellow and red produces the orange of the String and Flute Tones, while blue and yellow gives the green of the Organ and Flute Tone.

With the tertiary the combination of orange and green produces the olive of certain proportionate relationships of the String, Flute and Organ Tones. Orange and purple gives the brown, which symbolizes other proportions of the primary and secondary combinations, while green and purple produces the grey which typifies yet other proportionate relationships of the Organ, String and Flute Tones.

This metaphorical illustration might be applied to the specification which has formed the basis of this article by naming the stops which, in their combinations, would be represented by all the colors with the poetic glow of a richly-tinted cathedral window, but as it would seem to border upon the realm of fanciful speculation rather than the sphere of practical application, further elucidation is left to the esthetic imagination as a symbolical study in comparative tone-color.

REPLIES TO INQUIRIES.

A correspondent asks: "Why do metal flue pipes flat with increasing cold and sharp with increasing heat?"

Answer.—If a novice should be asked what the effect in pitch would be on applying warmth to a metal flue pipe, he would be very likely to answer that the pitch would be lower and give as his reason that the application of heat would so elongate the metal that the pitch would be flat, and when he is told that a contrary effect is produced it seems a paradox.

If a metal flue pipe is taken from its place in the organ and held in the hands until the metal is somewhat warmer (an open pipe with the body about a foot in length will serve the purpose), and then replaced, on sounding it with any other pipes it will be found to be very much sharper, and quite a while will elapse before it will resume its former pitch, not until it has returned to the same temperature of the other pipes when, if the tuner at the top has not been touched and the mouth is turned exactly in the same position as before the removal, it will be in tune again.

If in preparation for a concert where a pianoforte is to be used with a pipe organ, the piano is tuned to the organ when the temperature is 50° on the night of the concert when the temperature is 70°, the two instruments cannot be used together, a result which interferes with many programs, as the organ becomes much sharper in pitch than the pianoforte on account of the increase of heat.

The pipes themselves do not change, but in the case of holding the pipe in the hands the heat is imparted to the metal and the warmed metal imparts heat to

the vibrating column of air enclosed within the body of the pipe. Warm air is rarefied. The molecules of rarefied air vibrate more rapidly when set in motion and slower when colder. When the vibrations are more rapid the pitch is sharper, and when the air is cold and dense the pitch is flatter.

When there is an even temperature throughout the organ the metal and wood flue pipes remain in tune with each other. A sudden change of temperature will affect the metal flue pipes quicker than the wood pipes until the wood becomes as warm as the metal.

In very cold weather with large organs it is often noticed that the pipes on the north side of the instrument give forth tones of a flatter pitch until the heated air is evenly heated. In tuning an organ the heat radiated from the physical body affects the pitch of the nearest pipes. On this account very careful tuners have been known to put on an overcoat in setting the temperament to prevent the heat being communicated to the pipes.

FANTASIA.

An amusing story of the late Mr. W. T. Best and his ideas of the dignity of his art is told as follows:—A few years ago he was present at a public dinner in Liverpool, and it was understood that he would contribute a short organ recital to the harmony of the evening. "The organ will now play," was the curt style in which the Mayor, who was in the chair, chose to announce the performance; and Mr. Best sat still in his place, taking no notice whatever of the observation. The Mayor repeated the words in a louder tone of voice, and still the great musician made no sign. A waiter came and whispered to Mr. Best, "Didn't you hear his Worship, sir? 'The organ will now play.'" Mr. Best merely looked up with a surprised and injured air. "Confound the organ," he said. "Let it play!" The message was duly conveyed to the Mayor, and then the Mayor rose again. "Our distinguished fellow-townsman, Mr. Best," he said, "will now very kindly oblige us with a selection of music on the organ." Then Mr. Best rose and entertained the company.

***

Among the many strange musical novelties at the recent Paris Exhibition was a harmonising organ. It is intended, by mechanical means, to produce a fitting chordal accompaniment for plainsong or other simple melodies without exacting any knowledge of the laws of harmony on the part of the performer. The makers state that the object of this instrument is to avoid the terrible monotony which has been hitherto inseparable from all similar inventions, which, permitting as they did only about 30 or 40 combinations altogether, could not fail to reveal in a short time their mechanical origin. M. l'Abbé Allier has made a long and exhaustive study of the chords and inversions necessary for these simple accompaniments, and has found them to number about 500 These the organ can produce by means of some simple electro-pneumatic mechanism. The 500 combinations are classified in 14 series, which are governed by the fingers of the left hand on the "clavier harmonisateur": the right part of the same clavier consists of 39 ordinary keys upon which the melody is played by the right hand. (There is also a lower keyboard of the ordinary type for the use of players who do not need mechanical aid.) The melodies to be harmonized by the special mechanism are printed with figures over the notes to indicate what chords should accompany them, and the makers say, in effect, "you touch the button—we do the rest." There is doubtless room for this invention. Its use would certainly save congregations from the excruciating efforts of the untrained human "harmonizateur."

***

Another interesting exhibit for organists was a "mixed organ," consisting of 15 stops, some controlling ranks of pipes and others bringing on registers of free reeds of the harmonium type. This instrument was made by the well-known firm of Alexandre Père of Fils. The difficulty of keeping fine pipes in tune with reeds when the temperature is variable will at once suggest itself to experienced readers. The makers claim to have solved this by applying to the pipes a simple tuning mechanism which enables them to be readily adjusted to the (practically unvarying) reeds. They say that an ordinary musical ear is sufficient for this purpose and that no special mechanical instruction is necessary. If this be the case the instrument should command a ready sale in cases where space or money, or both, are limited. At present we have the choice of two evils under such circumstances, (1) to have a small pipe organ with satisfactory tone but no variety, (2) to have a large harmonium with greater variety but unsatisfactory body tone. A good, full open diapason, with a reserve of varied reed-tone to fall back upon, would certainly open up new possibilities for small or poor churches.

***

Mr. W. Prendegast strongly urges the use of the practice-room (rather than that of the church itself) for choir rehearsals, except perhaps when new music has to be tried; and he strongly prefers the use of a harmonium (played in a staccato manner) to that of a pianoforte—either old or new—for the accompaniment of the voices during a choir rehearsal. Speaking of the practice room he suggests that it "should be well ventilated and lighted. If desks can be obtained they are most useful for insuring an upright attitude of the choristers, as well as for beating time, etc. Seats must be provided, for boys become tired and listless if kept standing for a long time at a stretch. The choir should be grouped as in church, according to the proper sides, *decani* and *cantoris*. In the practice room it is preferable, for reasons readily understoop, *not to let the boys face each other directly*. The music cupboard should be easily accessible, and, where possible, a *double set of books provided*, so that one set may be constantly retained in the practice room—the incessant removing of hymn books and psalters plays sad havoc with the leaves and bindings. Two or more boys (at least one for each side) should be told off to act as librarians, and to be responsible for the giving out of books and music. In a recent Charge, the Bishop of Glasgow spoke very strongly of the laxity of certain clergy and choirmasters in *not having everything arranged before the commencement of Divine service*, and the consequent sending of choristers with books and messages across the chancel during the service. A little forethought and arrangement obviates these uncalled for incidents. In the case of special services, there should be a distinct understanding between all concerned, and any variation from the ordinary course carefully explained and rehearsed. For instance, when the responses are changed from ferial to festal use, the places where slips are likely to occur should be practiced. At the commencement of an oratorio service the usual pitfalls should be obviated—it should be understood which responses are to be used; whether the "Amens" are to be harmonized or monotoned; and also if the Lord's Prayer is or is not to conclude with the Doxology On Saints' Days or Festivals there should be no need for looking up (during the *Benedictus!*) whether or not the Athanasian Creed is appointed, neither should the men have to try some half-dozen verses before finding out if they are supposed to be singing in unison or harmony, or in alternate verses or half-verses."

JOHN HOPKINS.

Speaking of the death of the late venerable organist of Rochester Cathedral, a writer in the *Daily Telegraph* remarked: "The last time he played upon the instrument which he understood so well was when he performed Chopin's Funeral March, on the occasion of the death of the Duke of Saxe-Coburg-Gotha. Must he not have recalled to his musical consciousness, in his own hour of departing breath, the exquisite strains of that threnody, tenderest, most delicious of funeral compositions, and with so much of secret joy in its sorrowfulness? The mind takes pleasure in meditating on a life like that of this good, gray old organist, seated like Master Hugues of Saxe-Gotha, before his beloved manuals, hearing the finest of music and producing it himself. As Browning makes the ancient writer say: "Sorrow is hard to bear, and doubt is slow to clear; Each sufferer says his say, his scheme of the weal and the woe, but God keeps a few of us here when He whispers in the ear, Let the others wrangle and welcome: 'tis we musicians know!" In an age of wars and rumors of wars, of turmoil and trouble and money-getting and wild, worldly scramble, here was one serene, contented human being, living in and by and for his glorious art of music—happy in its solace and its splendor content if he could nobly interpret the noble things he had to play. How could any one—let alone a good musician—dwell for forty years and more in constant hearing of the stately and lovely church music and not become silently saturated with the beauty and the peace and the holiness of chant and anthem? It was his duty to lead and direct. Sundays and Saints' days, the little army of choristers, in their white surplices, who raised chorus, or concerted piece or solo, beneath the entrance gate, which bore inscription, "Sing to the Lord with a Psalm of thanksgiving." Time after time—his fingers flying from manual to stop, the pipes obeying him like humble eloquent slaves—he had to make his organ and his choir pour forth on the eager ears of the congregation the majestic triumph of the Hallelujah, the solemn sweetness of the "Comfort ye, comfort ye My people," the exquisite elation of "How lovely are the messengers," the melting pathos of "I know that my Redeemer liveth," or that ethereal anthem of Mendelssohn, "Oh for the wings of a dove," where the inspired melody really seems to soar upward and upward as on silver wings. It cou'd not possibly have been an ordinary life which was lived amid such sounds and surroundings; and it was not an ordinary life. Good old John Hopkins had pleasures and compensations in his quiet career utterly unknown and undreamed of by the noisy and vulgar world. He had triumphs, too—his signal victories—at those happy moments when, the grand organ implicitly obeying his control and rolling forth its full soul of sound, the old organist was conscious of giving complete and solid justice to the splendid melodious conceptions of some great composer. Who can measure what joy was in the spirit of the gray-haired organist when, under his touch, the wonderful pipes and reeds swell into thunderous ecstasy, or sank into soft appeal? Death could only prove a passing change for one who has but "gone a little nearer to the Master of all music. To the Master of all singing."

PIPE-ORGAN TUNING.

The Physical Difficulties of Such Work, and the Treatment Given Church Organs.

"An organ is a good deal like a human being when it comes to changes of the thermometer," said an old organbuilder recently. "Sudden drops put a man out of tune, and it's the same with the instrument. It needs an even, moderate temperature during the winter instead of a roasting on Sunday and a freeze during the rest of the week. In summer a stone or brick church gets damp. A slight fire once a week will keep the organ dry.

"A pipe-organ requires tuning at least once a year, and it is a two or three days' job and needs two men. Besides the tuner up in the organ an assistant must be at the keyboard to hold down the keys.

"I believe that pipe organ tuning is the most nervous work one can do. In fact, after long experience I have come to believe that I tune with my nerves. No, I don't refer to the nerves of hearing. I get my impressions that way, but I tune with my nervous system. My assistant strikes a chord. If it is not true, I feel a nervous stress and strain. As soon as the chord is true my nerves become harmonious too.

"Two or three days may seem like a long time to take to tune an organ, but when you stop to think of the 1,700 pipes in a large modern instrument it isn't so long. A large organ will have a compass of five octaves or 61 keys. These instruments have 28 registers, and a pipe to each key and register brings the number to 1,728. A small number of the large and long wooden pipes never get out of tune. They are too long.

"I find that pipe tuning is a mystery to most people. They can understand how the piano strings are tightened and loosened, but changes in the pitch of pipes puzzle them. Nor is it strange, for the average organ has five kinds of tuning. Of course, the pitch depends on the length of the pipe. The pitch may be raised by shortening the pipe or by stopping the open end. A number of the wooden pipes are stopped by wooden slides. Handles are attached, and the pipe is tuned by moving the slides up or down. Other woods have set in the top a piece of metal which is rolled or bent over partially to stop the pipe.

"Ribbon strips are cut in the sides of the tall metal pipes and rolled down. These break the column of air and act the same as cutting off the top of the pipe. Another kind of pipes, the reeds, are on a different principle. The length of the reed controls the pitch. A wire presses tightly against the reed and is moved to lengthen or shorten the vibrating length."

IN THE MUSICAL WORLD

AMONG OUR SCHOOLS AND TEACHERS.

Mr. Herbert Wilber Greene, past president of the Music Teachers' National Association has been added to the faculty of the Broad Street (Phila.) Conservatory of Music.

Mr. H. M. Butler, Supervisor of Music in Schools of Newport, Ky., is contributing a series of articles, on Public School Music, to the *Musical Messenger*. Mr. Butler is an earnest and enthusiastic worker, and his writings will undoubtedly prove stimulating and useful.

A complimentary recital was given by pupils of Miss E. L. Bradley of Newburgh, N. Y., to their parents and friends on December 28, 1900. The program was varied and was well played. Prizes were awarded those pupils who had faithfully earried out the work of the year.

The ninth annual contest of the Kausas Musical Jubilee will be held at Hutchinson, Kansas, May 29-31. J. U. Brown is chairman and B. S Hoagland secretary, of the executive committee. The judges are E. R. Kroeger, of St Louis, and Professor Fellows, of New York. All entries must be made prior to May 1. The prizes aggregate about $700 Full information may be had of the secretary.

At the studio of Ad M. Foerster, Pittsburg, Pa., the following program was given on Wednesday, January 30: Aria, "Welcome Happiest Moment," Marriage of Figaro, Mozart. (*a*) Gavotte, Korn; (*b*) Ethelinde, Sherwood; (*c*) Tarantella, Foerster. Brindisi, La Traviata, Verdi. (*a*) Prelude, Op. 28, No 15; (*b*) Mazurka, Op. 24, No 3; (*c*) Waltz, Op 69, No. 1 Chopin. Aria, "Surprising," La Traviata, Verdi. Suite, Op 40, Grieg. Prelude, Gavotte, Air, Rigaudon. Prayer and Aria, Der Freischutz, Weber.

The Beloit College Musical Association, B. D. Allen conductor, gave a Gounod program recently which contained the following numbers: Gallia. Motett for soprano solo and chorus. Sacred song, "There is a Green Hill Far Away." Hymn to St. Cecilia transcribed for the organ. Chorus from the Redemption "Unfold ye Portals." Meditation, Vision of Joan of Arc, for the violin. Cavatina from the Queen of Sheba "Lend Me Your Aid." Selections from Faust. (*a*) Introduction. (*b*) Trio and Finale.

A piano and song recital by pupils of Herve D. Wilkins was given at Herve D. Wilkins' music studios, Rochester, N Y., on Thursday, January 17. The excellent program follows: Sonata, Op. 13, Beethoven: I Introduction and Allegro; II Adagio Cantabile; III Rondo Allegro. La Fontaine, Lysberg; Ave Maria, Buck; Valse, Op. 34, Moszkowski; Murmuring Zephyrs (transcribed for piano by Niemann), Jensen; Song, "The Golden Pathway," Gray; Traumerei, Schumann; Wedding Music (four hands): I, March; II, Bridal Song; III, Reigen; IV, Notturno, Jensen.

Mr. E. R Kroeger's second lecture-recital, on Wednesday morning, January 9, at St. Louis, Mo., presented the following program: Ludwig van Beethoven (The Shakespeare of Music), born 1770; died 1827. The influenee of Havdn and Mozart on his early works; the independent and original Beethoven; Beethoven as a prophet and seer; his influence on the development of pianoforte music; the Sonata and the Symphony. Compositions played were: First movement of Sonata in F minor, Op 2, No. 1; First movement of Sonata in E flat, Op. 31, No. 3; First movement of Sonata in A. Op. 101.

Miss Isabella Beaton gave a novel piano recital of improvisations. The recital was given at the Cleveland School of Music, in the Arcade Miss Beaton, who is a pupil of Moszkowski, is instructor of piano and composition in the school. Her program was given as follows: Phantasie, Marche Militaire, Berceuse, Melodie, Barcarolle, Polonaise, Marching Song, Summer Sun, musical setting of "Eve of St. Agnes," Keats; Conte Fantastique, Nodier. This is a rather difficult feat, yet, it is said Miss Beaton held the attention of her audience very success-fully. Miss Beaton was also pianist at the regular concert of the fortnightly Club, January 29.

The following program was presented at the one hundred and ninth recital at College of Music, Cedar Rapids Iowa, from classes of Voice—William J. Hall, director, and Piano—Mrs. Katharine Kulp Hall, on January 28 Piano—Minuet from quartet in D, Mozart-Schulhoff. Vocal—The Seasons, Cowen. The Slumber Boat, Gaynor. Piano—Scherzo, Op. 101, Gurlitt. Vocal—*a*—A Tiny Fish I'd Like to Be, *b*—The Gingerbread Man, Gaynor. Vocal—Flower Song, "Faust," Gounod. Piano—Gondelied Op. 4, Low. Balancella, Mazurka de Salon, Wachs Vocal—Margery Daw, DeKoven. Vocal—Promise (Le Presents), Chaminadé. Lul-La-Loo, Mascheroni. Piano—About Butterflies, Rogers. Vocal—Habanera, "Carmen," Bizet. Piano—Bereeuse, Schytte.

Mrs. Grace Battis-Brown sang the following program at Lewiston College, Gaffney, S. Car., on Jaunary 4. She was very successful. *a* Sapphic Ode, Brahms. *b* Meine Liebe ist Gruen, Brahms. *c* Sandmaennchen (Little Dustman), Brahms. *d* Ungeduld (Impatience), Schubert. *a* Aria—Oh! Love Thy Help (Samson and Delilah), Saint-Saëns. *b* Sognai (I dreamt), Schira. *c* Staendchen (Serenade), R. Strauss. *a* Love has Eyes (Old English), Bishop. *b* Loch Lomond (Old Scotch), Vogrich. *c* The Lark now leaves (Old English), H. Parker. *d* The Ould Plaid Shawl (Old Irish), Battison Haynes. *a* My Star, Mrs. H. H. A. Beach. *b* Love is a Bubble, Frances Allitsen. *c* The Silver Ring, C. Chaminade. *d* A Bunch of Violets, Guy d'Hardelot. *e* Sweetheart thy lips are touched with flame, Chadwick. Mr. Wade R. Brown officiated at a fine Christmas service in the First Baptist Church of Gaffney, on December 23.

The following Christmas program was given at Trinity Church, Staunton, Va., F. R. Webb, organist and director, on Christmas Day. The following soloists and double quartet took part: Mrs. Bumgardner, Mrs. R. N. Blackford, Miss Lizzie Atkinson, Miss Tams, Miss Brew, Mr. Haines, Mr. Tucker, Mr. Euritt, assisted by a vested choir of thirty-five voices. Processional Hymn, "Hark! the Herald Angels Sing," Mendelssohn; Anthem—The Hallelujah Chorus—"Hallelujah! for the Lord God Omnipotent Reigneth," Handel; Venite, Festival in E flat, Dudley Buck; Gloria Patrias, from same; Gloria in Excelsis, in C, Schnecker; Te Deum, Festival in D (new), F R. Webb; Jubilate Deo, in C, Lambilotte; Hymn, "While Shepherds Watched Their Flocks by Night" (Hollanish Air); Gloria Tibi, in G, Paxton; Hymn, "It Came Upon the Midnight Clear," Sullivan; Offertory Hymn, "O Zion That Tellest," Dudley Buck; Presentation Sentence; Recessional Hymn, "O Come, All Ye Faithful." Reading; Organ Postlude, Damascus, Triumphal March, Costa.

AT HOME.

Mr. Jaroslaw de Zielinski, of Buffalo, gave a morning concert at the Olean, N. Y. High School, on Tuesday, January 15.

Owing to the death of his mother, Rafael Joseffy has left for Budapest. Sincere condolence and sympathy are extended Joseffy in his sorrow.

At the dedication of the First Presbyterian Church of Shelby, Ohio, Mr. Dwight Smith, of Mansfield, officiated at the organ in a special program of music.

H. E. Krehbiel, the musical editor of the New York *Tribune*, who was one of the judges of Class XVII, at the Paris Exposition, has been created a chevalier of the Legion of Honor by President Loubet, of France.

It is reported that there will be no opera next year. The patronage has not been up to the mark. If the prices were put within the reach of the mass of music teachers and students the results would be better.

Mr. Albert W. Borst, inaugurated a series of organ recitals at Odd Fellows' Temple, Philadelphia, Pa., on Monday evening, January 14. He was assisted by Mr. Frederick Davis, vocalist. The admission was placed at ten cents. The second concert took place Monday evening, January 21, with Mrs. Florence Tullis, vocalist.

A marvelous baritone of royal descent is singing in this country. The Marquis de Souza (no relation to the March King) is allied to the King of Portugal. He has a voice of remarkable power—like the blast of a trumpet, the critics say—yet capable of the most pianissimo effects. It is said he is not so much concerned about art as exploitatiou, which is lamentable if true.

The Ashtabula (Ohio) Oratorio Society gave one of its regular concerts on January 23 Rossini's "Stabat Mater" was the work in hand. The soloists were Mrs. Edith M. Yonmans, soprano; Mrs. Winnifred Eggleston, contralto; Edwin Douglass, tenor, and Francis J. Sadler, bass. Mr. W. H Leuthi was the conductor and Mrs. H. E. Whitsey, the accompanist. A miscellaneous program preceded the "Stabat Mater."

Edward Baxter Perry is in the midst of a tour of forty dates in the Southern States. Before the holidays he made a ten weeks' trip, from Boston to the Pacific Coast, and will close the seasou with a Spring trip in the Eastern and Middle States, playing in all a hundred and five concerts in less than six months. This record is unequalled in the history of piano playing, no pianist ever having given an equal number of concerts in the same length of time.

The *Musical Courier* gives the names of 38 pianists who will have been heard in New York before the end of the season. They are: Gabrilowitsch, Tozelli, Carreno, Hofmann, Friedheim, Palmer, Siemens, Harold Bauer, Dohnanyi, Aus der Ohe, Godowsky, Slivinski, Sieveking, Pascal, Bloomfield-Zeisler, Shay, Sholder, MacDowell, Jonas, Wienkowska Burmeister, Heyman, Sherwood, Proctor, Schiller, Whiting, Rive-King, Breitner, Durko, Huss, Delhaze-Wiekes, Mills, Szumowska, Cottlow, Winkler, Lachaume, Margulies, Bernstein.

The Brooklyn Institute announced a special series of concerts for Jauuary 23, February 6, March 6 and April 3. At the secoud concert Miss Maud Powell, violinist, and David Bispham, baritone, gave a recital. The third concert will he given by Mrs. Dorothy Harvey, soprauo; Mrs. Hamlin-Ruland, contralto; McKenzie Gordon, tenor; Hugh E. Williams, basso, and Miss Anna E Otten, violinist. Mr and Mrs. Georg Henschel, Mrs. Elizabeth Leonard, contralto, and Barclay Dunham, tenor, will be heard at the last concert of the series.

Miss Silence Dales, violiniste, assisted by Mr. Irving Andruss, organist; Mrs. Howard Freeman Doane, contralto, Miss Ethel Syford, accompanist, gave the following program at Crete, Neb., on January 23: Organ—Marche de Procession, Gounod; Violin—Concerto in G minor, Max Bruch; Voice—"Through Sunny Spain," Mattei; Violin—(*a*) The Swan, St Saëns; (*b*) The Zephyr, Jeno Hubay; Violin and Organ—Adagio Religioso, Ole Bull; Organ—Air du Dauphin, Roeckel; Violin—Polonaise in D, Wieniawski; Organ, Voice, Violin—"The Day is Ended," Bartlett.

The following program was given at the seventh historical recital of Mr. Francis Hemington, at Chicago, Ill. Part I—Great Composers: Organ—(*a*) Short Fugue in G minor, Bach; (*b*) Adagio (String Quartet), Spohr; (*c*) Finale (4th Sonata), Mendelssohn. Vocal—"It is Enough" (Elijah), Mendelssohn. Organ—(*a*) Grand March (Aida), Verdi; (*b*) Intermezzo (Romeo and Juliet), Gounod. A short talk on "Form in Music," by the Rev. John Henry Hopkins Part II—Modern Composers: Organ—(*a*) Grand Chorus, A. Hollins; (*b*) Christmas Reverie, Gounod. Vocal—"Hosanna," Granier. Organ—(*a*) Canzone, King Hall; (*b*) Finale, Lemmens.

A program was prepared for the first public concert of the Manuscript Society, of New York, held at Mendelssohn Hall, on Saturday, January 19, which exhibited the work of that organization under its present new policy in a very favorable light, the works, as a whole, being of an exceptionally high standard. A full orchestra was employed at the concert, and among the composition presented were the Overture to "Melpomene," by George W. Chadwick; "Sceues from Luxemburg," by Carl Beckel; "Engel's Concert" by H. H. Wetzler, and a "Concert Overture" by Henry K. Hadley Miss Jessie Shay played two movements of the Moszkowski piano concerto.

The first concert of the Beethoven Chamber Music Club, assisted by Miss Mary Syer Bradshaw, contralto, was given at the Congregational Church (the program does not state where), on Friday evening, Jauuary 18th. The artists were Fred G. Bradbury, first violiu; J. H. Flaaten, second violin; I. N. Sodahl, viola; Gaston Borch, 'cello; Gerard Touning, Piano. The concerted numbers were: Quartet—in D, for strugs, Josef Haydn; Allegro di Molto, Unpoco Adagio Affettuoso, Allegretto Alla Zingarese, Presto Scherzando; Nocturne (for violin, 'cello and piano), Franz Schubert; Trio—in B flat, Op. 11, L. v. Beethoven; Allegro Con Brio, Adagio, and variations on a popular song.

The first of three subscription concerts (second season) by the Buffalo, N. Y. Trio Club, was given on Wednesday evening, January 19. The program follows: Trio in G minor, Op 33, Karl Goldmark. Dedicated to Pablo Sarasate. Allegro con moto; Scherzo; Andante sostenuto; Allegro. *a* "Fair Star, be True," *b* "Love's Message," *c* "Dreaming," from Op. 106, Franz Bendel. Scherzo from Trio, Op. 27, Eduard Schütt. Dedicated to Anton Door. *a* "Yea Who Have Yearned," *b* "To the Murmuring Stream," *c* "Oh, Thou Art Like Unto a Flower," Jaroslaw de Zielinski. Trio in G minor, Op 15, Friedrich Smetana. Moderato assai; Allegro, ma non agitato (with two Alternatives); Finale.

Thomas Preston Brooke and his famous Chicago Marine Band are engaged to appear for a p riod of four weeks at the Pan-American Exposition, at Buffalo, and are just now making a tour of the United States with great success. As a conductor Brooke ranks well, he understands the army of instruments under him and uses the g.eatest discretion in the study of balaneing and changing the balance of tone Much of his success has been due to his ability to make a diagnosis of his band, so to speak; whether a radical reconstruct-on of the organization be necessary or a special exercise or rehearsal are needed by a few members or more. There is something reassuring and pleasing in the quietude of Mr. Brooke while conducting; he does not find it necersary to brandish a baton like the whip of Tisiphone or belabor the atmosphere. In the capacity of programmaker he is an adept: he satisfies the musician and enforces his claim to public respect by the employment of classics and, on the other hand, does not forget his duty to the more popular productions of the present time. The many novel suprises he has in store are perhaps among his greate t glories.

A concert by St. Luke's (Dubuque, Iowa) Vested Choir, directed by William H. Pontius, was given on January 17. The program was as follows: Processional, "Rejoice, Ye Pure in Heart," Schmitt; "The Coming of the King," Dudley Buck; Recessional, "Ten Thousand Times Ten Thousand," Dykes; Te Deum Laudamus (in B minor), Buck; Fanfare (Organ Solo), Lemmens; Cavatina (Violin Solo), Raff; "Honor and Arms" (Samson), Handel; Festival Cantate Domino (in D) Pontius; "The Celestial City" (Piano and Organ—Violin Obligato), Pontius; "The Sailor Boy's Glee" (Unaccompanied), Fearis; "My Heart at Thy Sweet Voice" (Samson et Delila), Saint-Saëns; Soldiers' Chorus (Faust), Gounod.

The regular choral service of the Central Congregational Church, Philadelphia, Pa., was given on Thursday evening, January 27, under the direction of Organist and Choirmaster Maxson. The program was excellent Mr. Maxson played the following numbers at the one hundred and forty-first free organ recital of the Drexel Institute, Philadelphia, Pa., on the evening of January 21: Sonata, in the style of Handel, W. Wolstenholme (English); Introduction, Allegro, Largo, Minuet; Andante, from Fifth Symphony, Wolfgang Amadeus Mozart (German, 1756-1791), (arranged for the organ by Frederick Maxson); Fugue, D major, Johann Sebastian Bach (German, 1685-1750); "The Holy Night," Dudley Buck (American, 1839- —); Allegro Cantabile, Fifth Symphony, Charles Marie Widor (French, 1845- —).

ABROAD.

At the Grand Opera, Paris, Wagner's "Tannhauser" has passed its 100th performance.

The Mozart Fountain, to be erected in the suburb of Wieden, is to be the work of the sculptor Wolek.

Edward Hopkins, who was organist of the Temple Church, in London, from 1843 to 1898, is dead. He was born in 1818.

Siegfried Wagner has completed the score of a new opera, "Herzog Wildfang," to which he has written the libretto.

S. Becker von Grábill, pianist, has nearly recovered from his accident of December 30, and will resume his recitals throughout the South—consisting of some forty engagements—on February 12

Haydn, Mozart, Beethoven, Paganini, Vieuxtemps and other famous musicians once frequented Artaria's historic music warehouse. The house, built in the sixteenth century, has been demolished.

Dr. Frederick G Shinn, author of Musical Memory and its Cultivation, lectured before the Incorporated Society of Musicians at 20 Hanover Square, December 8, on "Instrumental Music of the Nineteenth Century."

Intending visitors to Bayreuth this year who have not already secured their seats will probably not go, as the tickets for the "Nibelung's Ring" are already sold out, though the performances do not begin until the latter days of July.

Antonio Carlos Gomes, composer of "I Guarany," and the only native musician of Brazil who has hitherto achieved a European reputation, died in 1896. A monument is about to be erected to him at Campinas where he was born on July 11, 1839.

The house of C. F. Peters, music publishers, recently celebrated its centenary jubilee. Among the earliest publications of this firm were Beethoven's Pianoforte Concerto in B♭, the famous Septet, the First Symphony and the Sonata in B♭, Op. 22.

Dr. Cowen, the well-known British conductor and composer, seems to be something of a humorist, as well as a musician. He is reported as claiming consideration for billiards on account of the affinity it has to music—the cues for players, the fiddles, the rests, and the canons, the big scores, and the bars outside.

When President McKinley is inaugurated at Washington, March 4, a new ode, written for the occasion by Frederick R. Barton, director of the Yonkers choral society, will be sung by a large chorus, with orchestral accompaniment. Mr. Barton has taken as his text "Freedom, Our Queen," by Oliver Wendel Holmes.

Crystal Palace Loan Exhibition of musical instruments and memorials of musicians. A catalogue of this recent exhibition has recently been issued in book form as one of the Crystal Palace hand books. The catalogue contains introductory notes by high authorities and abstracts of lectures delivered by Rev. F. W. Galpin.

The house in Gmünden, Austria, where Brahms spent much time in the later years of his life has been opened as a Brahms museum. It contains a number of interesting relics of the composer collected by his friend Victor Miller von Aichholz, including the furniture of his villa at Ischl, autographs of his compositions, his diaries and letters, pictures, busts and diplomas.

One of the most prolific of British composers is Frederick H. Cowen. He is at the same time conductor of the London and Liverpool Philharmonic Orchestras, of three societies in Bradford, and has, in addition, been recently appointed conductor of the Scottish Orchestra, an important post which has not been held by a British-born subject since the régime of Sir Arthur Sullivan, nearly a quarter of a century ago.

A refuge for poor musicians is to be established at Jena. The committee has been formed at Leipzig, under the presidency of the composer Zöllner. A philanthropist, who wishes to remain anonymous, has offered a fine piece of land of two thousand square metres on condition that the erection of the building be started within the next seven years. It is confidently expected that the needful funds will be forthcoming long before that time.

Strange though it seems, there is still living in Vienna an old lady, Frau Grebner, in her ninety-first year, who sang in the chorus at the first performance of Beethoven's Ninth Symphony. The great occasion sank deep into her memory, and she tells how the composer, smitten with deafness, came and stood among the performers in the hope that some of the music might reach his ears He followed closely with a score, but on the cessation of the music continued to turn the leaves, till a friend tapped him on the shoulder, and directed his attention to the applauding audience.

The Rev. Hugh Reginald Haweis is dead. In both of his Sunday sermons he spoke feelingly of the Queen's death. The next day he was stricken and remained unconscious until he died. He graduated at Cambridge, fought under Garibaldi in the war for Italian unity, and at the siege of Capua showed great bravery. He returned to London, accepted several calls and finally settled down as pastor of St. James, at Marylebone. He visited the United States in 1885, and spoke at the world's congress of religions in Chicago during the World's Fair. He published many volumes of sermons, was well-known as a lecturer, and served as editor of Cassell's Magazine. He will be remembered by American musicians as the author of "Musical Memories," "Music and Morals," and other works.

PUBLISHERS COLUMN.

"A Wild Rose," by Frederick A. Williams, with which the music pages open, is a beautiful song, simply but well written. The music is a very appropriate setting for the words. It is a good teaching song. "Blue Bells," by Carl Bohm, is an excellent piece of salon music. It is good practice, too, in playing the melody with first and second fingers of right hand, while the other fingers furnish part of the accompaniment. "Colonial Gavotte," by Carl Krause, is a very different style of music, but equally attractive. Its quaint, sprightly movement is certain to please. It is excellent for teaching. The "Mazurka," by Genari Karganoff, attracts one by its wild rhythm and weird melody. The trio, in F sharp major makes an effective contrast to the preceding F sharp minor subject. It is an excellent number for recital. "Song of the Elves," by Franz Behr, is a characteristic piece, quaint and yet brilliant. It is short, but none the less well adapted to general use. The next number, "Ring Around a Rosy," by Eilenberg, is another two page piece which contains much in its short compass. Its subjects are well-defined and the changes of key very effective. "The Coquette," by H. van Gael, is a coquettish little piece for young players. The supplement closes with an effective ballad, "Within My Heart," by Alonzo Stone.

***

THE MUSICIAN for February carries out many of the suggestions made in our announcement. The contents are practical, yet fresh and interesting. The Teachers' Forum contains a particularly valuable discussion; the institution of a fraternity for male music students is announced, and another instalment of the articles on Von Bülow's teaching is given. If we may judge by the inflowing stream of renewals and new subscriptions, THE MUSICIAN has unmeasurably strengthened its hold on the musical profession. The editor will be glad to have suggestions of any sort and will do all that can be done to comply with such as come within the limits of possibility.

***

Bound Volumes of The Musician. We have a very few copies of Vol. II (1897) and Vol. III (1898) bound in *full cloth* with gold stamp, while they last we will sell them at $2.00. At this price they should be gone in a few days. We also have a number of *unbound* sets of Vol. IV (1899) and Vol. V (1900), which can be had for $1.50 each postpaid. These volumes are even *more valuable to-day* than when published.

***

On Page 2 of Cover and Pages 33, 64 of this number we publish a Selected List of Fifty Pieces for the First, Second and Third Grades. These lists comprise a selection from our publications *most used* by teachers. There is a growing demand for meritorious pieces of the easier grades. Our efforts have been directed to the collection and publishing of the *best* that could be obtained in this country and Europe; that our efforts have been appreciated by our teacher patrons is attested by our large sales. A good teacher may seriously cripple his best efforts by ill-chosen music. A poor teacher can hold the pupils' interest and show good results by the proper selection of music. It is worth one's time to study selected lists, such as those mentioned above, and whose value has been proven.

***

Minature Pictures, Op. 39, Hugo Rheinhold (Hatch Edition No. 69) is the latest number to be added to this edition of standard works. It is a collection of 24 Easy Little Pieces. Its aim is to form a correct taste, and improve the technic of pupils. Almost every style of subject is included and every variety of touch employed. Explanations as to style and touch are appended to each number. Altogether, it is a most valuable collection for teachers to use with young pupils. See special introductory price on page 34.

***

How Many New Subscribers will You Send Us? Teachers say their best advertisement is their pupils. So a magazine will always pronounce its readers to be the most valuable medium for spreading its influence. Now, at the beginning of the new year, is the time when our readers can demonstrate their belief in the value of THE MUSICIAN as an educational factor. The large percentage of renewals is an indication of the esteem in which its readers hold it, but they can do the magazine, themselves, and the large army of earnest students who are ever seeking additional help, incalculable good by securing new readers for it. It is not necessary to use space here in pointing out its value as an aid to teaching and study; our readers know it and are constantly writing us about it. We want them to tell others as well as the publishers. If you believe in THE MUSICIAN, tell your pupils and friends, build up its clientele and every advance made in the subscription list will be reflected to you in additional improvements in the journal.

THE MUSICIAN should regularly reach *every* teacher and student of music. It will prove invaluable to those students who contemplate making a business of teaching. It is not only in the instructive articles, by leading writers, that THE MUSICIAN proves valuable to teachers. Its advertising pages are filled with announcements which will interest all teachers and students, and it will pay to consult them. If subscribers will send the names and addresses of those whom a magazine of this character will benefit, the publishers will gladly send a sample copy.

***

Our Publications are noted for correctness and beauty. We carry a complete line of all Foreign and American publications. Our facilities for promptly filling all orders are unequalled.

Our *Special Novelty Offer*—an original plan by which you can obtain one copy each of our new sheet music publications at nominal cost—will interest you. Full particulars will be sent upon application.

***

Are You Certain that you are buying your music at as good rates of discount as your fellow teachers? If not, you are doing business at a *disadvantage*. *We claim* that the discounts we allow teachers are MUCH BETTER than offered by other dealers, and unless you have had our latest quotations, you *cannot* be sure that you are not paying *more* for your supplies. This applies not only to our own publications, but to ALL the music you use. On our own publications we offer such liberal discounts (which will be supplied on request) that, no matter how far distant you are, or the cost of Postage or Express, we GUARANTEE you a saving when purchasing from us. In this connection you should remember that we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all that has not been sold or used. Full particulars regarding this department of our business may be had on request. We also offer numerous additional advantages which it is impossible to mention in the limited space of this page. *Write us!* No trouble to answer your letters and inquiries. It will pay you to correspond with a house that is progressive and up-to-date in all of its dealings. We can save you time, trouble and money. We suggest that you give us an opportunity to demonstrate this fact by sending us a trial order, it will bring us your steady patronage.

***

Send for Our Descriptive Catalogue of Sheet Music and Music Books, including recently issued Supplementary Bulletin. Sent to any address for the asking.

***

Agents Wanted.—THE MUSICIAN wants good, live representatives to solicit subscriptions. Those having a knowledge of music preferred. Full particulars, including sample copies, order blanks, other helps and terms, will be sent to all who desire to make a trial of this work. No other field of subscription work offers such liberal inducements.

***

If in need of a Metronome, one that will give entire satisfaction (all others are worthless) and last a life time, send your order to the Hatch Music Co.

We handle only the best makes, and guarantee every instrument for two years. All complaints receive careful attention and prompt adjustment. Our prices ($2.50 and $3.50) are very low—the same as those charged by others for cheaper makes—and we can offer an extra discount on orders for six or more instruments.

***

Our Offer to send a complete set—seven grades—of the "National Graded Course" (together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course") subject to examination and approval, without any obligation to purchase, is still open.

***

The publishers of THE MUSICIAN have exceptional facilities for printing sheet music and music books. Upon receipt of manuscript, with full particulars concerning the style of publication desired, we will submit complete estimate.

***

If you are not satisfied with the way in which your orders have been filled by other dealers, why not give us a trial, and test our ability?

It pays to deal with a progressive and up-to-date house. We can save you time, trouble and money—all of which are worthy of serious consideration. No trouble to answer letters and inquiries. Don't hesitate to write us.

As THE MUSICIAN is the broadest and best journal devoted to the educational interests of music, it should regularly reach teachers, pupils and all who are interested in music. The various departments are handled by experts, hence the subjects are fully and concisely treated. The contributors to these departments are writers of exceptional ability—recognized authorities. The miscellaneous musical literature is of a high order of excellence. Each number is a gem, worth many times its cost. It is the aim of the editor and publishers to keep the readers of THE MUSICIAN well informed on all new ideas in the art of teaching; to bring to their notice valuable aids and suggestions; to give helpful advice; to contribute to the accomplishment of more and better work. If a subscriber and reader, you know exactly what THE MUSICIAN can and does do for its readers. We earnestly request the co operation of music teachers in extending its circulation and field of usefulness.

NEW PUBLICATIONS.

The music, listed below, presents the second instalment of new publications, the first appearing in January. The compositions named have been selected from a considerable number and represent the best that reaches us. The piano pieces are principally in Grade III, although some will run into Grade IV, the Liszt transcription and the Chaminade pieces being still more advanced. The songs number some excellent compositions, notably those by O. Speaks.

SONGS.

Drink to Me Only with Thine Eyes. Stephen Townsend. Baritone or Mezzo and Soprano. Key F: D to F. 50c. A splendid song, dignified and thoroughly musical.
A December Night R Leoncavallo. Soprano, Key G. Mezzo, Key E flat. Soprano: D to A. 60c. Somewhat difficult, but thoroughly good.
I Love You Dear Heart. Fred. Swanson. Soprano or Tenor, Key F. Alto or Baritone, Key E flat. Baritone, E flat to C flat. 50c.
A Maiden's Way. A. L. Sowerby. Key F: C to E 50c.
Daddy and I. H. W. Loomis. Key B flat: B flat to E flat. 50c. Healthy in sentiment, fresh and characteristic in music despite its unpromising title.
To Learn 'Twas But a Dream Julien Edwards. Key D flat: E to A flat. 50c A typical ballad, useful and interesting.
Where Go the Boats? Cissie Loftus. Key G: D to D. 50c. Words are by Robert Louis Stevenson and are beautiful. Music is simple and pleasing.
Two Cities. H. Gray. High Voice, B flat. Low Voice, F. Low Voice: B to D. 50c. A typical popular ballad with refrain.
In a Garden Fair. A. Plumpton. Medium Voice in C. High Voice in E flat. High Voice: F to F.
If We, Dear Heart, Should Meet. E. C. Spofford. Key F: C to A. 50c.
The Minstrel. O. Cantor. High Voice, G; D to G. Low Voice, F; B to F. 50c. A spirited song.
Can It Be True? O. Cantor. Medium Voice. Key G: C to G. Low Voice F: B to F. 50c. A good song.
Three Songs—Tones Passing. E flat: C to E flat. The Everlasting Snows. E flat: B flat to E flat. Sleep, My Heart. D flat: C to D flat. B. Thompson. 75c. Three interesting songs.
O, Were My Love Yon Lilac Fair. E Ebert-Buchheim. A flat: B flat to F. 40c.
In May Time. O. Speaks. Key C: D to E. 60c.
Eyes of Blue. O. Speaks. E flat: B flat to F.
When Gazing In Thine Eyes So Dear. O. Speaks. Key F: B to E. 40c. The above are three excellent songs. They are well written and effective.

PIANO.

Hark, Hark! the Lark (Transcription). Schubert-Liszt. 60c.
In the Flowery Fields (Mazurka Brillante). O. Lebierre. 60c. A brilliant salon piece.
Valse Arabesque. Theo. Lack. 75c. An excellent waltz in this writer's well-known style.
At Home. H. Lichner. 40c. Characteristic of this composer.
Valse Bleue. Alf. Margis. 50c.
Hats Off to the Flag (March). Edw. W. Corliss. 50c.
The Caress. G. Barrett. 50c. Very good.
L'Ondine. C. Chaminade. 65c. Quite difficult and brilliant.
Moment Musical. C. Chaminade. 65c. Characteristic. Both the above are worth using.
On the Beach (Scherzo). J. A. Silberberg. 50c.
The Water Lily (Idyll). C. Mayo. 50c.
A Southern Reverie (Morceau Characteristic). Theo. Bendix. 60c.
The Payton (March). F. L. Callahau. 50c.
Olympia (March). S. C. Maker. 50c.
Bright and Early. J. H. Rogers. Op. 35, No. 1. 40c.
In Line of March J. H. Rogers. Op. 35, No. 2. 40c.
Larks and Thrushes. J H Rogers. Op. 35, No. 3. 40c.
With the Harvesters. J. H. Rogers. Op. 35, No. 4. 40c.
At the Mill. J. H. Rogers. Op. 35, No. 5. 40c.
Homeward Bound. J. H. Rogers. Op. 35, No. 6. 40c. The above constitute an exceptionally fine set of teaching pieces. They are in Grade II and beginning of Grade III. They are by a musician, are sure to inculcate good taste and are well written for teaching purposes, besides being really attractive to young players.
Adagio et Polonaise. F. A. Haberneck. For Violin and Piano. $1.50 An excellent contribution to ensemble music. It is worthy wide use.
Fanchette, Entre'acte. Theodore Bendix. 50c.

OCTAVO.

SACRED.

Saviour, Source of Every Blessing. R. Kinder. 12c.
He Hath Risen. J. C. Macy. 10c.
There Is a Blessed Home. F. H. Brackett. 12c.
All Hail! Bright Resurrection Day. P. Greely. 12c.
The Day is Gently Sinking to a Close. A. W. Lansing. 12c.

VOICE AND PIANO.

Geibel, A. Sleep, Sleep, My Little Baby, Sleep. G e f 50
"Baby's in the cradle,
Hush! don't make a noise."
The pathetic simplicity of the story and its lovely musical treatment, combine to make one of the very best lullabys.

Sudds, W. F. Academy (The) Bell. Duet or Chorus. C. b-g 40
Extremely useful for school work. Can be used as duet for female voices, or as two part chorus with soprano solo. Words by Margaret E. Sangster.

Williams, F. A. Wild (A) Rose. E♭, e-f . 35
"As it grows in God's own garden,
A lovely wayside rose."
Pleasing poem set to a flowing melody of reasonable compass.

PIANO SOLOS.

Ascher, E. Op. 77. Tale (A) of the Amazons (Amazonen Idylle). Grade II, . 35
Piquant, yet dainty sketch.

Blied, J. Op. 25, No. 3. Stormy Night (Stürmische Nacht). Grade III, . . . 25
A fascinating little descriptive piece that is sure to please.

Eilenberg, R. Op. 48. Amaranthe (Tausendschön). Grade III, ... 30
Graceful tone piece of very attractive quality.

Eilenberg, H. Mail (The) Coach in the Woods (Die Post im Walde). Grade II. 30
Good study in finger work, with contrasted legato and staccato, and in broken octaves.

Eilenberg, R. Op. 188. Standard (The) Guard. March. (Die Fahnenwache). Grade III, ... 35
Stroug and inspiring quick march.

Gänschals, C. Op. 222. By the Millstream (Am Mühlenbach). Grade III, ... 30
Makes pleasing exercise in octaves, broken and otherwise.

Gänschals, C. Op. 224. Graziella. Melodic Sketch. Grade III, ... 30
Charming melody, principally in octaves and light chords.

Heins, C. Op. 177. Alpine Shepherdess (Die Alpenschäferin). Ländler. Grade II, ... 30
Tyrolean melody in this pleasing writer's best style.

Heins, C. Op. 187. At the Fireside (Am stillen Herd). Tone Piece. Grade II, 30
Fine melody study; pleasing and profitable.

Hollaender, V. Op. 3, No. 1. Spring Song. Grade III, ... 30
Melody accompanied by downward arpeggios of rapid sixteenth notes. Pretty melodic study.

Kügele, R. Op. 179, No. 2. Do Love Me! 35
Dignity and grace are nicely combined in this pleasing piece.

Kügele, R. Op. 179, No. 3. Happy Return (Fröhliches Wiedersehen). Grade III, 35
In the undulating style of a barcarolle; pretty and easy.

Kügele, R. Op. 157, No. 2. In Blooming Meadows (Auf blumigen Pfade). Sketch. Grade III, ... 30
Excellent and attractive example of connected sixths and thirds in moderate movement.

Kügele, R. Op. 179, No. 1. Longing (Heisses Erinnern). Grade IV, . . . 35
Song without words giving fine scope for sustained melody playing.

Pessard, E. Op. 41. Circassian Dance (Circassienne). Grade IV, ... 40
Oriental sketch of beauty and originality.

Pessard, E. Op. 43. Presto. Grade V, . . 40
In the style of Rameau, Couperin and other ancient French writers. Requires finger dexterity.

Rickaby, T. L. Op. 23, No. 3. Contentment. Sketch. Grade II, ... 35
Romance of peculiar beauty; work well distributed between hands.

Rickaby, T. L. Op. 23, No. 2. Evening (An) Melody. Grade III, ... 35
Song without words in slow waltz form.

Sartorio, A. Op. 338. Caprice Militaire. Grade III, ... 50
Spirited and dashing; the trio offers a quiet contrast.

Scharf, G. Op. 72. Sounds from the Meadow (Klänge von der Puszta). Grade III, ... 35
The dignified movement of the beginning merges into a stirring Bohemian mazurka.

Schytte, L. Op. 22, No. 7. Over the Steppes (Uber die Steppe hin). Tone Poem. Grade IV, ... 35
Good for study in staccato. Calls for considerable endurance, but a very effective piece of salon music. Requires well controlled arm and wrist

Sudds, W. F. Op. 256. Rustic (A) Revel. Grade III, ... 35
Has many good and pleasing points; useful for recreation or study.

Tourbie, R. Op. 230. Express (The) Train (Der Schnellzug). Galop Brillant. Grade III, ... 40
Brilliant solo for those who can play octaves.

Magnificent Half-Tones OF THE Masters

WITHOUT EXCEPTION THE BEST PORTRAITS EVER OFFERED AT ANY PRICE.

NOW READY: BACH, BEETHOVEN, BRAHMS, CHOPIN, GOUNOD, HANDEL, HAYDN, LISZT, MENDELSSOHN, MOZART, RUBINSTEIN, SCHUBERT, SCHUMANN, TSCHAIKOWSKY, WAGNER, WEBER.

Eminently worthy of framing, and of a conspicuous position in music studio or library. In addition to portrait, each sheet has the name of the Master, together with the dates of birth and death, neatly printed.

Price, Postpaid, Only 15c. Each.

Fletcher Music Method
(SIMPLEX AND KINDERGARTEN)

The aim of the Method is to eliminate the drudgery of the study of music and to give a fundamental, systematic and logical musical education in a thorough, natural and pleasurable way; and so make it possible for Music to exercise her three-fold power of development. The System was originated by Evelyn Ashton Fletcher, and the following are a few of the many endorsers and a partial list of the Conservatories in which the System has been adopted.

Dr. Wm. Mason, New York.
Mrs. John Vance Cheney.
Madame Hopekirk.
Philip Sousa.
Franklin Taylor.
Dr. Gerrit Smith, New York.
Wm. Tomlins, Chicago.
Dr. Hugo Riemann, Leipsic.
Thomas Tapper.
Dr. Wm. Cummings, London, Eng.
Kate S. Chittenden, New York.
And others.

University of the State of New York.
Institute of Applied Music, New York.
Departments—Metropolitan College of Music, Metropolitan Conservatory of Music, American Institute of Normal Methods, Synthetic Piano School, Fletcher Music Method.
American Conservatory, Chicago.
Gottschalk Lyric School, Chicago.
Mrs. John Vance Cheney School, Chicago.
Detroit Conservatory.
Broad Street Conservatory, Philadelphia. And others.
Also in the Eleven Leading Conservatories or Colleges of Music in Canada.

There are already over 250 teachers of the System, but the demand is greatly increasing. Miss Fletcher studied for five years in Europe, and has already successfully introduced her System in the European centres, Leipsic, Berlin, Brussels and Paris. Special advantages to those willing to go abroad with the System. The different sets of apparatus invented by Miss Fletcher are fully protected by patents in Canada, the United States, England, Germany, France, Switzerland, etc. This System can not be taught by mail, and the Fletcher certificate of authorization to teach is only obtainable, with the apparatus, by taking the course of instruction. Write for information and circulars with letters of endorsement, to Miss Evelyn Ashton Fletcher, 1125 Madison Ave., or Mrs. E. A. Sturgeon, 5155 Cornell Ave, Chicago, or to the Corresponding Secretary of the Fletcher Musical Association, Miss La B. Brown, the Nightingale, Dudley St., Roxbury, Boston.

THE "HATCH EDITION" OF
Cramer's 50 Selected Studies.
Systematically Arranged. Fingering and Marks of Execution Critically Revised, with Instructive Notes. Exhaustive Preface.
Edited by DR. HANS VON BÜLOW.
English Translation by LOUIS ROTHFELD.
A new, correct and elegant edition of these celebrated studies. The belief that there was room for another edition was based upon the fact that all others, whether good, bad or indifferent, sell for $2.50 per copy, while this, which is superior in many respects, is offered for $1.50—a reduction of 40 per cent. from the established price. The reduction in price does not, in any way, reduce the quality of the work, as the plates, paper, printing and binding are of the highest order of excellence.
Paper Binding, Cloth Back, Price, $1.50.

Exercises, Scales and Arpeggios.
By HAMILTON C. MACDOUGALL.
This work contains exercises for the various technical points in piano playing; the scales (major and minor) with their fingerings; directions for the formation and fingering of arpeggi of the common chords of the keys, chords of the dominant and diminished seventh, etc., etc. It is, however, very much more than this. The exercises are entirely out of the beaten track, and are explained so that any pupil can understand the manner of practice. The same plan is followed with regard to the scales and arpeggi making the work valuable for instruction in technique. We cordially commend it to all teachers who wish to get out of the ordinary rut of technical teaching. For purposes of self-instruction, it will be found very valuable.
Paper Binding Price 50 Cents

Musical Rhythms for Piano. By Arnold D. Scammell.
With an Introduction by MRS. CROSBY ADAMS. Of interest to every Teacher. Pupils are delighted with them. Develops a refined musical taste. The Introduction is well worth the price.
Attractively Bound. Price, $1.00.
This book is the direct outgrowth of a need expressed by both teachers and pupils for certain definite rhythms which shall suit the times which come to all of us, when something "in lighter vein" is demanded. To supply this need, by giving marked rhythm as well as tuneful melody is the task set himself by the composer, Mr. Scammell. That these requirements have been met, the work itself is the evidence. The pieces lie well under the hand, do not require much technical equipment, and, best of all, carry themselves easily along by the charm of the rhythm. Mr. Scammell has been fortunate in having the experienced judgment of Mrs. Crosby Adams in the preparation of his work. Teachers will welcome to their teaching list these compositions suited to the natural and healthy demands of a certain phase of the pupil's experience because, while the pieces are indeed "light" they are not commonplace, and will therefore help instead of hinder the progress of the pupil's development towards a refined musical taste.

Pretty Picture Songs for Little Folks
By G. A. Grant-Schnefer and Walt M. Dekalb. .75
What the Chicago Press says of it:
"Artistically there is not a more attractive juvenile book on the market."—Chicago *Times-Herald.*
"The melodies are attractive and catchy."—Chicago *Tribune.* "Should be in every Christmas stocking."—*The Elite.*

Wee Wee Songs for Little Tots
By C. H. McCURRIE and WALT M. DEKALB. .50
Nearly 5,000 sold and demand constantly increasing. Praised by old and young alike.

Songs That the Children Sing
By MRS. L. D. FESSENDEN and MRS. V. A. BARBER .75
Contains two charming operettas and six solos. Nothing better can be found for school and home use. Both words and music are captivating.

A SELECTED LIST OF

FIFTY FIRST GRADE PIECES

FOR

TEACHING AND RECREATION.

Any of our publications sent subject to examination. Complete Illustrated and Thematic Catalogue free on application. Send for our Special Prices. Mail Order Business Solicited.

BEHR, F.

Op. 503, No. 30. Au Revoir (Auf Wiedersehn) 20
A tender little melody, which sings out its good-bye hopefully. Requires a loose, quiet wrist and singing legato finger touch.

Op. 508, No. 18. Bird's Message (Vögleins Botschaft) 20
This makes somewhat greater demands on the player. Its bird imitation makes use of the added lines, which must be read quickly. A light wrist and flexible fingers are needed.

Op. 426, No. 1 Congratulation (Glückwunsch) 20
These congratulations are hearty and the piece should be played sturdily, but with no tendency toward hardness of touch. It is a useful teaching piece.

Ethel Polka 20
A sprightly little dance, bright in melody and easy in accompaniment. A good study in wrist touch and staccato.

Op. 575, No. 23. Farewell to Home (Abschied von der Heimath) 20
Somewhat similar in nature to Au Revoir, but more difficult. It is very pretty and sure to please the pupil.

Op. 575, No 1. French Child's Song (Französisches Kinderliedchen) 20
A quite easy first piece with a good tune to it. It is entirely in position.

Grandpapa's Dance (Grossvater's Tänzchen) . 20
Grandpapa must be a jolly old fellow, for his dance is quite gay. Another good exercise in wrist staccato.

Op. 575, No. 2. In the Month of May (Im Mai) 20
A song of spring, bright and tuneful. It is a good first piece.

Op. 426, No. 5 Italian Song (Italienisches Lied) 20
This requires more musical perception from the pupil and, given at proper time, will be a good study in phrasing. The reiterated chords in left hand must be watched.

Kindergarten Waltz 20
A very graceful waltz, not hard to play, but pleasing. Should be carefully phrased.

Night in May (Mainacht) 20
This is a splendid piece for teaching purposes. It is clear in form, interesting in treatment and attractive in melody and harmony.

Night Patrol (Nächtliche Runde) 20
A good staccato is demanded in this piece. Its martial character is pronounced. Bright and interesting.

Parade of the Guard (Wachtparade) 20
Somewhat similar to the preceding, but more lively. Partakes more of the character of the two-step. We can easily imagine the guard swinging by at double quick.

Op. 426, No. 3. Star Greeting (Sternengruss) . 20
Of quite different style. Phrases are well marked and a smooth, singing legato is necessary in both hands.

BIEHL, A.

Op. 53, No. 2. Dance on the Lawn (Tänzchen im Freien) 20
This dance shows the frisky disposition of the dancers. It is not difficult, but pleasing.

Op. 52, No 14. The Clock (Die Wanduhr) . . 20
Very characteristic. The left hand adds much to the effect and should be well played.

Op. 53. No. 7. Garland Weaving (Beim Kränzewinden) 20
A beautiful little piece. The second part makes some demands upon the left hand. Well worth study.

Op. 52, No. 15. Little Soldiers' March (Kleiner Soldaten Marsch) 20
An attractive study in chord playing in left hand, with a good tune in the right. Not hard, but pleasing.

Op 52. No. 10 Picnic Dance 20
Exemplifies its name. A jolly dance, such as happy picnicers would indulge in. Good teaching piece.

Op 53, No 1. Wild Rider (Der Wilde Reiter) 20
A good descriptive piece, requiring firm tone and light wrists and arms. Good study.

BOLCK, O.

Op. 68, No. 1. Weaving Garlands (Beim Kränzewinden) 20
A very tuneful melody with broken chord accompaniment. Attractive without undue difficulty.

ENGELMANN, H.

Op. 408 No. 4. Humpty Dumpty Schottische 25
A brisk Schottische. Like all of Engelmann's pieces, it is full of melody and interestingly harmonized.

Op 422, No. 3 King's Delight Mazurka . . . 25
A characteristic Mazurka by same author. Good practice in phrasing. Not difficult.

Op. 408, No. 5. Little Boy Blue March 25
A good march. Excellent practice in wrist touch. Sure to please.

Op. 408, No. 1. Mother Hubbard Waltz . . . 25
A graceful waltz, no hard places to discourage the young player.

Op. 422, No. 5. Old King Cole's March . . . 25
A bright piece, good for teaching purposes and sure to interest the pupil.

Op. 422, No. 1. Start Up Waltz 25
Sure to start the pupil to practicing it with vigor. It is easy, bright and jolly.

GOERDELER, R.

Lullaby 25
A beautiful melody which gives opportunity for cultivating a singing tone. Very interesting.

Merry Go-Round 25
A joyous little piece. Phrases are well defined, and will aid the pupil in understanding simple form.

Sweet Evelyn Waltz 25
An attractive little waltz of no particular difficulty. Melody of first part is in left hand. Effect of tie is good.

GURLITT, C.

Op. 130, No. 6. March of the Tin Soldiers (Zinnsoldaten Marsch) 20
Melody is given out by right hand and is then repeated in left. In six-eight measure. Very good.

HELLER, M. P.

Op. 6, No 3. On the Playground (Auf dem Spielplatz) 20
A good study piece. The slurs give practice in lifting hand after binding two notes. A contrasted legato melody in second part should be carefully played.

HILLER, P.

Op. 66, No. 2. Grandmother's Dream 20
An excellent study piece. Its subjects are well contrasted and the work is evenly distributed.

Op. 66, No. 3 Lonely Rose 20
In the minor. The loneliness of the flower is told quite well. A singing legato and a chance for expression are its distinguishing features.

KÖHLER, L.

Op. 210, No. 4. At Home (Am Gemüthlichen Plätzchen) 20
Quiet contentment characterizes this little piece.

KÜGELE, R.

Doll's Dance (Puppentanz) 20
There must be lively dolls, for this dance is full of go. Beside being a good teaching piece, it is sure to please.

LANGE, G.

Op 249, No. 1. In Rank and File 35
Erect and vigorous these soldiers march by. Occasionally the roll of the drum is heard. Not difficult.

LICHNER, H.

Op 78, No 4 First Ball. Rondino 35
Some good finger work can be gotten from this piece, which is tuneful and gay. A crisp staccato is necessary also.

Op. 57, No. 3. Twinkling Feet Waltz 20
Simple and free from catchy places, this waltz is nevertheless very attractive. If played daintily, it is very characteristic.

MERKEL, G.

Op 31, No. 1. Children's March (Kindermarsch) 20
Short, but it is full of music. It should be played with decision.

PRIDHAM, J.

Fairies' Waltz 30
Its two subjects require somewhat different treatment. The first, a quiet hand and firm finger touch. The second, a light wrist touch changing to a finger touch for the runs. Very bright and pleasing.

REINECKE, C.

Op. 107, No 12. Children and Cuckoo (Kinder und Kukuk) 20
The children's song and the call of the cuckoo are heard here. The children at times break off their song to imitate the bird. Instructive as well as pleasing.

RUMMEL, J.

March 20
A good example of this form. Bright and effective.

SARTORIO, A.

Op 229, No. 7. Dreams of Youth (Jugendträume). Polka Mazurka 20
Good practice in dotted-eighth and sixteenth rhythm, and in double notes. Tuneful and without hard places.

Op 229, No 2. Italian Song (Italienisches Liedchen) Barcarolle 20
A singing melody with a broken chord accompaniment. Excellent practice in phrasing.

Op 229, No. 3 Military March (Militair Marsch) 20
A good march somewhat more difficult than those before mentioned. Well controlled arms and hands are needed. Results will be good.

SCHUMANN, R.

Op. 68, No. 10. Happy Peasant (Fröhlicher Landmann) 20
Too well known to need comment. With it is a Hunting Song, which is an excellent companion.

THOMÉ, F.

Melodie 20
A very beautiful piece. Its exquisite melody should be played with a full singing legato. The first bass note of each measure is staccato, making a peculiarly effective accompaniment.

WOLFF, G. T.

Op. 25, No. 11. Mill by the Brook (Mühle am Bache) 20
Brisk and characteristic. The clatter of the mill is given first with the right, then with the left hand.

WOOLER, A.

Golden Sunset 25
Especially useful for the running work in left hand. Very pleasing.

Published by **HATCH MUSIC COMPANY**, Philadelphia.

CHOICE NUMBERS

FROM THE

"Hatch Edition"

Diminished reproduction of cover plate used on the "Hatch Edition."

All numbers included in this list have been carefully edited and annotated by leading American teachers, our corps of editors including: W. S. B. Mathews, Wm. H. Sherwood, Frank H. Tubbs, Frederic W. Root, R. S. Goldbeck, Jaroslaw de Zielinski, J. S. Van Cleve, Thos. a'Becket, Wilson G. Smith, H. C. Macdougall, Bernhard Listemann, etc. This important work has never been attempted by any other publisher. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Regardless of the additional expense involved in the publication of annotated editions, prices have not been advanced, but are the same as those charged for ordinary reprints of the works included in this list.

No. 28. BURGMÜLLER. Op. 100. Twenty-five Easy Studies for the Pianoforte 1 00

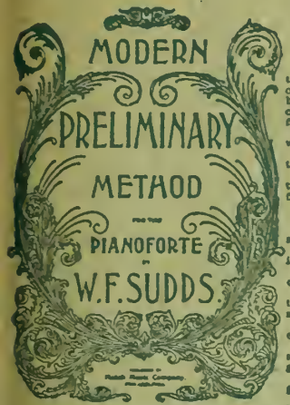
MODERN PRELIMINARY METHOD
FOR THE PIANOFORTE

Embodying the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation



By W. F. SUDDS.

As its title implies, this Method is modern, contains the newest ideas and their practical application. The bulky and voluminous instruction book is a thing of the past. The Method of to-day deals with more subjects than its predecessors, but deals with them in a terse and effective manner. It recognizes the importance of practical exemplification of the principles involved, but wisely leaves the application of various points to future study.

Among the many excellent features of the Modern Preliminary Method, we direct attention to the following:

The Rudiments are very progressive and explained with such clearness that the pupil cannot fail to comprehend them.

The various Touches are clearly set forth and are accompanied by illustrations, drawn and engraved expressly for this work, showing the movements of finger, hand and arm.

The Principles of Touch and Technic are illustrated by examples.

The Scales are introduced in an effective manner.

Proper Use of the Pedals, a matter generally disregarded, is given particular attention.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

Five-finger Exercises are judiciously used, but not in the usual enormous quantity that disgusts and discourages the pupil.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a Complete Preliminary Method—a work which cannot fail to interest both the practical teacher and the earnest student.

MODERN PRELIMINARY METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates on the best grade of music book paper.

Half Cloth Binding. Price, $1.00.

Magnificent Editions of Standard Piano Methods

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of national reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

Köhler's Practical Method for the Piano. Op. 249. Vols. 1-2-3. Paper Binding. Each $ 75
Revised, Fingered and Annotated by Thos. a'Becket.

The only ANNOTATED edition; the only edition in which the PHRASING is presented in accordance with the latest and most advanced ideas; the only edition that has had a comprehensive and thorough revision.

Löw's Practical Four Hand Piano Method. Vols. 1-2 . . . . . Paper Binding. Each $ 75
Revised, Fingered and Annotated by Wilson G. Smith.

Designed as a companion to all books of instruction for the piano, this method is a favorite with teachers. The perfect ensemble players are those who blend their individual characteristics in order to form a perfect whole, and this important accomplishment may be obtained by careful and conscientious study of Löw's Method.

Wagner's First Instructor for Young Beginners. Vols. 1-2 . . . Paper Binding. Each $ 75
New and Revised Edition. English and German Text.

This work, designed for the instruction of young beginners, presents a thorough and exhaustive course for the systematic training of children. The original edition (published with German text only) is a great favorite with leading German teachers in this country, while it holds a commanding position in Germany where it is a recognized standard not only for children, but for adults who take up the study of the piano.

All works included in the "HATCH EDITION" are printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Ask for the "HATCH EDITION," and take no other if you want the best.

KULLAK'S SEVEN OCTAVE STUDIES
From the School of Octave Playing. Op. 48, No. 2.
Revised and Annotated, with Introduction and Practical Directions for Study, by

WILLIAM H. SHERWOOD.

While numerous exercises for the practice of octaves have been presented to the musical world by virtuosi and masters, Kullak's is the only method or "School" of octave playing that has become a standard. But good as they are in their original form, it is remarkable how much the usefulness of these studies has been enhanced by Mr. Sherwood's revision and annotations. A broad foundation embodying the general principles involved and the method by which the end may be most satisfactorily attained is laid in his Preliminary Remarks; instructions and suggestions for technical preparation are given in his "Notes on the Studies;" each study is *treated in detail*. Each movement of the hand and arm is designated by an ingenious device and these characters, elaborately used throughout the text, show the student *exactly* how the hand should approach and leave the keyboard in performing various passages. The progressive teacher will appreciate the importance of Mr. Sherwood's editorial work, and especially so since he gives, for the first time, his system of of instruction in octave playing.

Regardless of the great expense involved in the preparation of this edition, the price is the same as that charged for the ordinary reprint.

Paper Binding. Price, $1.25.

Magnificent Editions of Piano Studies

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of national reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

BUSSLER'S PRACTICAL HARMONY
Newly Revised and Corrected Edition
Authorized Translation from the Third German Edition by N. GANS.

Without exception, the best and most practical work on this subject ever published. The author is a noted German theorist, whose works are known, used and held in high esteem at all the most prominent European colleges and conservatories. The demand for PRACTICAL HARMONY has been so great that three revised editions have been printed in Germany. Ours was translated from the third German edition, by a writer selected by the author. It is, as its title indicates, a thoroughly practical work, embracing the latest and most approved methods. It is simple, is illustrated by practical examples, and is eminently suited for a self-instructor. Its price brings it within the reach of all.

For class instruction or for self instruction, Bussler's Practical Harmony is unequalled. It makes the study of harmony easy, rapid and entertaining.

Cloth Binding. Price, $1.00.

THE HARMONIZING OF MELODIES
A Text Book for Students and Teachers
By HENRY C. BANISTER.

The harmonizing of melodies, generally termed the knowledge of harmony, is one of the most practical applications of the knowledge of chords and their treatment. One may know the meaning of a number of words and still be unable to construct a sentence; he who lacks the ability to use chords in harmonizing a melody is in a similar position.

"Harmonizing of Melodies" will prove a most helpful aid to the student of harmony. It is extremely practical and abounds in examples which will readily be understood. No point has been overlooked, and all important subjects are treated at considerable length. Various methods of handling the same melody are shown, and valuable information as to the best choice, with reasons for the selection, are given. Many excellent hints as to taste and ornamentation, culled from the experience of the writer, are included.

Paper Binding. Price, 50 Cents.

DICTIONARY OF MUSICAL TERMS
100 Pages. By STAINER and BARRETT. 6 x 9 Ins.

Compressed from the Imperial 8vo Edition, by K. M. ROSS.

We take pleasure in presenting a compressed edition of Stainer and Barrett's valuable work. Mr. K. M. Ross, in his preface, says: "In reducing this book from the author's larger work, we have endeavored to omit only such terms as are not in general use, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits. To the general public it is hoped that this edition will be found of practical utility."

"Dictionary of Musical Terms" is a neat and attractive book. It is offered at a nominal price with the hope that it may prove of incalculable value to those in need of a handy reference book.

Paper Binding. Price, 25 Cents.

Modern Method for the Reed Organ

Embracing the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation; also Containing Various New and Important Features, such as Registration, Stop Nomenclature, Adaptation of Piano Music, etc., etc., Not to be Found in Any Other Work of the Kind

By W. F. SUDDS.

As the title implies, this method is modern, the newest ideas, and their practical application, governing its compilation. It treats all subjects in a terse and effective manner.

Among the many excellent features of the MODERN METHOD, we direct attention to the following:

It begins with Dictated Lessons.

The Rudiments are explained with remarkable clearness.

It is Carefully Graded.

It is sure to Awaken the Musical Instincts of the pupil without smothering the soul with too much drudgery.

The Fingering is the so-called Foreign, thus according with all the better class of modern musical publications for either Organ or Piano.

It contains a complete treatise on registration as applied to the modern Reed Organ; also full information and comparison in the matter of Stop Nomenclature.

It is the only work of the kind treating the subject of Adapting Piano Music to the Reed Organ.

Every variety of Touch is clearly set forth, accompanied by illustrations (drawn and engraved expressly for this work), showing the movements of finger, hand and arm.

The Scales are introduced in an effective manner.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a work which cannot fail to interest both the practical teacher and the earnest pupil.

MODERN METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates and on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

NATIONAL GRADED COURSE

DR. WILLIAM MASON.

The Only Method of Piano Instruction

ILLUSTRATED BY AMERICA'S MOST DISTINGUISHED TEACHERS AND PIANISTS.

A Practical, Comprehensive and Thoroughly Graded Course.

THE NEW GRADUS AD PARNASSUM

Embodying the Latest and Best Ideas in Pedagogy.

WILLIAM H. SHERWOOD.

N. H. Allen
Chas. Davis Carter
W. B. Colson, Jr.
Henry G. Hanchett
Benj. L. Whelpley
Harrison M. Wild
Herve D. Wilkins
Arthur L. Manchester

GRADE 1.

The Corner Stone of the Course.

Table Exercises: Instructions from the Very Beginning, Most Carefully Graded; Difficulties Introduced in Logical Order; Interesting Exercises and Etudes; No Octaves; Exercises for Free Wrist; Major Scales—*Written*, but *not* Played.

GRADE 2.

Introduction of Scale Playing: Exercises for Passing Under the Thumb; Minor Scales Written; Beginning of Arpeggio Work (Broken Chords); Major and Minor Chords Awakening of the Ideal of the Singing Touch; Interesting Etudes; Careful Grading of Difficulties.

The Preparatory Gymnastic Exercises, in Grade 1, are Practical and Helpful.

GRADE 3.

Velocity Assumes Some Importance; Attention Given to the Staccato, while Cantabile Playing Is Carried Along with Equal Care; Etudes Become More Like Pieces; Polyphonic Playing Introduced; Exercises for Weak Fingers in Each Hand.

GRADE 4.

Polyphonic Playing Carried Forward; Rhythmical Problems (Two Against Three) Introduced; Greater Richness in the Etudes; Etudes for Melody Playing, Rapid Runs, Trills, Arpeggi, Marked Rhythms, Extreme Agility, Fourth and Fifth Fingers Interest Maintained Throughout the Grade.

GRADE 5.

Musical Material of Great Beauty; Etudes for Left Hand, Octaves, Polyphonic Playing, Staccato, Double Notes, Grand Arpeggi, Fourth and Fifth Fingers. In Singing Tone, Touch, Velocity and General Intelligence, Much More is Demanded of the Pupil.

GRADE 6.

Etudes for Extended Finger Touches, Staccato, Doubl Notes, Extreme Rapidity in Staccato and Runs; More Attention Given to Octaves; Pupil's Task Steadily Increasing in Difficulty—Greater Requirements in Regard to Touch, Interpretation, Color and Phrasing.

GRADE 7.

Pieces and Etudes by Saint-Saëns, Henselt, Kullak, Chopin, Mendelssohn, Raff, Alkan and others. These, Making Greater Demands upon the Pupil, advance his Technical Skill to the Highest Efficiency and Insure Ability to Interpret the Greatest Works for the Piano.

Several Opinions.

WILLIAM H. SHERWOOD: I am happy to state that the "National Graded Course" is remarkably adapted to the needs of teachers and students of music. Your claim in regard to the excellent grading of the studies is a thoroughly just one. I do not think that I have ever seen as good a succession of topics and exercises arranged as they are from the beginning on, using the best kind of materials from all sources and without any superfluous pages.

WILSON G. SMITH: I have been particularly impressed with the practical value and uniform excellence of the "National Graded Course."

AD. M. FOERSTER: The "National Graded Course" is destined to hold a foremost position among the works of its class. I do not know of a better work, one containing a more interesting and valuable selection of studies and pieces for the various peculiarities to be mastered. A list of desirable pieces that may be added to each part, if found necessary, is given in each grade, also definitions of all musical terms used in this work. The work is bound to find favor with thoughtful teachers and students.

O. R. SKINNER: I like the "National Graded Course" much better than any other work I am familiar with. The editing seems to be thoroughly well done, and the print leaves nothing to be desired.

(Want of space alone prevents printing the opinions of hundreds of well-known teachers in all sections of the United States and Canada.)

It Will Help YOU in Your Teaching.

Because

- It embodies the work of the most eminent pianists and teachers in America.
- It can be readily adapted to your "method," no matter what that may be.
- It is the LATEST work of the kind.
- ALL of the studies are carefully annotated, fingered and edited.
- It is the most carefully graded of any course before the public.
- It begins at the beginning of study.
- It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.
- It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.
- Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

This complete work (7 grades) together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course," will be sent upon request, subject to examination and approval—without any obligation to purchase.

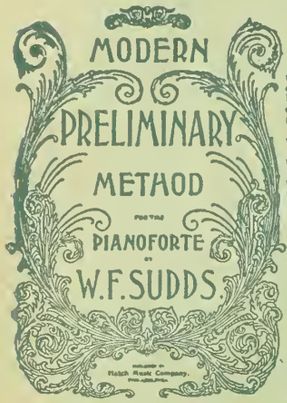
MODERN PRELIMINARY METHOD
FOR THE PIANOFORTE

Embodying the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation

By W. F. SUDDS.



As its title implies, this Method is modern, contains the newest ideas and their practical application. The bulky and voluminous instruction book is a thing of the past. This Method of to-day deals with *more* subjects than its predecessors, but deals with them in a terse and effective manner. It recognizes the importance of practical exemplification of the principles involved, but wisely leaves the amplification of various points to future study.

Among the many excellent features of the **Modern Preliminary Method**, we direct attention to the following:

The Rudiments are very progressive and explained with such clearness that the pupil cannot fail to comprehend them.

The Various Touches are clearly set forth and are accompanied by illustrations, drawn and engraved expressly for this work, showing the movements of finger, hand and arm.

The Correct Principles of Touch and Technic are illustrated by examples.

The Scales are introduced in an effective manner.

Proper Use of the Pedals, a matter generally disregarded, is given particular attention.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

Five-finger Exercises are judiciously used, but not in the usual enormous quantity that disgusts and discourages the pupil.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a Complete Preliminary Method—a work which cannot fail to interest both the practical teacher and the earnest student.

MODERN PRELIMINARY METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

Magnificent Editions of Standard Piano Methods

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of netional reputation, prices have not been incressed. The best is, therefore, offered at the cost of inferior editions.

Köhler's Practical Method for the Piano. Op. 249. Vols. 1-2-3. Paper Binding. Each $ 75
Revised, Fingered and Annotated by Thos. a'Becket.

The only ANNOTATED edition; the only edition in which the PHRASING is presented in accordance with the latest and most advanced ideas; the only edition that has had a comprehensive and thorough revision.

Löw's Practical Four Hand Piano Method. Vols. 1-2 . . . . . Paper Binding. Each $ 75
Revised, Fingered and Annotated by Wilson G. Smith.

Designed as a companion to all books of instruction for the piano, this method is a favorite with teachers. The perfect ensemble players are those who blend their individual characteristics in order to form a perfect whole, and this important accomplishment may be obtained by careful and conscientious study of Löw's Method.

Wagner's First Instructor for Young Beginners. Vols. 1-2 . . . Paper Binding. Each $ 75
New and Revised Edition. English and German Text.

This work, designed for the instruction of young beginners, presents a thorough and exhaustive course for the systematic training of children. The original edition (published with German text only) is a great favorite with leading German teachers in this country, while it holds a commending position in Germany where it is a recognized standard not only for children, but for adults who take up the study of the piano.

All works included in the "HATCH EDITION" are printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Ask for the "HATCH EDITION," and take no other if you want the best.

KULLAK'S SEVEN OCTAVE STUDIES
From the School of Octave Playing. Op. 48, No. 2.

Revised and Annotated, with Introduction and Practical Directions for Study, by

WILLIAM H. SHERWOOD.

While numerous exercises for the practice of octaves have been presented to the musical world by virtuosi and masters, Kullak's is the only method or "School" of octave playing that has become a standard. But good as they are in their original form, it is remarkable how much the usefulness of these studies has been enhanced by Mr. Sherwood's revision and annotations. A broad foundation embodying the general principles involved and the method by which the end may be most satisfactorily attained is laid in his Preliminary Remarks; instructions and suggestions for technical preparation are given in his "Notes on the Studies;" each study is *treated in detail*. Each movement of the hand and arm is designated by an ingenious device and these characters, elaborately used throughout the text, show the student *exactly* how the hand should approach and leave the keyboard in performing various passages. The progressive teacher will appreciate the importance of Mr. Sherwood's editorial work, and especially so since he gives, for the first time, his system of of instruction in octave playing.

Regardless of the great expense involved in the preparation of this edition, the price is the same as that charged for the ordinary reprint.

Paper Binding. Price, $1.25.

Magnificent Editions of Piano Studies

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of national reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

All works included in the "HATCH EDITION" are printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Ask for the "HATCH EDITION," and take no other if you want the best.

MAGNIFICENT EDITIONS OF STANDARD WORKS

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by musicians of national and international reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

Chopin's Album for the Pianoforte Revised and Fingered by Carl Mikuli.	Paper Binding.	$1 00
Chopin's Nocturnes for the Pianoforte Revised and Fingered by Carl Mikuli.	Paper Binding.	75
Chopin's Waltzes for the Pianoforte Revised and Fingered by Carl Mikuli.	Paper Binding.	50
Clementi's Sonatinas for the Pianoforte Edited and Annotated (after Köhler's Latest Revision) by Robert Goldbeck.	Paper Binding.	50
Kuhlau's Sonatinas for the Pianoforte. Vols. I-2 Edited and Annotated (after Köhler's Latest Revision) by J. S. Van Cleve.	Paper Binding Each	50
Mendelssohn's Songs Without Words Edited and Annotated (after Kullak's Latest Edition), by Jaroslaw de Zielinski.	Paper Binding.	1 00
Schumann's Album for the Pianoforte Revised, Fingered and Annotated by H. C. Macdougall.	Paper Binding.	50
Sonatina Album for the Pianoforte Edited and Annotated (after Köhler's Latest Revision) by W. S. B. Mathews.	Paper Binding	75

The works included in the "HATCH EDITION" are printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Ask for the "HATCH EDITION" and take no other if you want the best.

BUSSLER'S PRACTICAL HARMONY
Newly Revised and Corrected Edition
Authorized Translation from the Third German Edition by N. GANS.

Without exception, the best and most practical work on this subject ever published. The author is a noted German theorist, whose works are known, used and held in high esteem at all the most prominent European colleges and conservatories. The demand for PRACTICAL HARMONY has been so great that three revised editions have been printed in Germany. Ours was translated from the third German edition, by a writer selected by the author. It is, as its title indicates, a thoroughly practical work, embracing the latest and most approved methods. It is simple, is illustrated by practical examples, and is eminently suited for a self-instructor. Its price brings it within the reach of all.

For class instruction or for self instruction, Bussler's Practical Harmony is unequalled. It makes the study of harmony easy, rapid and entertaining.

Cloth Binding. Price, $1.00.

THE HARMONIZING OF MELODIES
A Text Book for Students and Teachers
By HENRY C. BANISTER.

The harmonizing of melodies, generally termed the knowledge of harmony, is one of the most practical applications of the knowledge of chords and their treatment. One may know the meaning of a number of words and still be unable to construct a sentence; he who lacks the ability to use chords in harmonizing a melody is in a similar position.

"Harmonizing of Melodies" will prove a most helpful aid to the student of harmony. It is extremely practical and abounds in examples which will readily be understood. No point has been overlooked, and all important subjects are treated at considerable length. Various methods of handling the same melody are shown, and valuable information as to the best choice, with reasons for the selection, are given. Many excellent hints as to taste and ornamentation, culled from the experience of the writer, are included.

Paper Binding. Price, 50 Cents.

DICTIONARY OF MUSICAL TERMS

100 Pages. By STAINER and BARRETT. **6 x 9 Ins.**

Compressed from the Imperial 8vo Edition, by K. M. ROSS.

We take pleasure in presenting a compressed edition of Stainer and Barrett's valuable work. Mr. K. M. Ross, in his preface says: "In reducing this book from the author's larger work, we have endeavored to omit only such terms as are not in general use, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits. To the general public it is hoped that this edition will be found of practical utility."

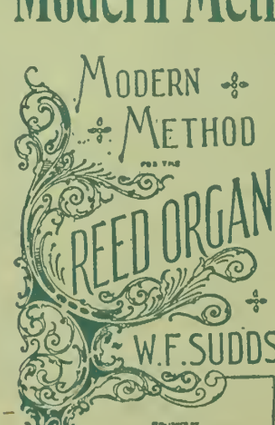
"Dictionary of Musical Terms" is a neat and attractive book. It is offered at a nominal price with the hope that it may prove of incalculable value to those in need of a handy reference book.

Paper Binding. Price, 25 Cents.

Modern Method for the Reed Organ

Embracing the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation; also Containing Various New and Important Features, such as Registration, Stop Nomenclature, Adaptation of Piano Music, etc., etc., Not to be Found in Any Other Work of the Kind

By W. F. SUDDS.



As the title implies, this method is modern, the newest ideas, and their practical application, governing its compilation. It treats all subjects in a terse and effective manner.

Among the many excellent features of the **Modern Method**, we direct attention to the following:

It begins with Dictated Lessons.

The Rudiments are explained with remarkable clearness.

It is Carefully Graded.

It is sure to Awaken the Musical Instincts of the pupil without smothering the soul with too much drudgery.

The Fingering is the so-called Foreign, thus according with all the better class of modern musical publications for either Organ or Piano.

It contains a complete treatise on registration as applied to the modern Reed Organ; also full information and comparison in the matter of Stop Nomenclature.

It is the only work of the kind treating the subject of **Adapting Piano Music to the Reed Organ.**

Every variety of Touch is clearly set forth, accompanied by illustrations (drawn and engraved expressly for this work), showing the movements of finger, hand and arm.

The Scales are introduced in an effective manner.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a work which cannot fail to interest both the practical teacher and the earnest pupil.

Modern Method is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates and on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

A SELECTED LIST OF

Fifty Third Grade Pieces

For Teaching and Recreation.

Any of our publications sent subject to examination. Complete Illustrated and Thematic Catalogue free on application. Send for our Special Prices. Mail Order Business Solicited.

BEAUMONT, P.

Slumber Sweetly. Cradle Song 40
An exceptionally valuable teaching piece. Its difficulty lies in the technical requirements necessary to keep the cradle song idea prominent. Beautiful.

BENDEL, G.

Op. 108. Dream and Awakening (Traum und Erwachen) 40
Characteristic piece in which the first subject is given out by 1st and 2d fingers as the lower note of the chords. Excellent practice, and pleasing as well.

BLON, F. von.

Chat in the Spinning Room (Plauderei in der Spinnstube) 40
The chatting is done by the right hand, while the left develops the spinning effect. Effective and interesting.

BLUM, O. R.

Dancing Sprites 35
Graceful and melodious composition, presenting no particular difficulties, but certain to please the pupil.

BOHM, C.

Op. 265. Bright Green Fields (Frisches Grün) . 35
The music is as bright and pleasant as the fields. Good study in passage work and phrasing.

Op. 284. Dance of the Gnomes 35
An excellent teaching piece, full of melody and grace. Well worth using; easy but brilliant.

D'ORSO, F.

Op. 46. Dream of the Ball (Après le Bal). Valse Rêveuse 40
A short but attractive introduction leads to a waltz of dainty and dreamlike beauty.

Op. 47. Dream of the Angel (Rêve d'un Ange). Nocturne 40
Evidently this angel had pleasant dreams. The music is melodious and shows no trace of care. Good wrist study.

ENGELMANN, H.

Op. 356. Dance of the Snowflakes. Polka Caprice 50
The rhythm depicts the capricious whirling of the flakes as they fall. Good study and brilliant. Requires light hands.

Op. 415. Golden Road. Reverie 35
An attractive piece in the well-known reverie style. Good practice in octaves and chord playing.

Op. 370. Whirling Dervish. Tarantella . . . 50
Like these oriental fanatics, this piece certainly whirls. Splendid exercise in velocity. Plenty of tune to it, too.

ESPEN, T.

Op 35. Elder Blossoms (Flieder Blüthen) . . 35
These blossoms sway to the breezes with careless grace. The piece is not hard, but when well played is very pleasing.

FISCHER, L. H.

Op. 14. Dragon Fly (Libellenspiel) 50
Requires nice playing. Good study in finger work and light arm. Fully annotated.

FISCHER, O.

Op. 204. Flower of My Heart (Herzblümchen). Mazurka 40
Good mazurka, containing many elements of attractiveness. Variety of form makes it useful.

GÄNSCHALS, C.

Op. 78. Farewell Greeting (Scheidegruss) . . . 30
A typical piece of salon music of the better class. Melody and harmony will appeal to the listener.

Op. 27. Heart-Love (Herzlieb) 30
The melody is mainly expressed in octaves and sixths, combined and broken. Excellent and very interesting.

Op. 123. In Twilight (Au Crépuscule). Melodie 30
A very pretty melody by the same author. Nice study in double notes, and absence of octaves makes it extremely useful.

Op. 237. My Love Star (Mein Liebesstern) . . 30
Graceful and containing no especial difficulties. An interesting study for those who can play octaves.

GEIBEL, A.

Messenger Two-Step March 40
Brilliant two-step, by a popular author. Not hard to play. A favorite with the leading bands.

GIESE, T.

Op. 215, No. 1. In the Fresh Green Fields (Hinaus ins frische Grün) 40
The freshness of the fields exhales from this piece, which is characterized by airy cheerfulness.

GOERDELER, R.

Babbling Waters. Morceau de Salon 50
Typical example of this author's popular compositions. Certain to please, and it is useful for teaching purposes.

Op. 499. Dream of the Shepherdess. Morceau 35
An excellent piece of salon music. Not especially hard to play. Good exercise in finger work.

Yuletide Bells. Morceau de Salon 35
The jollity of Christmas is in this piece. Pretty cross-hand passage in second part is an attractive feature.

GREGH, L.

Op. 37, No. 2. Return to Me Soon (Reviens Vite) 35
Splendid study in melody playing, the melody being given to both hands. Very striking composition.

HEINS, C.

Op. 184. At West Point. Marche Militaire . . 35
Good study in march playing. Dignified and attractive; requires octave playing.

Op. 93. Enchantress (Die Zauberin) 40
Good practice in octaves and full chords. Arm and wrist must be well controlled. Brilliant and taking.

Op. 156. Gitana. Mazurka Brillante 40
Very brilliant piece of salon music, requiring considerable control of hands and arms. Grace notes should be light, and the staccato crisp, but firm.

JENSEN, A.

Barcarolle 30
A thoroughly good composition. Excellent for its technical training and for its musical characteristics.

LEGE, W.

Op 55. Elf Play (Elfenspiele) 35
Very characteristic. Will require practice to properly play it, but is well worth all it demands.

NIEMANN, G.

Op. 29 No 12. The Chase 20
Short, but sure to please. Wrist touch is required, and must be played crisply.

PACHULSKI, H.

Op. 12, No. 3. Phantastic Fairy Tale 35
Strong musically, of considerable difficulty, requiring a good legato, but well worth careful study.

PEACOCK, W.

Sweet Memories 40
Attractive and presents no particular difficulties. Brilliant concert favorite.

PULLAN, C. H.

Echoes of Spring. Morceau de Salon 50
A popular piece of salon music, useful as a study piece.

RATHBUN, F. G.

Op. 15. Danse Impromptu 50
Characteristic composition by a well-known writer. Besides being a pleasing salon piece it furnishes instruction.

RUBENS, F.

Romance 25
Wide skips in left hand afford excellent practice. Good musically and technically.

Op. 17. Spanish Dance (Danse Espagnole) . . 25
Original and brilliant. Will demand practice, but repays it.

SAMARY, F.

Op. 17. Song of the Flowers (Chanson des Fleurs) 50
Melody and accompaniment in right hand. Two well contrasted subjects. Somewhat difficult.

SCHEHLMANN, L.

Under the Village Linden. Peasant Dance . . 35
Characteristic dance, full of vivacity and good humor.

SMITH, W. G.

Op. 74 Danse Pittoresque. Scene de Ballet . 35
A decidedly attractive composition. Somewhat odd in style, it holds the attention. Good study, without great difficulty.

SPINDLER, F.

Op. 306, No. 1. Ti'l We Meet Again (Auf Wiedersehn) 30
Tender melody, capable of much expression. Is developed into a good finger study without losing its pleasing quality.

STONE, A.

Electra. Scene de Ballet 40
A taking composition. Melody given out by right hand, left hand responding. Brilliant and effective; not difficult.

SUDDS, W. F.

Op 236, No. 1. As It Seemed to Me. Gavotte Sentimental 40
The sentiment contained in this piece is healthy. The music is strong, fresh and bright. Sure to please.

Op. 224. Our Brightest Days. Gavotte . . . 40
Another of the same kind, and by the same author. Sprightliness and vigor are its characteristics.

TOURBIE, R.

Op. 206 Little Curly Head (Krauskopfchen) . 40
The curly-head must have been a lively little chap, if the music is at all like him. Gay and full of fun.

TOWERS, J.

Life's Springtime. Rondo 50
The title page says, "a joyous rondo," and the saying is descriptive. Thirds and full chords are interspersed with finger work.

WILLIAMS, F. A.

Op. 17. At the Twilight Hour. Nocturne . . 40
Very pretty descriptive sketch, well worked out and with well contrasted subjects. Good for study and the parlor.

Op. 20. Danse Fantastique 40
Another attractive teaching piece written by a teacher and sure to please as well as instruct. Good passage work.

Op. 27, No. 1 Day Dreams 35
Can be most heartily commended. A simple but thoroughly effective piece.

Op. 22. Fountain in the Forest. Mazurka Impromptu 40
Considerably more difficult than the preceding. Useful for teaching and pupils' recitals.

Op 24, No. 2. Water Sprites at Play 40
The sprites are active and sportive. The piece is full of grace and spirit. Pretty and useful.

Published by **HATCH MUSIC COMPANY**, Philadelphia.

A
FAULTY TECHNIC
The prime cause of inartistic piano playing is the natural result of faulty elementary technical instruction.

Modern Foundation Studies
—In—
Piano Playing
Graded for Beginners.

By W. F. SUDDS.

The great progress made in the art of piano playing during the past few years has, to a large extent, rendered older books of instruction obsolete. All good works contain the proper material, but its arrangement, and the method of presenting it to the immature musical mind, often leaves much to be desired. Improvement of these particular features—the arrangement and method—has been the guiding thought in the preparation of "Modern Foundation Studies."

It is a work for beginners, and matters of vital importance, such as formation of the hand, methods of touch and tone-production, are treated in detail. In addition to the comprehensive treatment of these subjects and numerous musical examples, exact positions and movement of the hands in the proper performance of the various touches are profusely illustrated. This feature will be appreciated by teachers.

The work contains foundation material on which the most elaborate superstructure may be safely built. The music has been selected with great care, to clearly illustrate the point under consideration in an attractive manner, without wearying the student.

Paper Binding. Price, $1.00.

MODERN STUDIES
In Phrasing and Interpretation.

By W. F. SUDDS.

It is now very generally admitted that a separation of the mental and physical features is the best plan for imparting instruction in the study of music. Both may be studied at one time, but it is a mistake to suppose that mental training is the result of physical effort.

To insure proper performance of a composition, the mental concept must be perfect. A pianist possessed of brilliant technic, acquired only by long and faithful practice, may mar a good work because of inability to interpret the author's ideas, just as one may recite the *words* of a poem without a proper appreciation of their meaning and without a correct grouping into phrases. To thoroughly enjoy a musical work one must be able to analyze it, and "Modern Studies in Phrasing and Interpretation" presents the means of doing this in a most comprehensive and intelligent form.

Want of space prevents a detailed description, but we shall be glad to send the work subject to approval, so that any one may test our assertion that this is a thoroughly modern and practical exposition of the subject.

Paper Binding. Price, $1.00.

Guide to Practical Musicianship
For Students of Piano, Organ or Violin.

By A. J. GOODRICH.

In his new system, the author does away with the old and slavish process of rote memorizing, *i. e.*, playing notes and repeating them until memorized, without attempting to master the composer's design; and he illustrates the means by which intelligent students may, in a comparatively short time, master any composition that does not present technical difficulties beyond their conception.

The results are three-fold: (1) A great economy of time; (2) An intelligent understanding of compositions; (3) An improved memory.

Professional musicians, practical teachers, amateur musicians and students of music have long felt the need of some improved method that would reduce the time required to memorize a composition, and Mr. Goodrich presents a method that he subjected to a thorough and exhaustive test, with eminently satisfactory results, before putting his ideas in shape for publication. It is the author's firm belief that, by its aid, compositions may be mastered in from one-quarter to one-half the time required by old systems.

Every musician needs a copy of "Goodrich's Guide to Practical Musicianship."

Paper Binding. Price, $1.00.

THIS SYSTEM IS COVERED BY COPYRIGHT.

MUSICAL KINDERGARTEN
FOR THE PIANOFORTE
By FANNIE CHURCH PARSONS.

ASSOCIATE TEACHERS
MRS. GRACE YEAGER,
MISS KATHERINE SCHUSTER.

This system is most simple in outline and material.
It is most comprehensive and complete.
It is essentially a tone system teaching the children how to write music "by ear."
The materials used are, while very durable, most suggestive of the beauty of the art of music.
The lessons are equally instructive to either child or adult beginner.
The students do much real piano work, thus no intermediate course is necessary.
The stories and songs do not savor of the grotesque, but tend to refinement and culture.
The price for normal work, including materials, is within the reach of all.
You can take the work by mail, or of a normal instructor, or of Mrs. Parsons personally.

Correspondence should be addressed to **Musical Kindergarten Company,**
Office, 6 W. Chicago St., Quincy, Mich.

STUDIO, 510 HANDEL HALL, CHICAGO, ILL.

Characteristic Scenes and Sketches

A COLLECTION OF 81 PIANOFORTE PIECES

Compiled from the Masters and Modern Writers by

MARI RUEF HOFER.

Bound in limp cloth. Price, $1.25.

The material in this collection is especially desirable for teaching purposes, as they afford many phases of practice. They are particularly well chosen and represent a wide variety of subjects. Another attractive feature is that with few exceptions they are only one and two pages in length and, as the heading implies, are characteristic, "story-telling" pieces.

The well-known composers represented are Bach, Handel, Haydn, Beethoven, Mozart, Schubert, Schumann, Mendelssohn, Brahms, Reinecke, Jensen, Rubinstein, Grieg, Chopin, Heller, Karganoff, Hollaender, Gurlitt, Gayrhos, Foerster, Rheinhold, Kullak, Weber, Loeschhorn, Parlow, Gilchrist, Schoenefeld, Oldberg and others.

The pieces grade from easy to medium in difficulty. Most of them have been edited by Mr. Calvin B. Cady.

THEY THAT HAVE EARS TO HEAR, LET THEM HEAR.

EDWARD BAXTER PERRY.

Musicians are many who see in their mistress
But physical beauty of "color" and "form,"
Who hear in her voice but a sensuous sweetness,
No thrill of the heart that is living and warm.

They judge of her worth by "perfection of outline,"
"Proportion of parts" as they blend in the whole,
"Symmetrical structure," and "finish of detail;"
They see but the body—ignoring the soul.

She speaks, but they seem not to master her meaning,
They catch but the "rhythmical ring of the phrase:"
She sings, but they dream not a message is borne on
The breath of the sigh, while its "cadence" they praise.

Her saddest laments are "melodious minors"
To them, and her jests are but "notes marked staccato;"
Her tenderest pleadings but "themes well developed"
Her rage—but "a climax of chords animato."

In vain she endeavors to rouse their perception
By touching their brows with her soul-stirring hand;
They measure her fingers, their fairness admire,
Declare her "divine," but will not understand.

Away with such worthless and sense-prompted service;
Forgetting the Goddess, to worship the shrine;
Forgetting the bride to admire her costume,
Her garments that glitter and jewels that shine:

And give us the Artists of true inspiration,
Whose insight is clear, and whose brains comprehend,
To interpret the silver-tongued message of music
That speaks to the heart, like the voice of a friend:

That wakens the soul to the joys that are higher
And purer than all that the senses can give,
That teaches the language of lofty endeavor,
And hints of a life that 'twere worthy to live.

For music is Art, and all Art is expression
The "beauty of form" but embodies the thought,
Imprisons one ray of that wisdom supernal
Which Genius, to sense-blinded mortal has brought.

Then give us the Artist whose selfless devotion
To Art and her service, is earnest and true,
To read us the mystical meaning of music:
Musicians are many—but Artists are few.

ETHELBERT NEVIN.

America lost a composer of real merit to her. Ethelbert Nevin died suddenly, of heart disease, at his home in New Haven, Conn., on February 20.

He was born at Edgemont, Pa., in 1862. His talent displayed itself at an early age, and having the sympathy of his father, Robert P. Nevin, he was permitted to cultivate it. As early as eleven years he composed a polka, and at thirteen a song, "Goodnight, Goodnight, Beloved," which became popular.

Intending to become a piano virtuoso, Neven went, in 1884, to Klindworth, in Berlin. Klindworth perceived his talent for composition and advised him to develop his powers in this direction. After some study with Von Bülow, Nevin returned to America, taking up his residence in Boston. His restless spirit did not permit him to remain their long. Pittsburg was, perhaps, his home for the longest period. He went to Paris in 1892 and from there to Algiers, and subsequently spent considerable time in Italy, where many of his more recent compositions were written. He removed from Pittsburg to New Haven only last December. Nevin was married several years ago to Miss Anne Paul, of Pittsburg, who with two children, Paul and Doris, survive him.

Nevin's first great fame came from "Narcissus," a piece which has been played from one end of the country to the other. He did not regard it as one of his best works, and was rather annoyed at its great popularity. More than 125,000 copies have been sold.

Nevin had the wisdom to confine himself to composition in the smaller forms. The song-like nature of his work shows in all he wrote. Earnest and sincere, he would probably have gone on to greater things had his life been spared.

He has written piano pieces, songs, small pieces for violin, and some works for concerted voices. Among the more important of his works for the piano are the Sketch Book, the Water Pieces, and a few Suites of pieces; Of these the most recent is "A Day in Venice." His most important achievements are undoubtedly his songs, many of which are scarcely less well-known than the favorite "Narcissus." They are more popular than any other songs by an American composer. Chief among them perhaps, is "My Rosary," which is characterised by fine feeling and a skillful use of simple means for the producing of effects. Others almost equally liked are "Oh, that We Two were Maying," "A Necklace of Love," and "One Spring Morning." Less extensively sung, but of greater intrinsic value than these, are some of the charming French songs like "Dites moi, belle Enchantresse." Few composers have ever surpassed his children's songs, the best examples of which are the charming set of three written on words from Robert Louis Stevenson's "Child's Garden of Verse." Some of his latest songs were published under the general title of "Songs from Vineacre," gracefully christened after his childhood home in Pennsylvania. The text of "Sleeping and Dreaming" was written by his father in 1840.

It was to the family home, Vineacre, that the younger Mr. and Mrs. Nevin always returned with their children from the sojourns in Europe which were so attractive to the composer. There Mr. Nevin had a small cottage not far from the family home, and there he did his work. But the nature of the atelier in which he worked was not important to him. Once in Italy he installed a grand piano in an abandoned stable and composed some of the songs associated with his Italian sojourn.

Neither of the composer's two children, Doris and Paul, inherits his talent, although they were the source of much of the composer's inspiration in his songs about children. He was accustomed, when at Vineacre, to devote the mornings to work and his afternoons, when the weather permitted, were passed on horseback or with the little children of the neighborhood, whom he would gather in his studio. There he would tell them stories, sing with them, playing accompaniments on the piano, and frequently teach them songs he had composed for them.

Regularly every evening Mr. Nevin was accustomed to take his place at the piano, with the family around him, and half an hour was devoted to singing or the playing of some new composition that had possibly been produced during the morning of the same day. So firmly fixed in the family routine was this custom that it was discontinued when somewhat more than a year ago the senior Mrs. Nevin lay in bed with her last illness It was proposed to discontinue the evening concert for fear that it might disturb the sick woman. But she would not allow this, and declared that her son's playing and the sound of the singing were delightful to her. So the vesper music was continued and the night before she died Mrs. Nevin heard it through the open door, to which allusion has been made, of her room adjoining the library, in which the piano stood.

"Narcissus" was one of a series of water sketches, as Mr. Nevin called them, and was regarded by him always as one of his most trivial compositions in spite of its great popularity. It is played now all over the world. One man heard it played in Dawson City on a mouth-harp by a miner whose frozen feet were so wrapped up in bandages that he could not attend to his work. The composer has given this account of the circumstances under which he wrote the piece.

"I had suggested to my publishers a suite of water scenes in five numbers, and had completed four of them: 'The Barcarolle,' 'Ophelia,' suggested by Shakespeare's heroine; 'The Water Nymph,' which is pure fantasy, and the 'Dragonfly,' which was a reminiscence of the big fellows which used to dart their blue wings in my face and frighten me when I went in swimming. The fifth number was still to be written, and I had neither a title nor theme for it.

"We were living in Boston then, in a little house facing on Pinckney street. It was one bitter, bleak February afternoon in the winter of 1890; my wife had gone to Florida with her father and I was quite alone and as gray and melancholy as the weather. I set to work to drive away the blues, and finished the water scenes.

"I remembered vaguely that there was once a Grecian lad who had something to do with the water and who was called 'Narcissus.' I rummaged about my old mythology and read the story over again. The theme, or rather both themes, came as I read. I went directly to my desk and wrote out the whole composition. Afterward I rewrote and revised it a little. The next morning I sent it to my publisher. Until the proofs came back to me I had never tried the piece on the piano. I left almost immediately for Europe and was surprised when a publisher wrote to me of the astonishing sale of the piece."

AUGUSTA COTTLOW.

Augusta Cottlow was born in Shelbyville, Illinois; played by ear at the age of three, and at four began her instruction under her mother, who is a good amateur musician. At seven she was taken to Chicago and gave a private recital before the best local musicians and amateurs, creating a sensation, and at the age of nine was placed under the tuition of Carl Wolfsohn, with whom she continued until she went abroad. Besides her other musical gifts, she is endowed with absolute pitch and could name any combination of notes without looking at the keyboard, with unerring accuracy, from the time she first learned the names of the notes. She also studied theory with Frederic Grant Gleason. Her first public appearance in concert was in her native town, a month before her sixth birthday At the age of ten she gave an entire recital program in Chicago, before a large and critical audience, and the year following made her appearance with orchestra, playing concertos of Beethoven and Mendelssohn. At the end of a comprehensive and very successful tour over the entire country she returned to Chicago to her musical, and other, studies.

After a second triumphal tour, in 1895, she made her first appearance in Berlin with the Philharmonic Orchestra. She had been in Berlin, listening and absorbing music for a year, but had not pursued her pianistic studies with anyone, so she was the first American pianist to play in the great centre of music on purely American training and achieve a triumph. She had the advantage of a season of ensemble playing with Carl Halir, and after her first season in Berlin she began her studies with Ferruccio Busoni, who took the deepest personal interest in her work. She has a very magnetic personality and makes friends everywhere. Her success at her American debut at the Worcester Festival last September, when she played the Tschaikowsky Concerto with the Boston Symphony Orchestra, is still fresh in the musical world. Everywhere that she has appeared since then, she has received the same enthusiastic greeting.

THE Teachers' Forum

Conducted by N. J. COREY

This department is inaugurated for the purpose of uniting the many teachers who read THE MUSICIAN in a bond of professional brotherhood. It is to be their medium for the interchange of ideas, experiences, encouragement, discouragement and difficulties. The fullest correspondence is invited. The questions will be answered and suggestions given by the conductor and the contributions of those who wish to gain new light or to present their methods will be printed. We propose helping ever teacher who will permit us to do so; we intend to do everything possible to overcome the isolation with which you are burdened. Will you co-operate with us?

No conditions are attached; the department is open to *all* MUSICIAN subscribers. Address all communications to the Teachers' Forum, care THE MUSICIAN, Eighth and Locust Streets, Philadelphia, Pa Do not hesitate, but be among the first to ask help, or to give some other teacher a suggestion. Let us know what you would like to have treated in its columns.—Editor of THE MUSICIAN.

"The gates of art are closed unto none; who so entereth thereat, though he seeketh perfection, yet shall he not find it."
—Ancient Egyptian Papyrus, 3580 B. C.

SOME PRACTICAL PROBLEMS.

There are some problems that are met with in the experience of every pianoforte teacher which ever seem to remain far from finding a satisfactory solution and will most likely continue to give trouble as long as human nature remains as it is. Such seems to be the experience of the teacher who writes the following letter, a part of which is given.

"I am more glad than I can say of the new department in your already most valuable paper, and I so soon come seeking help on two or three troublesome "points" in my teaching.

First—How make a child of ten years understand and play three notes with one hand against four with the other.

Second—Is there any help for a careless pupil? I have honestly tried to make a careless pupil take pains, insisting on a most careful first reading and after practice, and yet every new piece is battered at in the same reckless manner.

Third—How can a child best be helped who always brings her lessons correctly learned, but who, in a very weeks' time, blunders hopelessly on the same studies.

The first question is an unusual one as concerns a child of ten years. Unless possessing talent far in advance of the average child, such a combination of notes is not likely to be met at that age. The most elementary composition that has come under my observation containing three notes against four is the slow movement of Beethoven's first Sonata. In my own experience I have found that a correct rendering of such a combination of notes can only be learned after much freedom upon the keyboard has been acquired. There is no way of representing such a combination mathematically to the eye that will be of the slightest assistance. Two against three can be so represented for slow tempo, but in rapid tempo any such aid has to be abandoned and the player rely upon correct feeling and independence of hand control. With inexperienced players it is generally not wise to insist upon a correct rendering at first. It is something that has to be left to the development of musical feeling. After a time the sense for the correct will come, as it were, of itself, and the pupil will wonder why so much trouble was experienced at first. For four notes against three the following exercises will be found to be all that is necessary. Practice each hand separately until an exact idea is obtained of each and an involuntary movement of the fingers in each. Then begin with one hand first and let the other soon follow. By practicing this persistently the difficulty will eventually be overcome.

After this is thoroughly conquered more extensive scale passages may be invented by the teacher and dictated to the pupil.

The condition of the pupil implied in the second question is a temperamental one. Carelessness is said by some to be the cause of nine-tenths of the bane in the world. The one who can find some way of making careless people careful will contribute one of the most important services to humanity that could be conceived. The evils due to carelessness are so great that it can be set down as nothing less than a sin. The only help for the careless man is education through which he may be brought to a realizing sense of the misfortune that is likely to follow from a neglect of the proper peforming of his duties. The primary trouble with the careless pupil is a lack of attention. The attention is so indifferent and lazy that a correct knowledge of the details of a lesson is never obtained except by a long and painful process on the part of the teacher in pointing them out at each lesson. A lesson will not be correctly learned until the pupil observes what are the essential points to be prepared. Then he must be taught to bring them up to a certain standard of excellence.

Attention and observation are the two primary factors that need to be carefully drilled and sharpened. It is generally a very slow process, taxing enough to the teacher, but of incalculable value to the pupil, not only for music, but for what it will mean to him in other departments of life's activity. The teacher ought really to receive double pay for such a pupil, for it is a double lesson that the pubil is learning, not only music but an invaluable life lesson. A good plan to follow with such a pupil is to take some composition that is much simpler than the music that the pupil is capable of playing, and insisting at each lesson that the pupil point out to the teacher all of the points of detail possible, the teacher afterward calling attention to those that have been missed, and then insisting on the piece being learned in correspondence with the details noted. In this way the mind can be led on from elementary to more difficult conceptions and perhaps develop consiberable ability for careful correctness.

In the third case either of two things may be the fault. Either the pupil is being kept too long on one study, or, as is the case with a great many people, the child is expected to play glibly a piece that has been dropped for a time. If the latter the demand is unreasonable. The greatest players do not play compositions that have been for sometime dropped without carefully practicing them again. It is the same with elementary pupils. They should not be asked to play compositions that they have laid aside after once learning and, perhaps, outgrown. If a piece is taken up again it should be for some definite reason. Until a certain stage of progress is reached the most of the pieces learned by pupils are dropped permanently after they have served their purpose for drill. If it is desired that the piece be played again it will have to be practiced again, but, of course, will be learned much more quickly than it was at the first learning. Or, on the other hand, the trouble may be as first suggested. There are many pupils that do not thrive well if kept too long on a single piece. It seems to cause a species of paralysis, the only cure for which is to change to something else. If a piece cannot be learned in a reasonable length of time the supposition is that it has been practiced so much that the pupil has lost all interest in it. Some pupils require change more than others. With such pupils it is necessary to be careful about giving them compositions that are too difficult, or they will tire of them before learned. Such as are selected to be conquered for their technical difficulties should be as short as possible. Let all others be well and easily within the powers of the pupil, and what may possibly be sacrificed in rapidity of progress will be compensated for in thoroughness and an interest well maintained.

Another correspondent finds it necessary to take up music again after having neglected it for several years and writes for information as to how to catch up to the times.

"I am at a loss just how to proceed. I cannot mention any great teacher with whom I have studied, and I do not wish to employ out-of-date methods, although I have none with which to replace them. New methods have sprung up with which I am totally unfamiliar. I do not even know what text-books are most in use. Now while I assure you again that I was thoroughly well-grounded in music, and have a deep love for it and an abiding patience with my scholars, as I have repeatedly proven to my own and their complete satisfaction, yet I will own that I feel considerably like an imposter. I cannot descend to the level of those who teach for twenty-five cents a lesson and whose musical training and pretention is in reality the barest whitewash; neither do I aspire to the professional heights and prices of the best teachers. But I do greatly feel the need of advice as to how to inform myself of late methods. Although I have neither the time nor money to go and pursue a course of study with an expensive teacher, yet I could give any amount of time to a course of private study that you might suggest. One especial need of mine is exactly how to arrange and grade the studies for my pupils, how long they ought to take in each grade, how many studies and their nature.

I shall be most grateful for any helpful suggestions and shall follow them implicitly. At present I have really urgent need of following teaching for a livelihood and am anxious to render conscientious work. Pardon me if I have taken too much of your valuable space. Your paper, though I am but a recent subscriber, I find is ever an inspiration and bristling with new ideas."

A teacher showing so much conscientious earnestness and a desire to do good work certainly deserves every encouragement. But the question is, in a certain sense, an impossible one, for it asks for a comprehensive musical education in a few words. Some general suggestions may be made, however, which may point the way to much improvement. In the first place, in addition to the subscription to THE MUSICIAN, it will be wise to become a member of the *Music Teachers' National Association* and thus obtain the advantage of the new educational course that is being planned by that organization. The membership fee is small and the interest on the investment will be large. Definite courses of study are now being arranged, which will be of inestimable value to students and teachers who are in the condition described in the foregoing letter.

As to "Methods" it would be difficult to state just which ones are most in use when there are so many that claim a large following. There are a number of kindergarten methods that are at the present time exciting a good deal of attention and designed for the instruction of the youngest class of elementary pupils. It might be well for the correspondent to write to the inventors of these and perhaps get a good deal of help in teaching the young children. For an older class of pupils I would recommend that she earnestly and attentively study the books of A. R. Parsons, as well as any others she may be able to obtain, and therein she will find discussions of teaching methods from which she will probably derive much assistance. Instruction books of the old-fashioned kind are not at present so much used, except perhaps in the elementary grades. As the pupil begins to advance there are so many graded collections of studies upon the market that teachers find them much more acceptable, selecting technical exercises from some of the standard works devoted exclusively to them, and selecting pieces in accordance with the individual needs of the pupils. Of the graded courses of studies the National Graded Course is superior to any other with which I am familiar. For one who confesses inability to determine the nature of studies that ought to be used, it will be wise to follow such a course as this implicitly, and if there are cases in which it may seem good to deviate from it, experience will gradually cultivate the ability to determine when this will be best. The amount of work and its nature is a question that can rarely be determined in advance, as it is necessary to consider the individual peculiarities of the various pupils.

A letter has been received from Mr. August Geiger, Director of the Department of Music in the Southern Female College, at Lagrange, Ga., which contains suggestions that may prove valuable to many other teachers similarly situated. Such a thorough and extensive course of supplementary study cannot result

otherwise than turning out some excellent pupils. The letter is as follows:

"In your January issue I notice an invitation for suggestions from teachers, and as I have been a reader of your valuable magazine for the past five years, I take the liberty of addressing you. At the beginning of each Collegiate year I organize classes for the study of Musical History, Harmony, Analysis and Musical Pedagogy. The study of history is conducted by means of lectures, no text-book being used in the class-room except for review work. Each period is first treated separately and then in connection with other epochs, each one being freely illustrated with representative music. I am much pleased with the benefits resulting from the work, as it stimulates action and thought on the part of the student, the influence of which is felt in the daily practice. One year of this work is devoted to general history, the second year dealing exclusively with American musical history. Although it requires a vast amount of labor on my part to prepare the lectures, yet I am fully repaid by the incitement to good work caused by it among the students.

"In a similar manner I conduct the classes in analysis and musical form, using the blackboard extensively, for the reason that work illustrated in a manner that will appeal to the eye, as well as be received by the ear, will make a deeper impression. Musical pedagogy is carried on in lectures covering an entire year. The class, however, is required to prepare each topic in advance, before I present my views, as I am trying to draw out their thoughts. I believe that if you can induce a student to first think for himself on these topics he will be more ready to accept or investigate the statements of the teacher. I try to stimulate the interchange of ideas between teacher and pupil and it does great good. I find that even the dullest pupil discovers something which arouses his interest. Yet all this work requires thorough preparation and constant study on the part of the teacher, the results, however, being very satisfactory.

"Thanking you for this opportunity, I remain,

"Very respectfully,

"AUGUST GEIGER."

MOSZKOWSKI'S "CAPRICE ESPAGNOLE." HOFFMAN'S "AUF SCHOENE ZEIT."

Analyses.

MARIE BENEDICT.

Among the many brilliant compositions with which Herr Moritz Moszkowski has enriched the literature of the pianoforte, there is none more effective, none which asserts a more instant sway over the listener's fancy than the "Caprice Espagnole." Yet, strangely enough, though it is perhaps the best of this composer's works for the piano, it seems to be one of the least thoroughly known. An admirable recital number, yet its title is very rarely seen among the familiar names which figure in the usual artist program. It is true, to receive a place among the recital numbers of Madame Bloomfield-Zeisler; but this is the exception to what seems the general rule. An admirable number for the development of advanced students—in rhythm, in piquant grace of expression, in bravura, in varied resource of technical skill—yet it seems to be a far less familiar frequenter of the studio than its inherent attractiveness, and genuine worth in technical work lead one to expect it to be.

As its title may imply, its spirit is not in the least that which is perhaps first brought to mind by the name of Spain. With the gloom and the grandeur of the peninsular history it has naught to do; nor with the impassioned cavalier; and the dark-eyed beauty awaiting him at her latticed casement, so familiar to song and story. Another, and quite a different picture is that suggested by the Caprice. It is brimming over with the witching piquancy of Spanish dance rhythms, with the half wild, wholly irresponsible gaiety of the Spanish dancing girl, thoughtless of everything save the absorption of the present's pleasure; now strumming her banjo, again dropping it, to yield herself wholly to the rhythmic fascination of the dance, as the music's witchery lures her to its thrall.

In a word, the Caprice is filled with an individuality of its own, which so twines itself round the player's fancy that its hold is firm long after most pieces of its type have lost their power of attraction. One does not weary of its gaiety, as one is apt, on close and extended acquaintance, demanded by study, to weary of compositions of somewhat similar mood.

In its opening pages there is unmistakable suggestion of the banjo effect to which I have referred, in whose reiterated notes and third, as well as first beat accent, so strongly marked by the recurring harmonic changes, one may find opportunity for valuable technical and rhythmic study. Turning to the trio, we encounter a complete change of mood; as though the dancer, wearied for a little with the excitement of the dance, had thrown herself on the soft turf beneath the pomegranate trees, to yield herself for a few fleeting moments to the fragrance of their blossoms—to the languorous beauty of the Spanish southland. But the relaxation is not of long duration, for the spirit of the dance very soon reasserts itself, increased witchery in its mood and movement, a witchery which holds the fancy captive to the end.

It is impossible to convey in words the fascination of rhythm, of shifting tone color, the effectiveness of theme and treatment which make the Caprice, once known, a permanent favorite. Its merriment has no affinity with the conventional gaiety of the court. There is rather in it an untamedness, a freedom from all trammels of conventionality which suggest the child of semi-oriental nature, untaught and unsobered by the influences of western civilization.

In marked contrast to the mood, and to the degree of difficulty of the Moszkowski Caprice, is Heinrich Hoffman's "Auf Schoene Zeit," a number which will at once win the love of the pupil of genuine musical temperament, and will prove, at the same time, a useful study in sustained melody tone; in harp-like accompaniment shared between the right and left hands, and in cultivation of the ability to recognize the charm of changing tone color in its different chord effects, if the pupil has been taught to use her ear in the true sense of the phrase, and affording an excellent occasion for beginning to do so, if she has not already been taught to listen; to realize that the ear is for something more than the ability to tell when one strikes false notes.

Its title, "Auf Schoene Zeit" (From a Beautiful Time), at once suggests the mood of the music. Its spirit is that of tender, regretful reminiscence; an affectionate lingering, strongly tinged with sadness, with memories of the brightness, the happiness of other scenes and other days; but not with hopeless sorrow for a joy which never can return. A tender twilight, the deepening shadows tempered by the sky's faint memory of the sunlight, an earnest of the reunfolding of "the great blue flower of day" with its heart of gold.

Germany claims both these composers for her own; Hoffman having been born at Berlin in 1842, Moszkowski at Breslau in 1854. The list of compositions by either of the two would prove quite too long for enumeration here, but will well repay acquaintance opened by the student.

SILHOUETTES.

HAYDN.

Joseph Haydn is distinguished as the father of Modern Music. The wonderful clearness of his instrumentation, the incomparable freshness of his melodies will make him renowned. For as long as we can enjoy a Spring day with a full heart, as long as we can delight in the memories of our childhood, so long will the music of Haydn suggest to us the woods and the fresh odor of violets, because it is so interwoven with nature.

His pure and reverent music seems to glide into our very hearts and follow us into the workshop as well as into the church; and, like a tender mother, it speaks kind and loving words when the daily cares and sorrows of life threaten to burden our souls; and that is why, perhaps, his music comes to us so delicate, so refreshing, so full of comfort and peace.

LISZT.

A large company of ladies and gentlemen were assembled one November evening in a Vienna salon. Their attention was concentrated on a delicate blonde boy who was approaching the piano. Adam Liszt, the friend of Joseph Haydn and Hummel, was conducting his eleven-year-old son, Franz, for the first time before the critical eye of the public. Many noted musicians were present and among them Czerny, the teacher of the boy. The little Franz played a concert piece, by Hammel, with wonderful fire and strength, and with a beaming face he hastened to his father's side amidst the rapturous applause which followed his number.

THOUGHTS ON PHRASING.

A clear knowledge of phrasing does not come to the average, normally constituted musician, like the sudden and rapid onslaught of an avalanche. It is not the acquirement of a day or a month or a year; nor can even the most musically gifted hope to phrase correctly and beautifully without that special knowledge required by the art and rewarded by patient industry.

All consistent musical utterance has a more or less definite plan of construction Like the sentences of most other languages, a musical sentence has its distinctly recognizable form, its subject, its predicate, its object—so to speak. That we do not enter into such detailed grammatical dissection of a musical sentence as our language surgeons in general seem to delight in is easily understood when the nature of our immaterial art is taken into consideration. It should always be remembered that music is born of that which is so convenient for us to designate as musical feeling. Though its best, its most perfect expression is dependent upon the refining process of intellectual force, the actual birth of a musical idea is rarely, if ever, assisted by purely intellectual effort.

Music's first and most direct appeal is to our sense of sound, primarily captivating or repelling us not in accordance with the thoughts it awakens, but rather in agreement with its effect on our musical and emotional natures. Though imbued with distinct, national characteristics of thought and feeling, the inherent universality of music brings it within the comprehension of all intelligent civilized peoples. Whatever may be argued against the idea of music's universality (an argument that would destroy this idea simply because appreciation of all musical creations is largely influenced by existent conditions)—whatever effort may be made to circumscribe its sphere of influence, the fact remains that a beautiful musical thought—wherever and by whomsoever it may have been created—impresses itself upon musical people most remote from it both in period and in place. That between different ages and different countries there can be no absolute agreement as to the higher *worth* of a musical creation hardly affects the question of whether music is or is not a universal language.

Of this universal language, phrasing forms an essential part. It either veils or clarifies the meaning of every utterance, according to correct or incorrect application of its principles; it imbues a musical sentence with charm, strength and dignity, or renders obscure, and even meaningless, the brightest and clearest musical thought, in accordance with the intelligent or unintelligent, precise or slovenly, manner of its presentation by both composer and player. It is so closely allied to the very essence of musical thought, that at no time is it separable from, or unimportant to, lucid musical expression.

For the violinist, it assumes chiefly the distinguishable form of a variety of bowings which either connect or separate, divide or subdivide, the various parts of musical speech. But it must not be presumed that its manifestations are limited to such bowings, however numerous or skilful may be their application; for united with this inherent and transparent form of phrasing is one which, strongly suggestive as it usually is to the enlightened musical mind, rarely points the way to intelligent comprehension by the inexperienced or uninitiated.

This subtler form manifests itself in the grouping of figures, the succession of ideas, the logical connection between the various members of a musical sentence—in fact, it is composed of the natural elements of musical expression, and characterized by the individuality of the composer and the player. Often it is not of sufficient tangibility to render possible a precise or immediate decision as to its signification. Often it causes perplexity because of the actual, or apparent, possibility of two or more varying conceptions, each violating neither musical principles nor the composer's peculiar intentions.

This is the more delicate phase of phrasing. It is that branch of the art which, unaided by long and earnest study, remains enigmatical to the average player.—*Musical Standard.*

Crises in one's life come, but come infrequently. It takes years of preparation to be ready for them. Herein lies the cause of many failures, and, per contra, many successes. The prudent teacher takes care to so do his work that an unexpected call finds him ready to accept it.

STUDY WITH HANS VON BÜLOW.

Chopin.

THEODORE PFEIFFER AND J VIANNA DA MOTTA.

Translated for THE MUSICIAN *by F. S. Law.*

Nocturne in B major, Op 9, No. 3. There is an aristocratic Chopin and a democratic Chopin.

The ornamental passages (*Fioriturен*) must be divided harmonically.

M. 19, right hand:

M. 56, after the hold make a pause, then begin *dolce.* The *stretto*, fifteen measures before the Agitato, "breathless."

M. 8, counting from the end:

In playing Chopin one needs, not intellect, but feeling.

Nocturne in G major, Op. 37, No. 2. Several ladies attempted this nocturne but von Bülow allowed none of them to finish. To one of them he said: "You play it like an étude, which is too hard for you." Finally a pupil of Professor Ordenstein, from Karlsruhe, played it through to his satisfaction. At the end he played it himself in wonderfully beautiful fashion. He said that it was a favorite with him and was infamously handled by virtuoso pianists. "The middle section is somewhat trivial; that is why it pleases. The public is obliged to take the finer part of the piece into the bargain."

Practice gliding from the black keys to the white keys with all fingers.

Polonaise in A flat major. "The beginning of this polonaise should be played *piano* and *molto grazioso.* Even German ladies are permitted a certain coquetry." He did not allow the lady to finish the piece.

Mazurka in G major, Op. 50, No. 1. Until M. 12 with clash of spurs. In that measure the dance becomes a song. In this mazurka we find dancing, singing and gesticulation. The last two chords very close together.

Von Bülow played the mazurka himself and said at the end: "See what lively springs I make; but I can give a reason for all I do."

Scherzo in C sharp minor. Of Chopin I recommend to you the four scherzos and the four impromptus. These represent the masculine Chopin, in contradistinction to the sickly, hysterical Chopin. The ballades I cannot endure.

Scherzo in B flat minor. This is commonly said to be in B flat minor, but it is really in D flat major.

Scherzo in E major. This is no fairylike scherzo. Not too soft. If you use the pedal with a scale, do it at the beginning of the scale and not at the end, *e. g.*, at the end of the scherzo. (*Vide* Hans Schmitt's Pedals of the Pianoforte.)

Fantaisie Impromptu. What I want in the opening measures to make a rich effect is a full bass.

"I know a lot of Chopin's pupils—ladies, they are—who differ from Liszt's pupils in being much older and in never having had lessons from Chopin, but they have, however, learned more!"

Some one asked permission to play the Ballade in A flat. "I am very sorry, but I cannot hear the ballades. I am like a tutor who has undertaken a certain fixed task which must fill the term. (*Vide* remark under *Scherzo in C sharp minor.*)

Impromptu in F sharp major. "In the beginning not too much pedal." As the lady started off in a furious tempo, he cried out: "No! no! no! You have played yourself into a fit! Everything is mixed up, and all your chords are chords of the diminished seventh."

Chopin's pupils have gotten up an edition of his works in Paris. Chopin's pupils, however, are as unreliable as Liszt's pupils. Use Klindworth's edition.

LISZT.

Von Bülow refused to hear any but original compositions by Liszt. All transcriptions were ruled out. He recommended the set of twelve études; the two concert études, *Waldesrauschen* and *Gnomenreigen;* the three études in A flat major. F minor and D flat major; the two ballades and the *Scherzo and March.* This last was a particular favorite with him.

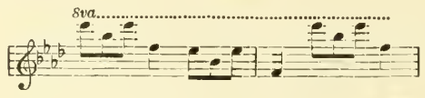
Au Bord d'une Source. (At the Spring.) He said: "Fraulein, you play that too much like a man. Herr N., play it for me in a more feminine manner. You have here a spring of champagne, not of bock bier. Liszt by no means represents mere virtuosity in contradistinction to true musicianship, quite the contrary! Diminish after the first three eighth notes of the second measure; the same in the two following measures. The whole piece is to be played very quietly; the fine and ingenious modulations must be brought out clearly and strikingly. Be sure to play the two sixths, E flat—G and D flat—F, occurring M. 17, counting from the end, distinctly and with a certain emphasis."

Among other things he said: "In making great springs you must now and then exaggerate a little; otherwise nobody will notice that they are hard to do."

Sixth Hungarian Rhapsody. Von Bülow said: "There are not only salon Tyroleans, but salon gypsies. Fraulein, you have a famous technic but no intelligence." When the lady began the octaves von Bülow went into an adjoining room, whereupon she stopped. He came back and remarked: "Oh, keep on playing; I consider myself superfluous!"

La Chapelle de Guillaume Tell (The Chapel of William Tell). The beginning strong and determined. It is like the motto: "We men of Rütli give each other the hand as pledge." To the amusement of all present, von Bülow included, the gentleman who was playing suddenly rose with the remark: "*Ach;* I can never play it as you want it, so I had better stop."

Valse-Impromptu. Liszt wrote this waltz in the album of the Empress of Russia. She made a present of it to her lady-in-waiting, who gave it to her maid. She, in turn, presented it to her sweetheart, who sold it to Schubert, the publisher. So there, you have the history of a waltz! This passage



as though it lightens; first here, then there.

At the passage

he said: "In concert playing one is obliged to set off fireworks more or less suitable to the occasion. I can recommend to your attention a witty saying which has, moreover, the advantage of being thoroughly respectable: play what is hard as though it were easy, and what is easy as though it were hard." A clever rendering of the rule that in difficult places the technic must not appear to be the end, and in easy places repose must not be lost. "I am convinced," he added, "that Madame Essipoff is a great executant, but as a musician—with emphasis—"she is one of the greatest abominations I know."

Ballade in B minor. "As regards poetic content this ballade can be favorably compared with those of Chopin. In the beginning be careful to bring out the first two notes—F sharp and B with distinctness—so that the hearer may distinguish the tonalty with certainty." He did not allow the pedal to be used with the chromatic passages of the left hand in spite of Liszt's express injunction to that effect. On the whole he was greatly pleased by the gentleman who played the work. "A beautiful composition and the performance was worthy of it. You are so musical that you really change to music what is unmusical in this piece."

Irrlichter. Gnomenreigen. These works are as finished as any song without words by Mendelssohn. I could wish that the genial master had created more such. To judge Liszt only by his symphonic poems, which I call extravaganzas, is unjust to him as a composer.

Paysage. Wilde Jagd. Etude in F minor. The early edition of these études is so difficult that no one nowadays, with the possible exception of Rubinstein, can play them. Later the master issued an edition for us mortal pianists. The rhapsodies also are much more difficult in the original edition.

I divide musical mankind into two classes: in the one, music enters by the feet and goes up to the heart, perhaps also to the head; in the other the case is reversed.

RAFF.

Von Bülow held Raff in high honor. Among other things he said: "Raff stands alone in the history of art because he combines in himself the most opposed styles, and yet in them all he preserves their purity. His salon music is salon music in the best sense of the word (in Raff's salon music a slight irony is always perceptible); the same is true of his chamber music, of his music in the strict style."

The following works were played: *Metamorphosen, Ob. 74, No. 3; Suite in E minor, Op. 72; Suite in D minor, Op. 91* (the ninth symphony of Raff's piano works), and *Frühlingsboten, Op. 55.* A gentleman played one of his salon pieces, an insignificant composition. Von Bülow said: "How can you play such stuff? Raff only wrote that on a commission for some music publisher. When you wish to honor Beethoven you do not play his flute duos."

On Raff's birthday, May 27, von Bülow, standing before Raff's portrait which was wreathed with flowers, spoke with visible emotion of his significance as a master. He laid stress on the fact that Raff had early recognized Brahms' great talent when the latter was but a youth. "Since Raff was one of the most unselfish of men," he continued, "I believe that we can best celebrate his birthday as he would have it by performing some important work of Brahms."

Their highnesses, Princess Marie of Meiningen (piano) and the blind Prince Alexander of Hesse (violin)—both constant attendants at the class and pupils of von Bülow—then played Brahms' violin sonata in G with wonderful effect. The prince played the Adagio with touching pathos—von Bülow said, "like a prayer." The audience was deeply moved; no one present will ever forget that morning.

Suite in D minor. Fantaisie and Fugue. As the lady played the passage in thirds at the end with a hard, rough touch, von Bülow cried out, in a tone of alarm: "Ah, ah there! Do not make so much noise. It is like a chest of china falling down stairs."

Giga con Variazioni. Von Bülow explained that the *giga* is a slow dance of Italian origin, while *gigue* is a quick dance of French origin. In the fourth variation the sixteenth rest in the figure

was too short to suit him. "When you practice this place beat the time of the rest with the toe, or," he added, with a mocking smile, "with the heel. That may be easier. In the variation next to the last be careful not to sacrifice clearness to the tempo—*il piu presto possibile*—but rather the reverse."

The work was then played by another gentleman. These repetitions of the same piece were highly instructive. The second player, if he were intelligent, had the opportunity of profiting by the remarks made to his predecessor; von Bülow could therefore go into other details and thus give greater finish to the execution.

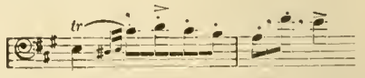
Suite in G minor. First Movement. Frühlingboten. Von Bülow named these pieces poems. "In *Abends,*" he said, "you should make a slight pause after the fourth measure. It is not possible to sing a phrase of eight measures in one breath. To be sure, it would be fine, if one could do it."

He praised the player repeatedly. "One of your good qualities is your discreet use of the pedal. Another—for you have many—is that you observe the text so faithfully."

Suite in E minor. In Mendelssohn one must be careful not to play too fast. In Raff everything goes with something of a swing. Gutzkow is right in saying that an art-work must make the impression of an improvisation—in the higher sense of the word, of course. You must play so as to give the hearer the impression that you are playing the piece for the first time. When modulations are closely crowded together you must retard a little.

When the player was not quite clear in playing an up-count, he said: "Hear Madame Sembrich. In her singing you will hear nothing swallowed up—no up-count lost."

Menuetto. You play too innocently. This must be played with a great deal of finesse; otherwise it sounds very ordinary. Play the trio as though the composer himself were mocking over its triviality and leaves it with a jest.



These are peculiarities in playing Raff which few can give you so well as I. It is now just forty years since I first knew him.

Cavatina from the Suite in D minor. The lady did not "declaim" the beginning well; she took the

unaccented eighth notes too heavily, thus: — — V | — instead of V — V | —. Von Bülow grew more and more excited. He exhausted himself in finding comparisons to make her realize her faulty playing. "When I hear such dragging it makes me nervous through and through. Your playing is like the Berlin dialect in which they say 'Wai-ee-ter,' instead of 'Waiter.' Do you know the lady who lives at No. 35 Thiergartenstrasse? She speaks in nothing but spondees, If you were to hear her you would play no spondees. It sounds so sentimental, so tiresome. Sentimentality is the dark side of real feeling. I want no sentimental things played here."

When he recommended her to play a certain passage with more spirit she immediately began to play faster. "But rapidity and spirit are not identical," he said. "In order to play with spirit it is by no means necessary to hurry the tempo."

He was visibly affected by a beautiful modulation. "Yes, yes," he said (in English), "*music is a strange thing*. There is much in it that we cannot understand."

Romance from the Suite in E minor. The player altered his style of playing in such close accordance with von Bülow's suggestions that the latter cried out: "It is one of the most remarkable proofs of your great talent that you have adapted yourself so quickly to this style. You have so much talent that you could give some of it to your needy colleagues and yet have enough for yourself."

THE GYPSIES AND THEIR MUSIC.

MRS. JOHN FREEMAN,
President of "The Ladies' Musical Club," Bedford, Ohio.

Reliable authorities differ as to their origin, but all agree in calling them a mysterious vagabond race. Their name would naturally lead one to think that Egypt was their birth-place, but whence they originally came, what were their motives which drove them from their native soil, so much only seems now established that India, the cradle of many nations, was also the source from which they sprang. The first considerable body left Asia for Europe before the twelfth century. Their language (a daughter of the old Sanscrit) has, besides giving the only real clue to their origin, also shed some light over the dark period between their first emigration and their appearance in Europe. Originally the distinct mode of speech of a single and special border tribe of Northern India, it has, during many wanderings of the race, appropriated words from every country through which they passed; while on the other hand, it lost many of its own words, and still more of its own inherent power and elegance. These adopted foreign words, their respective number and their more or less corrupted state, point plainly to the gypsies having first passed into Persia, then having wended their way to some Greek country, their designations for seven, eight and nine being still Greek, and to their descent thence into Hungary, Cyprus, etc. Their language has remained the only tie which binds the scattered nomads together; although separated for centuries, they would at once recognize each other by certain words and formulas indelibly written in the memory of the whole race. A Gypsy band is spoken of as 14,000 more or less. One authority says the gypsies have no literature worthy the name, nothing but rude ballads, some love and dance songs, and a considerable mass of folk-tales—the latter will repay a keener investigation. The following is a bit of their poetry:

"There runs a swine down yonder hill
As fast as ere he can,
And as he runs he crieth still:
Come steal me Gypsy man."

Everywhere Gypsies ply an endless variety of trades. In Egypt it is serpent charming; in France and Spain they sit as professional models; in England we meet Gypsy Methodist preachers, actors, quack doctors, chimney-sweeps, carpenters, factory hands, etc. But everywhere the men have three principal callings—workers in metal, musicians and horse dealers. Gypsies have long been famous as copper and ironsmiths in South-Eastern Europe, where their horseshoes are unrivalled. It is here where Paderewski has spent so much of his time during his vacations, living among them and getting material for his new opera, the hero of which is a Gypsy—the heroine a Slav. The Gypsies brought no particular religion with them, but regulate themselves in religious matters according to the country where they live, wherefore, most writers place them below the heathen. However, in each tribe there is some power above all others, whether it be the Moon, a serpent or tree. Gypsies have everywhere been found dwelling in tents, which are described as low, black and oblong made of rough blankets. Even those in England, who live in rude houses and pursue agriculture, at certain times in the year take their tents and wander about for a time. The Gypsy character, strange medley of evil and good, presents itself as black and hateful to the outside world, whilst to the Romani race it is all that is fair and lovable. "There is nothing like mumply Gentiles," is a saying often in Gypsy mouths.

Gypsies lightheartedness and courtesy are patent to all men; but only to true adopted members of their tribe are their inmost hearts revealed. They are vain, cunning and indolent, with a passionate temper, but are as ready to forgive as to resent a wrong. Their family affection is intensely strong, prompting a parent never to chastise a young child—a grown-up son meekly to take a thrashing from his father. Finely proportioned, they are a race of middle stature, but lithe and sinewey, insensible to cold or wet, capable of enduring great fatigue. They pride themselves on their small hands and feet; corpulence rarely occurs, and only with the older women. The hair, black or dark brown, inclines to coarseness, is often frizzled, and does not soon turn gray. The complexion has been compared with the North American Indian. The teeth white and regular, cheek-bones high, aquiline nose over-hung by a strongly marked brow, knit often in deep lines of thought. The most striking feature is the full dark eye, now lustreless, then changing to an expression of mysterious, child-like sorrow, presently blazing forth with sudden passion. This description of the eye is to me the key to what is called Gypsy music. The lustreless expression to the descriptive—the child-like sorrow to the minor strain, which is, I think, always found, followed by the passionate, which represents the quality of their nature which responds to the intensity of their feelings, as they give themselves up wholly to the spirit of music. The words of John Oxenford, set to music by R. Schumann, called Gypsy life, with which you are all familiar, pictures the life of the Gypsies, as well as the fascination of their music. The Gypsies early develop and early fade. Many famous artists have issued from their ranks; and their own melodies sounding over the pushtas of Hungary—the steppes of Russia, or in the streets of Jassy, are not easily forgotten, some of them having been embodied in our favorite operas. No less wonderful is the grace and charm of their wild dances. Altogether the Gypsies are one of the most gifted races—the lost geniuses, so to say, of humanity. The real truth about them, their traditions and religion will, we fear, be ever kept a secret. The statement of Geo. Borrow, who lived so long a time with them, says, "Their entire catechism is summed up in three precepts—Be faithful to your husbands—be true to your people, and never pay any debts except those owing to your own kindred." Gypsies formerly had a distinctive costume, consisting of a turban-like headdress of many colors, together with a large cloak worn after the fashion of a toga, over a long loose underskirt. They still cling to a few distinctive features. In 1878, Queen Victoria was welcomed to Dunbar by a Gypsy "queen," one of the Reynolds family, who was dressed in a black robe with white silk trimmings, and over her shoulders, wore a yellow handkerchief. Behind her stood two other women, one of them noticeable for her rich gown of purple velvet, and two stalwart men conspicuous for their scarlet coats.

The Gypsy's favorite instrument is the violin, but few are the instruments he has not successfully essayed. Eisteddfods of Wales, have witnessed the triumph of Gypsy harpists and hundreds have been charmed by the concerts of the Roberts family, not knowing they were a Gypsy band. Brahms has, I think, written the most Gypsy songs. Nearly, if not all of the composers have written what is called "Gypsy music." Liszt, in his book "The Bohemians and their Music," ascribes to the Gypsies the creation of Hungary's national music, but his theory has been contested giving to the Magyars (Mŏd'yars) folk song the credit, which the Gypsies have embellished and made their own. Liszt says, "They have one thing that vies with our culture and art—their music. In their improvisations they express the God-given freedom of the inner sensibility in all its emotions, from the proudest human consciousness to the inmost longing of the soul for sympathetic communion. This music is to them, as it were, their world and God, life and happiness, the sun and all the world-movement with which we feel ourselves closely associated." He says of the Gypsy virtuoso, Bihary, "Had memory been of soft clay, and every one of his notes a diamond nail, they could not have clung to it more tenaciously. Had my soul been the ooze from which a river-god had returned to his bed, and every tone of the artist a fructifying seed-corn, it could not have taken a deeper root in me." Again he says, "Out of the passionate stir of all the mental powers, as well as pleasure in their impetuous rhythms, had come to him the irrepressible longing for a purer and higher mental expression which resounded in their Gypsy melodies like the soul-lament of the world." Music was an all. It was to them those higher thoughts and deeper emotions of human life we call religion and God Himself. The Gypsies and their music are like another and ideal Fatherland in that of Hungary—the most sadly longing, as well as the most delirously passionate expression of its natural existence. Upon Liszt's first return to Hungary we are told, "he visited these sons of nature in their out-door kingdom, slept with them under the open heavens, played with their children, gossiped with their rulers and chiefs, and spent hours listening to one of the best of the Gypsy orchestras, whose playing was animated by the beauty of the summer day and the abundance of its favorite drink, and accompanied with indescribable ardor the dance of the women, who shook their tamborines with gentle cries and fascinating gestures." During the intervals of rest, so he says, "he would hear the creaking of the poorly greased axles of their wagons, which had been removed one side to make more room for the dancers, the huzzas of the boys, noisy cracking of nuts by white toothed children, bright laughter, mad leaps, somersaults, and a wild whirl and bustle—a genuine lyric of untamed nature and caprice." Liszt visited them the second time and was received by the Gypsies with great demonstration. "The orchestra was ordered out, and played for hours. Night came before they were weary. To light up the darkness a dozen pitch torches blazed in a circle. The flames arose like cylinders of glowing iron, for not a breath stirred the atmosphere laden with heat and the fragrance of invisible aromatic herbs that had been mowed down in the morning. To our half closed dreamy eyes, the torches appeared like columns supporting the dark canopy of the heavens. The smoke wavered in the air, now concealing and anon revealing the stars. Tne darkness was like a solid wall around a fantastic wood-palace, while the gnarled tree-trunks, with their curiously twisted branches, stood out like statuary. The children leaped about like gnomes and stripped the bushes. The scene constantly grew more strange and fantastic. The women appeared like spectres when they suddenly emerged from some dark corner, with eyes gleaming like coals, and with magical beckoning hands to tell us our 'good fortune.' That eve., the phrase was not a meaningless one."

[TO BE CONTINUED.]

SPARKS.

One day Panseron, the composer, while riding in a cab, beheld Cherubini trotting along the pavement beneath a small, delapidated umbrella in a pelting rain.

Panseron stopped the cab and addressing the illustrious director of the Conservatoire, cried: "Monsieur Cherubini, Monsieur Cherubini! please take my cab; you are dripping wet, and at your age this will not do."

Cherubini, thinking, no doubt, that Panseron was right, thanked him and hastily entered the vehicle which had been so generously placed at his disposal.

Panseron was now on the pavement receiving the rain, which fell in torrents. "My dear master," he said to Cherubini, "now that you are safe in the cab, would you be kind enough to lend me your umbrella? You see the rain is coming down fast."

Whereupon the celebrated composer of the "Requiem," giving the order to drive on, answered: "Impossible, my dear sir, you know borrowed umbrellas are never returned."

***

Verdi, in speaking of Paganini, one day, said: "Paganini was a real genius. Not a single modern violin-virtuoso can be compared to him. His talent was extraordinary, as well as his knowledge of things; extraordinary also was his technique. He performed the most wonderful feats upon the violin. One day he was invited to dinner by a friend. During the repast the host managed to slip a violin into the hands of the great virtuoso and requested the latter to 'play something.' Annoyed at this breach of hospitality, Paganini took up the violin and by means of a marvellous fingering and with a single stroke of the bow made four *b's* sound simultaneously."

QUESTIONS ANSWERED

[Under this heading THE MUSICIAN will be pleased to answer any questions submitted by its readers which may be of general interest. *All questions must be accompanied by the full name of the questioner.* Answers will be published without such names. Those who send questions should take care to state clearly what information is wanted. Only such questions as will be of interest to general readers will receive attention in this column. All others will be answered privately, for which purpose stamps should invariably be enclosed.—ED.]

W. I.—Mendelssohn wrote the Overture to Mid-Summer-Nights' Dream in 1826, when he was 17 years of age. The rest of the music of the play was not composed until 1843, a lapse of seventeen years. The unity of the work causes wonder, when the time between its beginning and ending is considered.

M. B. R.—In Rubinstein's Melodie in F, the thumb of the right hand plays the first note of the theme, the thumb of the left hand playing the second: the *alternation* of thumbs is maintained wherever the musical sense will permit of it. There are editions published with the proper fingering marked.

M. E. P.—Just which are the proper muscles to develop by correct practice is somewhat difficult to state; many of the great teachers, like Leschetizky and Deppe, having studies for the development of special muscles which are not the same in each case.

H. G.—The metronomic marks desired are given here:

Bach. Loure from 3d Suite, ♩=96–100.
Bach. Sarabande from 5th English Suite, ♩=63.
Beethoven Sonata, No. 1, Op. 2. Prestissimo, ♩=104.
Cui. Berceuse, ♩=144.
Delahey. Columbine Minuet, ♩=132–138.
Godard. Gigue, ♩.=132.
Godard. Second Waltz, Op. 56, ♩.=69.

M.—A talent cannot be acquired, but such talents as one may possess may be cultivated and improved by study and practice. It does not follow that a lover and student of music will be successful with every instrument he may take up. He will best succeed with the one he has a talent for. Tune the E to the note in the 4th space, treble clef.

F. E. H.—(1) Nachschlag is the German name for an ornament in vocal and instrumental music, which derives its value, or time, from the *preceding* note, and not from the *succeeding* note like the appogiature, which the Germans call vorschlag. "Triller ohne nachschlag" means "trill without a turn, or extra notes at the finish." "Triller mit nachschlag" means the turn should be added to the trill. (2) To omit the grace notes in Bach's Inventions would most certainly "seriously affect" the composition. They are not an insuperable difficulty. (3) Some of Chopin's works have been arranged for organ, both pipe and cabinet, with good effect. (4) A transcription has greater freedom and play of fancy than is permitted in variations, which are more restricted as for form and harmony.

C. M. B.—Figure and motive are, practically, the same thing, viz., a short musical subject. Technically, a phrase is an incomplete musical sentence, and a period is a complete one, usually of eight measures. Tubal Cain is spoken of as the first musician.

SOUNDING THE DEPTHS.

FREDERIC W. BURRY.

There are few students of music who take the trouble to sound the depths of their art; few who look into the scientific character of music. The average musician is inclined to be dilatory and careless. His impatient, impetuous nature refuses to give him a chance for cool reflection and strict analysis. I am not speaking of the expounder of theoretical principles—the precise master, whose talk is always of the mathematical side of music. We all know that he is "scientific" enough, in a sense—but he is not the virtuoso, the artist, and it is with the latter we are now dealing.

Too often, the lover of music allows his emotions to fly away with him. We excuse this lack of control and place it to the eccentricities of genius. But our emotions are forces which should be under the dictation of our intelligent will. It is then that we are capable of creations divine. Surely a true genius is pre-eminently one who is self-controlled, a master of *self* as well as his art.

Indeed, self-mastery is imperatively a first necessity of greatness. One can then take an inventory of the forces within, forces seeking for expression in the lines of one's desires. Self-mastery, concentration when the mind is poised in strength, when the energies within are firmly centred, is truly the base of progress.

The love of one's work has generally been held as sufficient for sacrifice. To yield up self for the sake of Art has been considered the mark of genius. This is only true in a degree. Love certainly demands sacrifice, but not necessarily of the kind which entails suffering. Service would perhaps be a better word to use. It is the faithful service to the task in hand which demands a thorough introspection, and an exact portrayal of the ideal.

One by one, should the details of a work be taken hold of, thoroughly mastered and interpreted. No careless desultory perusal or practice is going to produce the virtuoso. One must be business like, systematic in study and execution.

Concentration of mind, an alertness for what is before one, an attentiveness to one thing at a time, is indeed the sure road to high achievements. Follow out each idea as it presents itself; this leaves the mind clear, and receptive to fresh ideas. Do not let your notions crowd on one another. To work out into the field of expression, each thought as it strikes the horizon of your consciousness, is to open your being to new inspirations. Yes, concentration is the key to success.

One must have confidence, moreover. It is no use to be calling oneself a tyro in the world of music. We should aspire to be masters. There is no place out of reach for one who has faith in his aspirations. It is this confidence allied to persevering efforts which works magic with the materials in the world of Art, and produces the beautiful forms or symbols.

Each work of Art is a symbol of the soul's longings. It is an image, prophetically foreshadowing a condition of life. The artists of the world are in the vanguard of evolution. They create according to their dreams. It is only now that we are beginning to realize what it all means—the rare works of art—differing so greatly from life as it is, sordid and hideous. We see now that music, with all the fine Arts, is a leader, beckoning mankind on to brighter realms.

Glorious artists of the world, who brighten our pathway as we toil, giving hope to continue, encouraging us to look for more satisfying results! You are the prophets of the future, and already the world is changing in accord with your bright visions. Your ideals, projected sometimes but tentatively, are being materialized. And as the signs of progress are made more apparent to you, your ideals shall be recognized in all their intrinsic value.

This is the day for clear-cut deliberate action. Let there be a gracious union of technics with æsthetics. Let the various sides of Art no longer be divorced, but everything that leads to a true expression be considered worth our attention. Only when we recognize the complementary nature of mathematics with the inspirational ideals shall our productions be real works of Art; and then they shall be of value, even moving the world onward to a higher plane of existence.

Queen Victoria's love for music was well known, Mendelssohn was at Buckingham Palace in 1842, and, of course, there was music. A favorite song of the queen's was Italy, which appeared in Mendelssohn's first book of songs. "She sang it most beautifully in tune, strictly in time, and phrased it charmingly," Mendelsson has told us, "but where it goes down to D-natural, followed by D-sharp, she sang both notes D sharp. With this exception it was really delightful, and I have not heard the last long G sung by any amateur with such ease and in perfect time." On Mendelssohn on the same occasion pressing Her Majesty to sing one of his own songs the queen said that if I would give her plenty of help she would willingly do so. Just as she was about to sing she exclaimed, "But the parrot must go out of the room first, or he will screech louder than I can sing." "She sang 'The Pilgrim's Song,'" continued Mendelssohn, "really quite faultlessly, and with beautiful feeling and expression. I praised her very heartily and with the best conscience in the world, for that phrase near the end having the long sustained C she sang so well, joining the C to the following three notes—all in one breath, as one rarely hears it done—that it highly amused me that she herself should have spoken about the very long breath it required." "Oh, if I had not been so frightened!" said the queen.

REVIEWS.

SHAKESPEARE IN MUSIC. By Louis C. Elson. Published by L. C. Page & Co., Boston, Mass. 16mo. 354 pages. Price, $1.50.

An immense amount of research is compressed in this volume. Every musical lover of Shakespeare should have it and give it a careful reading. It is a thorough setting forth of the musical knowledge of the greatest of English poets. Every phase of such knowledge is inquired into and its bearing upon the musical references made clear. The book is not a dry chronicle of encyclopedic facts. The musical condition of England in the time of Shakespeare are brought out and the appropriateness of his musical allusions thereby made plain. Certain of Shakespeare's musical alusions appear to us strange, if not meaningless, because we are not conversant with the musical habits, works and instruments of his day. The names of the instruments used in some instances have been misapplied, and the reader of Shakespeare, who is not also a pretty thorough student of Musical History, will often be at fault. To the musically unlearned reader of this poet, then, this book comes as a boon. Its research and the full illustrative quotations it gives will give his reading a new and fuller meaning.

While thus especially useful to the lay reader, and while dealing with a special subject that might be supposed not to interest the average musician, the book is really a valuable addition to the professional musician's store of books. It is very attractively written and beautifully printed and bound. Its reading will increase one's general culture and broaden one's outlook.

It is handsomely illustrated with eighteen full-page portraits and scenes from the plays.

EXERCISES IN MELODY WRITING. By Percy Goetschius, Mus. Doc. Published by G. Schirmer, New York. 8vo. 126 pages. Price, $1.50

The music student of to-day is favored far beyond those of earlier years in the multiplication of really helpful text-books. The harmonies of Richter and others of like ilk, are being replaced by works better adapted to all classes of students, and, besides, the various departments of theoretical study are being interestingly treated in books devoted solely to the one phase. The book under review is of this class.

The name of Dr. Goetschius is synonymous with sound musicianship, and in this, his latest contribution to theoretical pedagogics, he has placed before music students an eminently practical and helpful little book.

It is intended to be collateral with Harmony, and is a course of study in Melody invention. It is a clear exposition of the subject, and should be widely used by those who do not intend to compose as well as by the aspirant for creative honors.

HARMONY SIMPLIFIED. By Francis L. York. Published by Oliver Ditson Company. 12mo. 135 pages. Price, $1.50.

The purpose of this addition to the literature of harmony is plainly set forth by the author in his introduction. He says: "I shall endeavor to give, in the simplest possible form, an outline of the principles of Harmony. I shall make no attempt to give details or to deal with the subject exhaustively, but I shall present all the tone combinations found in music and give sufficient explanation of their use to enable the student to recognize them in the works of others and use them correctly in his own. The rules given are derived entirely from the analysis of the works of the great composers and are followed by them in the great majority of cases."

Mr. York is an earnest student, a clear thinker and has produced a little book well worth mastering. On the framework built up from a study of these condensed treatments of so important and somewhat abstruse a subject as Harmony—providing, of course, the condensation is properly done—the student can proceed to more thorough work.

Long habit is hard to conquer, even when the will to do so is present. One of the primary necessities is that of concentration. To devote the attention to one subject for a short but definite time is the first essential.

PATIENCE AND PERSISTENCE.

HARVEY WICKHAM.

There are two things which every pupil likes to study; namely, that which is novel and that in which he excels. Between the two lies the hated thing which is neither new nor congenial. To master this requires encouragement. How easy it is to undertake a strange subject, or begin a new piece. How many ideas one gets and how the horizon of the mind seems to broaden. The more perfectly novel the thing in hand, the greater the pleasure. Let it be a composition of a class and grade hitherto unattempted, and let it be studied under a new teacher—or let us go further afield, and suppose that it is something entirely without the pale of previous endeavor; drawing, telegraphy, Spanish or what not. There is no difficulty in maintaining the interest in this lesson. It is after the strangeness has worn off and before proficiency comes that most become discouraged. Yet across this dreary middle ground every accomplishment must be carried if it is to benefit us.

There is a period between youth and maturity when all individuals are at their worst. No matter how charming the child, or how interesting the man or woman, they have passed through, or will pass through, "the awkward age." We cannot afford to cut their acquaintance at this time; neither can the student leave off the moment a composition or a subject becomes "stale." Leave off permanently, that is, for a temporary change is absolutely essential after a certain amount of mental food of one sort has been assimilated. The mind is strangely like the body, and to be a good educator one must have something of the physician about him. How then shall we pass this rubicon between the new and the loved?

First. By anticipating the state of intellectual satiety, and changing the occupation at the first sign of the approach. If it comes as a surprise, disappointment and discouragement are sure to follow. "This work which I undertook so gladly and which seemed so fine and delightful, is it only a dreary commonplace after all?" Such is apt to be the instinctive inquiry. Expect to be disillusionized, and the process loses half its sting. Expect the fabric of every subject to seem threadbare, but be sure you blame tired eyes and not the fabric itself, whose beauty you do not yet see.

Second. Loss of interest may be avoided by the proper use of variety. Variety is a thing which, like an opiate, needs careful handling. It is possible to produce monotony itself by excessive variety. If a patient is given powerful medicines on slight occasion, when the emergency comes he has no drug to fall back on, his system being enured and deadened by their constant use. This condition, when it is of the mind, is one of the worst which the teacher or pupil has to encounter. Beware of too frequent changes, lest change itself lose its power of refreshing. To the mind which has not been vitiated by variety, the slightest variation in its routine is recuperative. Put the composition away, which no longer yields to practice; or manifests a tendency to grow more difficult instead of less. A week or two spent upon something different, even something apart from music, will put the student into a condition to re-study with success.

Did you ever stop to think, I speak to ambitious pupils, that only mature ideas were of any practical use in the world? The subjects you have recently begun to think about, may appear to you very lucid and clear, and you may fancy that your conclusions and opinions upon them are very sound and judicial. Just commit your thoughts to paper, and refer to the paper after a single year of continued study. What raw, ridiculous bombast you read. Now you know why you didn't produce the impression on your friends which you expected, or even why you did not receive a certain appointment. Perhaps the judgment of the committee was not so biased after all. These written memorandá furnish an excellent method of seeing ourselves as others saw us, and after a few experiences one loses the habit of relying on immaturity.

How great, then, the necessity of persevering to the end. All the work of preparation is lost if the conclusion be not reached. Of what avail were the months of labor and the millions of dollars which were spent in the construction of a great bridge, if the engineer failed to complete it so as to make it fit for travel? Of what use the sunshine and the moisture and the treasures of the soil, which the growing fruit has received, if it fall ere it be ripe? The elements which make sweetness in the apple at last, only form acids during the period of growth. How little we understand the proverb, "There is always room at the top." We think it is a thing that applies to world-famous geniuses only, while it is applicable to all. Room at the top of what? Of every ladder. Not of the tall ladders only, but of *every* ladder. There is as much room for the superlative barber as for the superlative poet—more, if anything. One has only to do one thing supremely well to be in demand; and to be in demand is to have succeeded.

You begin by practicing the Moonlight Sonata. Many of your student friends have studied it also, and received pleasure from its sweetness and its strength. Probably both you and they omit the finale. If you stop here you have done nothing which will yield a return. If a speculator would buy large tracts of land in anticipation of a rise in real estate, what fortune would he reap if he held it till a year before the rise came? It is not in the nine years during which his capital lay dormant that he reaped his return, but in the tenth year, when its value showed itself to the world, repaying his foresight. In like manner, persevere with the sonata, giving yourself of course, intervals of change. Bye and bye you play it better, finale and all, than anyone in your circle. You are now known as a fine pianist. If you wish to teach, your reputation is made. To have *half learned* all Beethoven's works would not bring you a tithe of the profit and pleasure which comes from the mastery of one.

THE STUDY OF A SONATA.

Beethoven's Op. 2, No. 3 in C.

DR. HENRY G. HANCHETT.

There are many ways of setting about the study of any subject, and it may safely be said that no one has thoroughly studied his subject who has not attacked it in more than one way. It is quite possible to practice a Beethoven Sonata without giving it a bit of anything worthy to be called study, and it is equally possible to study a Beethoven sonata without practicing upon it a moment. It is undoubtedly true that the best way of studying such a work is by first memorizing and practicing it, but a real student of music will not be satisfied to leave so great a work with simply that kind of study. It would be a dull mind that could not make some new discovery by trying some other method of study, that had escaped attention in practicing even after memorizing, while on the other hand there would be enormous conceit present in the mind of any one who would dare to say, even after repeated studies, that he had exhausted all there was to be learned of so great a work. The human mind is so constituted and its products are so related to the universe and its infinite Creator, that it is absolutely impossible to exhaust any subject that is really worthy of serious attention.

In undertaking the study of a Beethoven sonata in this and some following articles, I do not mean to touch upon the matter of practice or performance more than incidentally. My purpose is to suggest certain lines of intellectual investigation that shall make the student more thoughtful, more appreciative of the skill of the composer, more observing and in short more intelligent as a musician than he can become by merely practicing, however carefully and on works however great.

As a first step in the sort of study I propose, it will be necessary to number the measures of the work throughout. It may sound a little strangely to say that there are several methods of doing this simple enumeration. A perplexing question oftentimes is: What constitutes a movement? Nearly, if not quite all writers who require measures to be numbered, number the measures of each movement separately, but writers who so treat all, or at least several of the sonatas, may even prove to be inconsistent in doing so. There one of the subordinate movements is a Scherzo with trio, for example, it may seem best to treat the trio as a separate movement and call its first measure, No. 1. But having done so (and that is the plan of Mr. Harding) when one comes to Beethoven's Op 31, No. 3, in which Beethoven has written out the Minuet in full after the trio as well as before it, it seems queer to start the measure-numbers anew at the trio while we are evidently still in the same movement. Then if one decides that the Grave of Op. 13—the Sonata Pathetique—is a part of the first movement and numbers continuously in accordance with that view, one may feel like sacrificing consistency when one comes to Op. 53—the Aurora Sonata—where the second movement, although called an introduction and leading without stop into the Rondo, nevertheless seems to require separate treatment, while the Prestissimo seems to invite a continuation of the numbering adopted for the Rondo. In other cases, although one may be clear as to how the rule he adopts is to be applied, he may yet find his results differing from those of someone else because of the use of different editions, for it is a fact that a good many typographical variations exist in different editions, to some of which attenttion must be called as we proceed with our study. All things considered it has seemed best to me to adopt the rule of measure numbering given by Mr. Harding in his Musical Analysis, mainly that comparisons may readily be made with that useful book, in which all of the Beethoven sonatas are analyzed as to their formal structure. The rule there given is to place a number before every bar, either single or double, regardless of the number of notes or beats contained in the measure. That is to say: if the movement should be in 6-3 meter and the first measure should contain but a single eighth note on the last beat, that is still to be numbered as measure one, and if a double bar should appear in the midst of a measure for any reason, the part before the double bar counts as one and the part after it as another, in applying the numbers. In the sonata Op. 2, No. 3, which we are about to study, this system of numbering will give 258 measures in the first movement, 32 in the second, 67 in the third (up to the trio where we begin again with one), 65 in the fourth, including the Coda, and 313 in the last. I do not regard this as the best way of numbering, but it is well to agree with Harding. It is best to write each number close to the bottom of each bar a little before it.

Now having the preliminaries arranged, so to speak, our sonata measures numbered, and if possible our sonata practiced so that it can be properly interpreted on the piano throughout, let us begin our study at the very beginning with the title. It is called a Sonata. Exactly what this means can be easily learned from any good musical dictionary, and to know thoroughly what it means will involve a good deal of study, into which it is not my purpose here to enter. Concisely stated, however, it may be said that a sonata is a composition in two or more movements, at least one of which must have a specific form, which I propose to call a Mozarta. This form has been called usually either a sonata-form, sonata-piece, or first-movement-form. All of these terms are objectionable. A sonata-form should mean the form of a sonata, but the term really does mean the form in which a particular movement of a sonata is cast. Sonata-piece might be better if we understood it to mean a piece or portion of a sonata; but as we commonly speak of a whole sonata as a piece of music the term would seem, like sonata-form, to mean all of the work, while it is intended to refer only to one movement having a particular form. First-movement-form again is a faulty designation, for the movement so called is often not the first movement in position, and in many sonatas several of the movements are cast in this form, and it certainly does not sound well to speak of three first-movements in a single work. On the other hand scientists are in the habit of using the names of the great men in any branch of learning as the basis of the nomenclature of that subject. In electricity, for example, we hear of "Galvanic" batteries, from Galvani; of "Faradic" coils, from Faraday, of "Amperes," and "Watts," making use of the names of great discoverers. Why then should not the name of Mozart be used in making a suitable title for something often requiring mention in musical analysis? Let us abandon "Sonata-form" and use instead "Mozarta." To finish, then, the concise definition of the sonata, it is a composition in two or more movements, at least one of which must be a mozarta; the latter being a movement in three chapters, the first and third of which must each contain two subjects, which in the first chapter are in different keys, while in the third chapter they return, but now in the same key. Nothing more about the sonata form is strictly or absolutely essential—so much is so.

The dedication of the sonata to Joseph Haydn and the opus number, showing it to be an early work, will lead to historical and biographical study by which attention may be directed to those earlier sonatas of Beethoven, which are not usually included in the regular series, but which are quite worthy of study and of comparison with the later and more mature works of lesser geniuses. All preliminaries, then, having been cleared away, it will be in order to commence the study of the sonata in detail, but space forbids doing so in the present article. A careful examination of the rhythmical features of the work will be undertaken in the next issue.

THE MUSICIAN.

A Monthly Publication.

EDITED BY
ARTHUR L. MANCHESTER, A. G. O.

PUBLISHED BY
HATCH MUSIC COMPANY.

SUBSCRIPTION PRICE.

SINGLE COPY . . . . . $ 15
PER YEAR 1 50

Free of Postage in the United States, Canada and Mexico.
Foreign Postage, per Year, 72 Cents.

Remittances should be made by Bank Draft or Check, Post Office Money Order, or Express Money Order. *Where none of these can be procured*, money can be sent in a Registered Letter.

New Subscriptions can commence at any time during the year.

Discontinuances.—The publishers should be notified when a subscriber wishes his paper stopped. In the absence of written notice to the contrary, subscriptions will be continued.

Communications are Solicited from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications intended for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned.

All Letters should be addressed and **Remittances** made payable to

HATCH MUSIC COMPANY,

Eighth and Locust Streets, PHILADELPHIA, PA.

The Publishers of THE MUSICIAN do a General Music and Music Publishing Business. They can supply anything in Music.

SUCCESS. Last month we chronicled the death of a musician whose career had extended through a long period of time, his powers being preserved in their fulness of strength to the end. His influence on music-life was exerted through the medium of origination. He left behind him compositions in one of the greatest of forms, the opera, which have, and will continue to serve as models and to influence musical taste, for years to come. All the world united in singing his praises. As a musician, a composer, a man, he was worthy of the praise universally bestowed upon him. For a long time incidents of his life, public and private, will appear in print. According to the tenets of man he was famous.

●

This month we chronicle another death, the death, too, of a composer. The first lived and died in Italy, the home of melody. This one died in our own land, born and bred within its national and social environments. The former died in the plenitude of his years and powers. The latter on the very threshold of his real career. One left great works behind, the other did not. Ethelbert Nevin composed no great operas, no requiem. His work was done in the unpretentious small forms. Piano pieces, songs, pieces for violin and some concerted vocal music make up the sum of his production.

●

Was his life work a failure? Is his place in music's hall of fame so insecure that the passage of a few years will cause his name to fade from view, his influence to cease, his memory to be lost? No audience will applaud the production of a great dramatic work of his; no student find in him a model for dramatic writing. Has Ethelbert Nevin, then, performed no service for American music life? It is true he cannot be placed beside Verdi, yet we will not say he did nothing for art. He did *much* for his art.

●

His compositions contained the germ, which real talent alone can give. He could sing. Whether writing for piano or voice, he sang with the true lyric quality. It is said that "Narcissus" was played before a pianist of eminence, some one remarking that it was trash. The pianist remarked that it showed the musician, and added, "it seems to me that any man who can write music which touches the hearts of the people must have a little genius." And here we meet the fundamental principle upon which our estimates of value must be based. While the questions of degree will always be more or less prominent, and rightly so, in the formation of such opinions, the underlying thought should be: did he do his work in his appointed time and place well? If so, he has fulfilled his mission.

●

Thus with Ethelbert Nevin. He did not pose as a composer of great works, but he wrote from the heart *to* the heart, and having recognized and accepted his measure of ability, he put into his work the all and the best he possessed. The result is songs and piano pieces that will continue to touch hearts and uplift taste long after he, as a man, is forgotten. He wrote songs for children, and such songs as few will ever surpass. He brought music to many in a form that left an indellible impress for good.

Nevin was not a Verdi, a MacDowell, a Foote, a Chadwick, but he did his work as well as they, mainly because he confined himself to the phases in which he knew his powers lay. As a recent writer has said, "there is room at the top of *every* ladder," and while the ladders do not all reach the same height, he who reaches the top of that one which his capabilities fit him to climb, achieves successfully his life work.

GREED. There was once a "child prodigy." She lived in this country of ours. Her talent was undoubted, and, withal, she was a beautiful and interesting child, really meritorious and sincere. At this same time there were also some relatives who saw in this "child prodigy" a means of support. So she was compelled to wander about the country giving concerts. All means of study and improvement were contemptuously laid aside. The years passed on and the "child prodigy" grew into a pretty well developed girl. Habits inimical to steady persistent work had been formed; no advance over the powers of early years had been made. The child powers were not so attractive in the young girl and the inevitable result was failure. The greed of those to whom was intrusted the development of the child's talent wrecked its future. Does it pay?

NOTABLE PIANISTS. As was noted in last month's MUSICIAN, the list of pianists before the public this season is unusually large. There have been some notable pianists among the visitors. With the crowd of players who do not attract particular attention have come some genuine artists who have more than fulfilled the promises of their advance agents. Gabrilowitsch has impressed himself upon all who have heard him as an artist of unusual powers and of real sincerity. His ample technique has been the means of conveying great interpretation of master works, without mannerism or unnecessary display.

●

Harold Bauer is another of like stamp. Simplicity and genuineness are his characteristics. His technique is also more than adequate for his purposes. Of his interpretation one writer says: "He is emotional, but never does this emotion interefere with rhythm or with what he considers the composer's intention. It means something to hear his interpretations, for they are not the impetuous outbursts of fiery youth, but in the fulness and buoyancy of young manhood, he gives forth that which is marvelous in its authority and authenticity, and one may well take heed of what he says through his wonderful fingers, for he is a master who respects traditions in the classics and is great enough to create that which may in turn become tradition for futurity."

●

There is a liberal education in listening to such players. Mind and heart are both benefited by repeated hearings of artists such as these. We earnestly hope our readers will have the opportunity.

MUSICAL CULTURE. "All knowledge, however, musical knowledge not excepted, is a knowledge of relations, simply because the universe itself is a complexity of inter-related co-exigencies In the absence of the requisite amount of musical culture, the mental effort involved in grasping the relations of the different parts of a work of musical art is so great as to be destructive to all direct and immediate pleasure in the music itself. Hence, to the musically uncultured all artistic music is artificial in the bad sense of the word. Thus the relations between popular and classic music depend largely upon popular musical culture.

"Finally, two facts stand out with great clearness before the minds of all who are conversant with what is going on in American musical life: First, Americans are a highly musical people, and, second, as in respect to other factors of civilization, so in regard to music Americans will never be satisfied with less than the best that the world affords, and nothing will divert them from the search for and the assiduous cultivation of the best."

The excerpt printed above is worth reading. Albert Ross Parsons, who wrote it, knows whereof he speaks, and in these two short paragraphs is contained the gist of the difficulties now in the way of the elevation of popular musical taste and of the fate of musical culture in this country. "To the musically uncultured all artistic music is artificial in the bad sense of the word." That statement comprehends the fact that piano teaching, voice culture or any other specialized form of music teaching will not result in a higher state of popular musical appreciation. They may do a small part in the attainment of this result, but alone they will never accomplish it.

●

Popular musical culture means popular knowledge of real music, not so much in practice, as in practical theory. The audience which knows something of formal construction, of the art principles on which musical composition is based, and of the means by which it is produced, interpreted, will not consider artistic music artificial. Evidently, then, musical salvation lies in multiplying the number of such audiences. How is this to be done?

●

The writer believes the many courses of illustrated lectures that recently have been inaugurated in various parts of the country will prove to be a powerful factor in doing this work. The departments of study, such as the *New Education* in THE MUSICIAN and the Home Study department carried on by the Music Teachers' National Association, will do still more. It is the propagation of musical culture through such practical channels as these that educates the people to that point where they can discriminate between good and bad music The dissemination of such literature as Henderson's "What is Good Music," Krehbiel's "How to Listen to music," "Songs and Song Writers," by Finck, will be productive of beneficial results. With the books, however, should go a knowledge of how to use them to the best advantage, hence such courses of study as have been named furnish the most direct means of educating a musical public. There is another factor in this work that should be mentioned. The educational music journals are doing not a little to aid in the consummation of this desirable condition. They regularly reach a vast audience, and when true to their calling, exert great influence.

●

And the fact that "Americans will never be satisfied with less than the best that the world affords, and nothing will divert them from the search for and the assiduous cultivation of the best" furnishes encouragement that these and other agencies will eventually effect the reform earnest musicians so earnestly desire. As those who are interested become more acquainted with the nature and value of this collateral education, they will enter upon the study with a vigor which will result in successful attainment. May the day hasten.

HALF-TONES.

The smell of violets in the dark;
The first wan star whose trembling spark
  Shows white against the west;
A square of moonlight cool and still,
Broken by leaves which wave at will
  To break its ghostly rest.

The early twitter of a bird
From apple-bough with dawn-winds stirred
  At break of summer day;
A rift of sunlight dropping down
From cloud-cast sky on meadow brown
  And gliding, still, away.

Dim hints, pale prophecies, ye hold
The charm of all ye untold,
  A spell which stirs my breast
With—is it pain or is it joy?
Wierd as an echo, swift and coy,
  But sweet as Love's unrest.

—Henrietta R. Eliot, in the New England Magazine.

HOW TO HANDLE PUPILS.

MADAME A. PUPIN.

An Englishwoman once wrote a cook-book: In it she gave a receipe for cooking a hare, beginning it thus: "First catch your hare." If the requisites for managing pupils successfully were to be epitomized in one sentence, for the benefit of teachers. it might read: "First love to teach." How can any person hope to meet with success in any pursuit which he does not love? The artist loves to see the landscape grow under his brush; the sculptor loves to see the marble come to life under the stroke of his chisel. If these can find pleasure in their work, why should not the teacher find a satisfaction, if not a deep happiness, in moulding the plastic mind of his pupil and watching his dawning intelligence.

Some teachers have been heard to say that they hated to teach. It is said that there are teachers that do not teach. It may be these are they.

A young teacher wishing to make a success in his chosen profession must recognize his different relationships to his pupils—Teacher, Guide, Model, Friend. He must examine himself to see if he possess the qualities necessary for a successful teacher, trusting that time, experience and a love of his work may develop what is lacking.

First, he must have self-control, without which it is impossible to control others. This self-control, combined with a quiet decision of manner which presupposes no possibility of insubordination, will compel obedience in all cases.

Second, he must possess infinite patience which never shows signs of weariness and consequently never suggests weariness to the pupil.

Third, his unfailing good humor must be proof against any intentional or accidental vexations which roguish or stupid pupils may impose upon him. With all this, the teacher should have the ability to read the character of each individual pupil and know how to interest him, and to lead him to regard his teacher as a friend and not as an enemy.

There are two things about children that most teachers overlook: First, a child respects a parent or teacher who makes him mind—not by means of arguments, threats or coaxing, but by the word of quiet command which speaks but once: And second, children love to learn. What is the child mind doing the first ten years of its life, but reaching out in every direction for knowledge. A child's mind is very active. The teacher who makes him think, interests him; but one who gives him dry rules, or things to do he does not understand, ought not to be surprised if his pupil should rebel.

One great secret of success in training pupils is to give them but one thing at a time to think of, and on this they should concentrate their whole attention until it is thoroughly mastered. For example: Even young pupils may get interested in forming scales of eight notes on different keys, after the formula of the first one—the C scale—semitones between the 3d and 4th and between the 7th and 8th of the scale—they may even be roused to ambition in playing these little scales of eight notes, with one hand, up to a considerable degree of speed, because they have but one hand to think about, and they see themselves playing them better and better each day. But other pupils have practiced scales, with the two hands together, up and down the keyboard, for a whole year without getting the least interested in them. On the contrary, the more they practiced them the more they hated them, and all because they had too many things to think of at once and they saw no improvement with all their practice.

A teacher taking a new pupil must have won his pupil within the first fortnight—won his obedience, his confidence and his friendship. In some way he must have impressed on his pupil's mind the proper relationship between them—"I am the teacher, you are the pupil; it is for me to command, for you to obey. I may give you some disagreeable things to do, but you will try to do them to please me, and the time will come when you will be glad that you did so." Then he must teach his pupil to think, and if he can make the work seem a little like play, instead of drudgery, he will make it more interesting. And then he must in this time have made his pupil accomplish something, even if it be only a simple duet, played with the teacher, whose accompaniment will add a grandeur to the performance that will encourage the pupil to think he is making immense progress.

Let the teacher recognize the fact that teaching, or drawing out from his pupils their higher abilities, is the noblest work in which he can be engaged, and he will grow to love his work and be successful.

LA GONDOLIERA, BY LISZT.

An Analysis.

EDWARD BAXTER PERRY.

This dainty and most pleasing little work, like many of Liszt's contributions to piano literature, is not exclusively his own; that is, it is not an original melodic creation, but the admirably clever arrangement or setting of an old Venetian boat-song. The melody has been in existence for many decades, perhaps centuries, and may be heard by any one who visits Venice, as sung by the Gondolier in time to the swing of his dextrously handled single oar.

It is a distinctly Italian melody, with no pretentions to great depth or dramatic intensity, but simple, tender and sweet, winning rather than commanding—a lyric of the sensuously beautiful type, but not to be despised, as it is a spontaneous product of the sunny tempered, warm-hearted children of the South. It contains no hint of the Venice of mystery, of secret cruelty, of world wide powers of the Council of the Ten, that masked midnight tribunal of former days; but breathes only of Venice the fair, in her moonlit beauty, of Venice, "The Bride of the Sea."

Liszt's setting gives us not only the melody enhanced by effective harmonic coloring and delicate embellishment, but a characteristic and picturesque background of accompaniment suggesting the scene, the mood and the environment; the low murmur of the Adriatic, at the distant water-gate, pleading to be admitted to the presence of his Queen; the soft ripples stealing up the long winding canals, whispering their love secrets under the palaces of Juliette and Desdemona, and creeping fearfully beneath the Bridge of Sighs, and past the dreaded dungeons of the Doges; the silvery moonlight gleaming upon marble frieze and column, and touching to soft brilliancy the fadeless tints of glass mosaic; the dip and sway of the graceful gondola as it glides on its silent way along those water streets between rows of stately buildings, every carven stone of which is alive with history or romantic legend.

All these are delicately yet graphically depicted, while the boatman's song rises and falls, seeming now near, now distant as it is borne to us on the varying breath of the light sea breeze.

The whole picture is one of subdued evening tints of half disclosed, half hinted outlines, with a pervading mood of dreamy fancy, of wistful tenderness.

It seems to me one of Liszt's most perfect and ably sustained efforts in the purely lyric, yet suggestively descriptive vein.

At the close the great sonorous bell of St. Mark's Cathedral strikes midnight. Its grave, deep-toned voice majestically commanding attention. The F sharp here used to produce the bell effect, and at the same time serving as bass in a prolonged organ-point throughout the coda, is the actual key-note of the St. Mark's bell, ingeniously utilized for this double purpose. Meanwhile, the last notes of the song die away in the distance, and slumber, like a veil of mist floating in from the Summer sea, envelops the city.

THE PATH TO SUCCESS.

FREDERIC W. BURRY.

For the proper training of one's abilities, there must be a concentration of the mind on the work in hand. All achievement is in Concentration; every creation of worth is the result of concentrated effort. We cannot overcome the limitations of Time—it is impossible to do two things at once therefore, in centering the mind on each detail, building up with care the separate parts which make the perfect whole, is found the key to strong productions. All else that may be produced can hardly be called real creations, since their imperfections are glaring. We can see they lack a solid basis, and we know they must soon crumble.

Very few learn the value of Concentration. To those who do, we give much adulation; we call them by the name of genius. But if we would only admit it, we should have to confess there was but one thing that stood in the way of each of us attaining a similar height, reaching to the altitude of genius—and that was laziness.

People are too lazy to act as they are too lazy to think. Their weak intellects could be made stronger if they would only use their brains; the failures that characterize their actions is caused by lack of concentrated energy.

We have all the energy necessary for superb works. But its possession in latency is useless in itself. This energy must be organized, intelligently directed by a firm, well-directed mind, before it can be turned into master-works.

We should all aspire to accomplish something truly great. We should try to express our ideals. What is the use of standing aloof from our ideals, gazing in rapture perhaps over someone else's creation? It is no use, unless we heed the lesson that every production of genius has for us—the suggestion that we may each give birth to something of equal value.

The desire to excel is a sufficient proof of one's ability. If the desire is a powerful one, we are forced into action, carried by the wings of aspiration to a point where our persistent concentrated efforts produce the manifestation of our desires.

Surely the possibilities of creating a beautiful work of art is sufficient to fire one with enthusiastic energy and renewed endeavor. Even though it is going to take time to master old habits of lazy diffused thinking, even though it is hard to rid oneself of suggestions of incompetence, pestering doubts which cling to one so. A strong intention to ever forge ahead, a sturdy defiance of all crippling fears will soon vanquish every terror; and when once the spirit of boldness and confidence has begun to assert itself, the path to success is opened wide.

SILHOUETTES.

SCHUMANN.

Schumann's music, according to the ideas of many, is the nightingale in the tone-garden of our century. His soul seemed surrounded and enchained by music. He glided through the real and serious walk of life as in a dream, and he left—in a dream.

"Those are winding walks through which Mozart, Beethoven, Haydn and Bach lead us," said Schumann one day; but where does that slender hand of the Pole entice us? Into an endless forest flooded with moonlight where we lose ourselves, where strange voices fill the air, calling forth all kinds of spirits. (Schumann had great reverence for Chopin (the Pole).)

Schumann has also sent us into *his* song-garden, and his creations were many during his short career. His symphonies, his quintets, his chamber music; in short, everything he wrote bore the stamp of his heart.

MOZART.

The jolly, careless Mozart was usually gay and free-hearted as a child. In his young days he was very fond of a pet starling, which his mother had sent him, and this bird used to accompany him in his long tramps through the woods in the neighborhood of Vienna, where he was fond of roaming, "trying to steal a melody from the forest birds," as he once said. As Mozart wandered about, with the starling on his shoulder, they were heard singing a jolly duet. The world smiled upon him and his soul seemed to swim in a sea of sweet sounds.

THE NEW EDUCATION.

Arthur L. Manchester
Thomas Tapper } Editors.

FOREWORD.

The *New Education* offers its readers, for 1900–1901, the best plan for a year's study that it has yet presented. It will be the best in two particulars: in choice of subject matter and in manner of presentation. The hearty reception which this novel educational feature has met with makes it possible for THE MUSICIAN to continue to develop the idea of home music study and to offer the best advantages that are to be attained in this manner.

The general high degree of excellence is due to a widespread interest in the subjects treated and to the careful manner in which our contributors have sought to deal of the various subjects. Scores of papers sent in by clubs show the excellent results of that method of making much of the *New Education*. The club elects a presiding officer, conducts its meetings regularly, arranges definitely for the reading and discussion of the month's lessons in each subject; takes up the questions included in each lesson for study; and, all this having been done, each member, independently, writes up his paper and sends it in. The plan is feasible either with a club of two or of a hundred.

The editors of the *New Education* department hope to see the number of these clubs greatly increased during the coming year. Club work is an excellent stimulus to study, and as the work of this department is so well adapted to club uses, there should be many bodies of students banded together in its prosecution.

Let every club inform the department of its organization, membership, purposes and manner of work, reporting at stated times details of its existence. In this event, we will keep a roster of *New Education* Clubs. Intercommunication can then be established which would doubtless bring mutually advantageous results.

The series of subjects for the coming year follows. Each subject is in the hands of a specialist and will be treated practically and as fully as possible in twelve lessons. In order to meet the immediate demands of students who seek information on special points in the work the editors will be glad to furnish:

Suggestions for the further study of any subject.
A bibliography of any subject.
Information on any question in the lessons.
The consideration, and, if necessary, the presentation, for general discussion of any point that comes up in actual teaching.

The subjects for the coming year are as follows:

I. Advanced History of Music; twelve lessons, with suggested reading.
II. Psychology and Pedagogy of Music; six lessons in each subject; suggested reading.
III. Advanced Music Form; twelve lessons developing those already given in this department.
IV. Harmony and Melody; twelve lessons; six in each topic.
V. The Literature of Aesthetics and Criticism in Music, twelve lessons.
VI. The History and Development of the Piano, twelve lessons with illustrations.

It is desirable that the work be sent in as promptly as possible after the study of the month's lessons. Write clearly; explicit answers are requested. Do *not* write queries on your lesson paper; *send them separately to the editors for immediate reply. And send them in every case direct to the office of The Musician, addressed as indicated below.* Never send your work in lead pencil nor in pale ink. Aim at plain, straightforward, careful work.

The following conditions *must be observed:*

1. Address all communications for the *New Education* department, thus:

THE MUSICIAN,
New Education Department,
8th and Locust Streets,
Philadelphia, Pa.

2. *Do* NOT *roll your manuscript.*

3. The answer for each month must be sent as soon after the issue of the journal containing the subject to which they relate as possible, and before the next succeeding issue. No papers are to be held until end of course. New members can join at any time by sending names and answering questions contained in current issue.

4. The editors are obliged to say that no paper will be read or rated that fails to comply with conditions 3, 4, 5 and 6.

5. No two subjects should be written on one sheet. All sheets pertaining to one subject—for example, History—should be independently fastened.

A few words should be said regarding answers to the questions. There exists a great temptation to read the text and answer questions in the words of the writers. This is not a good plan and in order to stimulate our readers to original effort, we will state that the ratings will be largely influenced by the following points:

Accuracy.
Clear, concise, yet smooth diction.
Grasp of the subject.
Originality of thought and statement.

As to the questions following each lesson, they have two purposes: First, to connect the readers mind directly with the text—the most fundamental, that is, lowest duty a question can serve, but necessary. Second, to suggest a thought beyond the mere expression of the words in the text; the most useful, that is, highest purpose a question can serve. If a student is to abandon one or the other of these two kinds of questions he should not hesitate a moment in deciding. The first is by far the least useful if he has a memory; the second the most useful if he has a reasoning faculty.

The editors will welcome letters from teachers which contain:

a. Suggestions as to what will make this department more valuable, the suggestion being dictated by the teacher's individual experience.
b. Statements regarding the application of this work with pupils as well as in one's own effort to secure a broader education.
c. If there is any line of thought of practical value to you, and likely to be equally practical to others, let us know it.
d. All such suggestions must be sent to the office of THE MUSICIAN, addressed according to direction given in regulations.

[NOTE.—*New Education* students are specially requested to avoid enclosing *anything* relating to their business with the Hatch Music Company with their *New Education* papers. The failure to comply with this rule causes great trouble. Kindly keep this matter in mind. We wish to call the attention of our students to the necessity of *fully prepaying postage on their papers.* We have been compelled to pay additional postage on a large number of those already received. This should not be, hence we request our students to take care that sufficient amount of stamps be affixed before mailing.]

IV. PROPAGATION OF MUSIC BY THE CRUSADES.

PERCY GOETSCHIUS, MUS. DOC.

A historic movement of such magnitude and profound significance as that which is identified with the religious wars of the middle ages between the occidental Christians and the Mohammedans in Palestine, could not have been without deep and far-reaching influence upon the life and progress of the arts, as well as that of civilization. The famous Crusades, that held nearly all Europe and a part of Asia in a condition of great agitation more or less continuously for two centuries (1096–1291), stirred up all religious, civil and military conditions to their very foundation, impelled its upheaving and stimulating consequences through all the veins of society and all ranges of thought and action, and brought into unexpected and vitalizing contact many foreign elements and agencies that might otherwise never have been matched or united.

There is no doubt that this, on the whole salutary, agitation contributed in many ways to the development of the music art, and that it did so just at a time in its history when some such powerful stimulus from outside was becoming daily more necessary; and though it may not be possible to specify the precise benefits that music derived from these sources, it is at least easy to perceive and account for the general and striking growth of musical practice during and after the era of the crusades.

Although the entire movement was, primarily, a religious one, and therefore owed its inception and maintenance to the Christian church, it is not evident that *ecclesiastic* music was vitally affected by it. History lays great stress upon the effect of the crusades in bringing together the civilizations of the East and West, but it does not appear that this materially altered the relations between the Latin and Greek churches, or conduced to any modification of the ceremonial of either,—certainly not as far as music was concerned. This leads to the conclusion that such influences as the crusades exerted were chiefly, if not solely, instrumental in developing, improving and propagating the *secular* practices of music.

The reader was reminded, in the foregoing article, of the important part taken by the popular minstrels and strolling players in the diffusion of music, in arousing popular interest, enlisting popular sympathy and appreciation, and conducting musical practices ever nearer to their natural mission and purpose. These humble musicians were no mean contingent of the numerous armies that took up their long and painful marches to the far east. It was a part of their mission to brighten the weary hours, to refresh and re-inflame the sinking courage of the exhausted hosts, and to inspire by publishing and glorifying deeds of valor, in their own rude way. At the same time, they were thrown into closer contact with one another, imparting and receiving increased knowledge and skill; were finally brought face to face with the totally different musical methods of Arabs, Turks and Saracens; were able to inspect, at close range, the quaint melodies and still more wonderful and beautiful instruments of these notoriously gifted races, and compare them with their own more clumsy kind; thereupon to return to Europe with their experience and other valuable musical booty, and deposit both where there was more ample opportunity (as subsequent musical history has shown) of developing their splendid resources and transforming them into vital factors of the true music art.

Much of this applies, also, to the nobler class of secular musicians, the Troubadours and Minstrels. The spirit of chivalry that so delightfully characterized them, during, and for some time after, the crusades, was called into life largely if not wholly by these great military expeditions, or was, at least, more powerfully promoted by these than by any other medieval influences. Many of the recorded verses and melodies of the earlier Troubadours reflect the spirit which was born of the religious wars, and long nurtured by them and their memories.

Allusion was made, above, to the instruments and melodies of the Mohammedans. In order to estimate these justly, it is but necessary to know that no other race on the face of the earth is accredited in history with such great natural musical talent and aptitude as the Islamites, not only in these early ages, but even down to the present day; and, further, no other race ever possessed so vast a number and variety of musical instruments as they. It is therefore not difficult to discern the most potent cause of the rapid advances of secular music in Europe at this period; the music lovers of the west profited richly by the stores of novel melodies that assailed their ears in the Orient, and their more thoughtful and discriminating sense enabled them to separate what was wholesome and enduring from much that was wild and extravagant.

As to the instruments which found their way into Europe upon the receding currents of the Christian armies, it is exceedingly doubtful whether our perfected modern orchestra could ever have become a reality, but for the unique experiments made, hundreds of years ago, by these intensely musical and dexterous nomads of the eastern desert, and but for the knowledge of them brought into sober Europe through the agency of the crusades; for the models

of our violins and violoncellos, of our oboes and, more than likely, of still other orchestral instruments are of direct Arabian origin, as are likewise the manifold varieties of the lute, guitar, mandolin and other favorites of the Southern household.

The influences thus exerted by the crusades upon the growth and propagation of our (European) music art, were by no means limited to the two centuries of religious war alone. These chiefly prepared the way, by opening channels of intercourse between the east and west, for the more momentous events of subsequent years; and historians do not fail to trace significant relations as far forward as the Reformation, in which are centered some of the greatest impulses that modern music has ever known.

QUESTIONS.

1. What were the general consequences of the crusades?
2. Was ecclesiastic music affected thereby?
3. What kind of music profited most?
4. What part did the vagrant players take, and what did they learn?
5. What incentive did the Troubadours receive?
6. What was the quality of oriental music?
7. What orchestral and other instruments are of Arabian origin?

MUSIC IN GENERAL EDUCATION.

THOMAS TAPPER.

This subject is amenable to many forms of subdivision. Of these many forms, this is one:

I. The Purpose of Education.

II. The Conditions that decide the Elementary Subjects in Education.

III. The Place and Force of Music as an Elementary Educational Subject.

In brief: Why educate the child? How educate the child? Why employ music to aid in educating the child?

One of the first thoughts that comes to us in considering Education is this: That not a few men have studied earnestly, long, with patience, bringing to the subject acute observation, scientific accuracy, science itself indeed, have so deeply and unselfishly entered their work that they risk life and liberty on the outcome of it, and—inevitably—display some day to the world that it was all directed upon getting into a safe-deposit vault; or upon producing a twenty-dollar bill, so like that made by the Government that even the discerning will not detect the difference. And the greatest of these men—if one may call them great—has all the enthusiasm of genius for his work. No difficulty appals him, the more abstruse the problem that confronts him the greater energy he exerts; time, care, watchfulness, alertness he has them all. And, all the while, in many human ways he is as other men. He lives and loves. He has his home and his friends. He gives his word as he honors it. He makes his debts and he pays them. He rings true in many tests; but works away from the sunlight. Daylight and the eyes of those near by, these disturb him. He would rather be alone, listening for the unexpected. Training then is not always worthy to be had. Education must direct itself upon a special line of effort, to be worthy of our attention. It must make for the greatest good—not of the greatest number alone—but of each individual.

I The Purpose, then, of Education is by no means training merely. It is training in exalting the inherently good, equally with repressing the inherently wicked tendencies within us. Hence we strive to educate children into certain great relations; in relation to life, to others, to the higher self. Whence did I come? Whither am I tending? Who are these about me? What is this force within me? These indicate in general the higher planes of education.

II. The Conditions that decide the Elementary Subjects in Education are untimately these queries just propounded. But there are a few others dictated to us by the demands of convenience. We must communicate with others by speech and symbol, we must move from place to place, we must know about the past, we must be trained into economic ways of thought and action. Hence come Language, Writing, Geography, History, Science, each individually, and all collectively, to aid in assisting us to live with as little friction as possible. And why live with little friction? So that we may find the time and the means whereby we may work out—each for the self—the problems stated above: Whence did I come? Whither am I tending? Who are these about me? What is this force within me?

III. What is the Place and Force of Music as an Elementary Educational Subject?

A man may go among the lofty and the lowly, among the pure and the impure, among those who rejoice and those who mourn and he will hear music. The human mind seems to have discovered, or perhaps it knows intuitively, that let the heart be filled with whatever sentiment it may, music will intensify that sentiment. It makes joy more joyous, sorrow realizes itself the more, the dance is merrier, thanksgiving more thankful with it.

The moment, then, that we set out in the hope of solving the riddle of existence, of finding our relation to the world without and within; the moment we set about this with the conviction that truth and right, undefinable as they may be, are the only legitimate pursuits, the more we shall discover that music intensifies the countless phases of this pursuit. As the pursuit is the uncovering of all good, the intensification of all good takes place.

It may not be that you require classic music deeply to be moved. Perhaps a simple song unlocks the mind and heart. But in any case the advancing human being will discover some day that the power of music for good, being unlimited, he may to his advantage, turn to it and have more of it. Then he questions whether he shall let it enter his life little or much.

QUESTIONS.

In place of set Questions the student should make a brief abstract of the three main paragraphs.

FORM—FOURTH LESSON.

The Song.

THOMAS TAPPER.

In all the instrumental forms we have thus far studied, we have found certain definite lines of structure present which enable us to group them into certain classes. Of these classes we are already familiar with the Unitary Form, the Binary Form, the Ternary Form, the Sonatine, and to a slight extent we have learned about the Suite and the Sonata as groups of pieces brought together for artistic unity and contrast in two particulars:

I. For the unity and contrast of matter in each individual movement.

II. For unity and contrast between the movements.

The student will readily understand that the composer can express himself with wonderful variety in any single Form. For instance, note the variety in the Chopin Waltzes, in the Bach Preludes, in the Allemandes of Handel's Suites. The very fact that there is elasticity in Form is the artistic element in the matter of composition. The Form is not stereotyped. If it were, the pleasure of following it would soon weary us.

With the Song the composer finds himself dealing with a matter somewhat different from the instrumental Form. Let us deal a little in the Imaginative: A poet, deeply moved by some observation, sentiment or other thought, seeks to give it word-expression. For this he brings to his aid rhythm, meter and rhyme. He chooses these and words that shall most beautifully and most naturally portray his imagery. After a time he has completed his work; that is to say, he agrees to call it finished. He leaves the written poem by the roadside and passes on. Another man chances along, sees the poem, sits down to read it, and those about him listen; observing that he drawls it listlessly, with no life, no expression, no genuine feeling. He passes on and another man chances along. This one picks up the poem, studies it, grasps the beauty and the force of it, begins to read it, and, at once, all about him are enraptured; for he makes the poet's imagery as plain as real scenes. He has art for re-creating—and it is a great art—an art at which people have mavelled always. But the actor reads, passes on and then chances along another. He is homely of face, bushy and unkempt of hair, spectacled, shy, awkward—that is, he is awkward until he has read the poet's stanzas and they have filled him with the truth of their imagery. And the people watch to hear him read as others have. But he says to them—in action if not in word—I am tongue-tied in the language of other men. I cannot read as they read. But I find within me a response to the truth and to the beauty of this poem; and in my way I can tell you what it says. It is a way that I will set down for others to follow who care to read as it is permitted me to read. And he makes his marks on paper, in the accepted way for others to know and he passes on, leaving his name there, as an evidence that he is proud to acknowledge the peculiar gift of reading God has given him. The name is Franz Schubert, and we honor his way of reading, because like the true poem, it is full of truth and beauty.

A Song then is the reading of a poem. It employs not a few tones of the voices but many tones; picturing in them more forcibly, more rememberably if one may so say it, the meaning and the force of the lines. And yet it is a reading, a reading up and down, now high, now low, along the scale, dwelling here, hurrying there, but always *telling* the message of the words.

The poem must be worthy of a great artist, otherwise it could not inspire him. He must not mutilate it. Its climax must be the climax of his music. Its strong words, even its strong syllables, he must set to strong tones. He must decide whether the various stanzas require different music or whether they may be sung to the same music. The accompaniment is truly a servant. It must help and emphasize. It must not over-shadow the voice; it must not bear unnatural relation to it. It must assist in the imagery and support the singer.

QUESTIONS.

1. What is a Poem?
2. What is a Song?
3. What elements of structure enter the Poem?
4. Compare reading and singing a Poem.
5. How must the music-structure follow the poetic-structure?
6. What is the purpose of the Accompaniment?

[TO BE CONTINUED.]

HARMONIZATION OF MELODIES COMPARED WITH HARMONIZATION OF BASSES.

DR. H. A. CLARKE.

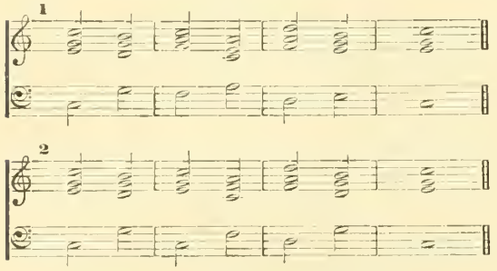
Teachers who bestow much thought on their work are beginning to question the advisability of adhering rigidly to the time-honored custom of relying on the writing of figured basses as the best means of teaching the art of harmony.

It is admitted on all hands that there is a natural order in which the various parts that make up the body of a subject should be presented to the student; in other words, the evolutionary idea that has proved such a powerful aid in every field of effort, should be the dominant idea in teaching. It is easily understood why the notion of writing to a given bass should have been the first way tried in the teaching of composition, it being a natural outgrowth of the practice that was at one time universal—of composers taking a "Cantus" as the basis of their composition, and writing "descants" or counterpoints over it, but music at that period was in its infancy. Composers were groping their way towards the discovery of harmonic combinations, and of "tonality," that hardly definable thing that not only teaches us to recognize and require "key" in our music, but had led us to the point of recognizing—that is, those of us who are trained in music—that every melody suggests its appropriate harmony, any departure from which seems incongruous. It is not too much to say that the trained musician cannot *think* a melody apart from its implied harmony.

It is a well known fact that modern music resulted from a union of the popular ballad and dance music with the highly artificial learned music of the church. One brought to the union its *melody*, the other, its gradually unfolding *harmony* and art of construction. It is certain, therefore, that melody preceded all forms of the art of combining sounds, hence it would seem to furnish the natural basis upon which the art of musical construction should be founded, not that the pupil should be put first to the writing of melodies, for two excellent reasons; first, his sense of tonality may be undeveloped, a fact which the writer has often noted; second, the sense of tonality may be present in a slight degree, a consequence of which will be that all his melodies will fall into a stereotyped form, from which he may never be able to free himself. Hence the melodies upon which the student is set to work should be the work of the teacher, and should be so

designed as to make him step by step familiar with all the possibilities of combination and succession; first, of common chords natural to the scale in their just positions. Then in their inversions; then the dominant harmonies of the key and of its related keys, and so on until he is able to see at a glance the harmonic possibilities of any melodic succession. The most useful part of this kind of drill is to be found at the very beginning, that is, in writing successions of chords with their roots at the bass, in accordance with the following simple rule, that two successive chords must never have the same member at the top, thus:

It makes teaching interesting to the teacher, to observe how the musical instinct will manifest itself in some pupils and not in others, although he will make a great mistake if he concludes that it is wanting altogether in the latter; it is the experience of nearly every observant teacher that the "facile" pupils are often distanced in the long run by the apparently dull. As an illustration, the two following examples are the work of two pupils, the writer of No. 1 could not perceive that No. 2 sounded any better than her own.



For drill in writing chords in this way, short passages, like the foregoing are the best. The pupil should be made to harmonize them in every way possible, and should play them and mark those successions that appeal to his ear as musical, transpose them both in writing and at the keyboard until they are fixed in his memory. In conclusion, we venture the opinion founded on many years experience, that no pupil who has tried to learn harmony by working from the melody ever fails to get deeply interested in it, he is constantly making discoveries, and has almost endless opportunities for experiment, in short he is learning to use his own powers, not working out a dry puzzle in notes and figures that does not offer him the least chance of *making* anything himself, or tell him *why* the writer of it made it as it is, unless it was for the sole purpose of worrying and wearying the seeker after musical knowledge.

One evening Chopin returned home in company with some friends, among them Szmitkowski (to whom the "Mazurkas," Opus 50, were dedicated) and complained of the state of his finances. "How happy I would be," Chopin exclaimed, "if a ministering angel would be kind enough to lay 20,000 francs in my desk! I could then procure all the comforts I desire."

The same night Chopin dreamed that his wish had been granted, and related the fact to his friends. A few days later Chopin, in opening his desk, perceived the 20,000 francs he had wished for. This money had been laid there by Szmitkowski, who had related the incident of the wish to Miss Sterling, one of the pupils of Chopin, a Scotch lady, who took pleasure in presenting this handsome gift to her beloved teacher.

***

It is related of Mendelssohn at a public dinner, at which ladies were present, and where he was surrounded by a chorus of aggressive women clamoring for his autograph, that he allowed himself to be victimized with good nature until finally a fleshy matron of mature years handed him her card. Whether with malice prepense or not, it is not stated, but the composer wrote upon the card the music and words from Haydn's "Creation," "And God created great whales." Mendelssohn was allowed to go on with his dinner.

THE DEVELOPMENT OF THE PIANO.

FRANCIS L. YORK.

Although it would not be correct to say that the harp developed into the spinet, the spinet into the clavichord, the clavichord into the harpsichord, and this in turn into the piano, still the order of development is practically as given. Of course, several of these instruments were in use at the same time—just as the harp and the piano are both in use at the present time.

The pedigree of the clavichord carries us back in an almost unbroken line to the very beginning, not only of the history of music, but of the history of man. The first hunter, who in pre-historic ages twanged his bow, may with reason be called the father of all such as play upon the harp and pianoforte. For from the hunter's bow came on the one hand the instrument called the monochord, and on the other the harp, from which two in good time came the piano. The monochord consisted of a single string with a moveable bridge, which determined the pitch of the tone. This monochord was first played with a bow like the modern violin. Examples of this go back beyond reliable history. It was certainly used by the ancient Greeks five hundred years before Christ, and according to some authorities, by the Egyptians twenty-five hundred years still earlier. It was in common use in the church for centuries to teach singers the eight tones and after the tenth century the number of the strings was increased. Thus, instead of a single movable bridge, levers, or as we should say, "keys," were arranged which by means of a metal pin struck the strings at the desired distance from the end, thus forming a temporary bridge and at the same time causing the string to sound. Surely it would seem as if the piano was not then far in the future, but it took eight hundred years more to produce the prototype of the present Steinway. At first in the so-called monochord there were many keys and few strings, so each string might be struck in several places, thus producing various tones. But by this arrangement the simultaneous sounding of more tones than there were strings was impossible. So, too, the player could not sound together two tones which were produced by the same string. Gradually the number of keys increased, as did also the number of strings, though for a long time there were more keys than strings. This instrument was still called the monochord, or, later, the manichord, but as the name had lost its significance (*i. e.* one stringed instrument), it was changed to clavichord, an instrument in which strings (chordæ) are played by keys (claver). So that a clavichord was a many stringed, many keyed monochord. This instrument was well known in France early in the fifteenth century and was much used by the troubadours or minstrels. We read in an old book printed by Caxton in 1484. "A young man cam to a feste where were many lordes, ladyes, and demoysels, and arrayed as they wold have sette them to dinner, and had on him a coote hardye after the manner of Almayne. Sir Gregory called hym before hym, and demanded hym where his vyills or *clavycordes* were. The young man answered, 'Syre, I can not meddle therewith.' Said the knight, 'I can not believe it, for ye be counterfaytted and clothed like a minstrell.'" It is interesting to notice that the instrument, as was also the case with the organ, was frequently spoken of in the plural, as in the quotation given. It was also often called a "pair of clavichords," just as the organ was called a "pair of organs" where only one was meant—somewhat perhaps as we speak of a "pair" of stairs. Thus in the expense book of Queen Elizabeth of York, wife of Henry the Seventh, we find the following. "*Item.* The same day, Hugh Denys, for money by him delivered to a stranger that gave the queen a payre of clavycordes. In crowns for his reward i i i j l i." A certain poet, William Cornish by name, who after the manner of poets appears to be in financial straits, wrote from the Fleet prison:

> The clavicorde hath a tunely knyde,
> As the voyce is wrested high and low:
> The song of himself yet never the les
> Is true and tunable, and sing it as it is.

The action of the clavichord was very simple and was made as follows: A key similar to a piano key was used; on the farther end of this key a wedge-shaped piece of metal, called a tangent, was fixed upright. This tangent was brought in contact with the string by depressing the key and the blow produced the tone. The full length of the string, however, did not sound, only the longer portion being allowed to vibrate, for the part between the tangent and the farther end of the string was muffled by a bit of felt or cloth. When the tangent struck, the length of string that vibrated (and on this the pitch of the tone depends) was determined by the point where the tangent struck, and here the tangent acted as a bridge, somewhat in the manner of the frets on a guitar, and at the same time as a hammer. It must be remembered that the tangent continued in contact with the wire as long as the key remained depressed, in this differing entirely from the spinet, virginal, harpsichord and modern piano.

A, B wire. C, D, key moving on the pivot P. T is the tangent. X, Y, the bed of the instrument.

The old system of having one string used for two or more tones still remained in the clavichord after the newer instrument was well developed. One instrument of which we have a record contained seven strings and twenty-two keys, but in the later examples two keys for each string was the rule. It followed from this that some combinations of tones were impossible, for example even C and E could not be played together. This sheds a strong side light on the little value that musicians in the old days set on sonorous harmonies, and recalls to us the fact that voice progression, rather than harmonic effect, was the chief thing sought. It was not until the eighteenth century that each key was given its own string.

This instrument was in many ways more nearly allied to the piano than the harpsichord, which displaced it in popular use, and which was the more immediate predecessor of the piano. The string was *struck*, not plucked, and the player could vary the tone to a considerable extent. The player's connection with his instrument seemed more intimate, more direct; the tone did not pass from his control so immediately or so irrevocably. John Sebastian Bach much preferred it for his own use and for small musical entertainments, even giving it his preference over the piano. Philip Emmanuel Bach used it all his life, even after the piano had become well perfected. But its tone was too feeble for a large room or for use with chorus or orchestra. The action being extremely light, was suited to great velocity and to delicate shading. It also possessed two other means of expression that are wanting in other instruments. After the tone was produced it was possible to keep it sounding by a vibratory pressure on the key. This gave the tone a wavering quality like the vibrato of the violin. This effect was called the Bebung (wavering, shivering). Another characteristic effect was produced by an increased pressure on the key. This by increasing the tension of the string slightly raised the pitch of the tone—an effect that every good singer and violin player knows the value of. Conversely a slight relaxation of key pressure slightly lowered the tone again. Thus, in the clavichord, the tone could be modified by the finger itself, even during the continuation of the tone. Legato, staccato, phrasing, forte, piano, Bebung, melody, harmony, velocity, all at last were within the powers of one instrument played by one performer—truly, as Oscar Bie says, "the keyed instrument had at last found its soul."

Questions.

1. What was the order of development from monochord to piano?
2. Describe the derivation of the clavichord.
3. Describe the action of the clavichord.
4. What characteristic of the clavichord indicates the value set in that day on harmonies?
5. Name the possibilities it possessed as a musical instrument.
6. What has been said of it?

The value to any music student of a course of study, such as is being provided in the *New Education*, is so apparent that every reader of THE MUSICIAN should participate in it.

A GUIDE TO THE STUDY OF MUSICAL LITERATURE.

ARTHUR L. MANCHESTER.

Having secured an understanding of the structural basis of music and of the elements which enter into its proper interpretation, we find ourselves attracted by a series of chapters contained in a book, called "Interludes," by Henry Charles Banister, an eminent English musician and teacher, now dead. The heading of the first chapter attracts us because of its pertinence to our previous studies. "The Uses of Musical Knowledge" is suggestive, and when our writer quotes "the desire to know is an illusion. . . . We are never more completely taken in than when in pursuit of knowledge," we begin to wonder what inferences he proposes to draw from his subject. We may pause in our studies to question ourselves as to our purposes in pursuing them and the use we intend to make of the knowledge derived from them. Should this be true of us the book has always done us good. As the author states, the *acquirement* of knowledge should not be our *only* incitement to persist in certain lines of study. There is a pleasure in the pursuit that should also act as a stimulus to our efforts.

Thus the reading of a book in which an experienced and thoughtful author discusses such topics as "The Uses of Musical Knowledge," "The Appreciation of Music," "The Development of Movement Structure," "Counterpoint in Modern Free Composition," "Some Thoughts Concerning Composition" is certain—provided the reading be properly done—to be beneficial.

These topics are so treated as to show the value to the instrumentalist or vocalist of collateral knowledge. The basis of true musical appreciation is shown to be in the possession and exercise of judgment, founded on perception, recognition and intelligent notice of necessary details. Structural development receives a somewhat more technical treatment than in the books named last month, but for this we are now prepared.

The love of music and a full appreciation of its beauties need not be confined to those who make it the principal study of their lives. As has been said in previous chapters, one who familiarizes himself with the structural nature of music is prepared to perceive its inner meaning, and sometimes we find one whose life is devoted to other pursuits able to instruct us in what constitutes the best in Musical Art. There was a lawyer living about the time of Schumann who wrote a book which called out the praises of that master. And although it was written so long ago, the principles it then set forth hold good to-day, and while we may be tempted to think it somewhat restricted in view, yet we must concede it to be a safe guide.

"Purity in Music," by A. F. Thibaut, was written by a jurist whose ardent love for art and clear headed perception of true art principles enabled him to get at the root of what constitutes fine music. The book is small, but repeated readings will demonstrate its richness as a mine from which the elements of true art perception may be dug. He clings to the classics and has less reverence for the new, but his dicta are not weakened thereby.

"All work and no play makes Jack a dull boy," runs the old saw. So, as a relief to the somewhat heavier reading we have done, we will turn to two little volumes, written by a prominent Boston critic, whose conversance with musical affairs makes him an interesting writer. These two little books are the outcome of some gossipy contribution to the program books of the Boston Symphony Orchestra. While they contain so-called gossip, it must not be confounded with the undesirable sort. This is gossip which informs and leaves a pleasant taste in the mouth.

The two volumes of "By the Way. About Music and Musicians," by W. F. Apthorp, are small enough to slip into one's pocket, and the sketches are short enough to read between lessons. "Form," "Habit," "Fashion," "The Influence of Surroundings," "Music and the Eye," "Some Points in Modern Orchestration," "Brains," "The Non-Musician's Enjoyment of Music," are a few of the topics in volume one. "The Old Strict Contrapuntists," "Some Not Wholly Random Speculations About Paganini," "Mendelssohn's Heart Abhorrence," "Two Anecdotes of Von Bülow," "Canons," "Culture," are some in volume two. An entertaining style and an experienced hand make the books at once readable and instructive. Intended to stimulate thought, they fulfil their purpose admirably.

Another contribution to this class of literature, by Mr. Apthorp, but of more weight, is "Musicians and Music Lovers." This book represents deeper study, a more careful weighing of opinion and is an analytical study of the viewpoints occupied by musicians and music lovers, the functions of criticism and the value of scientific music study.

Included with these essays are biographical studies of some of the masters. It is a serious work requiring thoughtful reading. A mastery of the views advanced by its author will help to classify our own.

A similar work, by an equally well-known critic, is "Chopin and Other Essays," by Henry T. Finck. As the title indicates, the first essay is biographical. It is analytical and is a strong contribution to the literature inspired by this peculiar personality. There is also a portrayal of Schumann as seen in his letters. "How Composers Work," "Music and Morals," "Italian and German Vocal Styles," are entertaining and instructive. Mr. Finck's training makes his writing unusually valuable, and in our studies this book should occupy a prominent place. (Questions will follow later.)

TWENTY-THIRD ANNUAL CONVENTION OF THE M. T. N. A.

The twenty-third annual convention of the Music Teachers' National Association will be held under particularly pleasant auspices. Several cities opened negotiations with the officers in regard to the coming meeting; and, after careful consideration and much correspondence, it was decided to accept the offer which promised not only adequate facilities and financial support, but also furnished opportunities for a restful, upbuilding relief from the turmoil and burden of the year's labors, and the very advantageous proposition of Put in-Bay, one of the most famous Summer resorts on the Lakes, was accepted. Put-in-Bay, Ohio, is a delightful resort on Lake Erie, not far from Cleveland. It is easy of access, centrally located and particularly well adapted to the entertainment of conventions. The various halls needed for our concerts, round table discussions and business meetings, are all under one roof, and are at our disposal free of cost. Among the pleasant features of our stay will be a delightful trip among the islands on the Lake as guests of the management.

The date of the convention is July 3–5, with a delegate meeting on the 2d. Full particulars as to the meeting place and the program will appear in issues of the *Messenger*, the official organ of the Association. It is sufficient now to say that not only musicians near Put-in-Bay have signified their intention of doing all in their power to make the meeting a success, but Eastern and Western men have also taken hold with earnestness and vigor. The central location of the meeting place, its delightfully cool and restful atmosphere, its luxurious accommodations, which are placed at the disposal of the Association, all point to a splendid turnout and a thoroughly enjoyable time.

While it is too early to make definite announcement as to the program, it can be said that it will be thoroughly educational; the soloists will be artists of national reputation, and the round table discussions will be especially comprehensive and valuable. The matters to come before the delegates will include some of the most important that have ever been acted upon. Already prominent musicians, of both East and West, have accepted appointment as delegates and signified their intention to be present.

In view of these facts, the officers are justified in believing that the twenty-third annual convention of the Music Teachers' National Association will be a most interesting gathering of prominent musicians; one in which important business will be transacted, and music education receive a decided stimulus.

Application has already been made for a rate of one fare for the round trip, and a recent conference gives every reason to believe that the Western and Central Associations will grant this rate. These two Associations include the territory from Pittsburg and Buffalo to and including Colorado, Missouri and the Dakotas. What the Eastern Association will do is not yet known, but it will grant the rate of fare and a third, if not the lowest rate.

The low fare and a program which will contain several entirely new features, should bring to this meeting all those who derived so much pleasure and benefit from the Des Moines meeting, as well as a large number of teachers from other sections, East and West. Put-in-Bay is but a short distance east of Chicago, and these members can reach it at little cost. If those who intend to identify themselves with the Association and take part in its Courses of study, as well as be present at the coming meeting, will promptly forward their dues to the secretary, they will never miss the dollar, but will greatly help in the work of promoting the interests of the Association.

The educational movement inaugurated by the Association is meeting with great commendation. It provides a course of home study under the auspices of the Association.

The work is to be done by means of Syllabi, which give the topics to be studied, and name the sources from which information can be derived. The student, using his Syllabus as a guide, will prepare himself for an examination, which is given by questions sent to him when he notifies the Board of his readiness. His answers to these questions proving satisfactory, he is awarded a certificate for that Course. Should he decide to pursue other Courses, each certificate gained will be counted as a credit toward the awarding of a certificate of the highest grade.

A Syllabus for History is now on press and Syllabi for
Musical Pedagogy and
The Evolution of Pianoforte Technique
are being made ready. Other subjects will be prepared as rapidly as the demand makes them necessary. It will greatly hasten the development of this work if those who are interested and intend availing themselves of the opportunities afforded by this department will register at once and state what lines of study they wish to pursue. Certain conditions must be complied with. These are not in the least burdensome, but are only just.

1. Applicants must be members of the Association with all dues paid in full. (The initial fee is $2.00; renewal, $1.00.)

2. Applications must be accompanied with one dollar entrance fee, which will cover all cost, except that of examination.

3. When ready for examination, notification should be sent to the Educational Board with a fee of three dollars to cover cost of same.

As will be seen the total cost outside of the membership fee and text books is only four dollars. Now is the time to join the Association; it will do good to every one who participates in the advantages it offers. Let all old members send renewal fee and help the Association in its work by inducing their friends to join. Send application, with two dollars for new members, and one dollar for renewal, to the secretary, Thomas a'Becket, 1541 North 19th street, Phila., Pa. Copies of the *Messenger* will be sent on application.

Concerning Mozart, we find the following in the diary kept by Boisserée: "Mozart was passionately fond of playing billiards, but played the game badly." The arrival of a celebrated billiard player in Vienna interested him more than that of a celebrated musician. The latter, he said, would come to him, but the former he visited. Mozart played for high stakes and during entire nights.

Mozart composed quicker than any copyist could follow, and that without playing or singing, only occasionally striking a chord. The score of "Don Juan" was finished in six weeks. He was always in financial difficulties, and thus arose so many trifles, sonatas, variations, and the like. Artaria, the publisher, paid him 25 ducats for half a dozen "Variations." There was always music paper lying ready for him. If he passed the publisher's place of business and was in need of money, all he had to do was to sit down and write.

***

At the time Joachim, the celebrated violinist, was concert-master in Hanover, he could see from his windows how those who were fond of skating enjoyed themselves while following their favorite sport. Catching their enthusiasm, the famous artist decided to participate in the sport, although he was unfamiliar with it. He stepped on the ice and was soon asked by one of the individuals lounging around looking for a "job" whether he wanted his skates strapped on. Joachim answered affirmatively, adding, however, that he did not know how to skate. "Oh, that does not matter," answered our friend. "I will teach you." As soon as Joachim had his skates on, he received the following instructions: "Now, Mr. Joachim, stand erect, so—now throw out your right leg, so—now your left, so—and now go ahead." Joachim following the directions he had received, made some mysterious movements first with his right foot and just before repeating the operation with his left, found himself sprawling on the ice. "Yes, yes, my dear sir," said Joachim's instructor, while he picked the violinist up and put him on his legs again, "you see *skating is not as easy as fiddling*."

FOR THE YOUNG PEOPLE

The Young Musicians' Perseverance Club.

Conducted by ARTHUR L. MANCHESTER.

Last month's story seemed to please our club members very greatly. I am glad of that, for Brahms is not so popular a composer as others of the masters whom we have studied. Even notable musicians do not agree as to the extent of his greatness, but all do unite in recognizing him as one of the masters.

Our studies take a somewhat different direction now, and I feel sure our members will not only be greatly benefited, but very much interested as well. I shall not tell you just what we purpose doing; I want you to find out by reading the story and tell me. If you cannot decide, after reading this first story, wait until you have read one or more. Then write me what particular line of music study our stories are intended to follow.

We intend the Perseverance Club to assist you in becoming *good musicians* and not piano players only. Now let us all turn in and do this new work just as well as we possibly can.

Here are some belated answers to January:

Louise Keffer.
Marie Eldridge.
M. Camille Bunty.
Heleu Barker.

The answers to February story are these:

1. Johannes Brahms.
2. May 7, 1833–April 3, 1897.
3. Hamburg.
4. Vienna.
5. She was of a noble Roman family and lived in the reign of the Emperor Alexander Severus, altho' the story of her life is partly mythical. She has been adopted as the patron saint of music.
6. Eduard Reményi.
7. Robert Schumann.
8. Beethoven.
9. (Any composition.)
10. He excelled as a composer of choral and chamber music.

And here are the names of those who have answered. There are a goodly number of them and the answers to this pretty hard story are very good, too.

Agnes Freeman.
Ethel C. Porter.
Ruth L. Simpson.
Jeannie C. Davis.
Ada R. Marsh.
Florence Bradshaw.
Jesse Flook.
Ethel Mitchell.
Nellie Packenham.
Héva Courtol.
Mamie Week.
May McKenzie.
May Flaherty.
Aileen Corcoran.
Emma Baillargeon.

Marie Josepha Timmins.
Genevieve Johns.
Lela V. Busbey.

Now for our monthly experience meeting.

This music teacher evidently is interested in her pupils, an interest which the pupils are certain to respond to. May we hear of many like her.

CORPUS CHRISTI SCHOOL, CHAMBERSBURG, PA.

Dear Sir—THE MUSICIAN was kindly given to me by my music teacher, a Sister of St Joseph, and being very much delighted with it, I think I should like to join your club. I am very fond of music and am anxious to obtain a thorough knowledge of the art, and also to know the lives of the many great composers.

Respectfully,

LYDIA CAROLYN HELLER.

We expect to print some pictures some of these days. The editor is looking for the photos of those who have not yet sent them.

ST. JOSEPH'S ACADEMY, MCSHERRYSTOWN, PA.

Dear Sir—If you put the pictures of the members in the MUSICIAN, we shall all look immediately for dear little Ethel Porter. I am glad she was successful in the December work. I am very fond of music, and my daily two hours of practice pass all too quickly for me. My music teacher tells me I may say that I have made good progress for the two years and a half I have been at music, and that if I keep on, I may hope to become a fine pianist. I will be honest and add that sometimes my love of music causes me to neglect other things, and perhaps my school teacher would not praise quite so highly my dilligence, although I enjoy school and study. "Valse Bluette," by Lack, "Valse Styrienne," by Wollenhaupt, "Au Matin" by Godard, and Weber's "Freischütz" by Leybach, are among my favorite pieces. For studies I am taking Heller's "Studies in Expression and Rhythm," and Czerny's "Velocite Etudes." We have very few opportunities to hear good music. Florence Cross and Ethel Porter were fortunate in hearing Paderewski; I could almost envy them. We enjoy THE MUSICIAN, especially our page. This letter is long; if I write any more I fear you will not print it, so with best wishes for the success of the club, I sign myself a devoted member.

MARY I. MCCANN.

We welcome these Alabama members heartily and hope they will write us often. For study we would suggest "Young People's History of Music," by Macy.

ACKERVILLE, ALA.

Dear Mr. Manchester—We would like to have our names enrolled as members of the Young Musicians' Perseverance Club. Our father takes THE MUSICIAN for us and we like it very much. Our teacher says it is very instructive and wants us to get in working line with the Perseverance Club members. Will you please suggest some books for us to get so we can study and be able to answer the questions each month. We want the Club to know that there are children in Alabama who love THE MUSICIAN as well as those in the Western and Eastern States

Your little friends,

LESTER, ROBBIE AND PEARL POWELL.

The names alluded to in this letter are among those printed above. This is a big accession to our ranks. May there be many such.

LORETTO ABBEY.

Dear Sir—I am enclosing the names of some of the junior pupils of St. Cecelia's Club of the above named school, and we think it would be profitable to us to join the Young Musicians' Perseverance Club.

I am 12 years of age, and I am very much interested in my music. We have been allowed to practice nothing else but our technical work and Bach since Christmas, but I have now a pretty piece called "Petite Mazurka," by Sapellinkoff. We all wrote our answers together. I am enclosing the list of the names hoping you will receive us among the other members.

Your little friend,

PHYLLIS SMITH.

Last of all we have a recruit from the Pacific coast. We are far apart in distance, but near each other in our work. Let us work bravely.

PORT TOWNSEND, WASH.

Dear Sir—I wrote some months ago and sent in my answers, but did not join the club then. I wish to do so now and want to answer every time. I have taken music lessons from my sister for four years. I practice an hour every day, and in the future expect to become a teacher. I have been a careful reader of THE MUSICIAN for some time; I find it very interesting. The story was so nice in the last MUSICIAN that a person could not help becoming interested. I see so many club members go to a music school, I hope to go some time. Hoping to see my name in the paper, I remain,

Yours truly,

FLORENCE BRADSHAW.

A CHURCH SERVICE OF LONG AGO.

A city which, scarcely a century before, had ruled all the then-known world, the once beautiful city of the Cæsars, lay desolate in the sunshine of a day in early Spring. The marble arches, columns and statues, and magnificent palaces, colonnades, theatres, temples and baths with gilded domes, the streets filled with gayly-dressed people, and with glittering chariots drawn by many horses abreast, even the sacred tabernacles and groves—all these, which had once given the city its charm and life and beauty, were now but memories. From across the seas enemies had invaded the country, and its great capital was left with only the traces of its former glory in broken triumphal arches, and the ruins of beautiful palaces. In later years famine added its burden; the river winding about the city overflowed its banks and swept away the granaries of corn. When the Pope Pelagius died the people in their great trouble looked for help to the monk who was elected to be the new ruler, for the Pope held all authority over the city, and though it was not long now since the great day of his ordination in the Church of St. Peter already much better things had happened. Food for the famishing people was gotten by his efforts from Sicily and from other countries. He defended the city, and at last compelled its enemies to sign a treaty of peace. The beginning of his reign was the beginning of prosperous times, and though the ruins of magnificence lay on every hand still the famine was over, the granaries were again filled, and the hearts of all the people were grateful to the new Pope, living in the monastery which, as a monk, he had helped to build, and which stood upon the summit of one of the seven hills of the city.

On this Spring day a little procession wound upward from the valley toward the walls that surrounded the holy place. In the lead were two priests, wearing tall turbans wound with white, their long robes embroidered with gold and held from the dust by neophytes, each bearing a tall but light silver cross. Behind them were six more, walking two by two, holding aloft tall lighted candles. Then came a band of monks, one walking in advance and seeming the leader, or high in office, though barefooted, like the others, and wearing the convent dress. When the gates of the monastery were reached, at the summit of the hill, they were opened by monks whom the Pope had sent to receive his guests. These wore white garments with a cross and star in gold upon the breast, and long rosaries, glittering in the sunlight; they turned solemnly to lead the way. A bell filled the air with its slow tolling, as the procession filed across the court-yard, and entered the chapel of the monastery; it was at the hour of the vesper service, and the monks were assembled there. A few knelt at the altar before a large cross covered with vines and flowers; the chapel walls were hung with exquisite paintings; a beautiful rainbow-tinted light filled the place from the high, stained-glass windows. The newcomers were ushered to seats in front of the altar, and knelt there, the neophytes bearing the lighted candles forming a long line in their white surplices. There was perfect stillness, for the bell had ceased. Moments passed, and there was neither sound nor movement; the Pope, in his vesper robes, knelt at the altar. There was no order of incense, but the perfume of the white flowers, which the rainbow light had turned to crimson and purple, covering the great cross, filled the air. Then, on a sudden, the kneeling forms with one accord bent prostrate. For upon the silence a solemn chanting broke in regular, monotonous beats, clear, pure, melodious, yet unwavering in the slow, majestic rhythm, the voices, like bells, chiming in measured unison the Greek "Hymn of Cleanthes."

There was no instrument of accompaniment. Only the clear voices. There many verses and they were sung in Latin, the monks still kneeling and joining at intervals with the choristers, who were in another division of the chapel, and unseen.

Then followed the brief service, the choristers chanting the vespers, the monks responding in the same key, and at length there was again silence. The Pope rose slowly and turned, with outstretched hands, while upon the stillness the choristers' chant came softly:

"Quare tristis en anima mea?
Quare contubas me?"

and the monks answered, more faintly, but in that sweetest key:

"Spera in Deo!"

When the service was over the Pope sat with his guest until late into the night in an oval room, high in a turret of the monastery. St. Isidore, the monk who had walked in advance of the other in the little procession, had come from Spain and would soon return, for his own ordination was at hand. These men, high in authority, were co-workers and among other reforms and plans, their greatest desire was to establish an imposing Church ritual. They saw the great aid which music would lend and were determined to learn all that was then known in the world about music, and to bring it gradually more and more into use in the Church service; and their plans besides were to establish schools that the people everywhere might learn to sing.

"Then thou didst like my service, Isidore? Thou wilt model thine, perchance, in like pattern?"

"It is already thus patterned," said the priest. "Since the matter has been so clearly set forth in thy letters many churches have profited thereby. Yet is there much practice needed that the perfect method of thy chant be acquired in all its purity. Thou has established it in perfection and I doubt not thus it will remain as the foundation and pattern for all true Church music in time to come."

1. What was the name of the Pope who was the successor of Pelagius?
2. How long was he at the head of the Christian Church?
3. What is the name of the city in which he was consecrated?
4. On what river is it?
5. What name is given to the system of chants arranged by the successor of Pelagius?
6. What composer of a more primitive system of chants lived about two centuries before him?
7. Of what city was he bishop?
8. What is the meaning of *chant?*
9. In what churches is the chant most often heard at present?
10. Why were no instruments allowed in the primitive church service?

VI. Hope Temple, Composer.

HOPE TEMPLE.

If, with the names of Liza Lehmann, Clara Butt, Fannie Davies and Agnes Zimmermann whose work THE MUSICIAN has chronicled, we add that of Bettina Walker, writer of "My Musical Experience;" the pianists Madelaine Schiller and Arabella Goddard; the composers Virginia Gabriel, Hope Temple and Miss Wurm of international fame. We shall conclude that London's musical atmosphere has proved salutary to women's musical development, for with that metropolis is associated each of the above names. Many lesser lights there have been on England's musical record, and every one acquainted with the student life in music there, is aware of the preponderating number of women making a special study of theory.

A few years ago the writer was present at an examination in one of London's music schools, having just left a similar examination in America, carried on by the American College of Musicians. The surrounding circumstances seemed different indeed, for the examiners wore the Oxford hood, many of the candidates were in cap and gown, and it required a shifting of mentality to consider crotchets and quavers, etc, as substitutes for eights, quarters, etc. To read at sight (naturally MacFarren's suggestive of the Day theory), with every X indicating the thumb. And aside from these non-essentials, another surprise was the number of women taking a "stiff exam." in harmony and the relatively large number of successful ones. On to Germany, at Vienna, Berlin, Leipzig is met the English woman studying music and her innate love of choral music and characteristic thoroughness, rank her among most earnest workers and cleverest of competitors. The bond between the two English speaking races is a close one, and while much of benefit could be interchanged, American women can read records of 19th century's music with pride in achievements of women of England.

We give this month a photograph of a fair composer with an excerpt of a popular work of hers. Born in Dublin, Hope Temple went to England at the age of 13; studied under Barnet and Silas also in Paris. She gave some concerts in 1890. She is a composer of an operetta, "The Wooden Spoon," and a number of songs.

Virginia Gabriel was born in Surrey, 1825; studied music under Thalberg, etc.; married to Geo. March in 1874; died at London, 1877. Her work in composition included cantatas, operettas, songs and pianoforte pieces.

Marie Wurm was born at Southampton in 1860; studied with Clara Schumann, J. Raff, etc.; won the Mendelssohn Scholarship in 1884, and then studied with Sullivan, Bridge.

Bettina Walker, pianist and writer, settled in London in 1890; studied under Henselt; died in 1893.

Arabella Goddard, pianist, was of English parentage; studied harmony with MacFarren, and piano with Thalberg; married the critic, Davison.

CLUB WORK.

MUSIC SECTION OF (MASS.) THE AMHERST WOMAN'S CLUB.

Extract from Mrs. Marsh's address read at one of its meetings:

"The years are mile stones—each one bringing us onward, let us hope, to a broader culture in all things beautiful, to a truer value of what is really worth while, and thus to a nobler living.

"This is our seventh year of work as a music committee, and let us make the most of a happy incident. 'There's luck in odd numbers,' and of these the number seven has, since the world began, stood pre-eminent as a magical number. The seven plenteous years, the seven churches, the seven golden candlesticks, the seven hills of Rome, the seven days of the week, and what is more to our purpose, the seven notes of the scale.

"Counting the notes as years, we have now arrived at the seventh, not the discordant major seventh, nor yet its use as a suspension, for we do not want to stop here. Neither do we take the diminished seventh as our symbol but rather we wish to be the dominant seventh, preparing to resolve itself in another year into the tonic chord, the perfect octave, the eighth year of progress and success. It seems desirable at this time to review briefly the years of our association and recall as we may, some of the details of our pleasant work, 'lest we forget,' as Kipling says, and undervalue the advancement we have really made toward a better appreciation and understanding of the heavenly art we love."

The record that follows, tells of the Club's organization in 1893, with three officers, an advisory board and a membership of thirty.

Four meetings were held and music's history at time of earliest classics, studied. Haendel's Hallelujah Chorus, arranged for six hands, was given; a paper on Old Violins read; a sonata of Galuppi played, as well as a gavotte and composition of Emmanuel Bach. Biography was the theme of the second year's work, followed by considerations of Classic, Romantic and Modern Composers. A fine Weber piano was purchased at this time by the Club. During ensuing years American Music, Women in Music and other themes were studied. The Ladies' Chorus, ably led by Mrs. Sanderson in tastefully chosen and carefully practiced selections, gave pleasing variety to the program.

"We have numbered," continues Mrs. Marsh's summary, "between eighty and ninety names on our membership list during the seven years, and of the thirty original members, eighteen still remain, the veterans of the flock. Forty-five meetings have been held since the beginning, and the list of different composers and the number of illustrations given is too long to be enumerated. The musical work of our association has paid for all the labor it has cost—paid in knowledge gained of composers and of their work and musical literature generally. Paid in the stimulus to practice, in difficulties overcome and confidence gained. Paid in the cultivation of social relations, and the forming an acquaintance with those whom we might not otherwise have known. Let us hope, too, that our organization has paid in promoting in our town of Amherst, a more general interest and progress in musical matters. It is surely worth while to keep that object in view, as we go on to the future."

This season, 1900–1901, the music committee consists of Miss Clara L. Dwight, chairman, with Mrs. William A. Burnett and Mrs. D. W. Marsh. Much time has been given to Beethoven, of whose works a symphony, one string quartet, one piano and one violin sonata have been played, beside vocal music given. A paper on the development of the sonata form was read by Miss Clara Dwight.

The writer enjoyed the hospitality of this Club during January—in Biblical measure—witnessing the energetic methods of one of our largest organizations of busy women, of which corporation a most prominent part is The Music Section.

THE MONTH OF MARCH AT THE MOZART CLUB OF JAMESTOWN, N. Y.

March 9: Musical Lecture by Mrs. E. Gross.

"Development of the Mass," Kyrie (Missa Brevis) . . . . . *Palestrina*
"Development of the Mass," Kyrie (Twelfth Mass) . . . . . *Mozart*

March 13:

Concerto . . . . . *Beethoven*
Oh, for a Burst of Song . . . . . *Frances Attitsen*
a. Spring Song . . . . . *Henselt*
b. Air de Ballet . . . . . *Chaminade*
The Rosary . . . . . *Nevin*
Paper—Bach's Passion Music.
The Bach Singers in America.
a. The Heavenly Song . . . . . *Hamilton Grey*
b. Good Bye, Sweet Day . . . . . *Kate Vannah*
Concerto, G minor . . . . . *Mendelssohn*
a. The Princess . . . . . *Grieg*
b. Good Morning . . . . . *Grieg*
Brahms Quartet.
Part Song.

This Club of about one hundred and twenty-three members with an added list of non-resident members, was formed in 1879, and incorporated 1894. In this, its twenty-second season, it has a president, vice-president, secretary, treasurer and recorder, with twelve directors. There are, moreover, committees appertaining to Artist recitals, to music, to piano and a quartet called The Schubert Quartet, as well as a Brahms Quartet. Those giving recitals in the Club this year are: The Spiering Quartet, of Chicago; Julie Wyman, soprano; Anna Lawrence, harpist and Katherine Talbot, contralto.

WOMAN'S WORK AND CRITICS.

KATE VANNAH.

The male critic never misses his chance to state that, though women may write with some degree of grace and clearness, even correctness, they have, as yet, accomplished no "great" work in music.

Now "great" has suffered, along with several other innocent adjectives such as lurid, tremendous and elegant, at the hands of would-be critics.

The wife of a "great" man may, while his spouse is putting the final touches to a "great" symphony, be doing out what in the opinion of her neighbors is a "great" washing for her large family. Adjectives depend largely upon the point of *you*.

Let us be common, sensible. Suppose for instance, the tables were to be turned—her wash table into his sanctum, the crying children along with it; his table along with the piano to be transferred to her sanctum. The woman would and could in time, achieve just as "great" things in musical composition as the man. Why not? Opportunity makes the woman quite as surely as it does the man. If the last ten years have blossomed with women who are poets, composers, novelists, lawyers, pianists and players of every instrument in an orchestra, organists, the harp of the Israelite, the banjo; if they have produced clever actresses, singers, dancers, elocutionists and tonsorial artists—what will not women accomplish in the coming twenty-five years?

To be sure, there must be something behind their eyes besides their back hair, but as many men are without brains as women.

Let opportunity sink the shaft into the mine of woman's genius. Men will not look in vain for priceless treasure which, whether it be as great, lurid, tremendous or elegant as theirs, is sure to be commensurate in value. Did some one say the word "publisher?" An honest publisher is the noblest work of God. (Will the Editor please give me italics for the first adjective?)

MY LADY'S BOWER. HOPE TEMPLE.

THE SUBTLETIES OF BOWING.

GEORGE LEHMANN.

We have little reason to believe that Johnson, the lexicographer, had either practical or theoretical knowledge of the art of violin playing; yet this keen observer of men and things seems to have been profoundly impressed with the peculiar difficulties of the act, and, in one of his friendly arguments with Oliver Goldsmith, he proved conclusively that he could better appreciate the fiddle's unique position in the world of art than most men who have given the subject more or less serious thought.

Said the Great Cham, to the poet, "there is nothing, I think, in which the power of art is shown so much as in playing on the fiddle. In all other things we can do some thing, at first. Any man will forge a bar of iron, if you give him a hammer; not so well as a smith, but tolerably. A man will saw a piece of wood, and make a box, though a clumsy one; but give him a fiddle and a fiddle-stick, and he can do nothing."

Shrewd as this observation must be conceded to be, neither Johnson nor thousands of other intelligent men can account for the remarkable fact that, in the beginning, the most intelligent efforts to do something with the fiddle are only productive of excruciating sounds. The secret of this is found in the bow, not in the violin. And it may be said, without magnifying the difficulties of the art of bowing, that the training of the fingers is an insignificant matter compared with the colossal task of mastering the technics of bowing.

The interest of teachers and pupils in general is concentrated on the intricacies of left-hand technic. As a matter of fact, this is a reversal of the natural order of things in connection with violin study. Sooner or later, the discovery of this mistake is inevitable; but once the fact is clearly established in the mind of the misguided pupil, he ceases to regard the acquirement of left hand technic as the most serious problem of his art, and anxiously concerns himself with the subtleties of bowing.

Should any pupil question this super-importance of right-hand technic, let him but ask himself what are the obtainable results of purely digital skill. Are the fingers, unaided by the bow, capable of producing anything? Is it possible for the fingers, even in the most perfect state of development, to evoke any musical sound other than that which is termed a *pizzicato?* No, this is manifestly impossible. At best, the fingers are nothing more than silent messengers of the bow, capable of creating only that which the bow vibrates into a musical utterance. Resembling, in many respects, a piece of complicated machinery, they are useless and uncreative in themselves, but at once become an all-powerful medium of production when a higher operative force acts upon them and reveals their possibilities. Every tonal beauty, every form of melodic expression, every characteristic of musical thought, depends upon manipulation of the bow. It is the violinist's tongue articulating all his thoughts. The greatness of a musical intellect may be revealed with moderate digital skill, for the revelation is uttered not by the fingers but the bow.

When it is considered that, in violin playing, there are certain strokes which defy the pedagogue's art, and can be acquired only by means of persistent experiment and the establishment of certain physical conditions, the difficulties of elucidating the principles of bowing by written or spoken word, can readily be imagined. And as, at best, the pupil can derive but little profit from reading even the most minute particulars of these principles, I will dwell, in this article, on such questions as seem to point to practical good, rather than on those which admit of little more than theoretical discourse.

The long *legato* stroke should receive careful daily attention. The full length of the bow should be utilized, except when the pupil's arm is too short to maintain, at the point, the general conditions which govering the drawing of the bow in its lower divisions. The stroke should be of exceeding lightness, and though much care should be bestowed on a very slow stroke, the pupil must acquire the ability to draw and push the bow with great rapidity. This study requires much patience, the employment of a great variety of *tempi*, and the closest attention to character and quality of tone. And, in addition to this, the change of stroke (from down to up-how, and the reverse) necessitates constant watchfulness; for it must be accomplished without any cessation of tone, and the change must be effected by the wrist alone, unaided by either the lower or upper arm.

The short, detached stroke, in the middle of the bow, is also an indispensable daily exercise. When played at the point of the bow, this stroke is commonly termed, the *detaché*. It is a rapid, energetic stroke, of a crisp, elastic character. The initial pressure must not be continued throughout the stroke, as continued pressure will result in a harsh, disagreeable termination of the tone. When the pupil has learned to perform this stroke in the middle of the bow, he should strive for equal proficiency a little nearer to the point, and thus, in the most cautious manner, gradually obtain control of the upper half of the bow. It is advisable to confine all such work to the A-string —at least in the beginning.

The *detaché*—at the point—is one of the most important of all bowings. It is much neglected by both teachers and pupils, and, for this very reason, is one of the gravest shortcomings in the work of most of our players. In Germany it is taught with ill success, but in Belgium it has always been a characteristic feature of the best masters' work. Kreutzer devoted many of his famous studies to the *detaché*, and these studies, if persisted in, will richly reward the student.

All "methods," and many *etudes*, are so planned that the pupil may become proficient in playing at different parts of the bow; but the average pupil's inattention, or his disinclination to follow the author's injunctions, results in a deplorable inability to pass from one portion of the bow to another with the necessary rapidity and ease. Often, when the pupil should be playing at the lower half of the bow, he is at the upper half; or the circumstances may be just reversed, but the field of activity equally undesirable.

This inability fully to control the bow in its different divisions leads to innumerable embarrassments, especially in sight-reading. It is attended by all sorts of mishaps and complications, and is fatal to graceful bowing, good phrasing and good style. Time and again the pupil is "caught" at some portion of the bow which he should have avoided, and his efforts to extricate himself from the difficulty are nearly always disastrous.

A universal pupil's weakness seems to be the avoidance of the lower part of the bow. If permitted to do so, most pupils will systematically shun the lower third till this avoidance becomes a confirmed habit. The exclusive employment of the upper two-thirds of the bow naturally increases the pupil's inability to perform at the lower third, and it is not long before disinclination is converted into actual fear.

A habit which militates against, and often makes impossible, the development of a broad and dignified style, is the constant employment of short strokes at the upper part of the bow. In Berlin, this unfortunate tendency is never tolerated. But, on the other hand, the German pedagogue, determined to eliminate this fault, illogically flies to the other extreme, and insists upon indiscriminate employment of the full length of the bow. It is not difficult to understand that constant and unwarranted use of the whole bow endangers good tone and style, and often renders awkward and crude what should be delicate and refined.

But, whatever may be said in opposition to an excess of long strokes, the fact remains that the "short bow habit" is both harmful and distasteful.

All pupils should make a special effort to acquire a fine *spiccato*. It is one of the most useful and brilliant of bowings, and, if practiced every day, will greatly strengthen the wrist and increase its suppleness. Apart from the manner of performing the *spiccato* (*i. e.*, with a perfectly flexible wrist), the chief question to be considered is, the quality and character of tone. The continually rebounding bow should produce a very brilliant tone, but brilliancy must be combined with volume.

The best *spiccato* is produced at a point just above the middle of the bow. The effort to make the bow rebound should not be continuously repeated. The first effort, or impetus, should suffice.

At a West End church the opening of a new organ gave rise to much harmonious discussion on its evils and shortcomings. It found a champion in an elderly gentleman, who pointed out the fact that the new organ must be more useful than the old one, because it had a "Double Diapason," so that if one broke the other could be used. Organ-builders will doubtless make note of this in drawing up specifications for the uninitiated.

EARLY VIOLINISTS COMPARATIVELY CONSIDERED.

What Each Contributed to the Technic of the Instrument.

H. W. HART.
Author of "Arranging Music for a Small Orchestra."

(*Concluded from January.*)

The violin, once having established its claims to unusual artistic capabilities and powers of musical expression, was not long in finding its way into the Roman Catholic Church, which certainly has always given a warm welcome to the highest developments of all the arts. Gabrieli had already made extensive use of orchestral accompaniments in his Church music, and from merely doubling the voice parts, he advanced to distinct instrumental settings.

From about 1650, instrumental numbers, entirely disassociated from vocal music, began to form a regular part of the church service.

Giovanni Battista Vitali, the first great master of the Violin Sonata, was born at Cremona about 1644. He was a violinist of note in his day, and held various appointments as leader of orchestras at Bologna and Modena. He composed a considerable amount of violin music and in these compositions the musical interest is much greater than in those of his predecessors and contemporaries. His dances are concise in form, vigorous in character, and in some instances —especially in a Chaconne which has been heard from the concert stage even within comparatively recent years—he shows high powers as a composer. While the demands of his music upon the executant are at times considerable, he does not, on the whole, represent in this respect any material progress beyond the current compositions of his day.

Thomas Baltzar (Lübeck, 1630—London, 1663), was a German violinist celebrated during the middle part of the seventeenth century, particularly in England where he went in 1656, being the first violinist of note to visit that country. He seems to have been the first, or among the first, to utilize the shift, in which, however, he did not exceed the third position.

An amusing account of one of his private performances is given by an English writer who heard him in 1658 and "did then and there, to his great astonishment, heare him play on the violin. He then saw him run up his fingers to the end of the finger-board of the violin, and run them back insensibly—and all with alacrity and *very good tune*, which he nor any in England saw the like before."

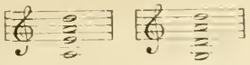
Far in advance of Baltzar, however, are to be noted two other German violinists, Walther and von Biber. Johann Jacob Walther was born in Thuringia in 1650. He was fond of realistic tone-pictures, imitating the cuckoo, the nightingale, the crowing of the cock, and other sounds of nature. In a set of variations, he has imitations of the guitar by means of pizzicato, of pipes by passages going up to the sixth position on the first string, of trumpets by fanfares on the fourth string. Further on he introduces echo effects, the lyre, the harp, and winds up with a Coro in full chords. All this, of course, is very childish, but some more serious work is to be attributed to him, who, together with von Biber, did much toward developing advanced fingering. He ascends to the sixth position, frequently makes use of difficult double stops, and uses a variety of bowings.

The Italian school of violin playing at this period was far more limited in these respects, even Corelli not exceeding the third position. In fact, the Germans at that time took the initiative in execution on the finger-board.

Heinrich Johann Franz von Biber, born in Wartenberg in 1644, represents a still greater advance than Walther. The early German school of violinists was more influenced by the methods of Farina, a superficial musician, and other Italians of his class, who delighted in attempted imitations of the sounds of nature, than by the more solid and dignified methods of Vitali and his followers. Von Biber shows a marked contrast to his contemporary, Walther, and may be said to be one of the founders of the German school of violin playing. He was court-conductor to Emperor Leopold I (who ennobled him), and also to the Bavarian court and the Archbishop of Salzburg. Judging from his compositions, his execution was far in advance of most of his contemporaries and his use of the bow marked by great dexterity and variety.

He appears to have been the first occasionally to modify the usual tuning of the violin. In two of his

Sonatas, the tuning of the instrument is indicated thus:



To return to the Italian school, in whose musically fertile soil violin playing had its beginning and found its highest development, at least until within very recent years, the name of Torelli attracts attention.

Giuseppe Torelli was born in Verona about 1660, and died in Ausbach in 1708. He studied in Bologna where, from 1685, he was for many years leader of the church orchestra of St. Petronio. In 1705, he became leader of the band of the Margrave of Brandenburg-Ausbach.

To his genius is accorded the honor of first conceiving and realizing the Violin Concerto form. In this he retained the skeleton of the so-called Church-Sonata which differed from the Chamber-Sonata of that day in being made up of four movements, the first in slow, measured time, the second an allegro, the third again slow followed by a brilliant finale; the Chamber-Sonata consisted of alternating slow and quick dance-forms—Sarabandes, Allemandes, Bavottes, Gigues, etc. Torelli retained this skeleton Sonata form, which was for a solo violin, sometimes accompanied by a bass, and to it added the flesh and blood of orchestral accompaniment. Some of his Concertos are scored for one or two solo violins, two accompanying violins, a viola and a bass, which were occasionally supplemented by a lute or an organ part. This arrangement was very largely adhered to by Vivaldi, Corelli and Händel.

While Torelli, in introducing the Concerto form, added nothing to the technic of the violin, he marks an epoch in violin history and inaugurates a period wherein the most talented musicians, almost as a matter of course, were violinists—just as in modern times with but few exceptions, all great composers have been pianists of greater or less ability.

One of the most luminous individualities in the early history of violin playing and composition, whose influence is still felt, was that of Arcangelo Corelli. He was born in Fusignano, Imola, Italy, in February, 1653. He studied the violin with G B. Bassani, and counterpoint with Mateo Simonelli. Little is known of the details of his early life, but if one may judge from the remainder of his career, it must have been quiet and uneventful, devoted to study and the development of his art.

In 1681, we find him settled in Rome, where he published his first work, a set of twelve Sonatas. His growing reputation as an executant and composer soon made him a general favorite in the highest social circles of Rome and among his fellow artists. Cardinal Ottoboni, an enthusiastic patron of all forms of art, particularly of music, became a life-long friend of Corelli, who lived in the Cardinal's palace till his death. He there conducted the weekly concerts on Monday nights, considered the most important and interesting events in Roman musical life.

Cignani, Maratti and other eminent painters of the day were his intimate friends. He himself was an ardent lover of pictures and formed a large and valuable collection of paintings.

His fame as a master was not confined to his native land, for to him came young aspirants to musical honors from all countries to benefit by his instruction. The most eminent of his many pupils were Geminiani, Locatelli, Somis, Baptiste and Castrucci. His compositions were published not only in Italy, but in Amsterdam, Antwerp, Paris and London.

Corelli was of a quiet, dignified nature; simple and unpretentious in his habits, amiable in disposition and modest with all his genius. Illustrious visitors to Rome paid homage to the master and when Queen Christiana of Sweden came there, Corelli conducted, in her palace, the performances of an orchestra of one hundred and fifty musicians.

Corelli did not journey out of Rome for many years, and although the King of Naples made many attempts to induce him to settle in his capital by the most tempting offers, so contented was Corelli among the happy surroundings which characterized his life in Rome that he declined all overtures to remove therefrom.

It was not until late in life that he visited Naples, then the most important musical center in Italy. Allesandro Scarletti was the ascendent musical light, and an excellent orchestra contributed to the advancement of music. In order to assure complete success during his visit to Naples, Corelli took with him two violinists and a 'cellist to make certain of perfect accompaniment. His home-staying, however, had kept him more or less ignorant of the progress made in matters musical outside of Rome, and he found, upon arriving in Naples, that his precaution was entirely unnecessary. At the first rehearsal Scarlatti's band played the introductory tutti without error, and drew from Corelli the exclamation, "They *play* at Naples!"

His Naples' experience, however, does not appear to have been altogether happy. The king did not appreciate his playing, leaving the concert room before Corelli had finished playing, saying his adagio was tedious. Soon after this he made a very pronounced mistake in playing one of Scarlatti's compositions, in a passage which was probably not well written for the violin. Scarlatti's violinists, familiar with the work, played it correctly, to the humilation of Corelli. But this was not all. Doubtless disconcerted by his previous blunder, Corelli led off in C major, a piece written in C minor. They were compelled to start again, when Corelli repeated his mistake and Scarlatti was obliged to point out wherein he was wrong.

Greatly humilated by this unfortunate series of *contretemps*, Corelli left Naples immediately and returned to Rome. Soon after this a hautboy-player acquired such applause at Rome that Corelli, disgusted, would never again play in public. All these mortifications, in addition to the success of Valentini, whose compositions and playing, while infinitely inferior to Corelli's, were becoming "fashionable," induced such a condition of melancholy and chagrin, that it is thought to have hastened his death. Corelli died January 18, 1713.

EDITH.

A Story for the Girls and Boys of the Perseverance Club.

OCTAVIA HUDSON.

Perhaps my little readers will think this rather a strange story; but if you understand musical terms you will understand the story.

Little Rose had lived with her Aunt Virginia since her baby days. When her dear Mamma went to her Heavenly home she gave baby Rose to her sister; and a precious gift she has been.

While she was yet a tiny girl she would climb upon the piano stool and pick out little melodies with her chubby fingers. So no time was lost in commencing her musical education. She is now a true little musician, and spends three or four hours every day with her beloved music.

"Rose and I had looked forward for a long time to our day in the country," said Aunt Virginia, when relating to me the story of little Edith. "You see, we live in a large city and did not go into the country often, but when we did go, oh, how much we would enjoy it."

The eventful day came at last. The morning dawned bright and beautiful. By six o'clock a dainty luncheon was carefully packed in a basket and we were off. We were to drive about twelve miles in our pony phaeton. How delightful it was. All nature seemed glad. Countless flowers dotted our roadway, and the bright sunbeams streaming on their dewy petals made them glisten like precious stones.

Presto, our spirited black pony, seemed to enjoy the cool, refreshing air as much as we, for he took us over the smooth, winding road *allegro*. We passed most beautiful scenery, too; but I think Rose enjoyed watching the broad, blue river more than anything else. And indeed it was a charming sight to watch it flow by so *legato*. Rose was quiet for a long time, and when I asked her what she was thinking about, she replied that she was listening to the water. "I think," she said, "that it sounds *cantabile*." We then talked a long time about music and the great composers who heard music in everything. The wind, the water, the rustling leaves of the forest, and even the flowers.

"Listen! Aunt Virginia," said Rose, presently. "Do you not hear some one singing?" I listened, but at first could hear nothing. In a moment, however, I heard a very sweet little voice singing. "Where can the singer be?" asked Rose, looking all around. "Wherever it is," I replied, "must be some distance from us, for the voice is *pianissimo*." But a gradual *crescendo* and soon the beautiful little song could be heard quite distinctly.

"There she is!' said Rose, jumping off the seat in her excitement. "But see, Auntie, she is walking *adagio*. I wonder why? I should think she would feel like running and skipping this beautiful day."

Very soon we learned the reason. Under one arm was a tiny crutch. Tears filled Rose's dark eyes when she saw this, and her tender little heart ached for the little lame girl.

"Let me call to her to stop, Aunt Virgina, and she can ride with us," said Rose. She called to the child, but we were yet so far away she did not hear, but sang merrily on. Rose then called *fortissimo*. The little girl turned around, and Rose waved her hand to wait for us.

"We heard you singing," I said, when we came to her, "and my little niece is anxious to have you ride with us as far as you are going." The frail face of the child lightened with pleasure and a tender look came into her large, blue eyes as she said: "Oh, thank you; it is so kind to think of me, but I am going to the woods just over there." "You see," she said, "I never play with other little girls, for I cannot run and jump as they do, but all the time I have to walk *andante*. So I go to the woods where I can be with the birds and the flowers; and oh, I love them so."

Rose and I soon arranged to spend the day in the same woods with little Edith. What a delightful day the two children spent together. One would have thought they had known one another for years. Rose declared that the little birds knew Edith and would come quite close to her to sing.

The woods were filled with birds and it seemed that they were overflowing with happiness that day. Sometimes the whole woods echoed and re-echoed with the songs of joy which they warbled to *dolce*. At times the music of this bird symphony was so clear and *forte* we could hardly hear ourselves talk. Then a *diminuendo* and the birds would sing *piano* for a moment, and then another wild burst of song warbled and trilled so exquisitely that the children and myself listened in rapture until the golden sun was lost to view behind the distant hills.

I told Rose afterward that whenever we wanted to hear true music—the sweetest music on earth—we would go to the woods and listen to the birds.

I was not long in learning that Edith's father and mother were dead and that she was living with her grandmother. I also discovered that she had a beautiful voice and that she could well imitate the birds she loved so well.

On our way home we stopped to see Edith's grandmother. While the children were playing in the yard I had a long talk with the old lady. She told me Edith had fallen out of her father's arms when a baby and injured her hip. Many physicians have told her the child could be cured. "But," said the old lady, "I cannot afford to send her to the city. I am so poor I can hardly buy her clothing."

I told the old lady that I had long been wanting to find a nice little girl for a sister for Rose; and if she would let me have little Edith she would have the best medical treatment the city could afford. After much persuading she consented to let me come for Edith in two weeks.

Edith was under medical treatment for six months; and she can now run *allegro* as any other little girl. She has been with us three years, and her soprano voice, so *dolce*, so bird-like, grows more beautiful every day. She also studies the violin of which she will, before many years, become its master.

Rose and Edith are inseparable and each Summer is spent with the dear old grandmother, and many days while in the country are spent in the woods listening to the birds.

"Raconteur," in the *Musical Courier*, gives these gems of thought for the guidance of musicians:

Cut your hair—your music will sound just as sweetly.

If you can't be moral be as moral as you can—loose living does not always spell genius.

If you don't go to church, at least read the Bible. It is excellent literature.

If you don't vote, don't express your opinion of politics. Any barber can do both.

Pay your debts, even if Wagner did not.

Don't publish everything you have composed—or compiled.

Be polite to your wife—she can't help being a woman and your wife, nor can she be blamed for discovering your limitations.

Don't worry about the 21st century—it won't worry about you.

Be of good appetite, for blessed are those who eat, drink and are merry with their own.

Here is the last and best commandment for ailing and dissatisfied artists:

Carpe Diem!

HINTS FOR THE NEW YEAR.

How to Give Pupils' Recitals.

EVELYN G. MARSH.

Does any one say, "I never have pupils' recitals. I am too busy, or my pupils are not advanced enough. This topic means nothing to me." It should be of interest, however. You ought to give pupils' recitals. Not the kind in which your advanced and best players play difficult selections with showy titles, or a concerto on which the entire time for months has been spent, to the neglect of regular work; the recital in which the timid and bashful child has no part. I do not consider this a lawful or fitting kind. In one way it may do you the most credit, but it does little credit to your sense of justice to your pupils. Most children appreciate a chance for public performance. Your retiring pupil should learn self confidence; your awkward one, ease and composure; your despondent one will grow interested in comparing his work with that of others. The talented one will do you full justice which, perhaps, these others may fail to do at first. Because of what it does for your pupils, you are in duty bound to consider this subject.

The Preparation.

Begin your preparation months beforehand, so that there may be no half-learned pieces, or too much time spent on one special thing. Too much time is often spent on one composition, which is never touched later, to the neglect of regular work. A wiser way to do, a way which which will avoid this, is to plan in your own mind, months in advance, what each pupil shall play. You may mention the fact to him or not at your discretion when giving it for the first time. Let it be thoroughly learned, memorized and *laid aside*. About two months before your recital date, have the piece, which is now become an "old one," relearned, repracticed, and if partially forgotten, memorized again. There will be no haste, flurry and worry in preparing for the recital—very little fear and few misgivings about the piece to be played—for it is one the pupil has been given a chance to thoroughly learn, and in which he has full confidence. In all probability such preparation will do both you and the pupil justice.

To play any composition well, the pupil must be well in advance of its technical difficulties. He must have made it a part of himself, so that his whole soul and powers of expression can be thrown into it. To do this, there is no piece like the old familiar one. In the review of such a piece, one sees new phases to be developed, new ideas can be brought out—one can become master of it. Of course, such choice is not always available with new pupils, but have it so whenever possible.

It is often advisable in planning for a recital, to choose a piece that the child likes and enjoys practicing. Then the hours of necessary practice will be more cheerfully given and in greater numbers. I have had pupils object to playing sonatinas, even very beautiful and melodious ones, because "they had no name;" "they were only sonatinas." But if the beauty of the melody, the grace of movement can be shown them, and so presented that it appeals to them, half of such difficulties are overcome. Much of the success of the program will depend upon the style of pieces you chose. Adapt a program first to your pupil. This girl plays runs, trills and the like well at lesson hour, but before an audience her fingers are very apt to run away with her. She becomes confused, fails to play clearly and does not do herself justice. She should be given something that gives a feeling of composure, of rest, of absolute control. A piece with few runs, with sustained chords, a singing melody, will find her looking forward with little apprehension to the recital. As she gains in self confidence, she may attempt these other styles, and in time learn to play them well. A confident pupil, to whom the excitement of a public performance is a tonic, may be given the brilliant piece and thoroughly enjoy it.

The dull or backward pupil should first be introduced in a duet. The companionship of a fellow sufferer, the feeling that all is not dependent upon him, removes much of the nervous strain. Thus he is given a place on the program when otherwise he would not be able to appear. The probabilities are that next time he will aspire to be a soloist and thus work more diligently.

Adapt your program in a measure to your audience. A program should contain that which is educational if possible. The cultured, musically educated audience will appreciate the classic program. People who do not profess to understand music, but who enjoy it as it appeals to their sense of rhythm or love of melody, demand a different kind. In all probability they will want "a tune." I recall my first pupils' recital in a small town. I was warned that a classic program would not "take," and that if I wanted to please my audience I should present a varied program. It being my first recital, I was anxious to make a favorable impression. How did I decide the question? I chose *the best* of the style that my audience would appreciate and understand. In other words, it was an adapted program. Lead gradually to a higher grade. Doubtless some will disagree with me here. But the success of a young teacher depends largely on what his patrons and audience think of him and his recitals. A severely classic program, had the pupils been able to present such, would doubtless have been greeted by empty chairs, a most discouraging feature.

The Recital.

The arrangement of the program has a distinct part in its success. To arrange a well ordered, logical program is an art in itself. Briefly stated, do not allow monotony to result from pieces of the same style following each other. There should be contrast and yet coherence. Do not begin with your best, or yet with your poorest; work toward a decided climax of your best material, leaving a favorable impression upon your audience. Open your program with a duet, follow with one of your fairly confident and advanced pupils. Arrange for the timid one among the early numbers, so that he may not grow nervous with long suspense. The poorer ones should be "sandwiched in." Vary the program with well selected talent of a diverting and contrasting nature. Have at least two *good* numbers. These *may* be above the heads of your audience, but select the most attractive and musical of classic composers. Thus you give a taste of better music in sugar-coated pills, as it were.

Above all else have a short program. It is much to your advantage to have your listeners wish for more and to remark upon the shortness of the hour, than to make them "twice glad" with a long program. In such cases, scant attention is too often paid the last number. Better give two short programs on different evenings than one wearisome one. Use tact in this matter.

Have your first recitals in private parlors or a small hall, for your pupils sake. Let nothing give the impression that failure would be a heinous offense. Make the pupils feel at home, with all appointments simple in character, everything tending to produce a feeling of composure. As the pupils become accustomed to playing, you may use a larger hall, making it a more pretentious affair. An excellent plan is to have the young performers play before each other at a private gathering before the recital. If you conduct a club, have the pieces played there. It will be a test of the perfection of the piece and of their own composure or lack of it.

On the day of the recital, there is a temptation to over-practice on the all important piece which should be avoided. Too much is as bad as too little. The inclination will be to play the piece fast, whereas the best way is to practice but little, and that slowly. If the piece is fast, play it in tempo comparatively few times, only enough to test yourself, and avoid a continual running to the piano to try a difficult passage. Slow, steady, firm practice will induce correspondingly steady nerves. Nor will it be to a teacher's advantage to worry. Affect a brave and confident spirit, whether you feel it or not, for your feelings will be contagious always. Give all the encouragement you can before hand, and do not be discouraged or find fault if anything goes wrong. Expect a few failures the first time.

Give each pupil something to do. Give the overgrown boy, who is learning to forget his diffidence at lesson hour, a post as usher, and let him give out programs at the door. Endeavor to use every pupil in some way, if you have those who are not able to play. It will give a feeling of ownership in "our recital."

Madame A. Pupin, who should speak with authority, once gave the following advice under the heading, "To Cure Stage-Fright:"

"The pupils of the Conservatory were very much excited. It was graduating night for the piano class. All asserted they were horribly nervous. One young woman was sitting in a corner—pale, cold and silent; a young man, red and perspiring, was rushing hither and thither; a pretty young girl, a picture of despair, was biting her handkerchief to keep the tears from falling. An epidemic of fear seemed to have seized them all.

"'Fie! Fie!' exclaimed the elocution teacher as she entered the room. 'What do you mean by all this nonsense? I have a remedy in my room which will set you right in a moment.' 'What is it?' cried a chorus of voices. 'I will give you each a dose just before you are ready to play, but you must promise not to tell the others what it is.'

"As each pupil emerged smiling from the elocution teacher's room, went on the platform and came back saying, 'I never felt the least bit frightened.' Great curiosity was expressed as to what this wonderful remedy could be.

"Now, it seems she only slapped their backs. She began by patting their backs and shoulders with the palms of her hands, alternately right and left. The slaps grew harder and faster, until the poor victim could scarcely bear it; yet as the blood went tingling through the veins, there was such an exhilarating effect that each one felt impelled to endure 'just a little more,' until the teacher sent them off laughing to the then delightful task of playing their graduating piece, which all of them did, with honors to themselves and their teachers."

Aims and Results of Recitals.

The true aim of a recital should be the benefit it gives a pupil, not the glory that may reflect upon the teacher. Comparatively few are the players who do not dread a public performance. Many never do their best at such a time because of nervousness. Playing in public is something to which one must become accustomed, and the earlier the better. Let a child play from his earlier years and he will know little of the meaning of fear—he has overcome it. He will be too young to analyze his feelings as "nervous," and in older years he will not have that bugbear of musicians. It is a great and lasting benefit to be thus prepared for later years.

Some never outgrow this nervousness, but most players do in a measure. So put forward your timid and self-conscious pupils as well as the advanced ones. You owe it to them for the benefit they will derive from it. They are thus being prepared to make their music of use and pleasure in a social way.

Parents are usually gratified at the results of a recital. They look almost as eagerly as the children for the pupil's number on the program. They long to see tangible results from money and time invested in music lessons. "I am tired of continually paying out money and never having Alice able to play anything," said a mother recently. All parents feel the same way—they want to see results. Of minor consideration should be the fact that by recitals one gains often new pupils. It is a good advertisement of your work.

Have you ever offered rewards? I successfully offered a small prize for the "most musical performance" at two or three recitals, with an "honorable mention" for the second best, the same to be decided by judges selected from my audience. I found there were no hard feelings resulting, only a friendly rivalry and an earnest effort on the part of each one to do his best. At the close of the teaching year, each pupil received a certificate, showing his grading and work accomplished. It was a most pleasant feature of the evening and one of interest to the pupils.

Pupils can learn that it is the music and not themselves that is important, and can learn to forget themselves in the piece. Of course, a pupils' recital means extra time and work to the busy teacher. It requires extra practice hours, and a greater expenditure of your own vital energies. But does it not pay in the end? If you can't see it as a duty, perhaps you may see it as a paying investment of time, in the increased interest and renewed ambition of your pupils and in the new ones which you may gain by it. Try it.

Catalini, like most prima donnas, had a great weakness for showing off her jewelry:

"You see dis brooch?" she would say: "de Emperor of Austria gave me dis. You see dese ear-rings? De Emperor of Russia gave me dese. You see dis ring? De Emperor Napoleon gave me dis," and so on.

Braham, the tenor, in imitation of this, would say, pointing to his umbrella:

"You see dis? De Emperor of China gave me dis."

Then, pointing to his teeth:

"De Emperor of Tuscany gave me dese."

FOR "AULD LANG SYNE."

AIMEE M. WOOD.

(Concluded from January.)

Leslie, wakening from his fancies, became aware of an oddly familiar figure passing the moss-grown stones, and moved unobserved into the shadow; it was his visitor of the morning, walking about the place with bent head. He seemed shabbier, more dejected than in the morning, in contrast with the beauty of the scene; he had removed the old slouch hat and paused at last, raising his eyes and head and moaning aloud:

"*Mein Gott! Mein Gott!*"

Perhaps it was the influence of the night, perhaps that of the Heine legend, presenting in the composer's adaptation the ultimate triumph of the Greater Self, perhaps both, which brought the man forward from the shadows to say, though still gruffly, as was his long use:

"You came to see me this morning. What is your trouble?"

The German started; the hand with which he replaced the hat shook. He was weak with long fasting, having spent the little he could earn from the occasional sacrifice of a painting, or an etching, for a mere song, for the materials necessary in his work on the Tannhäuser sketches.

"I come to see you," he began, as he had done in the morning, "but I hat no money; I hat only promese—"

"I want no money, and I tell you now again I help no one! Is that all your trouble—your studies for the competition?"

To the young man's face, pallid in the moonlight, came again the sudden passing tenderness, yet intensified, and transforming it; the influence lent itself to his voice. He stood with gentle self-possession, and there was less of the accent than in his awkwardness.

"Perhaps you know, haf known, as I know, a luf such as once only comes to make the life for that, only for that - afterward. It is six monts my Nina and I haf met—"

"Nina!" the artist's voice interrupted him harshly.

"She is chorus girl; she lif beyond in te little village with old woman; she haf no parents. We luf, we wish to marry, it ees impossible. I haf no vork, no money! Ven te supernumerary look about, I say 'Nina can sing. She haf grand voice; she sing in chorus in te greatest operas in *Lombardi*, in *Ernani*, in *Fra Diavola;* she vill learn now te *Tannhäuser*.' He hear her and say: 'She ees true music child of her father, who vas lost in shipwreck, von great musician who blay in concerts in efery city, mein friend,' he say, 'ERNST REINHARD!'"

The artist laid a hand on Otto's arm.

"I—I knew her father, I knew of him. I would like to see her—to find her." Though he had summoned all his force to speak quietly, his voice had sunk in its agitation to a whisper. But in the German's eyes crept again the light of a hope that raised his figure erect with renewed strength as the two made their way out into the highroad leading back to the city. The artist, he thought, might after all consent to see his sketches, perhaps suggest to him how to put into them more of the life, the finish, which he felt was now their lack. If he could win the order!

The chorus rehearsals for the Wagnerian drama were already going forward in the great concert hall, the opera house not yet being complete. For an hour the men moved restlessly about in a little anteroom, Leslie saying nothing throughout the time. When the noise and confusion of departure were heard at length on the stage the German went out, reappearing quickly, his face transfigured with the light of its pride and happiness.

For an instant a darkness clouded Leslie's vision, he reeled a little and leaned back in his place beside the long, curtainless window; then he looked steadily, clearly, into the face of the girl who stood opposite him, framed in the doorway. And looking thus, the years rolled back. He was again in the presence of his early love. The great gray eyes and brown hair contrasted with the ivory of the skin and the rose-leaf color coming and going in the cheeks. In an instant, so swift is thought, all the panorama of those long-fled days rolled itself before him. And the girl, who bore the mother's name and was her living embodiment, saw only a pale, white-haired man standing there, whom Otto told her knew the father she had never known; one of the many musicians, probably, whom she was constantly meeting, who knew him, or of him.

Nina Reinhard was warm hearted. Something in the man's hopeless attitude, and in his silent gaze fixed upon her, touched a chord which vibrated. She went swiftly to him, laying her hand on his, her fresh, flower-like face upraised, and said simply:

"You knew my father. I am glad to see you."

And Leslie did not tell her then, nor afterward, that her father, whom he had never met, Ernst Reinhard, the well known concert virtuoso of his day, while making a tour of the States with Garcia and Malibran, had robbed him, without a scruple, of his life's happiness.

Otto Geyer soon had reason to decide that the one most fortunate day of his existence was that upon which he made the ascent, in his weakness and despair, of the long flights to Leslie's studios. The artist visited him on the morrow, criticized unsparingly the cartoons covering his attic; praised no single point, pointed out flaws, defects and absolute errors of arrangement and proportion, going away unmindful of the German's boundless gratitude to wonder at the talent displayed in his work. He had found the designs, which he feared he would not, worth criticism.

The delicate creations of his own brain, which would have been as a seal to his fame, the work that, when completed, would, without doubt, have outlived a generation of its admirers frequenting the opera house, the rolls of gray paper covered with the exquisite setting for the Tannhäuser scenes, that had cost him days and nights of toil and strain—these he took down upon his return, tearing them one by one into strips and defacing them completely, so that no prying eyes, when they should be carried away to be burned, could discover that which they had been.

A month later the competition closed. Otto's designs gained the award, and he received from the management an order for the scenic decorations.

While faithfully guiding, through criticism and suggestion, the German's work during the weeks that followed, with a feverish interest in his progress, going daily to the opera house, Leslie strangely shrank from seeing again the child whom the young mother in those long past days had asked him to take into his care. He could scarcely explain to himself why he avoided a further meeting. It was something as one dreads the opening of an old wound, perhaps, through scars that had brought lethargy. And after all, it could make no difference; there were some papers filled out of late and placed in the desk. By these she would one day receive his all, and the wherefore of it the yellow letter and the exquisitely painted portrait hidden beneath the curtain would explain to her then.

In the third week after Otto had begun his work at the opera house, proud of his progress, he had asked the girl to come in that he might show her the partly finished scenes. Upon the morning following Leslie was standing with him on the high scaffolding, brush in hand, directing him in some choice of tints, which a gas-light effect would enhance for the roseate interior of the mountain grotto. Workmen were busy under tha stage carpenter's orders, and the sound of their hammering filled the hall. Otto, even engrossed as he was, and at his great height, with the true lover's instinct, became aware after a time of Nina's presence.

Leslie, turning to move further along the scaffolding, looked down suddenly into the girl's upturned face. There was a misstep, a confusion and rush of workmen, a quick gathering around the form of the man lying there, the rigid fingers of a hand still clasped about the brush with which he had been aiding in the work on the Tannhäuser scenes.

ARRANGING A PROGRAM.

There is an art in arrangement of even the simplest program. Some people fail so completely that it is really necessary to give a lesson on program-making for the benefit of vocal teachers who give recitals and concerts. Some people can never put a handful of flowers together and have them look well, while others seem but to throw them together and they look tasteful. Some ladies cannot trim a hat without every ribbon sticks out in four directions. They haven't the "knack." Program arrangement requires some "knack," but everyone can learn the art.

Contrasts, safe-guards and climax are the three things to be sought. Arrange your material on a paper in a list and then number the order in which they should appear on the finished program. By "safeguards," which should be first considered, is meant the selection of the persons who can be depended upon to sing well and to give strength to the program. Frequently, a duet, trio or quartet is used for the first number. If so, be sure to have the solo which follows perfectly safe, solid and reliable. That one is sure to give the stamp to the first half of the program. Then the next point to guard is the middle part. Have one or two fine singers "hold the fort" at that part. Should anything go wrong in the first half they will recover things and place them "on their feet" again. The last solo number on the program should be the greatest and best.

"Contrast" means that two soprano or two alto voices shall not be placed together. Also, when material permits, let the singing of a gentleman follow that of a lady, and *vice versa*. A large aria should be followed by light songs, naturally avoiding placing a young singer as the one to give the light songs. So far as that goes, a young singer will be most likely to sing the aria. Arias can more easily be sung, generally, than can light songs of modern composition. The music of different styles can give some contrast, although as music is universal language this does not make strong contrast. The pupils of one teacher will be quite liable to sing all kinds of music much alike. When singers have reached the point of growth that they can render the music of different national writers so that it is in keeping with the spirit of the composer—they are already artists. When two, three or more songs are grouped together special care must be had that they contrast well, and also that they produce a climax. The sonata arrangement cannot be surpassed. A smooth, perhaps quiet, song for "A," a bright little thing for "B," and a strong and vigorous song for "C."

This suggestion for "climax" applies pretty well to the whole program. The appetite of the audience can be whetted in the first half; it can be supplied with some solid food and some dainty dishes in the middle part; but by the time the third or fourth selection from the end begins there must be a building of strength. From that moment the music must pile up and the singers grow greater and stronger (although, perhaps, not better singers), until the last solo number. That is the height of the climax, and should be the strongest music and have the greatest dynamic force of the whole program. The closing number, probably a duet, trio or quartet, will go of itself almost. It always swings off, because of the impulse of the program, with good finish.—(*Nonconformist Musical Journal*).

THE VALUE OF PRACTICING WITH OTHERS.

FREDERICK A. FRANKLIN.

The trouble with so many piano students is that they practice too much alone; they learn nothing but piano. I do not mean that to learn the piano one must also play other instruments, but that one should practice with players on other instruments, or in accompanying singers, in order to obtain that thorough knowledge which marks the accomplished musician.

The advanced student should seek every opportunity of playing concerted music, such as the sonata for piano and violin by the great masters, trios and quartets for piano and strings, or the accompaniments of solos for string instruments.

One of the very best aids in learning to phrase correctly, will be found in listening to an accomplished violinist or vocalist. A pupil who does all of his practicing alone is apt to grow careless about time, cutting long notes short, and hurrying over rapid passages, leaving out rests, etc., but when playing with others he simply *must* keep time. Every one knows that even among first-class pianists, a good accompanist is a rarity. If teachers would urge their pupils to take advantage of every opportunity of practicing ensemble music, and, whenever possible, would make an effort to throw such opportunities in the pupil's way, this might not be the case.

Ask any violin teacher who of his pupils get along the most rapidly, those who have no assistance at home, or those who have a parent, a brother, or a sister who plays the piano with them, and he will say that the last mentioned advance at least three times as fast as the first.

If ensemble practice is of so much value to violinists, it certainly also is for pianists. When the writer was a boy studying the violin, his sister was studying the piano at the same time; and for a number of years we practiced together every day for an hour or more. The benefit we derived was very great, besides the pleasure it afforded, both to ourselves and our parents.

The Voice.

Mr. Frank Herbert Tubbs, Associate Editor.

THE SINGING VOICE.

Article Ten.

FRANK H. TUBBS.

The Orotund Tone.

Acquiring secondary resonance, or reverberation of tone in the chambers of the nose and mouth, is the first step toward gaining the sonorous tone which is needed in arias and the works of the most recent composers. Study on the exercises with "V - - - ah" and "M - - - ah" as given in our last lesson brings about a voice which many singers do not know they possess, although everyone has it. Then, the vibration secured there must be connected with the constant vibration at the vocal bands. One can gain this by sending his thought over the surface of the tongue and through the chamber of the back of the mouth and downward to the larynx. The evidence of securing connection between secondary and primary vibration can be had if one will place his finger-tips on the neck just below the ear, while he is singing. He can feel vibration through the muscles of the neck. At first it will be slight, but as he sends more and more the powerful concentrated thought through the pharynx, this vibration will be increased. Another person can feel the vibration in the neck more than can the singer, because the latter is vibrating in hand and arm to some extent, and as it corresponds to the virbrations in the neck, perception is not so strong in the singer's own hand as it is to the hand of another. To return to the statement made above, the increase of vibration indicates the more complete connection between secondary and primary resonance.

When one feels assured that he has made the connection throughly, it is time to seek to amplify the complete resonance so that it (vibration) takes possession of shoulders, arms and body. Something of the same vibration felt in the neck can be felt in all parts of the body, the degree of which depends largely upon the distance from the points where vibration is first excited, and upon the intimacy of connection with those points. Tone can be sent down the arms quite easily, so that it can be felt in the wrists and hands. It can be sent down the body also. It will be strong in the shoulders, upper chest and arms. There is a line of strong manifestation of vibration around the body about three inches below the armpits. Probably this is because this belt, a little above the diaphragm, is intimately connected with the larynx. But it will not vibrate much when there is primary vibration only. When secondary and primary vibrations are effectually joined the effect of the combined vibration goes down to the belt. Amplifying this combination is the means for producing the full large voice—often called the orotund voice—which is needed for generous singing. This kind of singing makes large demands on breath control, although it does not require more breath. One can sing with large voice with as little breath as with small voice. If he cannot he is on the wrong track in voice culture. It is probable that the pharynx responds to the mental wish when orotund voice is used by enlarging its chambers. The singer must not consciously enlarge the chambers of the pharynx, and if he tries to do so he will surely upset that balance of parts and adjustment of organs which must be secured and maintained in all good singing. Permit all organs to respond to mental wish and do not *make* them respond. By attempting the latter many teachers fail. All that class of teachers and students who are seeking nasal resonance as a thing by itself (not connecting it with the vibration of the larynx and not supporting it on the breath) fail in the end.

This instruction can be summed up thus: secure vibration in the nasal and breccal cavities by the use of such syllables as "V - - - ah," "M - - - ah,"? "N - - - ah" and "Z - - - ah;" connect that with the ever present and constant vibration of the vocal bands in the larynx; extend the combined (connected) reverberation down to the waist, or even down to the knees; permit enlargement of any chambers which respond to wish to sing large tone.

The orotund voice must be acquired, no matter how long a time it takes, by every singer who desires to sing acceptably in oratorio, and should be acquired for church choir singing. It is, then, the most desired voice and may well form the larger part of the study done with a teacher. Be it remembered ever that this voice is a completion of voice culture so far as tone in the middle and lower parts are concerned. It can best be secured on chest and lower medium voices, less well on upper medium, and still less on head voice. It is only a matter of time with its patient practice when it can go through every tone of the voice.

The Rounded Tongue.

Little things are what make or mar results, just as "little foxes spoil the vines." It is often remarked that "when we sing 'ah' the tongue has the position nearest that which it has during quiet breathing." Then we go at practice and do all manner of faulty things with the tongue and wonder why the voice is not better. Instead we should see how the tongue does lie during quiet breathing and then try to have it there when we sing "ah." To try its location close the lips and breathe through the nose a minute. That gives time for observation and permits normal conditions to be assumed. Now open the lips a little and sing. If the tongue changes from the place it occupied during quiet breathing something is wrong. (Generally there is depression of the upper surface of the tongue and perhaps stiffening of the back of tongue.) Close the lips again and observe the normal position of the tongue and then part the lips and sing once more. A student should persist in such observation and application until he can start the tone on any note (see remark about upper voice further on) without there being any depression of the tongue from the arched and rounded form which obtains during quiet breathing. This is so important that no student should let a day pass until he has acquired the ability to allow the tongue to retain this normal position. Then it should be retained while singing "ah" on all sorts of vocalizes.

As the voice ascends to the upper voice the surface may rise a little above that which it has in quiet breathing, but it never should take a lower. In slowly ascending the scale, for instance, there should be quite a little rising of the dorsam of the tongue, and the tip should touch lightly the lower teeth (never drawing back from them during vowel sounds). The effect of this practice will be that greater freedom in the throat will be experienced. This ought to be a boon to a lot of singers.

Forever shun that wretched idea that the tongue must be "spoon-shaped." No one can estimate the trouble that has been put upon students and singers by that piece of wrong teaching. We all know how faithfully students will do what they are bid, when seeking to make the most of their voices and there is something very sad in the efforts of students to make good singing through and by means of very wrong teaching. However, we must not let sympathy be drawn upon too much. Those of us who know how the tongue should go must help all the others. It is perfectly true that "the tongue, which we sing 'ah,' has much the position it has during quiet breathing." The care now should be (and therein lies the reason for writing this instruction) to see what that normal position is and then be sure to retain it while singing "ah."

Many students take an idea and apply it to one exercise, thinking that that particular exercise is the only one on which they are to exercise care. An idea carries out a principle, and that principle is the underlying reason in a whole series of exercises. The instruction about the position of the tongue while singing "ah" must be applied to all exercises on which "ah" is used. That includes most figures, scales, arpeggii and vocalizes. The application of the principle in work so extended is sure to be forgotten by students and teachers must call attention over and over again to the idea which makes the principle. It is well to return frequently to practice of slow exercises on which the student can examine, as suggested earlier in this article, where the tongue belongs. Then seek to allow it to retain that place during the whole exercise.

The Carrying Voice.

After all training, which may have extended over a term of years, some singers find they can hardly be heard in a hall which can seat two or three thousand. The rule may be set down that any voice can be heard in any hall. If it is not, the trouble lies in the ignorance of the singer. Anyone can be heard if he whispers, when he is standing on the stage. An actor often makes his best effect by his stage whispers. Now, *any* voice is larger than a whisper. The trouble is to adjust the action of the voice to the hall in which we sing. The course taken by most singers is to sing louder to make themselves heard, and, thereby, they defeat themselves. Louder singing in the manner most singers employ is a forced voice which has no carrying power. A country boy in a boxing match beats the air, and when he finds he is not winning he beats the harder, trying to do by force that which he wishes. The more he works the more quickly does he defeat himself, and his trained opponent masters him. To make a voice carry sing less loudly, more relaxedly and deliberately and with perfect clearness of tone and words. One should so seldom use his full voice when singing in a hall that that voice should be only the exception to the rule. The rule, then, is sing with moderate power, but clear emission and distinct articulation. The smallest voice can then be heard distinctly in any hall. The subject of acoustics is one on which instruction is meagre, and architects, in building halls, have no way of making them sound-perfect. The singer must have a rule by which he can adjust himself to any hall or theatre. The above, if made part of one's life, will work one into a habit of adjusting instantly the voice to any situation and it will carry. The condition of the atmosphere in the hall makes a difference, but even the misfortune of having used up air to sing against is in a great degree overcome by the rule given. It can never be overcome by shouting or singing louder.

Again, to show that any voice can be heard we quote the statement that in the Grand Canyon of Colorado, which is eighteen miles long, a man's shout can be heard from one end to the other. The singing voice there is distinctly heard and the words of the song are clear. At Gibraltar, the voice has carried ten miles. Why is it then that in a comparatively small hall a voice sounds so small and muffled? Evidently because the voice is not used right. It emphasizes the need of studying the principle above enunciated. Do not force, but permit, refined reverberation of tone to extend through the space enclosed by the walls of the hall.

Feeling.

Singing is expression in art of the thought of the human mind. No created animal expresses an art in the same way. One difference between man and the other animals is that he has a voice for speech and song. Singing springs from the higher nature of man (mind) and is produced by a machine which is part of his material structure (body). Man is dual in his make-up. He is mind and body. The former expresses; the latter is the means of expression. Our lessons of this series have dealt with the machinery of expression and have gone into the detail by which the machinery works. Nor are we yet ready to leave that part of the subject. We are, however, at the point where we can call attention to the fact that the mind cannot exercise its full power, nor can it work to any great extent so long as it is hampered by that working of the machine which has sensible friction. The point to look after now is the removal of tension. Breathing, larynxgeal activity, tongue action, reverberation of tone, facial expression and articulation of words, all of which have had consideration, are but means to the end—expression. The point of importance is, these physical actions cannot be perfect so long as they are performed consciously. They have, in our study, responded to the sense of feeling. "How to breathe" has been made a physical act. The way to have the jaw and tongue work has been taught through physical sensation. Reverberation of tone through the body and over space has been an act tested by sensation. Now must we put aside feeling and make the way for the mind to express. Conscious

use of organs and parts has been accompanied by sensation. In all feeling which appeals to the physical senses there is rigidity in greater or less degree, and rigidity is the enemy of pure tone emission. In times past teachers have sought to avoid rigidity through relaxation, but as students have "run riot" with relaxation, carrying it to "abandonment," wise teachers have become afraid of the term. If we could understand the meaning of that wise teacher, Sterling, when he defines relaxation as "reposeful activity," we might still employ the term. As we do not, we turn to another way of getting at the same result.

Exercise Thirty-seven.

Purpose to bring the whole body into reposeful activity. Place one foot forward and throw the weight on the ball of the forward foot. This will carry the chest a little in front of the forward foot. Reach out the hand as if about to shake the hand of an approaching friend. Sing three times, on one of the notes of the lower voice "How are you," letting the voice linger a few seconds on the word "are" each time. Let the conversational voice be used rather than the singing voice. Draw back the foot so that the feet are together. Then step forward once again with the same foot and extend the same hand and sing the next higher note of the scale. Seek to make the act of stepping forward and of extending the hand as elastic as possible. This will make the whole body pliable. Step back as before and again repeat the exercise of stepping forward and extending the hand as you sing "How are you" (three times) on the next higher note of the scale. Continue this process for every note of the scale, ever keeping in mind the elasticity of the body, speech in voice and genial manner of greeting. This will enable one to acquire relaxation which is "reposeful activity," and eventually reach the place where tone can be made without sensation. We must move away from making singing on the plane of physical sense (which at best is gross) that we may make singing intellectual—the expression of mind.

When one has followed the form already given on the notes of an octave, let him return to the lowest note of his scale again and sing on that in the same way, but with this change:—step forward on the foot not used before and extend the hand not extended before. If one has used the right foot and the right hand at first now let him use the left foot and left hand. Follow as before upward on each note of the scale.

After this, step forward two or three steps, come to a stop, leaving one foot forward (either foot) with weight on the forward foot and extending both hands sing "How are you" as before (three times) in the most cordial voice of greeting which one can devise. Follow up the notes of the scale as before.

This exercise is given for bringing the body into that elastic condition which admits of no rigidity. But it does more than that, for it trains the body for good appearance on the concert platform and prepares the way for graceful walk on the stage. It is the basis of all physical expression. Even gesture is begun in its practice. While these results are only incidental they are desirable, and if they can be acquired in connection with the other it is all the better. This training, though simple, is far-reaching and makes all vocal training easier.

CULTIVATION OF MEMORY.

ALAN GRAY.

Vocal training in this country lacks one element, at least my personal observation induces me to think so. It is that of the cultivation of the habit of memory, a lack which has more serious consequences on the after-development of the singer than is evidently realized in the profession here.

Man is a creature of habit in the strictest sense of the word, and if the vocal teacher realizes this, and thoughtfully reduces the knowledge to working rules, it will help him greatly in his teaching, and benefit the student notably, when he comes to years of vocal discretion.

Now the majority of men live according to habit, but these habits they themselves have formed; and when the habits are well formed, being good and healthy for mind and body, this capacity of habit-forming proves one of the most convenient and helpful with which mankind is gifted. The vocal student in his capacity of singer is no exception to the rest of mankind in this respect. Unfortunately, at times it is even more evident in him, for he solicits the public eye and ear to as considerable an extent as he may, and the habits he has formed under the guidance of the teacher stand out in bold relief, and if they be not good habits, they stand out in bold, bad relief.

Teachers realize to a great extent that good singing, in the full significance of the term, is dependent upon freedom—absolute and entire. This freedom is generally achieved by breaking up a set of unconscious bad habits, and replacing them by a set of good ones, (built upon correct knowledge) which, though at the beginning they be painfully conscious to the student, yet later are employed almost involuntarily as far as the singer is concerned, the mere thought "sing" setting them all in motion, and perfect freedom is the result. But there is one habit largely conducive to the singer's freedom, which is not formed in this country, at least not systematically or to any great extent, and that is the habit of memory.

If the formation of a good habit is neglected, its place is generally taken by a bad one, and it is so in this case. The habit of memory helps materially in the ultimate result of perfect freedom and conscious security, and the habit of not memorizing militates greatly against that result; but this is by no means appreciated as it should be here.

Neither teachers nor students realize how much of a habit that of not memorizing can become, and what a number of disadvantages it brings in its train. One of its greatest evils is that of dependence upon the printed copy, which besides interfering with the free poise of the head and throat, consequent upon the induced necessity of scanning the words, and taking due note of rests and interludes to be sure of coming in on time, interferes also with the passage of the sound outward, sometimes to the extent of changing the direction entirely and throwing it back upon the singer, if the space where he stands is at all confined, often giving him a deceptive impression of fulness and resonance, which is not participated in by the audience.

All the disadvantages of not memorizing are changed to distinct advantages if the habit of memory be cultivated from the beginning. Of course, for the singer, the habit of memory comprises much more than the mere memorizing of words and music. It means the cultivation of a distinct element in the education and development of what may be broadly termed the musical intelligence of the pupil, and as such it should be specifically trained.

Let the student begin to train the memory on scales, taking away the support of the piano, except for the accompaniment, as soon as possible. If the scales be always played with the voice, it should only be to assist in the correction of some mechanical defect. For this purpose many of the well known printed collections of scales are excellent, being generally well graded and the accompaniments tastefully arranged. The teacher should insist on the student's first committing to memory whatever scales are to be studied, and in process of doing this it will be found that the result attained will include, not only the memory of the notes, but a marked improvement or development in the student's practical understanding of time, rhythm and accent.

Then let this be followed by a certain number of Solfeggi, the student memorizing as before and singing without the music. The student in this case not only memorizes the melody, but the accompaniment also; and while the memory of these is being welded together, the teacher is giving instruction for the interpretation of the whole, and the student becomes independent of pencil marks to guide him in taking breath, singing piano or forte, etc., because he has a musical mental impression of the whole and is not dependent upon any external help. In this connection also it is that the capacity of suggestive musical phrasing begins to announce itself, and which, duly guided by the riper experience and taste of the teacher, later develops into the individual style of the artist.

By suggestive musical phrasing I mean this: While the student is studying the melody, it dominates the accompaniment and suggests certain ideas to the musical intelligence, which is largely subjective; then, in the studio these ideas are either modified or developed by the instruction of the teacher, which guides the student in the expression of what he has to some extent already felt; then, when the melody is well assimilated, the student's thought being less concentrated on it, by reason of the musical temperament having taken complete charge of it, the accompaniment begins to speak and suggest its relation to the melody and that of the latter to it. And it is just this latter suggestion which is, or should be, the objective point in the study of any piece of music, because by it the student realizes that his singing of any melody is but a part in the interpretation of a whole, and to interpret it with truly artistic effect he must preserve the just relation, which he cannot do unless the musical sense is at liberty through the repose of the intellect, to give expression to the suggestions it has received and understood from each part in turn.

By the time the student reaches the study of songs, the habit of musical memory will be well developed, and the musical temperament will have been rendered much more sensitive, and alive to the intrinsical value of musical form than is possible when it is necessary to scan the notes at every performance.

In songs, however, there enters another factor into the habit of memory: the words. This is the most important and the most generally neglected of all. Its importance is not appreciated because not understood, but it lies in this; in the singer, if he would be a complete artist, there must be brought about a perfect union of what I may call the objective intelligence and the subjective musical temperament. The latter expresses itself objectively through the former, but in order to do this fully and freely the former must be entirely at its service, and not be actively employed in renewing the objective impression from the printed copy.

Now the source, in the composer's mind, of the melody and harmony of a song, generally lies in the words, and if the singer fails to memorize the words, I question seriously whether he can ever give a full and true interpretation of the whole, and for this reason, the keynote to the interpretation, instead of being already prepared and lying in his knowledge and understanding of the whole, lies rather in the words before him, and the musical nature is seriously hampered in its expression, because the mind is kept active in taking cognizance of every sentence, and conveying its meaning to the inner musical intelligence, thus, obliging the latter on the spur of the moment, to modify the ideas of phrasing already suggested by the melody and harmony, and this is the more serious because, at times, as all singers are aware, the text is very arbitrary in its demands.

Above all things then, let the words be memorized and the rhythmic swing of the meter fully appreciated. This once done and their meaning understood intellectually, the objective mind is at rest as far as the mere words are concerned, but their sense penetrates further to the musical temperament, which often discovers deeper and finer shades of meaning, which we recognize by the feelings of emotion that stir within us, until ultimately the words, to a degree, lose their office of mere description and become the expressive vehicle for the very emotions themselves which have been aroused within us.

This result is attained much as in the Solfeggi. The sense of the words as a whole suggests a certain phrasing, this forms the groundwork and is to some extent influenced by the characteristics of individual sentences, this again is modified by the suggestions of the melody and the union of the two, while a further modification is suggested by the harmony, movement and form of the accompaniment, by which a complete union of the whole is effected, and thus as a coherent whole it becomes an actual part of the singer's musical temperament. Thus when called upon to perform it, he is able to give voice to it as an interpretation of something he really feels, and no longer does he merely sing it.

By all means cultivate the habit of memory. Correct breathing, when properly attended to in the beginning, becomes a habit, correct tone production the same; the proper placing of the voice becomes a habit, and so much so that each tone seeks and knows its own chamber of resonance. So it is with all the elements that go to make up the artist, he is a creature of habits, and the habit of memory is not the least of these.

The result desired is perfect freedom, not only of all the muscles, but, as I said before, the freedom of the musical nature to express itself, which can only be fully attained when the objective faculty is in repose, and this repose it cannot have until every difficulty, mechanical or intellectual, has been mastered and understood.

By the manifold advantages of memorizing may be measured the subtle and far-reaching evil of not memorizing.

OPERATIC ARIAS.

(Dio Possente from Faust.)

W. LOWES-HEATH.

The Dio Possente is an aria much used by young baritones, and when properly understood and sung it is of immense benefit to the student. Unfortunately, it is rarely sung intelligently and too often falls flat, dead and expressionless.

The reason of this is not far to seek. The student, in too many cases, apart from having a merely general idea of the whole, does not understand what he is singing about. Then too he fails in acquiring that breadth of tone, above all things necessary in rendering an aria of this style.

Its chief difficulty and that which constitutes its greatest beauty when properly mastered, lies in the breadth of phrasing and sustained quality of singing which it demands; and for this very reason the study of it is particularly beneficial to the young student.

Like the Salve Dimoma for tenors, the Dio Possente is an aria the student must grow to, and it is a splendid one to grow on. It will more than double the breathing power, add greatly to the breadth and scope of the voice and help immensely to a practical understanding of what is meant by breadth of phrasing and sustained singing.

While the Dio Possente is a prayer, it is not by any means a general, impersonal prayer, and the religious atmosphere is not exactly the one to throw round it in the interpretation.

The recitative is introduced by a beautiful modulation; sympathetic and sad, and thoroughly expressive of the temperament which afterwards gives voice to the aria. The translation I give is almost literal.

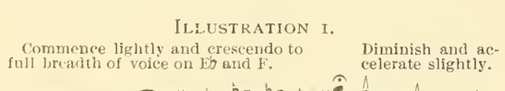
"O holy medal; thou gift of my sister; in the day of battle for a sacred talisman rest thou here on my heart!"

These few lines of recitative are very beautiful, and if properly studied they will help the student much in gaining a true conception of the aria, for they instantly give an insight into the character of Valentine who sings it.

The two first phrases in the Italian, "O santa medaglia; che la soura mi die," are sung piano, but not too much so, and very broadly. The D flat, which occurs in each phrase, should be sung open and piano; otherwise, the vocal coloring will not be true to the sentiment. To sing these tones acceptably demands that facility in the use of the open and closed or covered tones so-called, which is largely the result of experience, and this is one of the many ways in which the study of operatic arias helps the student to a broader knowledge and command of his own voice.

In the following two phrases, see fig. 1, a crescendo occurs which works up to full forte on E flat and F, diminishing as the phrase finishes into the piano of the final phrase: "Resta qui sul mio cor."

ILLUSTRATION 1.



The recitative finishes in D flat which is perhaps the best key for the young student to study the aria in.

In rendering it the student should try to make it personal to himself; so will he be better able to draw out the full significance of each phrase and the whole thing will be full of life and meaning.

Valentine, full of a soldier's courage, is leaving for the wars; but he is full of sadness at the thought that he must go far from his native land and the dear, peaceful spot so familiar to him as home; and his sadness is tinged with a deeper hue than that of his comrades, because of the beautiful, innocent Marguerite, his sister, whom he must leave entirely alone and unprotected, saving such protection as the kindness of neighbors may afford. With a full heart he breathes forth this prayer:

"God of power, God of love, now as I leave my native land, with sorrowful heart, to thee I commend my dear sister, that flower of purity. Guide and protect her; keep guard and vigil o'er her; in her pure simplicity, ah, shield her from all harm!"

Then as the soldier's love of danger and glory takes possession of him the spirit of words and music changes and the following is given forth with great virile strength.

"But on the field in the day of battle, in the front ranks the first I shall be, and if fate so wills that I meet a soldier's death, gladly and covered with glory I shall fall."

The thought of death on the battlefield and of his sister left alone, turns him again to prayer:

"But as I draw my latest breath for my sister, still to heaven I shall pray," after which the first part repeats.

The first part opens piano, restrained and full of reverence; each note well sustained, the words being perfectly pronounced and care being taken to avoid gaps as each word gives places to the following.

In the Italian the second phrase, "Nel lasciare il patrio suol," is generally broken, thus: after the word "lasciare" breath is taken and this changes the quarter note on B flat to a dotted eighth and a sixteenth. The first half of the phrase is sung piano; the second half crescendos up to C, on which the crescendo is increased and then diminished to piano, and if the voice be then carried up and the next phrase commenced on the same breath, disregarding the rest, the effect will be admirable.

ILLUSTRATION 2.

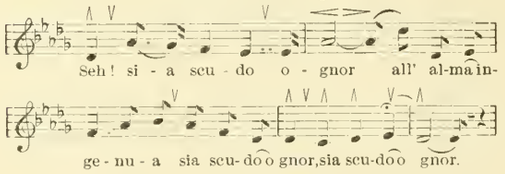
Piano to breathing point. Crescendo up to C. Full on C, diminish to piano and carry voice up over the rest to beginning of next phrase.

The phrase, "La mia suora il casto fior," commences forte, a short hold being given to the F, but the second part diminishes and finishes piano.

The two phrases which follow are taken piano, a slight crescendo and tone of entreaty marking each.

The phrase, "All'alma ingenua," is worked up to full forte, and the following, "Deh! sia scudo ognor," is given in a full voice of entreaty. This is accented in the repetition of these two phrases, see fig. 3, by the marked ritard which closes them and the breadth of accent with which they are to be sung.

ILLUSTRATION 3.



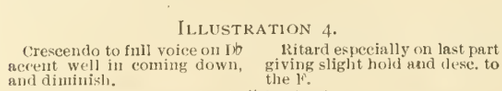
Accent first word and take breath. Piano to next breathing point. Crescendo and dim. on A♭ carrying voice up with quick portamento to D♭. Give it short hold and avoid portamento coming down; preserve piano to next breathing point. Sing last part very broadly. Much feeling, accent and marked ritard.

The second part opens with much more spirited movement which, however, is to be imparted more by the decided accentuation than by the acceleration of the time, although it is taken a little quicker. The phrases are given out forte, and with much spirit and enthusiasm and the student must take care that in rendering the spirit he does not allow the time to run away with him. That breadth, which is characteristic of the whole, must be preserved in this movement.

In marked contrast to the rest of the movement are the two phrases, "Ma nell 'estremo anelito," "Praghero ancora il cielo." As Valentine thinks that the fateful chance of war may leave him dead on the field, he knows that his last thoughts will form a prayer for his sister and he expresses himself as above. The phrases should be sung piano, each tone well accented and light in color with a marked retard.

In the phrase, "Per mia suora," the D flat is attacked piano, then swelled to forte and brought down with a gradual decrescendo as the phrase closes, each note well accented to the piano in which the final movement opens.

ILLUSTRATION 4.

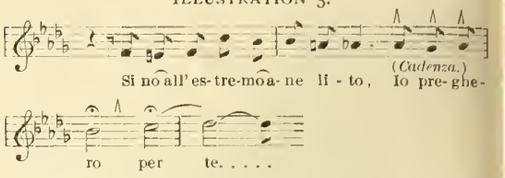


In the repetition, "Dio possente; Dio d'amor," is taken piano as in the beginning. "Nel lasciare il patrio suol," begins piano and crescendos to forte on "suol!" The next phrase begins forte with the full strength of the voice and diminishes to piano in the second part. The following phrase also commences forte and diminishes to piano at the close.

In the phrase, "Ah per la suora preghero," the F must be attacked clean and strong and be well supported and held the full length of a breath. This phrase, closing with the word "preghero," should be finished with a retard and an open piano tone.

The last phrase is generally altered, thus: "Sino all 'estremo anelito, io preghero per te," and in the latter part, instead of being carried down to the keynote from the A flat, it is usually taken up, being finished forte with a hold on the leading tone.

ILLUSTRATION 5.



There is much in the "Dio Possente" for the earnest student.

SONGS FOR YOUNG SINGERS.

F. W. WODELL.

Strangely enough, many people desire to do just those things for which they are not fitted. The contralto wants to sing soprano parts, and the baritone to sing tenor roles. A great soprano sings a certain composition, and straightway the young soprano who has heard her wishes to sing the same thing, without at all considering whether she has the kind of voice and has had the necessary training for the adequate interpretation of the selection.

The choice of concert selections is a matter for careful con ideration, and one in which the young and ambitious vocalist often makes serious mistakes.

The songs chosen should be such as the singer thoroughly enjoys, for nothing is more certain than that one can always sing much better a number which gives him personal pleasure, than one that falls short in that particular. A song may arouse interest, but that is a very different thing from giving delight and awakening enthusiasm.

Class of voice and natural style are items to be taken into account. Upon the general question of suiting selections to the voice it may be sufficient to suggest that the lyric soprano which is so charming in "With Verdure Clad," is not the voice for the proper interpretation of "Hear ye Israel." So too, a soprano voice which is well fitted for a delightful rendition of "Nymphs and Fauns" by Bemberg, or the dainty little "Necklace of Love," by Nevin, is overweighted by the "Prayer" from Verdi's "Otello," or "My Heart At Thy Sweet Voice," by Saint-Saëns. It is not merely a question of compass, as so many young singers seem to think. A good baritone may be able to sing as high as many tenors, yet his voice be unsuited to the singing of most genuine tenor songs.

Light, high voices usually possess much agility; to such, rapid scale passages, runs, and ornaments are comparatively easy of execution. Few of such voices are capable of properly rendering songs which require the steady sustaining of tone on long phrases with warmth of color. Among women the voice which covers the greatest range of style in compositions is the mezzo-soprano. This voice usually possesses large compass, with considerable flexibility, agility, breadth of tone, and variety of color. Among men the voice of the genuine baritone occupies a similar position. The larger, broader, more dramatic vocal works belong to these voices, and in some cases to the lower voices—the contralto and bass. These latter, however, are usually somewhat lacking in agility. On the other hand they frequently possess a warmth and nobility of tone which is immensely effective in selections properly chosen for the exhibition of their characteristic qualities.

The power to sing with fervor, to color the tone, to make it "expressive," has its source in the soul, and is in the first instance a matter of natural endowment. In some cases the voice, because of an inferior gift of nature, or from want of proper and complete technical training, is an ineffective medium for the expression of the emotion of the singer. There may be more "soul" than voice; or the voice may be so badly produced as to make full "soul-expression" impossible.

The "big" things in opera, oratorio, and song belong to the "big" people—those with a generous mental, emotional, physical and musical equipment. What could be more absurd than an attempt by a tenor with a light, lyric voice and without a spark of fire or virility in his composition, to sing "Thou Shalt Break Them." ("Messiah.") The larger, more passionate or dramatic compositions may be studied, under the direction of a competent, careful teacher, as a means of development, but they should not be sung in public except the voice, training and style are adequate. Nothing but disaster and disappointment can come to the singer who attempts in public that which is too great for him to properly accomplish.

For certain singers songs of smooth, flowing, legato style, dealing with the pleasant, tender, joyous sentiments and which reflect those sentiments in the music, are indicated. For first study and concert use such songs are usually best for all pupils; the more passionate, intense, highly colored, declamatory compositions, though possibly suited to the natural style of a few young singers, should be reserved for later periods of study and public work. Otherwise progress in acquiring a true "singing style" may be retarded and voices injured. Moreover, it is better to do a small thing very well than a large thing rather badly.

The young singer must also look into the question of the average height of pitch of the songs he uses. A song may contain very few notes at or near the top of a singer's compass; yet if the greater number of the notes of the selection are in the upper third of the singer's range, he is likely to find the song quite difficult in delivery. An occasional quite high note, if properly approached, may offer no difficulty, whereas a long series of moderately high notes tires the voice. Each singer must test this matter for himself. Transposing a song a semi-tone or a tone lower will sometimes make it available. But in certain cases transposition robs a composition of its proper effect. It is best to select songs which can be sung with ease in the keys in which they are written.

Then as to "climaxes." It is of course unwise to choose a song in which the "climax" is reached upon a pitch or pitches either too high or too low to be effective in a given voice. As a general rule when a singer can emit a given high note with good quality and ample power, and can "swell" it in exercises done in "cold blood" in the studio, he can reckon upon good tones from a minor to a major third higher for use in a climax when stirred to enthusiasm in public performance. Young singers should test their selections carefully in private, with these points in view, choosing for public performance only such as suit the compass of their voices.

The most "singable" songs are, as a rule, those in which the melody proceeds for the most part stepwise, and in which the "skips" are not wide and do not form intervals which are difficult of intonation. The rhythms are smooth and flowing, and there is a preponderance of "long" notes, and a comparative scarcity of short notes with a syllable to a note. In other words, these songs are "singable" because their melodies afford an opportunity to exhibit the characteristic powers of the human voice in the sustaining, binding (legato), shading and coloring of tones. It is unwise to write for the voice as if it were a piano and could jump from one note to any other with freedom, surety and good effect. It is not necessary in order that a song shall be "singable" that it shall be common-place in melody and rhythm, and elementary in harmonization. Saint-Saëns' "My Heart at Thy Sweet Voice," from his Biblical opera "Samson and Dalila" is an example of a fine song which is interesting and effective in melody, rhythm and harmonization, and is beautifully written for the voice—thoroughly "singable."

Much of modern composition for the voice is of the nature of vocal recitation or declamation, allied with instrumental music (miscalled "accompaniment") of a highly emotional character. The instrumental part of these works is as important as the vocal part, and the voice is often not nearly so well written for as is the instrument. From their very nature these modern declamatory compositions tempt the young singer to over-do—to "push" his vocal organ, to shout when he should sing. For this and other reasons the student should postpone their use until his powers have matured and he has thoroughly mastered the true "singing style" by the use of vocalizes and "singable" songs. The modern, high-class, declamatory songs have their own characteristic beauty, and are certainly to be studied and used. But they are for the more mature and experienced vocalist.

A SONG.

There is ever a song somewhere, my dear,
  There is ever a something sings alway:
There's the song of the lark when skies are clear,
  And the song of the thrush when the skies are gray.
The sunshine showers across the grain,
  And the bluebird trills in the orchard tree:
And night and day, when the leaves drip rain,
  The swallows are twittering ceaselessly.

There is ever a song somewhere, my dear,
  Be the skies above or dark or fair;
There is ever a song that our hearts may hear—
There is ever a song somewhere, my dear—
  There is ever a song somewhere.

There is ever a song somewhere, my dear,
  In the midnight black or the midday blue:
The robin pipes when the sun is here,
  And the cricket chirps the whole night through.
The buds may blow and the fruit may grow,
  And the Autumn leaves crisp and sere;
But, whether the sun or the rain or the snow,
  There is ever a song somewhere, my dear.

—*James Whitcomb Riley.*

VOICE CULTURE.

J. STANFORD BROWN.

In the *Musical Record* for August, 1900, Mr. M. L. Brown raises "A Protest Against Old Fogyism in Voice Culture."

That Mr. Brown understands the development of the voice is at once apparent from his remarks: "Voice building is in reality, instrument building." . . . "Half of the colds are more the result of bad method than of bad weather." . . . "Everything moves on but voice-culture."

As a remedy for this last condition he advocates progress, but most unfortunately he points no way, neither does he explain the reason for the present deplorable state of affairs.

It is always unpleasant to criticise, yet if the criticism be intelligent and helpful of intent, its harshness is or should be overlooked.

A wide acquaintance with singers and teachers of singing and of voice production must lead to the sad conclusion that, as a class, they are uneducated when compared with the followers of any of the so called liberal professions: Law, medicine or any branch of modern engineering or applied science. And this must be so, for, as a class, they receive no sound preparatory education, whether liberal or special

Voice training should be held to mean the teaching of normal (*i. e.*, healthy) voice use. It is the preparation of the instrument for use and the teaching of the technic or execution upon the living instrument.

The vocal instrument is usually assumed to be only the larynx, which includes the vocal bands and all its associated muscles. As a matter of fact, the larynx is only one part of the instrument, the part which may be termed the "pitch" mechanism.

The "power" mechanism consists of the muscles of the abdomen, ribs, chest and back. Chief of these is the diaphragm, whose contraction and relaxation must become subservant to every vagary of the will to a nicety equalled only by the delicacy of touch required to polish the objective of a great telescope.

Thirdly, the "color" (Klang) mechanism comprises the whole vocal tube, from the vocal bands to the lip and nose aperatures (for the singing tone must find egress through both openings), as well as all the resonance chambers of the head—and possibly of the chest.

The whole vocal instrument is alive. It consists of bone or cartilage and of muscle. In tone production these muscles are brought into use in many varied combinations. Many of the muscles used for tone production have no other uses, while some of the most important ones serve other bodily purposes, and have to be specially taught their functions in tone production.

Voice building, then, is muscle building. A pupil must be taught: (1) To "find," *i. e.*, bring into action those muscles which are used exclusively for tone work. (2) To use properly for tone work those which have other functions. (3) To control the combined activities of all these muscles in many different ways and degrees. (4) To strengthen all the muscles used in tone production until they are ready for and equal to the heaviest kind of strain and long endurance. (5) To acquire perfect control of gradation of muscle action, for the muscles must contract or relax swiftly or slowly, with constant or with varying acceleration.

So we see that voice building is muscle training of the greatest intricacy and delicacy, requiring years to acquire the polish of a Patti or of a De Reszke.

An intimate knowledge of the anatomy of all the parts involved, if not an essential to practical voice training, must at least be deemed imperative to an intelligent understanding of the instrument and a safeguard to its normal use. Improper tone production, *i. e.*, unhealthy muscle use, be it use of wrong muscles, as trying to control loudness of tone by the muscles of the laryngeal region instead of by those of the abdomen and ribs, is usually manifest immediately to the expert "ear." Its results likewise are always apparent in an irritation of the throat, or even as a deformation of parts (as the shape of the vocal bands when in or even when out of action), recognized at once by the expert "eye," with and often without the aid of a laryngoscope.

So if voice training does not involve the training of the eye of the pupil to pathological conditions of the interior of the throat, or his ear to the pathological sound of unhealthy tone, it certainly does or should involve this knowledge on the part of the teacher.

The term singing may be defined, and should be so confined, as the art of applying the science of artistic, healthy tone production to the intellectual and emotional interpretation of vocal literature. It is the art of using proper tone production to convey emotion as portrayed in song.

One may teach singing, so far as an intelligent and perhaps even highly satisfactory interpretation is concerned, while totally ignorant of the science of tone production or of the art of teaching tone production, but voices will probably be harmed if not ruined in the process.

One may be able to sing divinely from the standpoint of both tone making and tone painting, yet not be able to teach others to do likewise, for teaching is nowadays an art in itself to be mastered as a specialty.

But a singing teacher who neither sings properly nor knows the sound of healthily produced tone is sure to shatter voices. It is being done daily all around us and there is no legal prevention, as there should be.

Knowledge, which assumes safety for the pupil, should be required of the teacher by law just as much for training voices as for practicing medicine. Some day (the millenium for students of singing) the States will safeguard the profession of voice training. How this may be brought about, however, is entirely another question.

In all other professions there is a vast literature which the student is obliged to know about and master to a greater or lesser extent. Such a literature on the voice exists in no less than a dozen languages and includes probably not less than three thousand titles, including pamphlets with books.

Most singing teachers have no libraries of such works; do not know that this literature exists, would not or could not use it intelligently if they did, because they have received no training in the use of literature as has the chemist, lawyer or engineer. It is also as unfortunate as true that a very large part of this literature, as is the case with all literatures of technical subjects, is chiefly of historic value, though vastly interesting and instructive.

Mr. M. L. Brown complains that so few singers are being produced from the vast army of vocal students.

In the first place the standard to-day for success in opera and the size of modern opera houses, demands a very unusual organ physically, such as is possessed probably by not over one in five thousand. Yet such an organ is only the *sine qua non*. To its possession must be added intelligence, education, imagination and an unconquerable ability to work long and arduously. Likewise there is required figure, presence and ability to act—a wholly modern demand. Very few of those with the voice possess also the other qualifications, and of those having the essential combination some are cut short in their possible careers by criminal mal-tuition at the hands of voice butchers.

The only remedy is light, more light for both teacher and pupil. Knowledge intelligently imparted; compulsory education of teachers before they are allowed to experiment on voices; and penal suffering to be visited upon the vocal shyster, as surely as the hand of the law is laid heavily upon the medicinal quack.

Many a mathematical problem is greatly simplified by the elimination of like, and therefore unnecessary, terms or factors. Similarly, many a problem in business or in study or in government is greatly simplified by the elimination of items that are not of immediate and preeminent importance. In reality, duties never conflict. Only one thing at a time is the preeminent duty. To decide what is that duty decides that, in spite of all seeming, nothing else in the universe is the duty of the hour. And to see that all other seeming duties are only duties in seeming, settles the question of what the one duty of the hour is.

THE ORGAN.

Organ Study.

In this issue is given the tenth of a series of articles on Organ Study, by an organist of long experience both as a teacher, church and concert orgauist. This instalmeut treats of the iuternal coustruction of the instrument. It is the purpose of the articles to give practical suggestions so complete and comprehensive that they will aid students of "The King of Instruments" to acquire a mastery over its complicatious and inexhaustible resources. It is particularly hoped that all who are interested in this subject will send to the editor any questions that they would like to have answered. Due notice will be taken of all that are so sent.—Editor of THE MUSICIAN.

X.—INTERNAL CONSTRUCTION.

WM. HORATIO CLARKE.

Every organist should understand the mechanical connection between the keys, stop-indicato s and pipes. The best way of learning the internal mechanism of the organ is to go inside the case and obseive the general structure and relationship of the various parts. If the instrument is built in the usual form, the first object seen will be the bellows for collecting, receiving and distributing the wind to the various sections, standing upon the floor with the top board covered with either iron or stone weights.

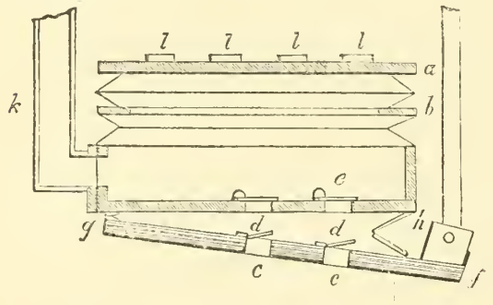


FIG. 1.

The bellows consist of a reservoir containing compressed air and the feeders which pump in the wind supply. The reservoir has a top-board, (*a* Fig. 1) on which are placed the weights, (*l l l l*) a middle frame (*b*) connected with the top-board by inverted leathered folds, and with the wind-box (*e*) by regular folds. The bottom board of the reservoir has valves (*d, d,*) which are opened by the inrushing wind when the feeders (*g, f*) are drawn upward by the working beam, and which immediately close when the feeders are lowered. The air forced into the reservoir causes the top board to rise, and the weights force the air at a given pressure to all sections of the instrument. The air is admitted to the feeders through the valves (*c, c,*) which open to receive the wind when the feeders are lowered. When the feeders are worked with a lever, there are two, but if operated by a wheel, there are three. The top-board connects with a safety valve when it is raised to its full height which prevents an over pressure of the wind. The pressure commonly used is called a three inch pressure, from the fact that when the weights are of sufficient gravity, the pressure is indicated by a wind gauge, or anemometer, in which two columns of water in a siphon glass tube are separated three inches apart when the pressure is tested. The air thus compressed is conveyed by wind-trunks as at (*k*) to the various wind-chests.

Following one of these trunks to its termination, it will be found to enter a wind-chest as at (*b,*) Fig. 2,

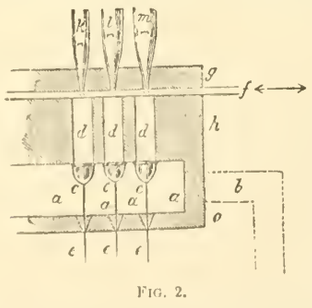

FIG. 2.

where the wind passes in and fills the chest, or valve-box, (*a, a, a, a,*) in readiness to be admitted tnto the desired pipes by opening of the valves (*c, c, c,*) which are pulled down by action-work from the keyboard, communicating with the pull-down-wires (*e, e, e.*).

Above the valves there are as many long, narrow channels as there are keys, (*d, d, d,*) running from front to back, and above them are as many rows of pipes extending from left to right as there are stops in that section. The pipes stand upon top-boards (*g,*) and are held in position by racks not shown in the diagram.

Between the top-boards and the thin covering of the channels, called the sound-board or veneer, are thin slides (*f,*) running from end to end of the chest, under each stop, with holes corresponding with the holes in the top boards in which the pipe feet stand, and holes in the veneer when the stop is drawn, and which slide by and close the holes when a stop is shut off. These slides and the under side of the top boards, as well as the surface of the veneer on which the slides rest, are coated with either plumbago or pulverized soapstone to ameliorate friction, and each hole in the top-board and veneer next to the slide is surrounded by V grooves which carry off the surplus air which escapes, so that it will not enter an adjoining pipe and cause it to sound.

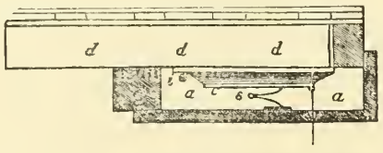

FIG. 3.

Fig 3 represents a sectional end view of a wind-chest with four slides or stops; (*d, d. d,*) represents a single channel, and (*a, a,*) is the wind-chest or valve-box, showing a valve (*c*) held in place by a wire spring (*s*). The valve is pivoted on a pin at the heel. (*l*) and opens to admit the wind into the channel at the pull-down end of the valve. The pull-down ends of the valves may be seen in the organ on taking off a panel at the rear of the chest.

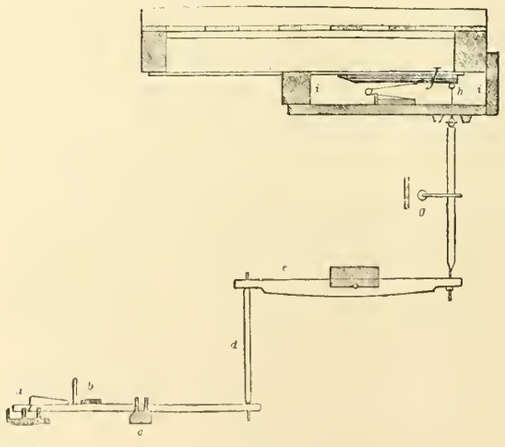

FIG. 4.

The action from the keys may be easily traced by having a person at the keyboard move the upper key. In Fig 4, the key *a*, fulcrumed at *c*, on being pressed down, at the other end raises the "sticker" *d*, which communicates with a lever *e*, to which is attached a "tracker" of thin pine wood. (A "sticker" is a rod which is pushed, and a "tracker" is a strip of wood which is pulled.) The tracker is fastened either direct to the pull-down wire, or communicates with it by an intervening roller-board action, which is used to convey the motion so that each valve may be communicated with wherever located, as CC is at one end of the chest and CC♯ is at the other end.

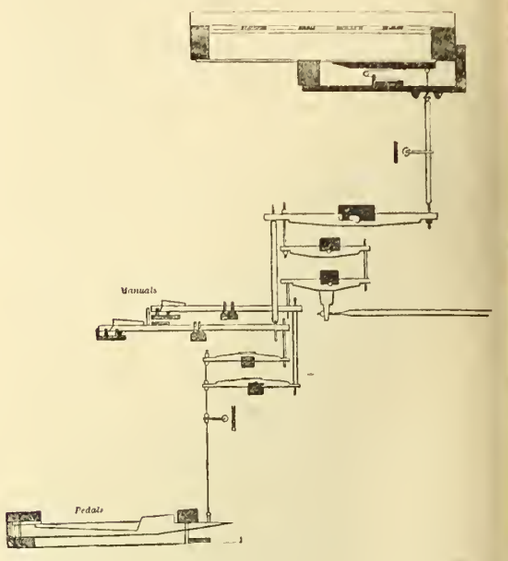

FIG. 5.

The connection of the pedals with the action work of a two manual organ is illustrated in Fig. 5.

This general method of construction is called *direct tracker action* with slide chests as in ordinary use in two and three manual organs for three centuries past.

THE DEFECTS OF SLIDE WIND CHESTS.

On account of the shallowness of the wind-chests and the "robbing" of the wind in the slide leakage as additional stops are drawn, there are serious tonal defects in this ancient method of construction.

When the compressed air of an organ is conveyed through wind-trunks, the velocity of its motion increases in proportion to the number of valves which are opened to let it pass outward to the pipes. When a single stop is drawn, the moving air passes slowly, and more rapidly when many stops are drawn. The natural elasticity of the air confined in the wind-chests, implies more or less density according to the variation in the pressure. The air in seeking an outlet through the larger valves, causes an uneven pressure near the smaller valves, which do not receive their proportionate supply on account of this unevenness.

This is especially noticed when full detached chords are played with the left hand, suddenly opening and closing the largest valves in the bass, while sustained chords are held by the right hand at the same time. The staccato chords change the density of the compressed air in the valve-box, and the tone of the right hand chords becomes unsteady, the undulations causing the pitch to change.

There is also an unsteadiness of the wind caused by the elasticity of the air in passing through the wind-trunks from the bellows to the wind-chests, which is partially obviated by the use of concussion bellows or "winkers" placed on the wind-trunks. Where these are not of sufficient help, additional reservoirs are placed underneath or as near as possible to their respective chests.

With slide chests the pipes of any given letter with each stop belonging to that section, stand over a long narrow channel. The pipes which stand immediately over the open end of the valves, receive a more ample supply of wind than those standing over the other end of the channel. The valves open at the rear of the chest, and the Open Diapason is placed as a front rank stop, and often does not receive its adequate supply of wind, which in part accounts for the lack of foundation tone in the full organ.

As additional stops are drawn, there is less wind pressure in the channel, and the requirements are not fulfilled, for the pipes do not receive the same wind supply as when they are voiced. When all the stops are drawn, the wind pressure is reduced several per cent. with a noticeable flattening of the pitch, resulting in the organ being greatly out of tune in the temperament and with itself, in addition to a defective blending of the tone qualities. Even the introduction of the pneumatic motor, so that larger valves and wider channels may be used, does not overcome this imper-

fection, and the larger the organ the more palpable is the deficiency.

Yet there is a more serious trouble in the use of slide chests resulting from a waste of air and consequent lessening of the wind pressure as it enters the foot of the pipe. In order that the slide may work freely without binding, the top-board must not be tightly screwed down. On account of the space left on the top and bottom of the slide, the adjacent pipes in each sounding stop would also speak were it not for V grooves in the top-board and veneer, which completely surround each hole and carry off the waste air which leaks. The air which is thus wasted and which robs the pipes of their proper voicing and power, may often be perceived, if when the stops are shut in, the arm is laid upon the keys so that two or more octaves of the keys are held down, which will cause some of the pipes to speak faintly from the leakages which the grooves do not carry off.

Another trouble arises from the binding of the top boards from swelling and warping so that they press upon the slides to such an extent that the stops cannot be fully drawn, especially with the composition pedals, which causes the pipes to be out of tune on account of the slide holes not corresponding fully with the holes leading to the pipes. This is of common occurrence. In very large organs the chests sometimes become warped and twisted by climatic conditions to such an extent that the instrument is a musical failure, even with the highest grade of pipes and voicing. All builders are well aware of these chronic defects, but it is not their province to advertise deficiencies.

On account of this robbing of the wind, delicate and well-voiced reed pipes often give defective speech when placed in position, and it will be observed in all slide chests that the reed stops are placed over the pull-down ends of the valves, so as to receive the most direct wind pressure with the least escape of air.

Individual Valve Chests.

German builders sought to overcome the defects existing in slide chests by the use of a separate or individual valve for each pipe, which required the use of an intervening pneumatic leverage to lighten the touch at the keyboard, but the shallow wind-chest was yet retained.

The valves were called poppet or mushroom valves, from having a round head moving upward on a mandrel, the head being lifted upward in the pipe hole by the action work so as to admit the air.

With this system of individual valves, no slides are used, instead of which each stop has its own shallow wind compartment along the length of the chest underneath its rank of pipes. The air is admitted into each compartment by a stop valve at the end of the chest, which is operated by a tracker connection from the stop-knob or stop-indicator at the keyboard. The shallow wind chest is divided into these longitudinal compartments. The air enters the compartment at one end through this stop valve and passes by all the pipe valves to reach the remote ones at the other end of the compartment.

Even in this method there is great change in the pressure when full chords are played with all the stops drawn, because of the wind only being admitted from the distant reservoir through the limited aperture of the stop-valve at the end of the compartment. This does not solve the problem of preserving the fulness of tone when all the stops are drawn, in strength, firmness of pitch and quality of voicing.

In the passage of the compressed wind from the reservoir to the wind chests through long and tortuous wind-trunks, even with mitred corners, with the friction of the moving air against the sides and corners, the pressure is not only somewhat changed, but it has been proved that this friction, when there are very long wind trunks, has caused the temperature of the air as it enters the pipes to be higher than when it leaves the reservoir.

While organists and organ purchasers should know of the defects alluded to, it is a pleasure to state that these deficiencies have been overcome by a new method of construction which is now being successfully introduced by enterprising builders as a departure from all previous systems.

The Universal Wind Chest.

The Universal Wind Chest furnishes an adequate amount of wind with unvarying pressure to each pipe, and simplifies the mechanism in its working, regulation and reliability.

It consists of an air-tight room or chamber of large dimensions, twelve feet wide, seven or eight feet high, with a depth according to the number of stops, ranging from six feet in the smallest to thirty-two or more feet in the largest instruments. This air-tight room is the reservoir into which the wind is forced from whatever system of feeding which may be employed, and has from ten to forty times the cubic capacity of the largest bellows of the old methods.

In order to regulate the pressure of the wind and govern the supplying motor, a "displacement board" is suspended along one side of this room, which is forced inward by graduated flat steel springs. When the wind is pumped into this room the displacement board is fored outward against the springs, and the connecting mechanism controls the speed of the motor or closes a wind gate where a rotary blower is used and thus regulates the wind supply at an even pressure, whatever quantity of wind may be used, with practically no inertia or momentum. The displacement board and springs bear the same relation in governing the pressure as the top-board and weights of the old bellows system.

Across the flat roof of this room and forming a part of it are placed firm bars like thick planks placed on edge through which are the holes in which the pipe feet stand. Each stop has its own bar, running from side to side twelve feet long, the width of the room. The pipes of each manual stop stand in one rank of twelve feet, insuring great freedom of speech and ease of access in tuning.

Each pipe stands directly over its own wind hole in the bar, and this hole opens immediately into the air-tight room which is filled with the compressed air. Each wind hole is covered with its own valve, so that when the wind is admitted to the pipe it enters the foot immediately from the reservoir, directly from the one source of pressure with no intervening obstacles or avenues of escaping wind.

Each letter of the scale, or corresponding wind hole with each stop, is placed in a straight line from front to back, so that a single tracker from the exhaust pneumatic valve operates the corresponding valve of every stop belonging to that section when it is drawn.

The valves of each stop have arms which are fulcrumed in a lever frame which is movable, so that when a stop is drawn these arms are brought in contact with a shoulder on the tracker which, when pulled, opens the pipe valve, and when the stop is off, these arms are withdrawn from contact with the shoulder. Thus every stop is operated with no intervening slide, wind channel or shallow wind compartment, each pipe receiving the wind directly from the large reservoir with no waste of wind nor change of pressure.

All the action mechanism is overhead on the ceiling of this air-tight room where it is exposed to view. The room is entered by double air-tight doors, and when within and the doors closed, a person may remain and see the working of the action while the organ is being played. When any regulation is needed, it may be done without removing any panels or sets of pipes, and there is no crawling over and through dust covered mechanism and wind trunks. The motor may also be placed within this reservoir room, as is the custom when electricity is used in the wind supply.

The wind pressure may be of the highest measurement without increasing the resistance of the touch at the keyboard. The exhaust tubular pneumatic action is used, which is instantaneous in its response wherever the keyboard is located, and the electric action is also used.

The wind pressure required by each stop is regulated at the proper place, at the toe of each pipe in voicing, the quantity of air and strength of the current being thus legitimately graduated. In the most recent organs the feet of the wood pipes have a metal shoe so that the aperture in the toe is graduated as with the metal pipes. The I, II and III Sections may be placed upon this one room reservoir, which simplifies the action work, and brings all the pipes in the same strata of temperature.

The advantages of this method are superior to every previous system of construction, and the improved musical value is recognized by the leading organists of acknowledged reputation. Its merits are so apparent that even in large organs of comparatively modern structure, the old wind-chests are being taken out and replaced with this great improvement. It is intended to have this method illustrated in a future article, which will make this brief outline more clearly understood.

ANSWERS TO INQUIRIES.

T. B. H.—"Could you not give more advice in regard to how to play the organ? Many of us, I take the liberty to say, do not understand mechanics enough to follow abstruse descriptions of pipes and other technicalities, but we can read music and study compositions. If you could give graded lists of organ music of medium difficulty, with your comments as to what stops to use and how to render this music with the best effect, I feel sure that many country players would be greatly aided."

Answer.—In the limited space devoted to organ study, but one department at a time has been considered. Having begun in a general way to treat of the outline of the complex instrument, a knowledge of which every organist should possess, it is deemed wise to illustrate many of the essential features of the organ before laying out a special course of study, other than answering correspondents. There must first be an instrument before its resources can be developed. At present, information is being given which cannot be found in books upon points upon which every organist should be well informed, not only that the instrument may be understood, but that one's opinion will be of some value in procuring new organs.

Concerning graded studies, it may be helpful to learn that a number of years ago, at the request of the largest music publishing house in the country, the writer of "Organ Study" prepared an extensive work of 232 pages for organ students in manual practice, entitled "The Harmonic School for the Organ," which may be obtained from the publishers of The Musician. It gives a ground work in manual study of legitimate organ music from the first principles through simple studies in imitation preparatory for improvising in organ style, united with a progressive course in harmony in all keys, ending with the subject of fugue. The work contains more than a hundred short service preludes in classic style, and is designed as preparatory to the use of the pedals, every note being brought within the reach of the fingers, so that it may be studied in the home upon a reed organ before practising upon the large pipe organ.

J. A. E.—"Is white wood as good as white pine for large pipes in regard to tone and resonance?"

Answer.—Yes, white wood is fully as good if not better, because the fibre of the wood is more firm and solid than pine. There are no knots in the grain of clear stock, neither is it subject to checks. White wood is more affected by dryness and dampness than pine, but that does not affect the quality of tone. When large pipes are made of white wood it is customary to have the edge of the language or block, as well as the cap, of hard wood. It has been asserted that in the case of 32 ft. open pedal pipes, if made of white wood, damp weather would affect the pitch of the largest pipes, but this is not true, as the vibrating column of air does not change out of proportion with all the other pipes of the organ.

"Is spruce prepared and quarter-sawed as good as white pine for small wood pipes in regard to quality of tone?"

Answer.—As far as tone and resonance are concerned, spruce pipes would give as good quality of tone as any other wood, but if used for stopped pipes they would be liable to check or split, as the fibre is somewhat cross grained. Some builders make the fronts of the manual wood pipes above middle C of hard wood such as cherry or pear tree, so as to have a closer grained material in finishing around the mouth.

"Is the composition of 55 per cent. block tin and 45 per cent. lead a desirable proportion for flue and reed pipes?"

Answer.—Yes. The more tin in the composition, the more firm are the vibrations, and the more durable are the pipes. In the large organ in Haarlem, built in 1738, the pipes are of 50 per cent. tin, and have been in constant use since that date. 40 per cent. tin is the least amount which should be used, and no first-class builder uses any cheaper composition. Years ago when a larger proportion of lead was used, antimony was also used which hardened the metal, but made the pipes brittle.

"What percentage of tin is most desirable for string tone stops?"

Answer.—Pure tin is best on account of its firmness. It is not the substance which gives the quality, but the scale, united with a firm material, formation of mouth, voicing, and steady wind-pressure In England, very excellent 8 and 4 ft. manual string tone stops of wood are being introduced in new organs, the makers claiming that for the production of string tone, wood is the better material combined with the new method of

voicing, based upon a further development of the German builder Schulze's system of voicing wood gambas.

W. B. G.—"What is meant by 'Full Swell Movement' in Article IX, page 59, of the February 'MUSICIAN?'"

Answer—It was a misprint for *Free Swell Movement*, by which is implied the free motion of both feet in pedal playing while the expression of the Swell Section is being given as therein described.

"Would it not have been better to have inserted a 4 ft. String Tone in the Swell of the specification illustrated in the same article?"

Answer.—Yes. The manuscript was written for the *Violin d'Orchestré* to be a 4 ft. stop, but by a typographical inadvertence it was printed as an 8 ft. stop.

E. M. D.—"Will furnace heat injure a pipe organ so that the air will leak out?"

Answer.—No, not if it is properly constructed and built of well seasoned materials. Hot air causes wood work to shrink, but the probabilities of shrinking and swelling are provided for in every part, as an organ is subject to all degrees of heat and cold, dryness and dampness. Organists should understand the relationship of the organ to all of these conditions. During a recent cold spell an organist of a church not far from Boston State House, discovered that the hydraulic motor in the cellar did not give ample wind supply on account of some obstruction. His unphilosophical imagination decided that it was owing to the influence of furnace heat to which the organ had been subjected for thirty-five years. With this idea he profusely sprinkled the floor of the organ gallery with water, hoping that the instrument by absorbing the evaporation would cause the obstruction to be obviated!

H. H.—"Whence the standard for five octave organs, or even 58 keys as used in pipe organs?"

Answer.—Each era has a standard which is introduced as the demand is evolved. For two or more centuries the German manuals have ranged from CC to f^3, a compass of 54 notes, while until about a half century ago the English standard was from G, G, G to g^3 or less. The standard then became from C C upward 56 or 58 notes, and some thirty years since the American standard became 61 notes from C C to C^4. At the suggestion of an enterprising organist, some progressive builder adopts a standard in some point, and a demand is created which in the competition of business others are compelled to follow.

There is yet no permanent standard for the compass of the keyboard, for the feasibility of extending the manual keys down to *F F F* is being agitated in England when the price of construction does not restrict the capacity of the instrument. This extension is worthy of consideration and will be treated in due order.

"Is there any practical use for a six octave keyboard?"

Answer.—Not with a large pipe organ with complete pedal compass and proportionate number of pedal stops.

With a reed organ, a six octave compass from C C C is very desirable for organ study, for this reason: In the higher forms of organ music which are often difficult for one player to master, two players may easily execute the composition, the left player taking the pedal part, which sounding an octave lower, the notes thus played do not interfere with the manual parts taken by the other player. This opens an enjoyable field in the interpretation of the idea and form of the composition.

In pieces requiring two manuals and pedal, the treble part may be played an octave higher so that the hands do not interfere. In Bach's difficult Trio Sonatas the primo player may simply play the upper part while the secondo can easily take the lower manual part and pedal bass.

With a six octave keyboard quite difficult organ music may be played at sight if the primo player will take the treble with the right and the alto with the left hand, while the secondo takes the tenor with the right and the manual and pedal bass with the left hand, always playing the pedal part an octave lower than the notes appear on the staff.

In this manner much organ music may be scanned in the home or studio, which would require months and years of labor for one person to be prepared to interpret.

ONE GREAT SOURCE OF MUSICAL EDUCATION.

W. FRANCIS GATES.

Music has been called the art of the people. By this is meant, it is the art that all the people can enjoy, can take part in, can have in their own homes. While in a sense, this is true, while a love for music in some of its forms is more prevalent than enjoyment in the other arts, and while of all the arts, music is most practiced, in a diluted way, to be sure, in homes of all sorts and conditions. That does not mean that the best of music lies at the beck and call of every one, nor that music of an elevating character is desired by all, or if desired, may be heard at light expense.

At least, this is true of this country. In some cities in the old country, grand opera may be heard for ten and twenty cents an evening, and the best of military band concerts for nothing every day. And then at noon we may see people of all degrees of wealth and standing going to the churches to hear perhaps a Bach fugue on the church organ, and some songs by Schumann or Mendelssohn, sung by the boy choir. There the case is different. There music is the art of the people. There, even the poor may hear the best music and, as a consequence, the poor enjoy the best music.

In our own country, the cost of a hearing of the best opera, is from two to seven dollars; the best symphony concerts, from fifty cents to two dollars, and only a limited number accommodated at the lower figure. Recitals by artists of high standing cost from one dollar to three per seat.

The result is that very little of this best music reaches the masses. Where, then, are they to hear good music? That they long for music is shown by the attendance on cheap opera and the applause that greets the musical turns in the vaudeville theaters and music halls.

Does not this point to the source from which good music should stream out to the people without money and without price? Should not the church become the fountain-head of good music, as it once was? Why, then, permit the light and trivial, the commonplace and trashy to have a place in our church programs? Why should not every church, every choir, aim at the best results possible for it to attain with the finances at its disposal?

This is one of the methods of elevating humanity, this use of good music. And the church is supposed to wish this result and to work for it with all possible means. And, by the way, isn't there as much possibility for the elevation of humanity in the hearing of several well rendered musical numbers as in hearing a theological disquisition on theories that no one can prove, or a doctrinal harangue which is simply an array of one "ism" against another, always to the discomfiture of the other, the representative of the other being, of course, absent?

In every large city, and in a few of the smaller ones, the mission of the church in this respect is coming to be recognized, and we find vesper services, services of song, and so on. In these, the best music the choir is capable of is put before the people; and the preacher, for that service, quits when he gets through. The best that every church has should be given to the service. All will admit that as a general proposition, but when they come to music, many will drop back to the gospel hymn level and attempt to present the sweetest and purest truth in tunes of the weakest of drivel.

It is true that congregational tunes should be simple, but at the same time they should be dignified. The best examples of this are in the chorales of the German Lutheran Church, and some of the tunes of modern English writers. And the music of the choir need not be of the florid operatic style so unsuited to church worship. The choir music should be dignified, too, but it need not be inane or of kindergarten grade of difficulty.

To repeat it, then, the place where the common people should feel that they can always repair for good music is the church. The church is a power for good morals, and it should be for good music. And with a musically educated clergy and a broad-minded and liberal officiary, the church can occupy its true place as an educating and elevating factor in this matter.

A recent writer takes much the same view of the subject as given above. Says he, "Grand opera as at present conducted, is the rich man's luxury, and will certainly depend for its success or failure on his whims. We are inclined to think that the churches can do very much for music in America. Puritanism left our services pretty bare. But isn't it time to re-introduce great music into the churches? They have always been the peoples institutions and are a conservating force in culture. We venture to think that good music would do as much as long prayers to uplift men and women.

"We need better instruments, better organists, and better selections. Above all, we need to have many more services of music and song, on week-days as well as on Sundays. It is necessary to make it easy and natural for people to hear good music before they come to know that they really care for it."

SOME RECENT PROGRAMS.

The following programs will prove interesting to our organ readers, as they show what our leading organists are playing.

The first is by Wm. C. Carl; the other three by Walter C. Gale.

FIRST.

Overture to Euryanthe . . . . . *Ch. M. Von Weber*
Pastorale . . . . . *Gustav Merkel*
Minuetto . . . . . *C. F. Kendal*
Fugue in D major . . . . . *J. S. Bach*
Allegro Moderato (Fourth Concerto) . *G. F. Handel*
Rêve Angelique . . . . . *Anton Rubinstein*
Fantasie on a Welsh Air . . . . . *William C. Carl*
("March of the Men of Harlech.")
Allegretto in B minor . . . . . *Alexandre Guilmant*
Carillons de Dunkerque . . . . . *Thomas Carter*
("The Chimes of Dunkerque.")
Barcarolle in A♭ . . . . . *Edwin H. Lemare*
Pedal Rondo (New) . . . . . *Arthur B. Plant*
Marche Heroique de Jeanne D Arc . . . *Th. Dubois*
(The March is intended to portray several incidents in the life of Joan of Arc.)

SECOND.

a—Grand Choeur—in E♭ . . . . . } *Alex. Guilmant*
b—Prayer and Cradle Song . . . . }
Sonata in D minor, Op. 30 (for 2 performers), *G. Merkel*
(Arranged for one performer by the composer.)
I—Allegro Moderato (Motto: Psalm XLII, 6, 7, 8, 10)
II—Adagio (Motto: Psalm XXIII, 1 4.)
III—Allegro con Fuoco Fuga (Motto: Psalm XLII, 2.)
a—Minuet in B minor . . . . . } *C. M. Widor*
b—March in F♯ . . . . . }
Offertoire in E major, Op. 9 . . . . . *H. Deshayes*
Fantasie in D minor, Op. 10 . . . . . *H. Shellenberg*

THIRD.

Organ Sonata in D minor, Op 11 . . . *A. G. Ritter*
Allegro—Andante—Allegro—Andante con moto—Allegro.
Meditation, in B major . . . . . *A. Claussmann*
Sonata in E♭, Op. 6 . . . . . *Christian Fink*
I—Allegro Moderato. II—Andante.
III—Allegro Risoluto (Fugue).
a—Prière in G♭ . . . . . } *E. Lemaigre*
b—Capriccio . . . . . }
Fantasia and Fugue in G minor . . . . . *J. S. Bach*
(Book II, No. 4.)
Adagio and Finale in C . . . . . *L. Spohr*

FOURTH.

Prelude and Fugue in A major . . . . . *J. S. Bach*
(Book II, No. 3.)
Communion in A major, Op. 4 . . . . . *H. Deshayes*
Andante in A major . . . . . *Dussek*
Sonata No 4 in A minor . . . . . *J. Rheinberger*
I—Moderato. II—Intermezzo (Andantino).
III—Fuga Cromatica (Moderato).
a—Melody in C . . . . . } *King Hall*
b—Offertoire in B♭ . . . . . }
Fugue in E♭ . . . . . *Albrechtsberger*
Prelude to "Parsifal" . . . . . *R. Wagner*

The word "stop," meaning a rank of pipes in an organ, is an absurd term. The word "register" is sometimes used in its place nowadays. Dr. Hinton, in his new work on "Organ Construction," says the word "stop" in this connection is absurd, but etymologically can be thus accounted for: "Until about the middle of the fifteenth century, each key in an organ controlled a certain pre-arranged number of pipes—in fact, the organ was a huge 'mixture,' sometimes having forty or fifty ranks. When means were devised by which the player could *stop* certain ranks from sounding, thus isolating others he wished to use alone, a new era dawned in the annals of organ building" (and, it may be added, of organ music). "The term 'stop' recalls the fact that sliders were first rather to *silence* ranks of pipes than to bring them on, and, in itself, constitutes a record of the causes which led to its invention. Similarly the term 'barrel,' applied to the body of a gun, reminds us that gun barrels used to be made of wooden staves hooped together like a cask."

IN THE MUSICAL WORLD

AMONG OUR SCHOOLS AND TEACHERS.

The 22d recital by pupils of Walter L. Sprankle and Walter C. Tuttle was given in Indianapolis, Ind., on February 6.

A recital, which drew a crowded house, was given by pupils of Mr. Frederick A. Williams, at Cleveland, Ohio, February 7.

Ida E. Tomson, a pupil of Eugene Feuchtinger, of Hiram College (Ohio) Conservatory of Music, gave an interesting piano recital on February 15. The program was comprehensive and well arranged.

Fargo, N. D., was the scene of a pleasant and profitable musicale by pupils of Mrs. W. J. Clapp, assisted by Miss Clara Wooledge. It was given at the home of Mrs. Clapp, on February 5. The program was very good.

At Crete, Neb., the Doane College Choral Club gave Gade's "The Erl-King's Daughter," on February 18, with the following artists: Erl-King's Daughter—Mrs. J. O. Goodwin, soprano; Oluf—Mr. P. L. Knight, baritone; Oluf's Mother—Mrs H. F. Doane, contralto; Erl-Maiden —Miss Julia Andress, Miss Fay Johnson, Miss Ethel Mason. Mr. W. Irving Audruss was the conductor.

Professor Surmann, a violinist of Louisville, Ky., gave a fine recital at Loretto (Ky.) Academy. Among his numbers were the Andante, from Mendelssohn's Concerto; Nocturne in E flat, Op. 2 by Chopin-Sarasate; Adagio from Spohr's Violin-Concert, No. II; Finale from DeBeriot's Concerto, No. VII; Polonaise, F. Laub, Op. 8, and Fantaisie Caprice, Op. 11, Vieuxtemps. He was ably assisted by Madame Pictin in soprano solos.

Amanda Vierheller and Paula Schonfeld made their debut in Elberfeld royal opera house recently in "Der Freischutz" and "The Magic Flute," and scored a tremendous success. They have been engaged for two years, beginning September next. Both are pupils of Nicklass-Kempner. Miss Vierheller is a Pittsburger, who has been abroad only a year. She received most of her musical training from Adolph Foerster.

In the Chapel of Beloit, Wis., College, the Beloit College Musical Association gave its second concert on Tuesday Evening, February 19, 1901. Mr. D. B. Allen, conductor; Miss E. Pangborne, organist; Miss Ethelwyn Eaton, pianist. The program included the following ambitious numbers: Symphony—"New World," Dvorak. Song of the Viking, Fanning. The Years at the Spring, Hertog. Chorus of Revellers, Gounod. Violin Solo—Album Leaf, Wagner. Song—Could I, Tosti. Duet—The Parting of Damon and Phintias, Prout. Fair Ellen, Cantata, Op. 24, Bruch.

Some interesting and valuable work has been done during this season at Salem Female Academy, Salem, North Carolina, under the direction of H. A. Shirley, the director of the music department. Mr. Shirley played the following numbers at concerts given during the season: Mendelssohn—Prelude and Fugue, Op. 35, No. 1. Schumann—Novellette, Op. 21. No. 7. Chopin—Fautaisie, Op. 49. MacDowell—To the Sea, Op. 55, No. 1. Glinka Balakirew—The Lark. Templeton Strong—The Fairy, Op. 44, No. 5. Saint Saëns—Etude en forme de Valse Op. 52, No. 6.

A pianoforte lecture-recital, by Mr. Edward Baxter Perry, was provided for the students of the Virginia Female Institute, Staunton, Va., on February 18. The program was as follows: Beethoven—Sonata, Op. 27 No. 2. (Moonlight). Chopin—Prelude in Db. Impromptu in Ab, Ballade in Ab. Grieg—Morning, from Peer Gynt Suite, Troll Dance from Peer Gynt Suite. Rubenstein —Kamennoi-Ostrow, No. 22. Saint-Saëns—Danse Macabre. Liszt —Gondoliera, Rhapsodie Hongroise, No. 6. The 165th pupils' recital was given at this Institution on the evening of February 8, under the direction of F. R. Webb, the director.

The March recital at Mr. Ad. M. Foerster's studio, presented Miss Anna B. Warden and Miss Georgella Bates, pianists; Miss Emilie Oetting and Miss Lillian Semmerlock, sopranos, and Miss Adelaide Schringer, contralto. The program included Polonaise, Op. 40, No. 1 Polonaise, Op. 26, No. 1, Chopin. Auf dem Wasser zu singen, Haiden Röslein, Ungeduld, Schubert. Gavotte, Sgambati. Slumber, Sweet Child, Wagner. Spirit's Song, Haydn. Consolations, Nos. 5 and 3, Liszt. Ye Who Have Yearned Alone, Why Are the Roses So Pale? Tschaikowsky. Trio—Spring's Verdure, Foerster. Aus Holberg's Zeit, Suite, Grieg. Ave Maria, Die Trauernde, Marie, Im Herbst, Franz.

An interesting piano recital was given at the Woman's College, Frederick, Md., on February 5, by Miss Margaret E. Upcraft, of the College Conservatory, assisted by Miss Bertha Thiele, harpist, of Peabody Conservatory, Baltimore, Md. The program was a splendid one as will be seen from the following: Schubert—Theme and Variations, B flat major, Op. 142. Beethoven—Sonate Pathetique, Op. 13; Grave, Allegro—Adagio—Rondo, Allegro. Chopin—Nocturne, D flat major; Valse, C sharp minor. Saint Saëns—Fantaisie, A minor, harp. Hopekirk—Serenade. MacDowell—To a Water Lily. Reinhold—Impromptu, C sharp minor. Oberthur—Conte de Fees, harp. Liszt—Cantique d'Amour.

Broad Street Conservatory of Music, Gilbert R. Combs, Director, 1329-1331 South Broad street, Mr. Stanley C. Muschamp, Jr., assisted by Mr. Louis M. Remont, Clarinet, Mr. John K. Witzemann, Viola, gave a piano recital at the Broad Street Conservatory of Music, Philadelphia, on Wednesday evening, February 13. His program included Prelude and Fugue, E flat minor, Bach. Sonata, Op. 27, No. 1, Beethoven; Andante. Allegro. Andante. Allegro molto e vivace; Adagio con espressione; Allegro vivace. "Grillen." "Aufschwung," Schumann. Etude, Op. 10, No. 12, Valse, Op. 34, No. 1, Chopin. Trio for Piano, Clarinet and Viola, Mozart; Andante. Menuetto. Rondo. Allegretto. Prelude, C sharp minor. Rachmaninoff. Gavotte, D minor, D'Albert. Marche Militaire, Schubert-Tausig.

At the Music School of G. L. Becker, New York City, Saturday, February 16, A. J. Goodrich delivered a lecture illustrating his new system, "A Guide to Practical Musicianship." Our readers will recognize this as the recently published new method of memorizing. After a few explanatory remarks concerning the principles involved, Mr. Goodrich called upon Mr. Becker to name a pupil who would assist in demonstrating the system. From a motive of three notes the pupil succeeded in building a correct period of eight measures. At the author's suggestion this was repeated in a quicker tempo and transposed. A motive for the left hand was then invented by means of reading the original motive backwards, like retrograde canon. This was extended to the length of a period as before. The left hand part served as contrapuntal accompaniment to the upper part. Both parts were then combined, making a very agreeable short period in two parts. The demonstration was an acknowledged success, and the young miss was complimented by Mr. Goodrich upon the thorough manner in which she had been instructed.

Pupils of Mr. Liebling gave, in Kimball Hall, Chicago, the following interesting program on Feburary 9. Toccata, Joues, Etude, Opus 25, No. 9, Chopin. Ballet Music, Faust, for four hands, Gouned. Le Retour, Bizet. German Dances, Beethoven. Serenade, E. Liebling. Nocturne, Grieg. Ballade in D flat, Homer Bartlett. Prelude, Rachmaninoff. Polonaise, Opus 11, Moszkowski. Mr. Liebling played before the pupils of Milwaukee-Downes College on February 16, including in his program the following American compositions. Prelude, Op. 10, MacDowell. Barcarolle, Op 31, Blumenschein. Menuet Moderne, Conrath. Etude, Op. 27, Foote. Prelude, Theme and Variations, Op. 25, Bruno Oscar Klein.

Pupils of Mr. Wm. H. Pontius, gave a song recital at Galena, Ill., on February 21. Among the songs presented were (*a*) Sleep On Cantor. (*b*) The Lament, Kemp. (*c*) In the Dark, In the Dew, Coombs. The Spirit of Spring, Parker. The Goldbeater, Randegger. (*a*) Love's Flight, Shelley. (*b*) It's 'a for the Love of Thee, Bartlett, (*a*) The Rosary, Nevin. (*b*) Love's Bliss, Spicker. (*c*) The Lark, Gilbert. The King of Love, Bullard. Sunset, Buck. (*a*) The Sweetest Flower that Blows, Hawley. (*b*) Fair Helen, Hastiugs (*c*) The Red, Red Rose, Hastings. 'Mid the Hush of the Corn (violin obligato), Temple. It was Not So to Be, Nessler. Fern Song, Lippa Thou Wilt Keep Him in Perfect Peace ("Isaiah"), Patten. Twilight is Falling (violin obligato), Strelezki. King's Champion, Watson. (*a*) Claug of the Hammer, Bonheur. (*b*) My Axe of Steel, Haveus. The Celestial City, (violin obligato), Pontius.

An interesting recital was that given by pupils of Miss Caldwell and Mr. Starr early in February, at Ward Seminary (place not named). The program is published in full as a suggestion to those who may wish to do something similar. Program. 1. "Music oft hath such a charm, to make bad good, and good provoke to harm."—*Measure for Measure.* Merry Wives of Windsor—Overture to "Merry Wives of Windsor," Nicolai; Misses Susie Abney, Lillian Williams, Emma Theus, Lettie Owen. Merchant of Venice—"Tell Me Where is Faucy Bred?" Act III, Scene 2, DeKoven; Miss Margie Lin Caldwell. Romeo and Julict—(*a*) Introduction and Duet, Act I, (*b*) Page's Song, Act II, (*c*) Slumber of Juliet, Act IV, (*d*) Finale, Act V, Gounod; Miss Kate Belle Selph. Juliet Waltz, Act II, Gounod-Raff; Miss Susie Abney. Taming of the Shrew—"Should He Upbraid," Act II, Scene 1, Bishop; Miss Bertha Louise Cox. Hamlet—Duet, "Ophelia," MacDowell; Misses Irene Russell and Maud Wilson. As You Like It—"Blow, Blow, Thou Winter Wind," Act II. Scene 7, Sargeant; Miss Calista Bailey "It Was a Lover and His Lass," Act V, Scene 3 Parker; Miss Margie Lin Caldwell. II.—Continued. Much Ado About Nothing—Quintet, "Sigh no More, Ladies," Act II, Scene 3, Steven; Misses Russell, Reed, Bailey; Messrs. Lyle and Jackson. Cymbeline—"Hark, Hark, the Lark," Act II, Scene 3, Schubert-Liszt; Miss Lillian Williams. Two Gentlemen of Verona—"Who is Sylvia?" Act IV, Scene 2, Schubert; Miss Bertha Louise Cox. Midsummer Night's Dream —"Oberon," Weber; Miss Lettie Owen. Quartet, "Nocturne," Mendelssohn; Misses Anna Blanton, Virna Colby, Julia Chester, Annie Ransom. "I Know a Bank," Act II, Scene 2, Parker; Miss Lenore Cramer. Fairy Music and Wedding March, Mendelssohn; Miss Emma Theus.

AT HOME.

An organ recital was given by Mr. C. Rupprecht, under the auspices of the Evangelical Lutherian Trinity Young Mens' Society, at St. Louis, on February 3. The program was a pleasing one.

Verdi's requiem was sung again at the Metropolitan Opera House on March 3 by the same big cast as gave it a short time before. Nordica, Schumann-Heink, Salignac, and Plancon, with Verdi's friend Mancinelli as conductor, were the artists.

An important foreign orchestra is in our midst. The Leipsig Philharmonic Orchestra is now giving a series of concerts in this country under its founder and conductor, Hans Winderstein. As a conductor, Winderstein is ranked very high. Grieg says of him: "Hans Winderstein is, without question, a conductor of the very first rank."

The fifth musical program for this season was presented at the Central Congregational Church, Philadelphia, on Sunday evening, February 24. Mr. Maxson, the director, also played the thirteenth recital of the Organ Players' Club since at his church on Saturday, March 2. He will give Gunod's Redemption on Easter Sunday night.

Richard Burmeister, the pianist, gave a concert at Mendelssohn Hall, New York, February 28, with the assistance of Mme. Schumann-Heink, the entire proceeds of which will go to the fund for the erection of a monument to the Weimar master, Burmeister was himself a favorite pupil of Liszt, and is widely known as an interpreter of his works. The program will contain several rarely heard works, all of course of Liszt.

Jean Gerardy, who is known as one of the best cellists who have ever visited the United States, had an unfortunate experience with his manager. His entire tour was wrecked by the inefficiency of the agent who was to arrange his concerts, and he was stranded in Chicago with no money to pay his hotel bill or to return to New York. An artist's life has two sides, one of which is as unpleasant as that of the ordinary individual.

Josef Hoffmann, who some years ago toured this country as a child prodigy, is about to begin his third American tour. Of him Mr. Finck in the New York *Saturday Evening Post* says: As Liszt, at the age of fourteen, resented being called, "le petit Litz," so Josef Hofmann has expressed the hope that he will no longer be regarded as a "boy pianist," for he is twenty-four years old. No child prodigy ever created such a sensation in this country as he did in 1887-8. When he gave 52 concerts in ten weeks; the hall was crowded at each of his concerts; and when, for reasons of health, his father had to take him away, this act was regarded as a musical calamity. In March, 1898, Theodore Thomas brought Hofmann back to New York, and it was found that, contrary to the general rule, the young man had retained the genius of the child prodigy. On March 4, 1898, the *Evening Post* remarked:

Josef Hofmann proved at his debut with the Thomas orchestra a few days ago that his spark was not a mere ignis fatuus, as it is with most infant prodigies, but the true Promethean fire, which, instead of dying out, grows brighter and warmer with years. To such concerts as his one goes not to critise, to say you have been there or to "educate yourself," but to have a good time, to be thrilled, to take an emotional bath, and come out a happier and better mortal from this contact with the sound waves of the immortals

Josef Hofmann is a Pole. Rubinstein also was Polish on his mother's side. Hofmann was his favorite pupil during the last years of his life, and he gave him his last photograph with a few bars of his "Contra Dance" written on it and the words, "You alone, my dear Josef, of all whom I have heard play this composition, render it as I intended it." Hofmann's first recital was given in New York on March 5.

The second and third recitals by Mr. Frank B. Williams, were played in the Memorial Presbyterian Church, of Newark, N. J., on February 18 and 25. The programs included—Toccata in E, Homer N. Bartlett; (*a*) Interuezzo, Callerts; (*b*) Daybreak, "Peer Gynt Suite" Grieg; Allegro. "Sonata," Guilmant; (*a*) Graceful Dance, (*b*) Processional March, Sullivan; (*a*) Lied, Dethier; (*b*) Hosanah, Wachs; Jubilee Overture, Weber; Fugue in D, Bach; (*a*) Largo, Chopin; (*b*) The Question. (*c*) The Answer, Wolstenhohne; (*a*) Berceuse, Bizet; (*b*) Allelulia, Dubois; Suite Gothic, Boellmann; Larghetto, from 2d Symphony, Beethoven; March D'Araine, Guilmant.

Prof. Edward Dickinson, well-known to our readers as Professor of History at Oberlin Conservatory of Music, is to take charge of a special music tour during the coming summer. The tour will include the full Wagner cycle presented at Bayreuth and the Choral Festival at Gloucester, England, together with the other available musical opportunities of the season. Lectures in preparation for these events given throughout the tour. Special attention will also be given to Art, particularly painting, the Italian portion of the trip being in close connection with the Special Art Tours, the lectures of which will be open to members of this party. The party is strictly limited to twenty-five members, and sails from Boston, June 19, returning to Boston by September 21. The cost of the ninety-four days' trip will be $625 00.

ABROAD.

The pianist, Leopold Godowski, who won a success in Europe has returned to the United States and is playing on the Pacific Coast.

Grieg's reported serious illness does not prove true. Bronchial trouble caused him to go to a Sanatarium for treatment. He is better and contemplates a visit to London to conduct some of his own compositions.

Paderewski and his wife are in Berlin. They will spend the time between there and Dresden until the production of Paderewski's opera in the latter city in May. He will also play in Dresden in February.

Stavenhagen, who recently toured America, gave an orchestral concert at Beethoven Saal. His program was entirely of Liszt (the third program within a month and more to follow). It was his first appearance in Berlin as a pianist in some years, and a large audience gave him a hearty welcome.

Miss Caroline Rowley, formerly of the Detroit Conservatory, read a paper on "Origin and Purpose of Music," before the American Woman's Club at Berlin a short time ago. It was followed by an animated discussion, which was lead by Mrs. O. B. Boise and Mrs. Ffrangcon-Davies. Miss Rowley's paper was one of the most interesting that has been given at the club this year.

Edward Risler, of Berlin, gave the first of his series of historical recitals on January 29, before a large and enthusiastic audience. His program was from the early masters, Couperin, Rameau, Scarlatti, etc. Every number was given with a nicety of detail and delicacy that was charming, but lacked in spontaneity and life. His next recital, which will be devoted entirely to Beethoven, will no doubt reveal all his powers.

Liszt did a great deal toward making Bach known to modern audiences, and it is therefore only proper that the Bach societies should endeavor to bring his works before the public. This has been done at Heidelberg, where at a recent concert of the Bach-Vereiu an excellent performance was given of Liszt's Coronation Mass and "Hunnen Schlact," under the zealous direction of Professor Wolfrum. This performance completed the series of concerts specially devoted to the more important compositions of the great pianist-composer, given by the Bach-Verein during the last ten years, which have contributed not a little towards a better appreciation of their merits on the part of an audience by no means confined to the music-lovers of the city.

Fifty-nine different operas, according to the *New York Tribune*, were performed in the course of the last year of the Royal Opera in Berlin. Of the composers represented in the list, Wagner took first place, with 66 representations of 10 works, "Lohengrin" being given 16 times, "The Flying Dutchman" 9, "Meistersinger" and "Tannhauser" 8 each, "Rheingold" and "Die Walkuere" 6 each, "Siegfried" and "Goetterdaemmerung" 5 each, "Tristan and Isolde" twice, and "Rienzi" once. Mozart plays second to Wagner, with five operas and 25 performances, "Le Nozze di Figaro" (in German, of course), leading with 11. The other composers follow in this order: Meyerbeer, 21 performances ("L'Africaine" 12, "Le Prophete" 9); Thomas ("Mignon") 15; Bizet ("Carmen") 14; Leoncavallo ("Pagliacci") 12; Auber 13; Kienze ("Evangelimann") 11; Siegfried Wagner ("Baerenhaeuter") 11, and Cornelius ("Barbier von Bagdad") 11. Verdi had only eight performances, of which three were devoted to "Aida," and Beethoven's "Fidelio" tied with Gonod's "Faust" ("Margarethe," as the Germans insist on calling it), with seven. Counting the nationality of the composers, not the original language of the operas, 38 of the 59 operas were by Germans, 10 by Frenchmen, 9 by Italians, 1 by an Englishman, and 1 by a Bohemian.

A great demonstration was had at the Theatro La Scala, to do honor to the memory of Giuseppi Verdi. The theatre was filled almost beyond its capacity. The ladies wore all black dresses; upon the stage there stood a very large bust of the great master, sculptured by Sacchi, amidst palms and cypress. All the performers sat at the sides of the bust. All throughout the occasion there was true homage to the name of Giuseppi Verdi, who symbolised the genius of the Italian art, and who represented the longest and perhaps most glorious epoch in our theatrical history. The concert brought in a net profit of 15,000 lire, which are to go to the funds for a national monument to Verdi, to be erected in Milan. The *London Telegraph* gives this account of the memorial ceremony: A band of 100 performers played the overture to the opera "Nabucodonosare" upstanding, the entire audience also rising to their feet. It was in this work that the singer, Strepponi, whom Verdi afterward married, appeared on the occasion of its production at the Scala in 1842. Next came the Crusaders' chorus, "Va, ponsiero," from "I Lombardi," the strains of which set Italian patriots on fire while their country lay yet under foreign rule. The famous quartet from "Rigoletto" followed, and then the prelude to "La Traviata," was played by the band and enthusiastically redemanded. At this point in the proceedings Guiseppe Giacosa, the poet and dramatist, came forward on the stage, and spoke of Verdi and his art in such manner as to draw heartfelt tears from his hearers. A number from "Un Ballo in Maschere" was then sung, after which the program reached its climax in the duet for tenor and baritone from "La Forza del Destino," the work which Verdi wrote in 1862 for the Imperial opera house at St. Petersburg. This piece, sung with the utmost feeling by Tamagno, who had come from Monte Carlo to assist at the concert, and by the baritone Maginl-Coletti, roused the audience to a height of southern enthusiasm which is said to have been almost without parallel. With the overture to "I Vespri Siciliani," the program came to a close. The receipts of the day, amounting to many thousand lire, will be devoted to the fund for the erection of a monument to Verdi's memory in Milan. Already subscriptions are pouring in, the firm of Ricordi & Co. heading the list with 5000 lire.

PUBLISHERS' COLUMN.

The music supplement opens with a characteristtc dance, in which the rhythm tells its origin. "Circassian Dance," by Emilo Pessard, will please by its freshness and graceful swing. It also affords some excellent practice in arm touch. "Crossing the Bar," by Olen Leston Carter, is an effective setting of Tennyson's beautiful poem. While not hard to sing, it gives opportunity for broad tone and expressive delivery. Stirring and full of spirit is the "Hunter's Song," by W. Homan. If played up to tempo, it will set the pulses to tingling. "Hypatia," by Byrd Dougherty, is a good example of the once exceedingly numerous "Morceaux," which were so popular. Graceful and melodious, without difficult, it is sure to be much played. "The Little Standard Bearer," by Paul Hiller, is a little duet, which is very attractive for teaching purposes. It has a touch of martial character which will please the young players. The young pianist is also remembered in the graceful and pleasing little waltz, "The Start Up," by Engelmann. The "Romance," by Franz Rubens, which follows, calls for a good cantabile style. The wide accompaniment of the left hand will require some practice, but it gives a firm support to the melody. A good love song closes the supplement. "Love for Ever," by William M. Hutchinson, is well adapted to the voice, and ends with an effective climax.

***

THE MUSICIAN for March is intended to touch the daily life of every earnest worker in the musical vineyard. It is filled with articles that go directly into the problems with which teachers are all constantly confronted. With these are combined some lighter writings that will relieve the tension of the mind and rest the brain. This is as important as any other element in one's daily routine. THE MUSICIAN hopes to build up in every possible way its clientele. And the publishers are certain that this issue is one of the best they have ever sent out.

***

Dictionary of Musical Terms. Stainer and Barrett. (Compressed Edition.) Price, 25 cents. For all ordinary purposes this edition fully meets all needs. Mr. K. M. Ross, the editor of our edition, in his preface, says: "In reducing this book from the author's larger work, we have endeavored to *omit only such terms as are not in general use*, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits." This valuable little book has a large and constantly increasing sale. The trivial cost enables teachers to supply it at trifling cost. If you are not familiar with the work, send for sample copy.

***

Rural Pictures. Wilhelm Fink. Op 295. Hatch Edition No. 70. 60 cents.

Bon Bons. Géza Horváth. Op. 20. Hatch Edition No. 71. 50 cents.

Eighteen Melodious Studies in Easy Style. Max Paul Heller. Op. 10. Hatch Edition No. 72. 50 cents.

The latest additions to the Hatch Edition series. Nos. 70 and 71 are collections of easy, melodious and instructive pieces—just such pieces as are needed by teachers to interest beginners. No. 72 is a collection of melodious studies in easy style and of great value for teaching purposes.

The "Hatch Edition" is rapidly gaining favor with teachers. Each number has been carefully revised, fingered and liberally annotated, and this work has been done by a number of America's leading teachers. These are *special features*, not to be found in any other edition of the same works.

The seventy-two numbers included in this series are standard works, and the same care will be exercised in the selection of future numbers.

***

Agents Wanted.—THE MUSICIAN wants good, live representatives to solicit subscriptions. Those having a knowledge of music preferred. Full particulars, including sample copies, order blanks, other helps and terms, will be sent to all who desire to make a trial of this work. No other field of subscription work offers such liberal inducements.

***

If in need of a Metronome, one that will give entire satisfaction (all others are worthless) and last a life time, send your order to the Hatch Music Co.

We handle only the best makes, and guarantee every instrument for two years. All complaints receive careful attention and prompt adjustment. Our prices ($2.50 and $3.50) are very low—the same as those charged by others for cheaper makes—and we can offer an extra discount on orders for six or more instruments.

How Many New Subscribers will You Send Us? Teachers say their best advertisement is their pupils. So a magazine will always pronounce its readers to be the most valuable medium for spreading its influence. Now, at the beginning of the new year, is the time when our readers can demonstrate their belief in the value of THE MUSICIAN as an educational factor. The large percentage of renewals is an indication of the esteem in which its readers hold it, but they can do the magazine, themselves, and the large army of earnest students who are ever seeking additional help, incalculable good by securing new readers for it. It is not necessary to use space here in pointing out its value as an aid to teaching and study; our readers know it and are constantly writing us about it. We want them to tell others as well as the publishers. If you believe in THE MUSICIAN, tell your pupils and friends, build up its clientele and every advance made in the subscription list will be reflected to you in additional improvements in the journal.

THE MUSICIAN should regularly reach *every* teacher and student of music. It will prove invaluable to those students who contemplate making a business of teaching. It is not only in the instructive articles, by leading writers, that THE MUSICIAN proves valuable to teachers. Its advertising pages are filled with announcements which will interest all teachers and students, and it will pay to consult them. If subscribers will send the names and addresses of those whom a magazine of this character will benefit, the publishers will gladly send a sample copy.

***

Our Publications are noted for correctness and beauty. We carry a complete line of all Foreign and American publications. Our facilities for promptly filling all orders are unequalled.

Our *Special Novelty Offer*—an original plan by which you can obtain one copy each of our new sheet music publications at nominal cost—will interest you. Full particulars will be sent upon application.

***

Are You Certain that you are buying your music at as good rates of discount as your fellow teachers? If not, you are doing business at a *disadvantage*. *We claim* that the discounts we allow teachers are MUCH BETTER than offered by other dealers, and unless you have had our latest quotations, you *cannot* be sure that you are not paying *more* for your supplies. This applies not only to our own publications, but to ALL the music you use. On our own publications we offer such liberal discounts (which will be supplied on request) that, no matter how far distant you are, or the cost of Postage or Express, we GUARANTEE you a saving when purchasing from us. In this connection you should remember that we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all that has not been sold or used. Full particulars regarding this department of our business may be had on request. We also offer numerous additional advantages which it is impossible to mention in the limited space of this page. *Write us!* No trouble to answer your letters and inquiries. It will pay you to correspond with a house that is progressive and up-to-date in all of its dealings. We can save you time, trouble and money. We suggest that you give us an opportunity to demonstrate this fact by sending us a trial order, it will bring us your steady patronage.

***

Bound Volumes of The Musician. We have a very few copies of Vol. II (1897) and Vol. III (1898) bound in *full cloth* with gold stamp, while they last we will sell them at $2.00. At this price they should be gone in a few days. We also have a number of *unbound* sets of Vol. IV (1899) and Vol. V (1900), which can be had for $1.50 each postpaid. These volumes are even *more valuable to-day* than when published.

***

Send for Our Descriptive Catalogue of Sheet Music and Music Books, including recently issued Supplementary Bulletin. Sent to any address for the asking.

***

The publishers of THE MUSICIAN have exceptional facilities for printing sheet music and music books. Upon receipt of manuscript, with full particulars concerning the style of publication desired, we will submit complete estimate.

***

If you are not satisfied with the way in which your orders have been filled by other dealers, why not give us a trial, and test our ability?

It pays to deal with a progressive and up-to-date house. We can save you time, trouble and money—all of which are worthy of serious consideration. No trouble to answer letters and inquiries. Don't hesitate to write us.

NEW PUBLICATIONS.

This instalment of new music presents a varied list of pieces, ranging from Grade I to Grade VI. The piano pieces are principally in Grades II and III.

The songs are good and worth using. Among them the best are by J. H. Rogers, N. Douty and Carl Busch.

SONGS.

My Own Dolly Dear. Rose M. Evenole. Key F: D to D. 50c.
Love's Incense. Francis W. Reid. Key G: D to E. 50c.
Where the Sandman Gets His Sand. Zitella Cocke. Key C: C to C. 50c.
The Standard On the Braes o' Mar. John Dewar. Key G: D to E. 40c.
Where Scotland Found Her Fame. John Fulcher. Key C: C to E. 40c.
Sweet and Low. N. Douty. Key C: E to G. 50c. A splendid song, musicianly and artistic in character.
Under the Greenwood Tree. Carl Busch. Key G: D to G. 40c. Like the preceding, this is an excellent song.
Love's Conquest. A. W. Hoffman. Key C: G to G. 40c.
Love's Lullaby. J. C. Macy. Key A flat: E flat to F. 50c.
Would You? W. J. McCoy. Key F: C to E flat. 50c.
There Are So Many Ways to Love. W. J. McCoy. Key F: F to A. 50c.
Love Has Wings. J. H. Rogers. Key A: E to A. 50c.
O Lay Thy Cheek On Mine. J. H. Rogers. Key D flat: E natural to A. 50c.
And Gave Them You. H. Clough-Leighter. Key D: C sharp to F sharp. 50c. All the above songs are worthy of attention. They are well written and of good style.
Lisbeth. J. K. Schaefer. Key C: C to E. 50c.
Angels' Easter Song. P. A. Schnecker. High Voice: Key F (D to G). Low Voice: Key D (D to E). 50c. A good solo for Easter. Easy to sing.
O Holy Hour. P. A. Schnecker. High Voice. Key G: B to F sharp. Low Voice. Key E: G sharp to D sharp. 50c. Another effective sacred song.
All Hail! Bright Resurrection Day. Philip Greely. High Voice. Key A flat: E flat to A flat. Low Voice. Key F: C to F. 50c.
O Jesus Thou Art Standing. W. H. Griggs. Low Voice. Key A: G sharp to E. 50c.
Light and Life Immortal. F. H. Brackett. High Voice. Key D flat: C to F. 60c. Three good songs, available for church use.

PIANO.

"At a Village Wedding." Op. 419. H. Engelmann. (1) Village Bride Waltz; (2) Bridesmaid Polka; (3) Village Groom Mazurka; (4) Wedding Dance Schottische; (5) Wedding Dinner March; (6) Jolly Wind-Up Galop. 25c. each. An attractive set of easy teaching pieces. Grades I and II.
Country Cousin Waltz. J. W. Lerman. 25c.
Mother's Love Gavotte. J. W. Lerman. 25c.
Sacred Medley (of Favorite Hymns). J. W. Lerman. 40c. These three pieces are of the same grade, are tuneful and pleasing.
Quintras March. Howard Cadmus. 40c.
Dance of the Pixies. M. S. Conrade. 50c.
Mariners' Song. L. Schehlmann. 50c. Good practice in chord and octave playing. Rather refreshing and original. Grade III.
Star of Love. Reverie. P. A. Schnecker. 40c. A thoroughly pleasing salon piece. Charming melody. Grade III.
Here they Come! *Alla Marcia*. P. A. Schnecker. 40c.
In the Bower. Op. 3, No. 2. N. Irving Hyatt. 50c.
A Frolic. Op. 3, No. 3. N. Irving Hyatt. 50c. This and the preceding are good studies.
Perdita. H. S. Saroni. 50c. A graceful waltz, not unduly difficult.
Story of the Fair. J. C. Macey. 40c. A good teaching piece, contains work for both hands.
Romance. Op. 8, No. 1. A. G. Salmon. 50c.
Air de Ballet. Op. 8, No. 2. A. G. Salmon. 50c. Two brilliant and effective compositions for rather advanced players.
An Afternoon Shower. B. C. Henry. 40c.
Eagle March and Two Step. J. K. Schaffer. 50c.
Mocking Witchery (Danse Vive). B. E. Grady. 50c. Brilliant and useful.
La Gavotte de la Reine. Op. 352. Gustav Lange. 50c.
Last Idea of Weber. Op. 74, No. 4. H. Cramer. 75c. A good transcription of the beautiful little melody.
Venus Valse. Op. 8, No. 1. E. P. Favor. 40c.
Juno Gavotte. Op. 8, No. 2. E. P. Favor. 40c.
Jupiter Schottische. Op. 8, No. 3. E. P. Favor. 40c. A set of teaching pieces in Grade II. Melodious and taking.
On the White Keys. Op. 18. 2 and 4 Hands. L. E. Orth. $1.00. A collection of twenty-four easy pieces (Grade I) for beginners. Containing no accidentals and progressively arranged.
Awakening of the Birds. Otto Lange 25c.
Flower Fancies. (Salonstuck). Op. 5. J. J. Deinzea. 50c.

TWO MANDOLINS AND GUITAR.

Beneath My Love's Window. D. M. H. May. 50c.
Rosemary Waltzes. Rosenberg, arr. by H. W. Weber. 50c.
La Cubanola Valse. Lengberg, arr. by H. W. Weber. 50c.

OCTAVO.

ORGAN.

The "Organ." Vol. XII, No. 67. Selections for Reed or Pipe Organ. 25c.

SACRED.

Choir Library. Vol. V, No. 26. 10c.
Choir Library. Vol. V, No 25. 10c.
The Palms. Arr. by J. W. Lerman. 15c.
I Shall See Him. J. C. Walling. 6c
Awake and Sing the Song. T. D. Williams. 10c.
Christ the Lord is Risen To-Day. T. D. Williams. 12c.
Angels! Roll the Rock Away. J. W. Lerman. 12c.

America, Our Fatherland. Mixed and Male Voices. E. H Bailey. 12c.

CANTATAS.

Easter Eve and Morn. (Solo, Chorus and Organ.) F. Stevenson. 50c.
The League of the Alps. Carl Busch. $1 25.
In Music's Praise. Op. 21. H. K. Hadley. $1.00.

Burrowes Musical Kindergarten Method

INSTRUCTION FOR MUSIC TEACHERS BY HOME STUDY.

THE FIRST EDITION of the Manual of Instruction for Teachers by Home Study has been ENTIRELY EXHAUSTED, owing to the rapidly increasing demand for the Burrowes Method, and a NEW, IMPROVED AND GREATLY ENLARGED EDITION is now being issued from the press.

YOU ARE REMINDED that this Method may be acquired advantageously at any season of the year.

IT IS GOOD to introduce the Method in the third or fourth term. In this way the teacher may learn the Method fully and secure some testimonials; and so when the schools re-open in the following autumn he will be in a position to advertise and talk to parents from his own experience, and will doubtless be more successful than if he had acquired the Method just before the autumn term began.

YOU CAN BEST learn the Method by its actual use with a class, and it is not necessary that you should be completely familiar with it before beginning to teach. The lessons in the Teachers' Manual are laid out very minutely, so that after a day or two of study the teacher may begin to impart the earlier lessons, and may POST HIMSELF ON THE SUCCEEDING ONES AS THE CLASS PROGRESSES.

THE BURROWES METHOD was built up for children and from actual study of the needs, preferences, character, and even the whims of children. The authoress has taught a musical kindergarten for many years, during which she has composed songs, invented games, and constructed apparatus too numerous and varied to mention or describe; and of these only the most valuable have been retained. Everything that was dull, cumbersome, ineffective, or unchildlike has been abandoned, and what remains has been tested through and through, and its value proved beyond the shadow of a doubt. There is nothing in it that is not agreeable and entertaining. IT IS NOT BUILT ON MERE THEORIES. It is not the inspiration of a day. It is, on the contrary, the CREAM OF FIVE YEARS OF SPECIAL EFFORT, and the fruit of many other years of toil and study. The results speak for themselves.

THE MANUAL will enable any teacher of music to carry a kindergarten class through 120 lessons.

MUSIC TEACHERS OF ALL GRADES should investigate this work. ADVANCED TEACHERS will profit largely by establishing kindergartens in charge of an assistant or partner, thus creating a preparatory department which will act as a leader to the advanced classes. The advantages of the Method to YOUNG TEACHERS is obvious.

KATHARINE BURROWES, A 1302 Presbyterian Bldg., Fifth Ave., New York.

Send your address, and a beautifully illustrated SOUVENIR BOOKLET will be mailed free.

LATEST PUBLICATIONS.

PIANO SOLOS.

Cooper, B. Christmas Dreams (Weihnachtsträumerei). Grade III, ... 25
As pleasing as childhood's dreams at yuletide.

Cooper, W. With the Guitar (Zur Guitarre). Grade III, ... 30
Interesting imitation, presenting many instructive points of *touch*.

Dolmetsch, V. Op. 115. Menuet Badin. Grade III, ... 40
Abounding in striking harmonies, and quaintly characteristic.

Eilenberg, R. Op. 191. Spirits of the Fountain (Quellengeister). Grade III, 50
The murmuring of the waters, and the playful antics of the sprites are described in melodious form.

Fuchs, O. Op. 21. Brook (The) in the Wood (Waldbächlein). Grade IV, . . 35
Fine melody in bass, with triplets of 32d notes accompanying.

Gael, H. van. Op. 35. Miniature. Bluette. Grade II, ... 30
Interesting contrasts of *legato* and *staccato* touch.

Gänschals, C. Op. 229. By the Forest Lake (Am Waldsee). Lyric Tone Poem. Grade III. 30
The second subject forms a brilliant contrast to the principal theme in arpeggioed octaves.

Heins, C. Op. 183. Love Song (Liebeslied). Grade III, ... 35
Tone poem of graceful movement.

Heins, C. Op. 227. Song of the Troubadour (Minnesang). Romance. Grade III, ... 35
Full of beauty and strength.

Kiel, F. Bolero. Grade III, ... 35
Brilliancy, grace and strength are combined in this fine solo. Revised and fingered by Thos. a'Becket.

Köhler, O. Op. 184. Flight of the Dragonfly (Liebellenflug). Grade II, ... 30
Showy and pleasing; valuable as a phrasing study.

Schleuning, O. Op. 33. Little Coquette (Petite Coquette). Mazurka. Grade II, ... 30
Charming combination of grace and melody, introducing pretty left hand subject.

Schleuning, O. Op. 34. Shower of Gold (Goldregen). Etude de Salon. Grade III, ... 30
Brilliant study of *arpeggios* with an auxilliary note, making a showy solo

Schütze, P. Op. 9, No. 2. Around the Circle (Im Kreise herum!). Waltz. Grade II, ... 25
A great deal of beauty in a small space. Exceedingly interesting.

Sudds, W. F. Op. 256. Rustic (A) Revel. Grade III, ... 35
Has many good and pleasing points; useful for recreation or study.

Tourbie, R. Op. 230. Express (The) Train (Der Schnellzug). Galop Brillant. Grade III, ... 40
Brilliant solo for those who can play octaves.

Vasseur, J. Harp of the Angels (Harpe des Anges). Caprice. Grade III, ... 35
Attractive salon piece, containing some excellent teaching points; good study in delicate yet firm staccato.

Fletcher Music Method

(SIMPLEX AND KINDERGARTEN)

The aim of the Method is to eliminate the drudgery of the study of music and to give a fundamental, systematic and logical musical education in a thorough, natural and pleasurable way; and so make it possible for Music to exercise her three-fold power of development. The System was originated by Evelyn Ashton Fletcher, and the following are a few of the many endorsers and a partial list of the Conservatories in which the System has been adopted.

Dr. Wm. Mason, New York.
Mrs. John Vance Cheney.
Madame Hopekirk.
Philip Sousa.
Franklin Taylor.
Dr. Gerrit Smith, New York.
Wm. Tomlins, Chicago.
Dr. Hugo Riemann, Leipsic.
Thomas Tapper.
Dr. Wm. Cummings, London, Eng.
Kate S. Chittenden, New York.
And others.

University of the State of New York.
Institute of Applied Music, New York.
Departments—Metropolitan College of Music, Metropolitan Conservatory of Music, American Institute of Normal Methods, Synthetic Piano School, Fletcher Music Method.
American Conservatory, Chicago.
Gottschalk Lyric School, Chicago.
Mrs. John Vance Cheney School, Chicago.
Detroit Conservatory.
Broad Street Conservatory, Philadelphia. And others.
Also in the Eleven Leading Conservatories or Colleges of Music in Canada.

There are already over 250 teachers of the System, but the demand is greatly increasing. Miss Fletcher studied for five years in Europe, and has already successfully introduced her System in the European centres, Leipsic, Berlin, Brussels and Paris. Special advantages to those willing to go abroad with the System. The different sets of apparatus invented by Miss Fletcher are fully protected by patents in Canada, the United States, England, Germany, France, Switzerland, etc. This System can not be taught by mail, and the Fletcher certificate of authorization to teach is only obtainable, with the apparatus, by taking the course of instruction. Write for information and circulars with letters of endorsement, to Miss Evelyn Ashton Fletcher, 1125 Madison Ave., or Mrs. E. A. Sturgeon, 5155 Cornell Ave, Chicago, or to the Corresponding Secretary of the Fletcher Musical Association, Miss La B. Brown, the Nightingale, Dudley St., Roxbury, Boston.

MUSIC PUBLISHING

WRITE US FOR FULL PARTICULARS.

We have every facility for the prompt and satisfactory publication of any musical work—no matter whether it is a piece of sheet music or a large book. Our facilities are unsurpassed and there is no kind or style of work in our line which we cannot do in the very best manner at the least possible cost.

Our printing is all that could be desired by the most critical and is equal, in every respect, to the finest European press-work.

HATCH MUSIC COMPANY, PHILADELPHIA.

Musical Rhythms for Piano. By Arnold D. Scammell.

With an Introduction by MRS. CROSBY ADAMS. Of interest to every Teacher. Pupils are delighted with them. Develops a refined musical taste. The Introduction is well worth the price.

Attractively Bound. Price, $1.00.

This book is the direct outgrowth of a need expressed by both teachers and pupils for certain definite rhythms which shall suit the times which come to all of us, when something "in lighter vein" is demanded. To supply this need, by giving marked rhythm as well as tuneful melody is the task set himself by the composer, Mr. Scammell. That these requirements have been met, the work itself is the evidence. The pieces lie well under the hand, do not require much technical equipment, and, best of all, carry themselves easily along by the charm of the rhythm. Mr. Scammell has been fortunate in having the experienced judgment of Mrs. Crosby Adams in the preparation of his work. Teachers will welcome to their teaching list these compositions suited to the natural and healthy demands of a certain phase of the pupil's experience because, while the pieces are indeed "light" they are not commonplace, and will therefore help instead of hinder the progress of the pupil's development towards a refined musical taste.

Pretty Picture Songs for Little Folks

By G. A. Grant-Schaefer and Walt M. Dekalb. **.75**

What the Chicago Press says of it:
"Artistically there is not a more attractive juvenile book on the market."—Chicago *Times-Herald.*
"The melodies are attractive and catchy."—Chicago *Tribune.* "Should be in every Christmas stocking."—*The Elite.*

Wee Wee Songs for Little Tots

By C. H. McCURRIE and WALT M. DEKALB. **.50**

Nearly 5,000 sold and demand constantly increasing. Praised by old and young alike.

Songs That the Children Sing

By MRS. L. D. PESSENDEN and MRS. V. A. BARBER **.75**

Contains two charming operettas and six solos. Nothing better can be found for school and home use. Both words and music are captivating.

BENDEL, F.

Op. 139, No. 3. Moonlight (Mondscheinfahrt) Grade IV 75
Characteristic piece, satisfying musically and well adapted to educate powers of expression. Bass requires careful study.

Op. 108. Polka de la Cour. Grade V 65
Brilliant polka, full of spirit and "go." Excellent practice in wrist and arm touch. Some good passage work.

BENNETT, W. S.

Op. 10, No. 3. The Fountain. Grade VI . . . 35
Good music, useful in training hands and fingers, and interesting to play.

BERENS, H.

Op. 97, No. 3. A Winter Evening's Tale. Tone Piece. Grade IV 35
Delightful piece, which can be made tenderly expressive. Good study in chord playing.

BOHM, C.

Op. 311. Bird in the Wood (Vogel im Walde). Salon Etude. Grade IV 50
Thoroughly melodious and very attractive; full of brightness.

Op. 153. With Resounding Song (Mit Sang und Klang). Concert Polonaise. Grade IV . . . 60
An effective introduction leads to the polonaise, which is brilliant and forceful. A good concert number.

BOROWSKI, F.

First Mazurka. Grade IV 35
Typical Russian composition. Should be well played. Requires well controlled arms. Has a beautiful middle part.

BRAHMS, J.

Op. 76, No. 2. Capriccio in B minor. Grade VI 50
Vigorous and fiery. Calls for intellectual treatment. Good study in light staccato. Will repay careful study.

BRASSIN, L.

Op. 17. Nocturne. Grade V 50
Furnishes excellent practice in melody playing and mixed rhythms. Can be made very striking.

CHAMINADE, C.

Op. 30. Air de Ballet. Grade V 75
Has all the grace and piquancy of the French school. Very characteristic and pleasing.

Op. 42. Les Willis. Caprice. Grade IV . . . 50
Depicts the elusiveness of these water fairies. A very good recital number. Not especially difficult.

Op. 37, No. 1. Pas des Amphores—2d Air de Ballet. Grade IV 50
Another characteristic composition by this talented French woman. Demands great abandon.

DEVRIENT, F.

Lovely Night (Bella Notte). Canzonetta. Grade IV 60
Tuneful, but nonetheless strong. Easily understood and very effective.

DOLMETSCH, V.

Op. 55. Mazurka Melodique. Grade IV . . . 50
A rather fantastic mazurka, which gives opportunity for individuality in treatment. Not technically difficult, but brilliant.

DVORAK, A.

Op. 54 Valse Bohemienne. Grade IV . . . 40
Beautiful waltz, full of the vagaries of the Slavic nature.

GRANADOS, E.

Spanish Dance. Grade IV 35
Moorish dance, in which the varying moods of the Southern nature are depicted. Good touch is required. Very effective.

GRIEG, E.

Op. 40, No. 5. Rigaudon. Grade IV 30
One of those interesting old dances, crisp and lively in style, to which Grieg has added a touch of Norwegian color.

HARMSTON, E.

Wood bird and Minnesinger (Waldvöglein und Minnesänger). Grade IV 60
The song of the wandering minstrel and of the bird mingle. An effective salon piece; excellent study in melody playing.

HASSELMANS, A.

Op. 2 Berceuse. Grade IV 50
Melody is accompanied by running, harp-like passages for the two hands. Splendid study in this style, and sure to please.

HENSELT, A.

Op. 2 No 6. If I Were a Bird. Grade VII . . 35
This favorite composition, edited and annotated by Wm. H. Sherwood. A legato touch which is essential.

JOSEFFY, R.

Nina. Transcription. Grade IV 35
An aria from Pergolese arranged for piano by a great pianist. It is not technically difficult, but requires finished playing.

LIADOFF, A.

Op. 11. Mazurka. Grade V 40
Characteristic Polish dance, with all its wierd variation of melody and rhythm.

Op. 13 No. 1. Prelude. Grade V 35
Exceedingly interesting composition, very effective for recital use. Can be used as a preparation for the Chopin studies in D flat and Op. 25, No. 8.

LACK, T.

Op. 134. Idilio. Nocturne. Grade IV 30
Attractive nocturne by a popular French composer. Full of interesting little touches that add to its charm.

Op. 98. Un Tour de Valse. Grade IV 35
Very brilliant and showy waltz. Excellent practice for the fingers and in crisp chord playing.

KROEGER, E. R.

Op. 42, No. 3. Entreaty. Grade IV 40
The pleading effect of the upper notes of the left hand part is very pronounced. Octaves and sixths in treble give some good practice. A beautiful piece.

Op. 42, No. 5. Humoreske. Grade IV . . . 40
The humor in this composition is strong and hearty. An excellent study and will repay use.

Op. 42, No. 4. Polka Serenata. Grade IV . . 50
Another excellent composition. The bass of second part produces a striking effect. The sixths of right hand part will call for some little care and practice. Good work in staccato also.

MACFARREN, W.

Third Tarantella. Grade IV 50
Splendid example of this wild Italian dance. Melodious and full of fire, it attracts both hearer and player.

MATTEI, T.

Victoria. Gavotte. Grade IV 40
Very taking gavotte. Written by a composer who knew how to add pleasing touches of contrast. Good practice, too.

MENDELSSOHN, F.

Op. 16, No. 2 Capriccio in E minor. Grade V 35
Fine edition of this well-known capriccio. Fully annotated and fingered. Should be popular with teachers.

MEYER-HELMUND, E.

Op. 71, No. 1. Gondoliera. Barcarolle. Grade IV 35
Characteristic and thoroughly enjoyable boat song. An excellent piece for the development of nuance and sustained tone.

MOSZKOWSKI, M.

Op 24, No. 3. Concert Etude. Grade VII . . 50
Brilliant study in octave and chord playing. Well worth the attention of capable players.

Op. 36, No. 6. Etincelles. Grade VI 50
Light staccato, requiring wrist and arm control, interspersed with legato passage is its characteristic.

OESTEN, M.

Op. 75. Swallow's Gossip (Schwalbenmärchen). Grade IV 50
Melodious and spirited salon piece combining instruction and pleasure. Exercise in legato sixths and in arpeggios.

RAFF, J.

Op 8, No. 9. Il Gladiatori. Grade VII . . . 40
Splendid study for hand (or wrist) touch. Well played, it is brilliant and very showy.

RHEINBERGER, J.

Op. 135. Scherzo. Grade VI 35
Requires ample technic and careful study. The constant staccato of left hand part demands care. Brilliant concert piece.

RUBINSTEIN, A.

Barcarolle. Grade V 40
This barcarolle, a good example of Rubinstein's piano music, is difficult. Its passages in thirds and sixths, and the melody carried by both hands demand practice.

Op. 26 No. 1. Romance. Grade IV 30
Beautiful melody in which both hands often join. Without being unduly hard, it is a very satisfying composition.

LISZT, F.

My Sweet Repose (Du bist die Ruh). Transcription Grade IV 35
A transcription of one of Schubert's songs. Should be well played so as to bring out the theme of the song.

SCHUMANN, R.

Op. 12, No. 4. Grillen (Fancies). Grade IV . 30
One of Schumann's best compositions, thoroughly characteristic and satisfying.

Op. 21, No. 1. Novellette in F. Grade IV . . 35
Strikingly vigorous. Its trio contains a beautiful melody in strong contrast to the bold chords of the other parts.

SCHYTTE, L.

Op. 102, No. 2. Valse Noble. Grade IV . . . 50
Good example of this fine piano writer's work. Graceful and original, it is certain to please.

SMITH, W. G.

Op. 64, No. 2. Papillon (Butterfly). Etude Caprice. Grade IV 35
As dainty as the butterfly, it is well named. Delicacy of touch is required to bring out its beauties.

SURZYNSKI, M.

Op. 5, No. 2. Bagatelle. Grade IV 30
Bold, original composition, requiring freedom of wrist and arm. Very effective when well played.

TONNING, G.

Danse Norvègienne. Grade IV 50
Wierd and enticing. The Northern characteristics are pronounced. Good for recital programs.

TSCHAIKOWSKY, P.

Op. 37, No. 9. The Hunt (September). Grade V 35
Characteristic tone description of the excitement of the chase. It belongs to a set of twelve pieces illustrative of the months.

WACHS, P.

Madrilèna. Fantaisie Espagnole. Grade IV . 60
Depicts the charms of the Spanish fair ones. Grace and warmth are in every measure. Thoroughly enjoyable.

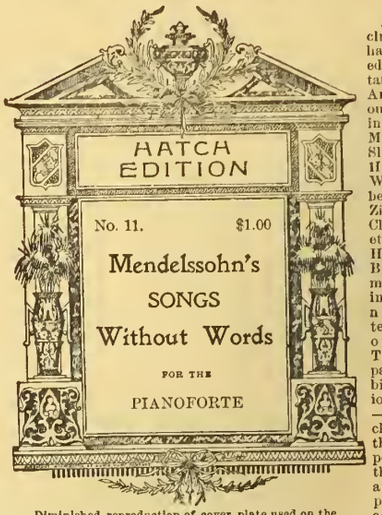
Les Myrtes. Valse de Salon. Grade IV . . . 60
Very brilliant piece of salon music, fresh and graceful in style.

ZITTERBART, F.

Glistening Dewdrops. Etude. Grade IV . . . 50
Not only a splendid study, but a brilliant piece as well. Exceedingly effective if played daintily, yet with firmness.

Published by **HATCH MUSIC COMPANY**, Philadelphia.

CHOICE NUMBERS
FROM THE
"Hatch Edition"



Diminished reproduction of cover plate used on the "Hatch Edition."

All numbers included in this list have been carefully edited and annotated by leading American teachers, our corps of editors including: W. S. B. Mathews, Wm. H. Sherwood, Frank H. Tubbs, Frederic W. Root, R. S. Goldbeck, Jaroslaw de Zielinski, J. S. Van Cleve, Thos. a'Becket, Wilson G. Smith, H. C. Macdougall, Bernhard Listemann, etc. This important work has never been attempted by any other publisher. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Regardless of the additional expense involved in the publication of annotated editions, prices have not been advanced, but are the same as those charged for ordinary reprints of the works included in this list.

No. 28. BURGMÜLLER. Op. 100. Twenty-five Easy Studies for the Pianoforte 1 00
Revised, fingered and annotated by Jaroslaw de Zielinski.

No. 29. CHOPIN. Nocturnes for the Pianoforte 75
Revised and fingered by Carl Mikuli.

Folio of Easy Pieces

IN THE FIRST GRADE

(Companion to "Easy Pieces for Little Folks").

"Easy Pieces for Little Folks," the most popular collection of first grade music ever published, has had an enormous and constantly increas ng sale. Its success confirmed our opinion that a work of this character was needed—that teachers would welcome first grade book combining instruction and recreation in well balanced proportions. Numerous inquiries for another collection of similar character led to the preparation and publication of a companion volume under above title.

Experience gained in the preparation of "Easy Pieces," and from teachers who have been constantly using it with first grade pupils, has enabled the editor to make a very strong book of the FOLIO, which contains thirty-four compositions for little folks. With a view of pleasing all tastes, and with the hope of encouraging young musicians to investigate and become familiar with every variety of form, extreme care was exercised in the selection of subjects. Experienced teachers will appreciate the editor's motive and will find it an extremely useful work

All of the selections have been carefully revised and fingered, and many of them comprehensively annotated. We have no hesitation in saying that it is, in some respects, a decided improvement over its predecessor.

FOLIO OF EASY PIECES, printed from new plates on a fine grade of music-book paper, is neatly bound and cannot fail to attract attention.

To show, at a glance, the ground covered by this excellent book, we print the

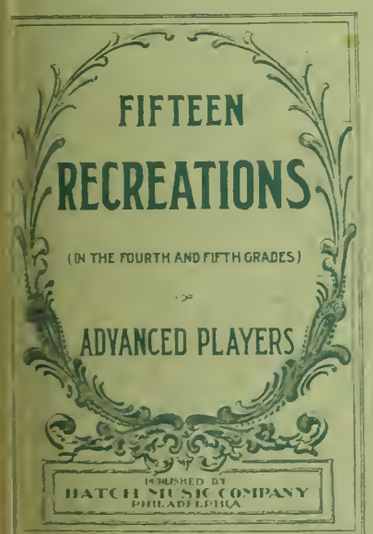
FIFTEEN RECREATIONS

(In the Fourth and Fifth Grades)

FOR ADVANCED PLAYERS

When pupils reach the fourth and fifth grades, they frequently have their own ideas regarding the selection of compositions. Nevertheless the editor is confident that this excellent collection of solos will meet with favor, and his confidence is based upon the fact that all, even the most capricious, will find among the contents a number of pieces that cannot fail to prove both valuable and pleasing.



No collection of similar size, selling at the same price, contains so many and such a variety of Grades IV and V pieces, and no collection of similar character can claim the same careful preparation. In these days of advanced thought and advanced methods, teachers demand revised, fingered and annotated editions, and they also demand editions with exact and proper phrasing clearly indicated. And these demands are so strong that the issues of publishers who do not yield to them meet with scant approval.

With these facts in mind, the editor aimed to make FIFTEEN RECREATIONS an absolutely perfect work, and it is our belief that he has succeeeded.

The selections are admirable, admirably contrasted in styles and moods, and include material available for all occasions whether public, semi-private (such as Commencements), or the home.

FIFTEEN RECREATIONS is printed from new plates on a fine grade of music-book paper, and is neatly bound, with an attractive cover.

To give an idea of the character and variety of the selections included in this collection, we print the

Price, 20 Cents.

By Mail, 28 Cents.

Liberal discount when ordered in quantities.

Musical Memory and its Cultivation

Also an Investigation into the Forms of Memory Employed in Pianoforte Playing and a Theory as to the Relative Extent of the Employment of Such Forms

By FREDERICK G. SHINN, Mus. Doc., Dunelm.

The purpose of the work is twofold: *First*, an inquiry into the various forms of memory employed in piano playing and the formation of a theory with regard to the relative extent of the employment of the various forms by different individuals. *Second*, to repeat, with the strongest possible emphasis, that Ear-training, which is largely a cultivation of the musical memory, is THE FACT of all musical education.

"MUSICAL MEMORY AND ITS CULTIVATION" is divided into two parts. *Part 1* contains seven chapters, as follows: General and Special Memory; Musical Memory; Musical Memory in Connection with Practical Execution Muscular Memory; Visual Memory; Intellectual Memory; Relative Extent of the Employment of the Different Forms of Memory. *Part 2* contains six chapters as follows: Necessity for the Cultivation of Musical Memory; General Conditions Favorable to Memorizing; Suggestions for a Scheme of Memory Training; Method of Studying Pieces for Memorization; Memory Training and Examination Schemes; Memories of Musicians.

A valuable work which should be read and studied by all musicians.

Paper Binding. Price, 50 Cents.

Sieber's 36 Elementary Vocalises

Op. 92-97 Inclusive

FOR SOPRANO, MEZZO SOPRANO, ALTO, TENOR, BARITONE AND BASS

With Introductory Notes by FREDERIC W. ROOT.

Sieber's 36 Eight Measure Vocalises, for all voices, are well known and appreciated by teachers. The composer had a double object in view and prepared them for use in the school, as well as for self-study at home. The book for each voice differs from the companion volumes, as the exercises were written with especial regard for the voice part under consideration. Each study is contained within eight bars—therefore do not become tedious—and are written with the *sol fa* syllabics, also with an ingenious and effective set of vowel sounds designed by the composer, who is a teacher of European celebrity. All of his studies are melodious and interesting.

Our new edition is, in every respect, the finest in print. These studies have heretofore, been published only in sheet music form, at $1 50 each. While our new edition is of much more convenient size and much handsomer in every way, it is sold for 50 cents per copy.

Mr. Frederic W. Root says "The new edition of Sieber's Exercises are beautifully gotten out and I hope will be properly appreciated. I congratulate you upon the edition and hope to use it in my teaching for many a year."

Paper Binding. Price, 50c. Each.

CLASSIC PIANO SOLOS

VOLS. 1-2.

Superb Collections by Eminent Authors.

While the contents of Volume 1 is largely made up of the works of the older masters, with but few exceptions the pieces found in Volume 2 are the works of the more modern classical writers, many of whom are still living. All of the compositions of both volumes are within the capabilities of the ordinarily good performer and will be found most interesting whether used for purposes of recreation or instruction. We ask a critical examination and comparison with works of similar character.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

Classic Piano Solos for Young People

VOLS. 1-2.

ELEGANT COLLECTIONS BY WELL-KNOWN WRITERS.

Classics selected for the young are frequently of the dryest character and students are too apt to absorb the idea that good music *must be dull*. In the preparation of these collections the requirements of the youthful mind were kept in view, and the selection of works will prove that music of an advanced standard can be pleasing as well as useful in the formation of a correct and pure musical taste. These works are unequalled by any similar publications of corresponding grade. A critical comparison will establish our claims of superiority.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

Herve D. Wilkins
Arthur L. Manchester

GRADE 1.

The Corner Stone of the Course.

Table Exercises; Instructions from the Very Beginning, Most Carefully Graded; Difficulties Introduced in Logical Order; Interesting Exercises and Etudes; No Octaves, Exercises for Free Wrist; Major Scales—*Written*, but *not* Played.

GRADE 2.

Introduction of Scale Playing: Exercises for Passing Under the Thumb; Minor Scales Written; Beginning of Arpeggio Work (Broken Chords); Major and Minor Chords Awakening of the Ideal of the Singing Touch; Interesting Etudes; Careful Grading of Difficulties.

The Preparatory Gymnastic Exercises, in Grade I. are Practical and Helpful.

GRADE 3.

Velocity Assumes Some Importance; Attention Given to the Staccato, while Cantabile Playing Is Carried Along with Equal Care; Etudes Become More Like Pieces; Polyphonic Playing Introduced; Exercises for Weak Fingers in Each Hand.

GRADE 4.

Polyphonic Playing Carried Forward: Rhythmical Problems (Two Against Three) Introduced; Greater Richness in the Etudes; Etudes for Melody Playing, Rapid Runs, Trills, Arpeggi, Marked Rhythms, Extreme Agility, Fourth and Fifth Fingers Interest Maintained Throughout the Grade.

GRADE 5.

Musical Material of Great Beauty; Etudes for Left Hand, Octaves, Polyphonic Playing, Staccato, Double Notes, Grand Arpeggi, Fourth and Fifth Fingers. In Singing Tone, Touch, Velocity and General Intelligence, Much More is Demanded of the Pupil.

GRADE 6.

Etudes for Extended Finger Touches, Staccato, Doubl Notes, Extreme Rapidity in Staccato and Runs; More Attention Given to Octaves; Pupil's Task Steadily Increasing in Difficulty—Greater Requirements in Regard to Touch, Interpretation, Color and Phrasing.

GRADE 7.

Pieces and Etudes by Saint-Saëns, Henselt, Kullak, Chopin, Mendelssohn, Raff, Alkan and others. These, Making Greater Demands upon the Pupil, advance his Technical Skill to the Highest Efficiency and Insure Ability to Interpret the Greatest Works for the Piano.

Several Opinions.

WILLIAM H. SHERWOOD. I am happy to state that the "National Graded Course" is remarkably adapted to the needs of teachers and students of music. Your claim in regard to the excellent grading of the studies is a thoroughly just one. I do not think that I have ever seen as good a succession of topics and exercises arranged as they are from the beginning on, using the best kind of materials from all sources and without any superfluous pages.

WILSON G. SMITH: I have been particularly impressed with the practical value and uniform excellence of the "National Graded Course."

AD. M. FOERSTER: The "National Graded Course" is destined to hold a foremost position among the works of its class. I do not know of a better work, one containing a more interesting and valuable selection of studies and pieces for the various peculiarities to be mastered. A list of desirable pieces that may be added to each part, if found necessary, is given in each grade, also definitions of all musical terms used in this work. The work is bound to find favor with thoughtful teachers and students.

O. R. SKINNER: I like the "National Graded Course" much better than any other work I am familiar with. The editing seems to be thoroughly well done, and the print leaves nothing to be desired.

(Want of space alone prevents printing the opinions of hundreds of well-known teachers in all sections of the United States and Canada.)

It Will Help YOU in Your Teaching.

Because

- It embodies the work of the most eminent pianists and teachers in America.
- It can be readily adapted to your "method," no matter what that may be.
- It is the LATEST work of the kind.
- ALL of the studies are carefully annotated, fingered and edited.
- It is the most carefully graded of any course before the public.
- It begins at the beginning of study.
- It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.
- It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.
- Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

This complete work (7 grades) together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course," will be sent upon request, subject to examination and approval—without any obligation to purchase.

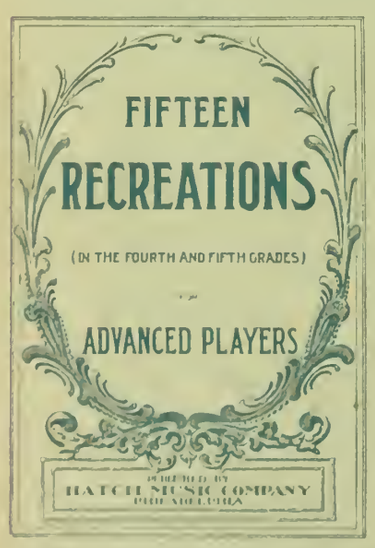
Avoids all necessity for either rolling or folding sheet music or books. A substantial satchel, made for service.
If to be sent by mail, add 22 cents.

FIFTEEN RECREATIONS

(In the Fourth and Fifth Grades)

FOR ADVANCED PLAYERS

When pupils reach the fourth and fifth grades, they frequently have their own ideas regarding the selection of compositions. Nevertheless the editor is confident that this excellent collection of solos will meet with favor, and his confidence is based upon the fact that all, even the most capricious, will find among the conteuts a number of pieces that cannot fail to prove both valuable and pleasing.



No collection of similar size, selling at the same price, contains so many and such a variety of Grades IV and V pieces, and no collection of similar character can claim the same careful preparation. In these days of advanced thought and advanced methods, teachers demand revised, fingered and annotated editions, and they also demand editions with exact and proper phrasing clearly indicated. And these demands are so strong that the issues of publishers who do not yield to them meet with scant approval.

With these facts in mind, the editor aimed to make FIFTEEN RECREATIONS an absolutely perfect work, and it is our belief that he has succeeeded.

The selections are admirable, admirably contrasted in styles and moods, and include material available for all occasions whether public, semi-private (such as Commencements), or the home.

FIFTEEN RECREATIONS is printed from new plates on a fine grade of music-book paper, and is neatly bound, with an attractive cover.

To give an idea of the character and variety of the selections included in this collection, we print the

CONTENTS

ALENEFF, E.	Op. 9, No. 3	Impromptu.
BOHM, C.	Op. 311	Bird in the Wood. Salon Etude.
CHAMINADE, C.	Op. 37, No. 1	Pas des Amphores.
DAQUIN, C.		The Cuckoo. Rondo.
ENGELMANN, H.	Op. 401	The Zitherplayer of Auenthal. Idyl.
GODARD, C.	Op. 67	Prestissimo. Galop Caprice.

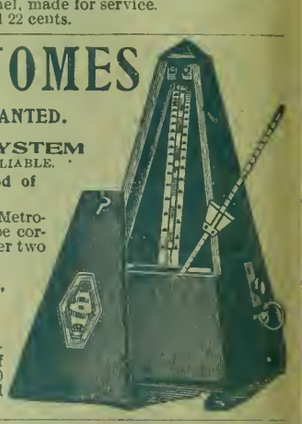
METRONOMES

FULLY WARRANTED.

MAELZEL SYSTEM
ACCURATE AND RELIABLE.

Quick and Easy Method of Measuring Time.



We advise the use of a Metronome, so that time may be correctly interpreted. We offer two styles at special prices:

Mahogany, without Bell, $2.50.
Mahogany, with Bell $3.50.

Prices quoted do not include Express or Mail. If ordered by mail, add 40 cents to the price quoted for each style.

WITH
Practical Suggestions
TO
Students of Music.

Is Entirely New and Superior to Anything of Similar Character That Has Ever Been Offered.

The Tablet is 6⅞ x 10⅜ Ins.

It contains 100 Sheets—each with 12 staves. The paper is first-class—suitable for writing with either pen or pencil. The leaves are perforated so that they can readily be removed. Second page of cover contains, for ready reference, the following: Notation, Display of Tetrachords, Cycle of Keys, Condensed History of the Minor Scale, Relationship of the Minor Scale. Manchester's is so much superior to all other tablets, that an examination will insure its use.

Price, 20 Cents.

By Mail, 28 Cents.

Liberal discount when ordered in quantities.

Musical Memory and its Cultivation

Also an Investigation into the Forms Of Memory Employed in Pianoforte Playing and a Theory as to the Relative Extent of the Employment of Such Forms

By FREDERICK G. SHINN, Mus. Doc., Dunelm.

The purpose of this work is twofold. *First*, an inquiry into the various forms of memory employed in piano playing and the formation of a theory with regard to the relative extent of the employment of the various forms by different individuals. *Second*, to repeat, with as compact possible emphasis, that ear training, which largely facilitates the cultivation of the musical memory, is The Factor of all musical education.

"MUSICAL MEMORY AND ITS CULTIVATION" is divided into two parts. *Part 1* contains seven chapters as follows: General and Special Memory; Musical Memory; Musical Memory in Connection with Practical Execution; Muscular Memory; Visual Memory; Intellectual Memory; Relative Extent of the Employment of the Different Forms of Memory. *Part 2* contains six chapters as follows: Necessity for the Cultivation of Musical Memory; General Conditions Favorable to Memorizing; Suggestions for a Scheme of Memory Training; Method of Studying Pieces for Memorization; Memory Training and Examination Schemes; Memories of Musicians.

A valuable work which should be read and studied by all musicians.

Paper Binding. Price, 50 Cents.

Sieber's 36 Elementary Vocalises

Op. 92-97 Inclusive

FOR SOPRANO, MEZZO SOPRANO, ALTO, TENOR, BARITONE AND BASS

With Introductory Notes by FREDERIC W. ROOT.

Sieber's 36 Eight Measure Vocalises, for all voices, are well known and appreciated by teachers. The composer had a double object in view and prepared them for use in the school, as well as for self-study at home. The book for each voice differs from the companion volumes, as the exercises were written with especial regard for the voice part under consideration. Each study is contained within eight bars—therefore do not become tedious—and are written with the *sol fa* syllables, also with an legato and effective set of vowel sounds designed by the composer, who is a teacher of European celebrity. All of his studies are melodious and interesting.

Our new edition is, in every respect, the finest in print. These studies have, heretofore, been published only in sheet music form, at $1 50 each. While our new edition is of much more convenient size and much handsomer in every way, it is sold for 50 cents per copy.

Mr. Frederic W. Root says: "The new edition of Sieber's Exercises are beautifully gotten out and I hope will be properly appreciated. I congratulate you upon the edition and hope to use it in my teaching for many a year."

Paper Binding. Price, 50c. Each.

CLASSIC PIANO SOLOS

VOLS. 1-2.

Superb Collections by Eminent Authors.

While the contents of Volume 1 is largely made up of the works of the older masters, with but few exceptions the pieces included in Volume 2 are the works of the more modern classical writers, many of whom are still living. All of the compositions of both volumes are within the capabilities of the ordinarily good performer and will be found most interesting whether used for purposes of recreation or instruction. We ask a critical examination and comparison with works of similar character.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

Classic Piano Solos for Young People

VOLS. 1-2.

ELEGANT COLLECTIONS BY WELL-KNOWN WRITERS.

Classics selected for the young are frequently of the dryest character and students are too apt to absorb the idea that good music *must be dull*. In the preparation of these collections the requirements of the youthful mind were kept in view, and the selection of works will prove that music of an advanced standard can be pleasing as well as useful in the formation of a correct and pure musical taste. These works are unequalled by any similar publications of corresponding grade. A critical comparison will establish our claims of superiority.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

A SELECTED LIST OF

50 Second Grade Pieces

FOR

TEACHING AND RECREATION.

Any of our publications sent subject to examination. Complete Illustrated and Thematic Catalogue free on application. Send for our Special Prices. Mail Order Business Solicited.

BAUMFELDER, F.

Op. 215, No. 19 Harlequin (Der Hanswurst) . 20
A very bright piece, well treated and clear in form. The little figure of sixteenth notes is sure to attract. Good study in staccato.

BEAUMONT, P.

At the Twilight Hour 30
Of quite different character. A rather broad melody calls for a singing touch. The wide accompaniment in left hand will require care. Very pretty.

Spring's Delight 30
This must refer to the pleasant May days, for it is full of cheer and sunshine. Good for teaching and parlor playing.

Twinkling Stars 30
These stars twinkle very melodiously. A graceful melody without special difficulty characterizes this composition.

BIELFELD, A.

Bygone Days. Menuet 20
The days that are passed are not remembered in sadness, for this is a cheery little dance in ¾ measure. Some good practice for left hand.

BIEHL, A.

Op. 53, No. 3. Gretchen and Her Doll (Gretchen und ihre Puppe) 20
Another bright piece, full of tune and presenting no hard spots. Considerable staccato in both hands.

Rondo Militaire 35
A martial composition that will set the feet to marching. Needs spirit in its playing.

Op. 52, No. 18. Rope Dancer at the Fair (Die Seiltänzer auf dem Jahrmarkt) 20
An excellent finger study, with chords in left hand. Short and interesting.

BOLCK, O.

Op. 68, No. 5. Roguishness (Schabernack) . . 20
One would hardly look for roguishness to be expressed in the minor, but it is done—and well done—in this little piece. A nice staccato scale for left hand.

BURGMÜLLER, F.

Hunting Song (Kreutzer) 20
A good teaching piece, and pretty withal. Arrangement of a scene from the opera, "A Night in Granada."

DOLES, R.

Op. 10. Little Waltz (Une Petite Valse) . . . 20
A very excellent teaching piece. Contains opportunities for phrasing, finger and hand development, and when learned, is well worth playing.

EILENBERG, R.

Op. 46, No. 3. Come to the Dance (Komm' zum Tanz) Schottische 20
This invitation to the dance is alluring. Bright in its subjects and full of "go," it is sure to please.

ENGELMANN, H.

Op. 308 No 1. Berceuse 20
A real bit of inspiration. A beautiful theme is interwoven between the two hands. A fine study in expressive playing.

Op. 430, No 5. Jolly Parting. Scherzo 25
These people must have parted in good humor, for the scherzo is a gem. Lightness of touch and nimbleness of finger are needed. Results will be good.

Op. 430, No 2 Out for a Day's Sport. Rondo 25
Excellent teaching piece. Full of all that attracts the young player, and can be made the means of material advancement.

FISCHER, O.

Op. 114, No. 2. At the Shooting Match 20
Good study in dotted eighth and sixteenth rhythm. Should move firmly and with well controlled arm.

GAEL, H. van.

Op. 83. Marche Guerrière 35
Stirring march. Good wrist study. Apart from its beauty, its rhythmic character is valuable.

GÄNSCHALS, C.

Op. 29 Our Loved One (Unser Liebling) . . 30
A sentimental piece, calling for good melody playing. Very tuneful. Without octaves.

GEIBEL, A.

Good Morning. Scherzo 35
Good study in rhythm and staccato. Melody work in both hands. Full of brightness.

Good Night. Berceuse 35
A good-night song, nice to play. It is simple in construction, the theme being principally in double notes, with bass of single eighths.

Pleasant Summer. Melody 35
An excellent study in melody playing. Lovely little melody with simple accompaniment.

HEINS, C.

Op. 224. Cuckoo Clock (Die Schwarzwälder Uhr) Salon Polka 30
The runs in this call of the cuckoo will be good training. Light wrist and flexible fingers are essential.

Op. 181, No. 2. Spring Wanderings 30
Good march. Excellent practice, and effective when learned.

HIRSCH, T.

Op. 44 On the Caroussel (Auf dem Carousel) 35
A cheery piece, recalling summers at the shore, with the fun at the merry-go-round. Good practice, too.

HOLST, E.

Beach Promenade. March 30
Another seashore piece. A picture of the crowds on the board walk. It is a tuneful march presenting no difficulties.

Fresh Breezes. Waltz 30
A breezy waltz, easy, but pleasing and useful. Presents a great variety of melodic themes.

Restless Waves. Tarantella 30
The restless sway of the waters is well pictured in the never-ceasing movement of this composition. Worth study.

JOHN, F.

Op. 251, No. 3. Gipsies Are Coming 20
The wierdness of the gipsy is in this. Should be played quickly and with lightness. Good practice in left hand skips.

KAISER, P.

Op. 2, No. 3. Schottische 25
Graceful dance, full of melody. Not difficult. One of a set of five easy dances entitled "The Children's Ball."

Op 2, No. 4 Waltz 25
A nice waltz containing some good practice in run playing. Another selection from the same set.

KRENTZLIN, R.

Op. 4 Army and Navy March 35
An attractive march, presenting no special difficulties. Inspiring and brilliant.

LICHNER, H.

Lords and Ladies. Minuet 30
A graceful minuet, worth playing. Stately movement can be well brought out.

MERKEL, G.

Op. 31, No. 2. Merry Huntsman (Fröhlicher Jägersmann) 20
Typical hunting song, well written and brilliant. Attractively harmonized.

MUTTER, C. F.

Jolly Guardsmen March 35
Brilliant and stirring. Excellent for thirds and octaves.

NÜRNBERG, H.

Dancing in the Meadows 20
Meadows gay with flowers and children full of joy are apparent in this lively little piece.

OESTEN, T.

Op. 202, No. 4. Doll's Dream 35
A piece of descriptive music. Contains a cradle song, the dream, and a dance.

SARTORIO, A.

Op. 229, No 9 Off to the Chase (Auf zur Jagd) 30
Another piece of musical description. A cheery 6-8 movement, and a real hunting song.

Op. 229, No 10 Torch Dance (Fackeltanz) . . 30
Characteristic piece of much merit. Excellent practice in wrist touch and syncopation. Can be made very realistic.

SCHILD, T. F.

Always Gay (Immer Flott) March 30
An attractive march with no troublesome places. Brilliant and joyous composition.

SCOTT, H.

Quiet Delight (Stillvergnügt) 35
A bright melody sure to please the pupil. Sprightly movement.

STREABBOG, L.

Columbine 20
An attractive piece presenting a good study of light, yet singing staccato Arms must be well controlled.

Harlequin 20
Useful and pleasing piece. Suggests tumbling of the clown.

TSCHAIKOWSKY, P.

Op. 39, No. 8 Waltz 20
Well worth using. It is healthy in sentiment, and thoroughly musical.

WANDELT, B.

Op. 12, No. 1. Doll's Waltz 30
Graceful and melodious. Excellent for phrasing study in simple forms.

WEISS, P.

Op. 19, No. 6. Evening Song (Abendlied) . . 20
Tender little song, calling for nice treatment. No technical difficulties.

WENZEL, H.

Bell in the Valley (Glöcklein im Thale) 30
A descriptive piece in which the chime of the bell is frequently heard. Presents no particular difficulty, beyond the light touch of the grace notes.

Brook in the Wood (Der Waldbach) 30
Brilliant tone piece in which the gurgle of the brook, as it rushes over the stones, is heard. Excellent practice.

Greeting to Appenzell (Erinnerung an Appenzell) 20
Tuneful and bright. Of no particular difficulty, and furnishes interesting practice of light chords.

WOOLER, A.

Little Cavalier. March 35
Graceful little march, without heavy chords or great stretches.

ZIESE, L.

Sweet Hope. Melody 20
Characteristic melody requiring a singing finger touch. Can be made very pleasing.

Published by HATCH MUSIC COMPANY, Philadelphia.

A
FAULTY TECHNIC
The prime cause of inartistic piano playing is the natural result of faulty elementary technical instruction.

Hatch Music Company's New Publications

Modern Foundation Studies
—in—
Piano Playing
Graded for Beginners.

By W. F. SUDDS.

The great progress made in the art of piano playing during the past few years has, to a large extent, rendered older books of instruction obsolete. All good works contain the proper material, but its arrangement, and the method of presenting it to the immature musical mind, often leaves much to be desired. Improvement of these particular features—the arrangement and method—has been the guiding thought in the preparation of "Modern Foundation Studies."

It is a work for beginners, and matters of vital importance, such as formation of the hand, methods of touch and tone-production, are treated in detail. In addition to the comprehensive treatment of these subjects and numerous musical examples, exact positions and movement of the hands in the proper performance of the various touches are profusely illustrated. This feature will be appreciated by teachers.

The work contains foundation material on which the most elaborate superstructure may be safely built. The music has been selected with great care, to clearly illustrate the point under consideration in an attractive manner, without wearying the student.

Paper Binding. Price, $1.00.

MODERN STUDIES
In Phrasing and Interpretation.

By W. F. SUDDS.

It is now very generally admitted that a separatiou of the mental and physical features is the best plan for imparting instruction in the study of music. Both may be studied at one time, but it is a mistake to suppose that mental training is the result of physical effort.

To insure proper performance of a composition, the mental concept must be perfect. A pianist possessed of brilliant technic, acquired only by long and faithful practice, may mar a good work because of inability to interpret the author's ideas, just as one may recite the *words* of a poem without a proper appreciation of their meaning and without a correct grouping into phrases. To thoroughly enjoy a musical work one must be able to analyze it, and "Modern Studies in Phrasing and Interpretation" presents the means of doing this in a most comprehensive and intelligent form.

Want of space prevents a detailed description, but we shall be glad to send the work subject to approval, so that any one may test our assertion that this is a thoroughly modern and practical exposition of the subject.

Paper Binding. Price, $1.00.

Guide to Practical Musicianship
For Students of Piano, Organ or Violin.

By A. J. GOODRICH.

In his new system, the author does away with the old and slavish process of rote memorizing, *i. e.*, playing notes and repeating them until memorized, without attempting to master the composer's design; and he illustrates the means by which intelligent students may, in a comparatively short time, master any composition that does not present technical difficulties beyond their conception.

The results are three-fold: (1) A great economy of time; (2) An intelligent understanding of compositions; (3) An improved memory.

Professional musicians, practical teachers, amateur musicians and students of music have long felt the need of some improved method that would reduce the time required to memorize a composition, and Mr. Goodrich presents a method that he subjected to a thorough and exhaustive test, with eminently satisfactory results, before putting his ideas in shape for publication. It is the author's firm belief that, by its aid, compositions may be mastered in from one-quarter to one-half the time required by old systems.

Every musician needs a copy of "Goodrich's Guide to Practical Musicianship."

Paper Binding. Price, $1.00.

THIS SYSTEM IS COVERED BY COPYRIGHT.

MUSICAL KINDERGARTEN FOR THE PIANOFORTE

ASSOCIATE TEACHERS
MRS. GRACE YEAGER,
MISS KATHERINE SCHUSTER.

By FANNIE CHURCH PARSONS.

This system is most simple in outline and material.
It is most comprehensive and complete.
It is essentially a tone system teaching the children how to write music "by ear."
The materials used are, while very durable, most suggestive of the beauty of the art of music.
The lessons are equally instructive to either child or adult beginner.
The students do much real piano work, thus no intermediate course is necessary.
The stories and songs do not savor of the grotesque, but tend to refinement and culture.
The price for normal work, including materials, is within the reach of all.
You can take the work by mail, or of a normal instructor, or of Mrs. Parsons personally.

Correspondence should be addressed to **Musical Kindergarten Company,**
Office, 6 W. Chicago St., Quincy, Mich.
STUDIO, 510 HANDEL HALL, CHICAGO, ILL.

Characteristic Scenes and Sketches

A COLLECTION OF 81 PIANOFORTE PIECES

Compiled from the Masters and Modern Writers by

MARI RUEF HOFER.

Bound in limp cloth. Price, $1.25.

The material in this collection is especially desirable for teaching purposes, as they afford many phases of practice. They are particularly well chosen and represent a wide variety of subjects. Another attractive feature is that with few exceptions they are only one and two pages in length and, as the heading implies, are characteristic, "story-telling" pieces.

The well-known composers represented are Bach, Handel, Haydn, Beethoven, Mozart, Schubert, Schumann, Mendelssohn, Brahms, Reinecke, Jensen, Rubinstein, Grieg, Chopin, Heller, Karganoff, Hollaender, Gurlitt, Gayrhos, Foerster, Rheinhold, Kullak, Weber, Loeschhorn, Parlow, Gilchrist, Schoenefeld, Oldberg and others.

The pieces grade from easy to medium in difficulty. Most of them have been edited by Mr. Calvin B. Cady.

Vol. VI, No. 4. PHILADELPHIA, APRIL, 1901. Yearly Subscription, $1.50. Single Copy, 15 Cents.

EASTER MORNING.

What tidings of reverent gladness are voiced by the bells that ring
A summons to men to gather, to-day, in the courts of the King.
"He is risen!" O glorious message! "He lives who once was dead!"
And hearts that were heavy with sorrow hear, and are comforted

We come to our dear Lord's altar. What brightness greets us there!
The winter's gloom has vanished, and beauty is everywhere.
From the censer-cups of the lilies rise scents of mirth and balm,
And the soul, like a lark, soars heavenward, winged with the Easter psalm.

Alleluia! the choir is chanting, like a jubilant, mighty voice;
The Lord is risen!—is risen! Rejoice, rejoice, rejoice!
From the tomb in which men laid him the stone has been rolled away,
And lo! the Christ they sing of is here in our midst to-day!

O beautiful, beautiful lilies, what truths you typify!
You seem to die in the autumn, and yet you did *not* die,
And on the Easter morning, while exultant voices sing,
You repeat to all men the lesson of the miracle of spring!

O radiant morning of Easter, dawn on all souls to-day;
Let the light of Christ's glorified presence drive darkness and doubt away.
From the lips of the lilies learn we the truth of life and of death
And say, "My Redeemer liveth!" with glad and reverent breath.

—*Eben E. Rexford.*

BUSINESS METHODS.

HARVEY WICKHAM.

The young music teacher is often confronted with the question, "What Method do you teach?" The correct answer, though by no means the politic one, would be, "I do not teach Methods, but Music." In this paper, however, I do not wish to speak of the method which an ambitious musician might represent, but the method by which he should exploit all phases of his calling—the Business Method.

And what is the business method? Almost everybody has a vague idea of what is meant by the term, but many would be at a loss for a definite one. This shows that many have not the first principle of the method at heart, which is accuracy. Exact attention to details is what makes, and the lack of it break, a mercantile establishment. It matters not how great a sum of money is invested in the capital stock, if its management is careless of odds and ends, little scraps of profit, or loss here and there, I don't want to be "long" of that stock, as the saying is. The difference of a very small fraction of a cent per pound in the selling price of sugar, is the difference between a fortune earned and a fortune lost by the great American Sugar Refining Co. Andrew Carnegie said in a recent interview, that the saving in freight which would be possible if he erected a steel plant near a great water-way which I need not name, would represent all the profit he cared for. It will thus be seen how close great establishments figure their accounts, and consequently what attention they pay to details.

Does the average music teacher do the like? Does he study trifles? Unfortunately, no. He doesn't think it worth while. If he inserts an advertisement, he takes little or no pains with its composition, as if "any old advertisement" would do. A great merchant would know that advertisement writing is an art in itself, and would engage a specialist to endite it. If the ordinary musician has to prepare a program for some particular occasion, he is satisfied with a mediocre performance. Here is an opportunity for the best kind of an advertisement turned to no account. If he has faults of speech or manner, he thinks them of too little importance to correct them. Yet, on what a hair the apple of opportunity often hangs. What mote of dust often turns the scale for or against the applicant! Neatness of dress and a general attractiveness of personality proclaim the gentleman always. I know not why, but every Tom, Dick and Harry assumed, as a matter of course, that he is a gentleman from the cradle. A letter which is ill-written, or on poor paper, or paper of the wrong size, or in an envelop that does not match, will produce an impression against anyone. A business man alone realizes the importance of these things. A business man, when he takes up music, has an attractive studio. If it is not elegant, it is clean. Dirty windows interfere with the sale of drygoods, or so much trouble would not be taken with soap and water in our stores. Is it possible that the teacher has to deal with a less sensitive class of customers than the dealer in calico?

Up-to-dateness, if I may be pardoned the expression, is the second principle of the business method. This implies many things. First, it implies up-to-dateness, pure and simple. The world moves, and at a tremendous rate. In a recent article in the New York *Sun*, a noted scientist writing about "Surgery," stated that the greatest surgeon of a half century ago would not be able to teach a class of beginners in one of our first-class medical colleges to-day; and that the conversation of an expert would be well-nigh unintelligible to him. It is not that the foundations of art or science are being changed, so much as that improved ways of applying old principles are being found. This makes constant study necessary for the successful everywhere. New things which claim to turn the world upside down and render null and void the work of the past, are very apt to be "fakes," pure and simple. Science and art grow by the gradual substitution of right for wrong in their theories and practices. Each worker removes a grain of error and puts a grain of truth in its place. Be familiar with the very latest grain added, my striving young reader! It is probably of comparatively small importance, but the rocks are made up, as are the mountains, of small grains.

Up-to-dateness means also the doing of everything to day that must not for some good reason be put off till to-morrow. Procrastination is a subtile enemy of us all, and little do we realize how often it side-tracks our ambitions. The mind easily finds excuses for putting off the disagreeable. It matters little what you will do or what you intend to do a year hence. A thousand circumstances beyond your control will certainly have something to say about it. What is important is to-day's work. If one does all that there is in sight, he is sure to advance.

"Business is business," is a proverb often on the lips of the unbusiness like. It usually means that they have done something which they are ashamed of, and are trying to hide behind the supposed selfishness of commercial life. Well, the commercial life may be selfish to a degree, but it is also honest. Credit is the foundation on which commerce rests. Confidence is the real circulating medium in the great world. And one can't win confidence without deserving it. One may try, but failure is foredoomed. Frankness is absolutely essential to success. Let every good man be thankful that it is so. It doesn't pay to misrepresent, even if self-respect counted for nothing. The man who comes out for what he is, is apt to be something worth while. If he is a professional musician, he is a welcome sight to the average business man. Too many professionals *pose*. They make themselves ridiculous in the eyes of the substantial part of the community in which they live. Nobody believes in a pose or a poser. The people know quite well that you are not a Paderewski, for they have heard you play. You may speak contemptuously of your betters, but it will do them and not yourself good. If you are an honest, wideawake, ambitious, painstaking, business-like, reputable worker in the field of art, though an humble one, you are sure of a welcome and a reward almost everywhere. Even if you are perhaps not particularly adapted by nature for the calling of a musician, business habits will carry you to remarkable heights. It will always be lamentable, if you have not a remarkable gift, that you did not take a different calling; but business ability without genius is a far more marketable, and a far more agreeable combination, than genius without business ability. The great ones have both.

I call to mind a man who was employed for years in a mercantile establishment—in fact, he was the employé of a "trust." Rather late in life, he became a teacher of vocal music, and assisted by a very capable wife, soon became the leader of the art circle of a large city, and a member of its best society. His musical talents were considerable, it is true, but I verily believe he would never have succeeded so well had his junior years been devoted to music and not to the business of the "trust." He has often said to me that those years at the desk were far from wasted, for there he learned the ways of men, the meaning of life, and the habits of accuracy which brought him success.

HOW TO PRONOUNCE THEIR NAMES.

The grand opera season in New York is almost over, but it is not too late to note this helpful key to the pronunciation of the names of the artists taking part, which the New York *Tribune* generously provides in response to the request of a reader. It may be added that the names on which Americans seem to stumble most frequently are Mancinelli, Fion, Gilibert, De Reszke (sometimes miscalled "de wretchky"), Bispham (which is often heard "Bisfan"), and Gadski, which seems a special temptation to those addicted to flat "a." Schumann-Heink is heard with the leading stress sometimes on the first name, sometimes on the last; it should be divided evenly as is the custom with English and American double-barreled names. Here is the *Tribune's* list:

Mancinelli, Man-chee-nel-lee, the accent on the third syllable, the vowel "a" broad as in ah, each "l" sounded separately.

Damrosch, Dahm-rosch, accent on the first syllable.

Fion, "o" as in on, with the suspicion of a "g" sound at the end of the word, the French nasal twang.

Melba, Mell-bah, accent on the first syllable "e" short as in fell.

Cremonini, Cray-mo-nee-nee, accent on the third syllable.

Campanari, Cahm-pah-nah-ree, accent on the third syllable.

Gilibert, Zhee-lee-behr, even accent on all syllables.

Journet, Zhoor-nay, equal stress on both syllables.

Dufriche, Du-fresch, equal stress on both syllables.

De Reszke, Duh Resch-kay, "uh" very short, accent on "Resch," last syllable very short.

Bishpham, Bis-pum, accent on the first syllable.

Blass, Blahss.

Ternina, Ter-nee-nah, accent on the second syllable.

Schumann-Heink, Shoo-mahn-Hink, the "i" long as in bind; accents on the first and last syllables.

Breval, Bray-vahl, equal stress on both syllables.

Saleza, Sah-lay-zah, equal stress on all syllables.

Sizes, Seeze.

Scotti, Scut-tee, accent on the first syllable, the "u" sound something between short "o" and short "u" in English.

Nordica, Nohr-dee-kah, accent on the first syllable.

Dippel, Dip-pel, accent on the first syllable.

Muhlmann, Muhl-mahn, accent on the first syllable.

Olitzka, Oh-litz-kah, accent on the second syllable.

Gadski, Gahd-skee, accent on first syllable.

Plancon, Plahn-son, a slight nasal twang at the close of each syllable, but no accent.

Salignac, Sah-leen-lahck, accent even on all syllables.

Bars, Barse

Van Dyck, Vahn Dike, accent on second syllable.

THE Teachers' Forum

Conducted by N. J. COREY

This department is inaugurated for the purpose of uniting the many teachers who read THE MUSICIAN in a bond of professional brotherhood. It is to be their medium for the interchange of ideas, experiences, encouragement, discouragement and difficulties. The fullest correspondence is invited. The questions will be answered and suggestions given by the conductor and the contributions of those who wish to gain new light or to present their methods will be printed. We propose helping ever teacher who will permit us to do so; we intend to do everything possible to overcome the isolation with which you are burdened. Will you co-operate with us?

No conditions are attached; the department is open to *all* MUSICIAN subscribers. Address all communications to the Teachers' Forum, care THE MUSICIAN, Eighth and Locust Streets, Philadelphia, Pa. Do not hesitate, but be among the first to ask help, or to give some other teacher a suggestion. Let us know what you would like to have treated in its columns.—Editor of THE MUSICIAN.

"The gates of art are closed unto none; who so entereth thereat, though he seeketh perfection, yet shall he not find it."
—Ancient Egyptian Papyrus, 3580 B. C.

PREPARATION FOR TEACHING.

"While my experience as a teacher is rather limited, my love for the art compels my attention and interest in everything pertaining to it. My early education in music was lacking in foundational training and understanding of the principles of touch and technic. Having talent and a good touch I came to be a brilliant performer, reflecting great credit upon my teacher in the eyes of the public, but ignorant, from a technical standpoint, of the principles on which my accomplishments were based.

"I wish to know if it is possible to obtain a sufficient knowledge of everything pertaining to fundamental teaching, through the medium of text-books, without the assistance of a teacher? While I make music my daily study, keeping in touch with the latest methods, and have studied harmony to the extent of understanding scales, chords, intervals, etc., I do not know whether that is a sufficient basis upon which to establish my claims as a teacher, in view of the many who have had higher advantages. I have no need to teach for a livelihood, but feel a desire to be identified with music, and to be capable of teaching, thereby paying to the art the only tribute within my powers."

In regard to the foregoing, I would like first to say that it would be greatly to the benefit of the art of teaching, if all those who join the army of teachers could obtain as much as even a good knowledge of scales, chords and intervals. If one has had an extensive musical experience, one of the most astonishing facts that he will have had most likely forced upon him, is the amazingly scant knowledge of these merest fundamentals that he will have encountered in a great many who are trying to teach others. It will have seemed like the blind leading the blind, and he will wonder how such teachers can possibly hold a pupil for more than twenty lessons, when seemingly not possessing sufficient knowledge to last more than half that number. Such spectacles are both amusing and pathetic. Amusing to behold one trying to build without either bricks or straw. Pathetic for the reason that many of these are impelled to enter the teaching profession without preparation on their own part because of the most grinding poverty. Poverty tries to make slaves of us all, and, I am afraid, succeeds with a good many. To rise out of it requires heroism, patience and application, more than is sometimes at the command of less resolute natures. The only ones who are really lost, however, are those devoid of inclination, content to remain on the same dead level of inertia and serene ignorance. These are the ones who never seem to awaken to a sense of their real need. It would not be so bad if they were the only ones to suffer. But they are, to a certain extent, a dead-load on art, and art suffers cruelly because of the bad work they encourage in their pupils, and the false ideals they inculcate, or, one might better say, no ideals whatever. There are too many of such would-be teachers who do not deserve encouragement, for the reason that they never seek it, at least not from those capable of bestowing the only sort of encouragement that could be of any sort of substantial benefit to them. It is true that the opportunities in some of the remote districts are absolutely nil, and yet to the alert and ingenious mind there are always ways for advancement that will be revealed after diligent search. We are not living in an age when printed matter is hard to be obtained, nor when it is even expensive. The outlay for such a magazine as THE MUSICIAN is simply absurd when put over against the immense return than one receives for the money in the course of a year. There is positively no excuse for so much ignorance when such magazines are in existence for so little money.

Sometimes these remote teachers like to deceive themselves into believing that there is no need for trying to add to their knowledge for the localities in which they work. They delude themselves in two directions. They never will be capable of progressing to a better field until they show a spirit that will fit them for it. Furthermore, some of our finest musicians have primarily issued from just such sources. A teacher never can know when about to happen upon some budding talent that will, in after years, far outgrow the early surroundings. Will not such an one look back with far more respect upon a teacher that shows a desire and an effort to do the very best possible in the limited circumstances, and to at least live above the level in which it may be found necessary to work.

In contradistinction to this it is refreshing to come in contact with the kind of spirit shown by the writer of the foregoing letter. As long as there is a desire and a willingness to learn there is sure to be progress and a lifting out of paralyzing ruts. A very common condition among many teachers is suggested in the first paragraph, namely, ignorance of the principles on which fundamental training is based. It is not to elementary teachers alone that this is applicable. It obtains also in the work of some of the greatest artists. It is a truism in art, that the greater the perfection of the work of art the less able will the artist be to explain how the result was obtained. Some of the greatest virtuosi have been notoriously bad teachers, at least at the beginning of their efforts. This is because the mental processes called into action in the brilliant interpretation of musical compositions, are of a very different order from the process of analysis necessary in order to reduce the complicated set of motions which he makes, in a sense unconsciously and automatically, into definitely systematized categories that will admit of their clear presentation to a pupil. The one is an aesthetic problem, the other more allied to science Without this scientific turn of mind the teacher will have difficulty in finding out how things are done, and his teachings will be deprived of a large measure of the value that it might otherwise possess. The farther the pupil advances and the nearer he approaches to virtuosity the less does he find it necessary to concern himself with these fundamental analytical processes, and he gradually loses all track of them in his absorption in his performance. This partly accounts for the helplessness of a great many fine players when they find themselves beginning to teach. They find that to a certain extent they have to begin their education all over again. It does not follow, however, that the virtuoso may not become a good teacher. Although at first he may find himself chagrined in presence of the complicated problem before him, which he must reduce to its simplest terms, yet the intellect that has enabled him to attain so much ought also to enable him to analyse, simplify and present to others. Such an experience ought to produce the best of teachers, for the virtuoso's measure from which to draw has been infinitely fuller than that of the teacher who has never developed a brilliant pianistic ability.

Two corollaries may be drawn from this. First, the more technical facility a musician is able to acquire, the more time he has been able to spend in perfecting his musicianship, the greater his experience as a player, the more will he have to draw upon for the benefit of his pupils. Hence, the wisdom of spending as many years in study and practice as possible, There is no danger of any practical musician spending too much time in this way. Not that he will be likely to cease study when he begins teaching, but it can be done to so much better advantage when directed uninterruptedly than when connected with the multitude of cares that falls to the lot of the teacher.

Second, it is of the utmost importance that the teacher see to it that the pupil thoroughly understands all the principles embodied in the elementary training and as much as possible insist that the pupil, as he advances from one point to another, explain what he has already had. This is of especial importance when the pupil is preparing to become a teacher. Some teachers make a distinction between those pupils who are studying the art as an accomplishment and those who intend to become teachers, the latter being taught to analyze from the start, and how to explain things in a clear and lucid way. In the interests of thoroughness it would seem as if it would not be amiss to give the same training to the other class of pupils also, for it is not in the least uncommon for players who have originally studied music as an accomplishment to suddenly find themselves obliged to fall back on it as means of livelihood. Then they realize the insufficiency of having blindly followed the lead of the teacher without having taken the pains to gain an intellectual understanding of principles as well as an automatic proficiency in their application.

I think it is pretty generally admitted that these principles never become thoroughly understood and digested until they are practically tested in teaching. This is sometimes hard on the first pupils who serve as material for the experiments of the inexperienced teacher. Neverthess, the young teacher will find no better schoolmaster than practical application of principles by means of original effort directed toward some definite object. Then they will come into view in every sort of light. In addition to the natural tendencies of his own nature he will encounter the multitude of peculiarities to be found in the various dispositions with which he will come in contact. Some of his experiences will almost cause the teacher to doubt the correctness of certain principles, so much they will have to be modified to meet individual emergencies.

In regard to our correspondent's question as to whether a sufficient knowledge of fundamental principles can be obtained from text-books, etc.; presupposing an advanced technical ability to begin with, it will readily be inferred from the foregoing that the answer can unhesitatingly be given that it will not he possible, and this for the reason that one who is in the condition described in the letter can never be sure of being right on a great many points that will come up. I take it that it was a good many years ago that the correspondent's training was received. Methods have changed greatly in the last few years, and yet even though much may be accomplished in the way of understanding them by means of the study of written explanation, yet this is in no sense equivalent to a little practical study at first hand from one of the acknowledged leaders. I have frequently known pupils to seemingly obtain a perfect idea of certain points by careful study, and yet when coming to a practical application of the same in presence of the teacher, to be wide of the mark. There are many little points of detail that often escape the most careful observation, and which seem clear and simple enough when the attention is directed towards them by someone who has had a personal experience with them. Such a course ought always be taken by anyone who is preparing to teach, unless circumstances render it imperatively impossible. In selecting a teacher for such purposes an acknowledged educator should always be chosen, and he should be given to understand the aim of the pupil in coming for study. It should be distinctly stated that a study of teaching methods is desired rather than merely playing as an individual accomplishment.

On the other hand, it may be as unhesitatingly stated that this in itself will not be sufficient. In order to become broad-minded in work and thought it is never wise to cling too closely to the methods and ideas of one man. If the teacher selected be a man of distinguished ability it will be, in a large measure, because his mind has been open for ideas and impressions from any and every direction. He will be constantly growing, and will not desire that any pupil of his should remain at a standstill at any point where he may have ceased studying with him. The young teacher's growth will henceforward depend upon personal investigation and the reading of such printed matter as is pertinent to each case in point. The New

Education Department has been proving to be a mine of information to teachers all over the country, and a musician in the condition described in the letter can obtain an immense amount of information from it. Not only this, but the M. T. N. A. is at present formulating plans that will be of the utmost educational value to teachers, and the wisest thing to do will be to join that Association and get the advantage of the courses of study as they are laid out, for knowledge will be disseminated in this way that it will be impossible for teachers at a distance from the centres to otherwise obtain. Even teachers who are at present able to enjoy the advantages of personal association with leaders in the art, will find the M. T. N. A. courses a valuable supplement to their study. This is not a question of booming the M. T. N. A. for ulterior purposes, but it reaches down to the question of the development of the musical taste of the country. This lies very largely in the hands of the music teachers, particularly as America has but few concerts which the people can attend, and thus, by raising the taste and improving the quality of the work of the teachers, their influence will be much enhanced for the good of art and passed on to the great public with whom they come in contact.

Another point is suggested by our correspondent's letter, that of teachers entering the profession who are not financially obliged to. It is indeed a compliment to art when the enthusiasm of one not obliged to teach is so great as to impel one to devote one's self heart and soul to it. But there is a great deal of bitterness often expressed among the profession when such teachers are beheld with a large following of pupils, and they are openly charged with taking the living from those that need it. But there are two sides to this. When such teachers engage in it solely for the purpose of earning a little pin money and, as is often the case, are dabblers of the very worst description, and obtain their pupils entirely through social prestige, there is no excuse whatever. They are an intolerable excrescence in an overburdened profession. But, on the other hand, when impelled to teach from a zeal for art, and oftentimes possessing an intelligence and cultivation far in advance of needy teachers, and an ability in presenting the truths of art and awakening enthusiasm in others that is conspicuous, in such cases it would seem that the benefit to art would be much greater than the interference with the material prosperity of individuals. To belong unreservedly in this latter class our correspondent will doubtless do everything in her power to perfect herself.

* * *

From another correspondent we have the following: "In what grade can hymns first be taught and what is the proper touch to be used in playing them? How should we teach the taking of chords and to what extent can a teacher apply these principles? Is there not danger of giving rise to mechanical playing?"

This question would imply the laying out of a complete system of chord touch, which is manifestly impossible at the present writing. The teaching of hymns is practically begun with the first lesson in playing chords. Preliminary lessons will be found in the first grade of the National Graded Course. Playing chords, as found in the average hymn-tunes, requires a combination of both finger and down wrist touch. Sonority is produced by the down wrist touch modified by the finger touch to preserve the legato. To play hymns effectively on the piano, especially when accompanying a body of singers, one should play the three upper parts with the right hand, and the bass with the left in octaves. No chord playing is mechanical when done properly. An access of hymn-tune playing would doubtless tend to stiffen the action of the fingers, if from no other reason than that of lack of agile exercise for them. Anyone that was indulging in such a practice could hardly be said to be giving serious study to the piano, as legitimate study involves much more than such one-sided efforts. Used properly the practice of chords tends to improve the playing and lessen the liability of stiffness.

* * *

Mrs. Ira L. Ray sends the following suggestions which readers of this department may ponder. "From the beginning of work with a child-pupil awaken the *love of tone*, and understanding and musical intelligence will follow, develop and grow to proportions that no undeveloped adult could ever realize or attain. I would suggest that the compositions of our present gifted masters be used as much as possible, and that all pieces given, for the first, whether the composer is of past or modern times, be explained and the meaning impressed in as poetic and artistic a way as possible."

THE STUDY OF A SONATA.

Beethoven's Op. 2, No. 3, in C.

SECOND ARTICLE.

DR. HENRY G. HANCHETT.

In a former article on this subject some preliminary considerations were given attention, among them the matter of numbering of measures. This, for the sake of conforming to Harding's Analysis of Form, was directed to be done by placing a number at the bottom of and just before every bar in the movement, single or double, regardless of the fact that a measure might be but partially filled, and also regardless of any repeats—the numbers should follow each other exactly as the page is printed, and each new movement should begin a new enumeration with measure 1, this rule applying to the "trio" following the minuet or scherzo.

The fundamental consideration in music is that relating to the length or duration of sounds. This consideration is that studied under the general title of rhythmics, with its subdivisions of time or movement concerning itself with the absolute length of sounds, meter concerning itself with the relations of sounds to regularly recurring accents or pulses, and rhythm concerning itself with the relative length of successive sounds. Let us begin the detailed study of the sonata with a rhythmical examination.

I have just said that the time or movement concerned itself with the absolute length or duration of the sounds; but although sounds must have an absolute duration that may be measured, it is never true that in a piece of music artistically performed sounds that are indicated by notes exactly alike are played exactly of the same length. We now have the musical clock—the metronome—by which it is possible to indicate exactly the fraction of time to be assigned to each note and to secure the absolute equality of notes of the same apparent length, but no artist would think of playing a movement throughout exactly in accordance with metronomic indications. In the case of the sonata before us, as in all the earlier sonatas of Beethoven, the time has not been metronomically indicated by the composer, he relying upon what is on the whole quite as satisfactory a method of expressing his intentions—the use of Italian words The metronome was invented during Beethoven's life, but not till twenty years after the publication of this sonata in 1796. However, the use of the Italian terms to indicate time is to be preferred to the use of metronomic figures, if but one plan can be followed, because there is conveyed along with the notion of time, an idea of style and character that could never be expressed by figures. Nowadays, important works are provided with both words and figures, and editors have been diligent in supplying metronomic marks to the movements of all of Beethoven's sonatas, and their ideas of some of the movements are widely at variance. In the case of the sonata we are studying, the first movement was marked as to time by Beethoven "Allegro con brio," which may be translated: "Fast, with brillancy," or at greater length: "Let this movement be played in a dignified manner befitting a serious work, but at a good rate of speed such as shall consist well with clearness of enunciation, and with the distinct outlining of the rhythmical figures and the embellishments, in fact, rather faster than would be understood if simply marked 'Allegro.'" In giving a definite time to the movement Epstein has said the metronome mark should be 72 quarter notes to each minute, while Germer says that 138 quarter notes should be played in each minute. The Epstein mark is probably a misprint for 72 *half* notes, equal to 144 quarter notes, in a minute, which latter is the mark given in the Stuttgardt edition. Still there is a considerable difference of opinion between the editors as to absolute time, and this is the case with the other movements. It will be near enough if we say "about" 52 eighth notes for the second movement, 76 entire measures (dotted half notes) for the third movement, with a slight reduction at the trio, and 56 entire measures (112 to the dotted quarter) for the last movement.

As has been observed, artistic interpretation never gives to every note of the same denomination in one movement exactly the same length. The Allegro before us opens with a bright figure, which will sound well if clearly enunciated at 144 beats to the minute. It is natural to assume that the composer's indication will apply with special force to the notes nearest its expression, and the first measures of the movement are well suited for performance "Allegro con brio." But with the 13th measure a passage begins that has more of excitement and restlessness in its notation and that would well bear a slightly faster interpretation. In fact some editors suggest this by inserting here the word "strepitoso," which is not in Beethoven's original. While the passage beginning at the 21st measure still has uninterrupted sixteenth notes, it is more akin to the opening measures and should return to the original time. At the 27th measure a passage enters which is more song-like than anything before it, and in order to give its melodiousness full value, it should be taken at a slightly slower pace than anything preceeding it, but at the 39th measure the pace should be resumed and continued till measures 45 and 46, which are plainly designed to conduct the player to the passage marked "dolce," beginning with the 47th measure. Dolce always implies that tender and caressing style of playing which is inconsistent with haste, and while not necessarily always meaning slower than before, certainly does so here; but to give the passage a proper significance the time should be reduced in the measure 46 even below the standard for 47 *et sec.* Measure 61 brings to mind forcibly measure 13, but as it is marked only forte, while 13 is marked fortissimo, and as it follows the dolce of 47, it will be sufficient to resume the original pace, which may become more excited beginning with measure 67 and extending to 77. Measure 91 plainly should be of the same tempo as the beginning of the sonata, nor is there occasion to make a change before Beethoven's own indication at "calando" in 108, which word influences the playing till 114 is reached. The original tempo resumed here might well be broadened somewhat in 127–129, and a slight ritard would be effective in 139, otherwise it should be maintained till 162 gives occasion for the same reduction recommended for 27. The correspondence noticed at this point will be seen further on (at 74, 180, 182, 196, etc.), but the measures 229–232, seeming to build up or complete a climax, stand by themselves and will be effective if somewhat accellerated. From there to the end of the movement, but for pauses, the liberties implied by the cadenza structure of 233, and a broadening toward the close, the original time may be maintained.

The second movement is marked "Adagio," usually translated "Slow," but literally signifying "At ease." The word indicates that although many very short notes may be introduced (16ths and 32ds), none of them are to give the impression of hurry. Hence the pace must be very slow, yet the effect may be that of a movement more rapid than a Largo, which, with its stately tread and long notes may be taken at a faster pace by the metronome and yet seem more deliberate than an Adagio. This movement is built upon three models which we may designate *A* (measures 1–10), *B* (measures 11–18), and *C* (measures 19–24). *A* is pensive and song-like and may move at about 52 eighth notes to the minute, *B* is slightly more urgent, at least while the melody is in the bass, and may be taken a trifle faster, with a ritard where the left hand crosses in 13, 16 and 17, the first half of each of these measures warranting a slight stretto. *C* is restless and impatient, and will be best interpreted by a slight unsteadiness of time-keeping, generally a little faster than *B* but with slight ritards in the last halves of 20, 21 and 24. At 25 *B* returns, at 37 *C*, at 43 *A*. At 53 there is a variation of *A* in much more ponderous, emphatic and insistent form. That and the next measure should be slower and more dignified. *B* returns at 55, *C* at 59, and 66 leads back to *A* in a sort of reminiscent style, with variations of a quiet and tender character. Measure 66 should ritard and from there to the end the pace should be a little slower than at the opening of the movement.

The third movement should go steadily, the trio at a slightly slower pace, and the coda with a gradual ritard from 56 to the end. (Harding numbers the coda as a continuation of the trio, and beginning with measure 43.)

The last movement can be taken at a steady tempo throughout (except where the composer has indicated otherwise) without harm, but a few slight ritards, as in 19, 55, 69, etc., and a slightly lower pace for 104–147, with sudden resumption of the speed at the change to minor in 148, will make the interpretation more effective. A little thought expended upon the meaning of the composition and the relations of its parts will result in wise treatment of the slight changes of pace required, which ought always to be less marked when not indicated by the composer than when called for by his signs. It will be necessary to postpone for another month consideration of the meter and rhythm of the work—specially interesting topics in connection with this sonata.

HOME.

The squirrel lies hid in his hollow tree,
All wrapped in his long, soft tail;
The rabbit is snuggled as snug can be
In his home 'neath the old fence rail;
The partridge is only a bunch of down
Where thickest the arching brush—
They in the forest and we in the town,
Hush, my honey-boy, hush.

The field-mouse curls in a velvet ball
Far under the dead swamp-grass;
In his hole by the frozen waterfall
The mink dreams oft of the bass;
And every chick of the ground and air
Is cuddled in haven deep—
So here, in the glow of the firelight fair,
Sleep, my honey-boy, sleep.

The North Wind romps with the whirling snow;
Sly Jack Frost noses about;
But wood and field are abed—for no,
Not even the owl is out.
And here, where the motherkin's breast is warm,
And motherkin's arms are tight,
Safe from the snow and the frost and storm,
Good-night, honey-boy, good-night.

—*E. L. Sabin, in Saturday Evening Post.*

STUDY WITH HANS VON BÜLOW.

Brahms.

THEODORE PFEIFFER AND J. VIANNA DA MOTTA

Translated for THE MUSICIAN *by F. S. Law.*

Sonata in C major, Op. 1. Andante. Brahms made his début with the three Sonatas, Op. 1, Op 2 and Op. 5. The last was composed nearly thirty years ago; since then he has written no sonata for the piano alone. At the time such a début created a sensation. Robert Schumann drew attention to the youthful Brahms in an article which was headed: "This is he who was to come."

From M. 27–28 on the flute tones in the right hand must be played very deliberately; the triplets flowingly and not too sharply accented as triplets. The unexpected B flat (minor third) must be made "surprising" through a slight ritardando.

In a large hall we must make the dynamics a little stronger, *e. g.*, play the *pp* fuller than in a small room. In pauses the hearer should not lose the rhythmic thread. Of course, I mean the attentive hearer; others I do not consider hearers at all.

Sonata, Op. 2. Finale. The up-count short. The first five notes form the leading motive (*Leitmotiv*). The trill in M. 6 is to be played with the second and third fingers; begin the run with the thumb on D sharp. Dissonances should be brought out, to be sure, but one should not pounce upon one whenever it is seen. That makes one think of children playing at snapping peas. When an ornament occasions difficulty first study the passage without it; then, when the framework is clear, add the ornament.

Sonata in F minor, Op. 5. Andante. This sonata von Bülow considered the finest of Brahms' piano sonatas.

A very young girl came forward to play this Andante, but he said: "Fräulein, you are yet too young to play this Andante." To the young man who played the sonata he said, after he had finished the Andante: "You play this movement with more sentiment than I, but then you are nearer the thirties than I."

Ballade, Op. 10, No. 1 (After Herder's *Edward*). Von Bülow explained the meaning of the ballade: "You must know that Edward has committed a great crime." Here he made a long pause, it could be seen, from his meaning expression that he had something witty to say—"He has killed his wife's father-in-law!" The applause was so tumultuous that everything was stopped for the moment.

"Think of Heine's saying: In every musical phrase I see an arabesque. Because of the poets whose cheeks are far too red, it was a good thing Heine wrote his 'Sickness in Poetry.'"

"In order to find the proper declamation of a melody you must sing it." This von Bülow often did for us.

This ballade is a gloomy, wonderful tone poem. Give characteristic expression to the dialogue on the first page. In M. 5 play the last quarter note, as well as the dotted half note which follows, *marcato*, and with full tone; likewise the last quarter note, C sharp, in the following measure. Make a pause on the chord of A major in M. 8. Begin the *poco piu moto* which follows with a different tone color.

With Brahms *sostenuto* always means *ritardando*.

On the chord of F major in M. 21, a pause, and begin the *poco piu moto* as before, with different tone color. Begin the Allegro *una corda* in order to bring out a powerful *crescendo Allegro*. In M. 2 do not break the phrase:

M. 13: accent the three eighth notes of the triplet on the last count with great firmness. M. 17: diminish before the B flat major chord; the chord itself with mighty accent. M. 18: diminish before the last count. M. 20: accent the third count. M. 21: diminish before the second count. M. 23: accent the first count.

Variations on a Theme by Handel. In Brahms we often find a musical workmanship which reminds us irresistibly of Johann Sebastian Bach. At a certain passage von Bülow said: "Between affectation and grace there exists the same difference as between sentimentality and sentiment."

Variation 21. The appoggiaturas have in themselves thematic significance; by them you can see how Brahms composes—how musically he thinks.

Variation 22 imitates the bag-pipes.

The lady who played these variations played them finely; she distinguished herself in particular by her performance of the fugue.

Stücke, Op. 76, No. 7. Intermezzo im Volkston. The second part of this intermezzo should be considered as a dialogue. This requires an entirely different conception from the one which would prevail if there were but a single voice.

Rhapsody in B minor, Op. 79, No. 1. The middle section in B major must appear as though bathed in a gentle twilight. In music we must punctuate, we must phrase and separate; we must speak piano, not babble it. I feel myself called upon to take the field against this tiresome correctness, which some understand as classical interpretation. One who is no longer among the living (Richard Wagner) and I are victors in the struggle.

Beginning with M. 27, counting from the second signature of one flat, the melody of the left hand in this and the measures following is to be brought out forcibly. The F sharp and B in the right hand at the end of this signature must sound like a flute.

Rhapsody in G minor, Op. 79, No. 2. Pedal on the first count of all the measures. Make a *crescendo* in the strides of the bass, especially in those of the tenth. These bass springs you can best study in the Zoological Garden with some distinguished beast as your model.

(I heard him say to a gentleman: "These different capacities perplex me. One cannot help but fall into trivial tone. With Herr N. I can go into the finest points. But," he added, despairingly, "the women do not understand that sort of thing.")

Ballade in D major. He considered the first two measures as a mere introduction, and that the melody began with the last count of the second measure.

Ballade in B minor. Those who do not know this composition will take it for Japanese music and will prefer "The Mikado." In the part in B major, this place

must sound like a call from the distance. Play it there in the corner.

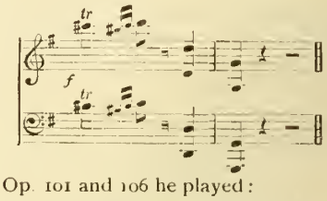
Repose is the piano player's first duty. There are three stages in musical interpretation: correctness, beauty and interest. Do not play with so much interest that your music ceases to be beautiful, neither so beautifully, *i. e.*, with so much feeling, that it ceases to be correct.

Apropos of a player who was playing from memory and made many slips, von Bülow said: "See, that comes from that confounded playing without notes what one does not understand intellectually. I much prefer your playing with notes. You wish to impress us by your playing from memory, but we are not so easily impressed as all that, are we? I do not require you to peform wonders for me."

From that time on no one dared to play without notes. Von Bülow's sureness of memory in these lessons, for which he could not prepare, was almost inconceivable. Everything that was played he corrected from memory at the second piano.

Capriccio in B minor. Strictly speaking, one ought not to prelude. But sometimes it must be done, *e. g.*, when the listener wishes to hear the whole piece and is hindered from hearing the first few measures by the necessities and requirements of his neighbors. In such a case, however, always play a prelude in the spirit of the composer. As studies to this end I recommend Beethoven's and Moscheles's preludes. They can be combined, and out of the combination of thoughts by others the player can gain something which he can give out as his own.

(It is well known how ingenious von Bülow's preludes and interludes were in his public performances. Some of them which come to the mind are as follows: Before Beethoven's Sonata in F minor, Op. 2, No. 1, he played the opening measures of Beethoven's prelude in F minor, 3-2 measure. Between the two sonatas, Op. 14, he played the following:



Between Op. 101 and 106 he played:

Before Op. 110 he played the first four measures of the sonata in F sharp major, Op. 78, transposed to A flat major. Before Op. 111 he played the first measure of the *Sonata Pathétique*, Op. 13.)

The interpreter should be the opposite of a gravedigger; what is hidden he should bring to the light of day.

Von Bülow was not satisfied with the lady who was playing. He said to her: "You play so affectedly, as though you were playing for a tea party of blue stockings."

There is very little to be learned from singers. But hear Madame Sembrich (who was singing in Frankfort at the time); from her something can be learned, especially in the execution of cadenzas. She is musical.

Scherzo in E flat minor. "There are two kinds of scherzos: the *scherzo giocoso* and the *scherzo serioso*. Most of Beethoven's scherzos are confoundedly in earnest. This scherzo of Brahms is a fresh composition dating from the youth of the master."

In the first measure he required the harmony brought out clearly:

He directed attention to the analogy with a passage in Beethoven's Sonata in C major which had been previously played:

which he required played in a similar manner.

At a *fermata* (pause) he said to the gentleman who was playing: "This *fermata* does honor to your rhythmic feeling (compare remark on the pause in Beethoven's Sonata, Op. 106)." In Trio II, he recommended the player to play thus in the left hand:

Gluck, the composer of "Orfeo" and "Armida," became a veritable tyrant as soon as he found himself directing an orchestra. The slightest mistake annoyed him and sent him into a fit of temper. He insisted upon the orchestra's repeating certain passages twenty or thirty times until they were played according to his approval. Upon one occasion the orchestra in Vienna refused to obey him and complained to the Emperor, whereupon Joseph II endeavored to conciliate them by saying: "Why, you know that you must put up with him. He really does not mean it." The consequence was that, whenever Gluck directed the "Hofkapelle," the salary of the members of the orchestra was raised. Those that had received but one ducat then received two.

HOPE EVERMORE AND BELIEVE.

Go from the east to the west, as the sun and the stars direct thee.
Go with the girdle of man, go and encompass the earth.
Not for the gain of the gold, for the getting, the hoarding, the having,
But for the joy of the deed, but for the duty to do.
Go with the spiritual life, the higher volition and action,
With the great girdle of God, go and encompass the earth.

. . . . . .

Go; say not in thy heart, And what, then, were it accomplished,
Were the wild impulse allayed, what were the use or the good?
Go; when the instinct is stilled and when the deed is accomplished,
What thou hast done and shalt do shall be declared to thee then.
Go with the sun and stars, and yet evermore in thy spirit
Say to thyself, It is good; yet is there better than it.
This that I see is not all, and this that I do is but little:
Nevertheless, it is good, though there is better than it.

—*Arthur Hugh Clough.*

RUBINSTEIN ANECDOTES AND APHORISMS.

"A talented man," said Liszt, when Anton Rubinstein called upon him in Vienna, "ought to be able to make his own way without any one's help."

Rubinstein, who was but seventeen at this time, had gone out into the world to seek his fortune, and this remark was all the notice he received from Liszt. Letters of introduction from the Russian ambassador at Berlin, of which he had a dozen, sealed and phrased alike, and the contents of which he knew nothing, brought him equal results from all to whom he had sent or presented them. A few of them still remaining, he decided to open one, and the following words greeted his eyes:

"Among the various duties incumbent upon an ambassador, is the exceedingly wearisome one of being obliged to give patronage and letters of recommendation to various of his compatriots, whose demands are sometimes very difficult to satisfy. I beg leave to recommend to you a certain Rubinstein."

Promptly throwing the letters into the fire, the young man prepared to grapple single-handed with destiny. He gained a few music pupils in Vienna, but was obliged to give the lessons for almost nothing, and the outlook, as the winter came on, became still more discouraging. His garret room was without a fire, and for days at a time he went without dinner, having no money to pay for it, while upon the floor of his room lay stacked the compositions at which he was constantly busy.

"What did I not write in those days?" he said afterward, in speaking of these early struggles. "Pieces of all sorts: oratorios, symphonies, operas and songs; not only music, but various attempts at literature also—critiques, and even philosophical articles. I actually started in my garret a sort of newspaper for one reader only—myself!

"This sort of life lasted for a year and a half. I suffered from poverty and hunger—sometimes to a terrible degree. In a word, my experience was the same as that of almost all those who try to make their way unaided."

Rubinstein tells the following story of custom-house management in Russia, upon his return a number of years later:

"I went to fetch my trunk, which was full of my musical MSS.—the result of three years labor in Berlin and Vienna.

"I can't remember now why I applied to a certain Frevel, or who the man was—whether an officer of the custom-house, or of the censor, or of the police—but whoever he was he refused to give up my box.

"'You see,' he said, 'all this MS. is *apparently* music, but the Government is aware that anarchists and revolutionists use a code of signals much resembling musical notes for their communications. *This may be some political cipher.* You must wait five or six months, and then, perhaps, I may be able to give you your box.'

"There was nothing for me to do but to take my leave!

"I set to work to rewrite from memory many of the compositions, but until long afterward I heard nothing of my ill-fated trunk. Not till years had passed. I happened one day to be in Bernard's music warehouse, and the manager said to me: 'By-the-way, we have lately bought a lot of your MSS.—single sheets of various pieces, written in your own writing.'

"'Where did you buy them?'

"'We bought them at an auction where they were selling bundles of MS. music as waste paper!'

"'Oh, pray go,' I said, 'and buy in all of it for me!'

"'Ah, unfortunately it is too late; all was disposed of.'

"What had happened? The custom-house officer, or whoever he was, probably advertised in *The Police News* for the owner of the box. As I do not read that paper I did not appear to claim my property, and so all my MSS. were sold off at so much the pound!

"Some years later, when applying for a foreign passport, the worthy functionary told me with great glee that he had bought a number of my MSS. among a lot of waste paper; probably the last remains of my trunk-load!"

Another story is also at Russia's expense:

"I will relate what (in itself) unimportant incident led me to consider the unsatisfactory social condition of the musical profession here, and first gave me the desire of establishing the position of my brother artists. This is what happened. Once, during the fifties, I went to confess in the Kasan Cathedral (St. Petersburg). After I had finished I approached the table to have my name inscribed in the book.

"'Your family, rank and calling?'

"'Rubinstein, artist.'

"'What! Do you serve in the theatre?'

"'No, I am an artist—musician.'

"'Yes, yes, I understand. Are you in service? *i. e.*, of the Government?'

"'No. I do not serve.'

"'But who are you then? How am I to describe you?'

"These questions continued several minutes, and I don't know how matters would have ended if the deacon had not the happy thought of asking:

"'But who, then, is your father?'

"'A merchant of the second guild.'

"'Ah! all right, *now* we know who you are,' said the deacon, with relief in every syllable, 'we will write you down as the son of a merchant of the second guild."

Rubinstein was giving a concert at one time in a large Austrian town.

After the concert was over a portfolio was presented him filled with paper money—the receipts of the evening. Among the crowd waiting to witness his departure, he noticed a lady whom he had known in St. Petersburg as a talented pianiste. He made his way toward her, and after a short conversation, inquired in a kindly manner about her career.

"Ah, master," she replied, "I never perform now; I gain my livelihood by teaching only."

This was enough for the kind-hearted Rubinstein; he instantly forced his portfolio upon her, and before the astonished woman had recovered, he was in his carriage rolling away from the Opera House.

Among the papers in Rubinstein's desk were found these aphorisms:

"There used to be little concert halls and great artists; now we have magnificent halls, but——."

"I once intended to write a composition entitled "Love, Theme and Variations," but I gave it up, because when I was young I might have found the theme, but had not experience enough for the variations; now I might write the variations, but cannot find a theme."

"An artist who gives a concert wishes to learn the judgment of the public on his performance. The easiest way would be, instead of charging the public for admission, to ask them at the end for such contributions as they thought he deserved? This would be a test of the applause and would check the flood of concerts."

"When musical thoughts are lacking, what a convenience the leit-motiv!"

"A good rendering of Lieder is difficult. The French have an admirable phrase *dire la romance.* How often do we not meet singers who in a Lieder rendering make it their chief task to display their vocal resources."

"What is poetry? It rhymes, but is not so. What is truth? It does not rhyme, but is so."

"Himalaya and Chimboraz› are the highest peaks of the earth; but that does not imply that Mt. Blanc is a small mountain."

MEMORIZING v. SIGHT-READING.

An Open Letter.

As to the balance between your two powers—viz., that of memorizing, which is great, and that of sight-reading, which is small—you may not be aware of it but you are really stating, or at least trenching upon, a great law of nature. There are many strange and wonderful things in nature, and nothing more marvellous than her way of compensating for short-comings and privations, and her jealous and equally watchful way of getting even with us.

If we have some remarkably strong faculty, she is sure to plague us with some grievous, galling limitation. There seems to be something essentially antagonistic and mutually exclusive between the contrasted powers of quick apprehension and tenacious retention. Of course, there are some wonderful exceptions among pianists, Liszt, among composers, Mozart and Mendelssohn, and other cases which might be adduced; but you may set it down as a general rule that these two things, reading and memorizing, are opposed to each other.

Which is the more valuable cannot be decided, except by each one for himself. For certain uses, the quick eye and the alert, automatic fingers which can snatch the musical page as the trained reader snatches the page of the morning journal, are valuable, nay, indispensable; but again, for other artistic uses, of equal dignity and moment, speed of reading is utterly nugatory.

Thus if I hear a wondrous and poetically uplifting performance of a Chopin "Polonaise," say the one in A flat, upon which many a good pianist has struck, reeled, foundered, what do I care whether the player has reached his mastery with ten hours' labor, or with a thousand, or with ten thousand?

As for cultivating your sight-reading ability, I advise you to do that, but not to fret about it. Play some music which is technically well within your grasp every day, and by unperceived degrees, as the grass grows, as the stream flows, as the morning comes you will gain somewhat of this coveted power.

But I gather from the tone of your letter that you are one of those deeply musical and emotional persons who will excel in the more soulful and less technically dazzling forms of music. I advise you, however, always to lean rather to the memorizing than to the rapid reading of your music. After all, it is the music which we memorize and brood over which enters into our inmost souls and nourishes the better life, just as it is the poetry, the Bible verses, the noble maxims which you know by heart that afford you literary culture and a cup of refreshing strength in the struggles of life's spiritual battles, rather than the entertaining summer novel or the sparkling newspaper.

As for your parents enjoying music, but preferring lively to pensive, vigorous to reflective music, that is not at all uncommon with the musically unenlightened or half-enlightened. Be patient with them, cultivate your own mind and heart according to an ideal, and lead them upward with you as far as you can, but never treat their tastes with contempt.

The most interesting remark in your letter is your statement that music of a deep kind stirs in you a vague, unsatisfied feeling. This is one of the very best evidences that you are the lucky possessor of a heart and mind really musical. It is the main purpose of all art to arouse this inner unrest, this discontent with the vulgar, the sordid, the commonplace, but if the art be wholesome and the mind upon which it falls sound and normally balanced, the same art brings an unutterable glory and beautitude of repose. If you have ever listened to a symphony of the immortal master, Beethoven, from beginning to end, with even semi-comprehension, you will know what I mean.—*London Musical Standard.*

How sour sweet music is when time is broke and no proportion kept.—*Shakespeare.*

My idea is that music ought to move the heart with sweet emotion, which a pianist will never effect by mere scrambling, thundering and arpeggios—at least not from me.—*Bach.*

I only wish I could impress on every friend of music, and on great men in particular, the same depth of musical sympathy and profound appreciation of Mozart's inimitable music that I myself feel and enjoy. —*Haydn.*

Young Composer's Column.

RULES.

1. MSS. marked "Young Composer's Column" must reach us by the 10th of the month to ensure notice in next issue.
2. Each MS. must bear the full name and address of the writer; the initials will be used unless a *nom de plume* is added.
3. Stamps must be enclosed if MS. is to be returned, but it is to be distinctly understood that the Publishers assume no responsibility for any MS.
4. No charge is made for the examination of any MS., and compositions of any nature may be submitted. The criticisms will be general and of such a nature as will be helpful to those honestly desiring frank and unbiased criticism.
5. No criticisms will be sent through the mail.

W. H. R.—(385). Yes, "The Winged Post" has merit—decided merit; it does not hang together well. You have a cadence every other measure and the cadences make the song disjointed. Send something again to us.

Elissa—(386-387). Your "Recessional" and "Every Day Patriotic Song," give strong evidence of a musical nature and a good deal of musical cultivation. You should be more careful in details; we have marked several things that ought to be corrected. "Recessional," if well sung, will be effective. You are a newcomer to our circle; come again!

M. R. E.—(388-390). Work tells, does it not? You give us much pleasure when you write that "I followed the advice you gave me in THE MUSICIAN, July, 1899, and have been studying hard ever since." As you have a teacher at your elbow now you will hardly expect us to enter into a detailed criticism of your pieces. Speaking broadly, we think you try too hard to make dramatic effect; you ought to strive now for *musical* effect. Do you see what we mean? "Weary Wind of the West" lacks point as a whole, because you paint the leaves on the trees, instead of being an impressionist and making us *feel* the leaves without painting them. In other words you reflect so minutely the spirit of each individual line that the effect of the poem as a whole is lost. Your piece in D flat suffers in the same way. The piano piece is not bad. On the whole, you have a great deal of music in you; you have improved vastly and have every reason for keeping on with study. *Study good music and not simply good text books.*

Treble Clef.—(392). The song has a pleasant melody of the popular-song of-the day type; the harmony of the accompaniment shows the novice. It is very difficult to apply one's knowledge to accompaniments. We think that if you will study with some good teacher in your neighborhood, you will make some good music one day.

Eva Coulter.—(393). The waltz is inoffensive, so much so that it seems heartless to criticise it. However, we will say that the rhythm of your first and third parts is identical: This is bad. All three parts are in the same key: This is bad. You use only tonic, dominant and sub-dominant harmonies and these in their fundamental positions only: This is monotonous. You have a vein of simple amiable tunefulness that may be developed into something.

C. B.—(394). The Etude shows you to be a musician of no small attainment. You have, curiously enough, in several places (page 1, measure 4, for example), written a ♮ for B♭♭; generally, however, you make no grammatical errors. As an etude, whose province is to repeat a figure many times, your piece does very well; as a musical composition it lacks variety—it gets tiresome before it runs down; it was evidently inspired by Chopin, Op. 25, No. 1. Try something in an original line and let us see it; we are sure you will write something worth while.

B. J. B—(395). If you knew how much better your Prelude and C. B.'s Etude are than the majority of things sent in to us, you would not write, "I would like to have this returned: I may need it to start a fire." Your MS. is legible and shows you to be no mere tyro. We are pleased with your piece; you have been careful to bind it together by using the same accompanimental figure throughout. Do you not think it would be better to change the figure for the part in D♭ major? That would be a distinct gain in variety and would not in the least hurt the unity of the piece. Come again!

L. R.—(396). The MS. you send is written in lead pencil and is carelessly prepared. You have many measures in 3-4 time with a triplet of eighth notes, a half note and an eighth note; other measures have a half note, a quarter and two eighths! Do you not think that if we are willing to give you the benefit of our experienced criticism, you ought to send us a legible MS? There may be merit in your mazurka. We are inclined to think there is, but you ought to rewrite it. When that is done send it to us.

F. E. B.—(391). You send one variation on "America"—we make out that much despite the poor MS. But what of it?

J. P. M.—(397). Your waltz composed at the age of 12 has, of course, much interest for you; its absolute merit is not great, though it may very easily be regarded as a beginning of great things in composition. At A and B you need another measure to complete the rhythm; at C you have a redundant measure. The harmony is correct and the melody good.

C. A. W.—(398-399). The Largo is by far the better of the two; the march does not amount to much; it is strongly reminiscent of von Wilm's Alla Marcia and Roubier's Marche des Troubadours. The Largo has some solid harmony and smooth melody. In writing a pedal part for the organ it is not enough to think of it as analogous to the bass part for orchestra; you must be careful to keep it lower than the normal l. h. part. At A is a badly written place. Do not thicken chords on the lower part of the organ, as at B. It strikes us that the forte chord at C will have a humorous effect. In the march your l. h. doubles the pedal part too much; make the pedal obligato; see A and similar places; the effect at B is bad: it's all top and bottom—no middle. The Largo shows you at your best; develop the *best* side of you; write two-steps if you find it necessary, but you've got a vein of rich melody and harmony in you that ought to be worked.

H. W.—(400). If you are the same person who has sent us two or three versions of a piece called "Parting," you have made a wonderful change in your methods in writing the mazurka in G minor. There is nothing in the pieces to show a common authorship. We like the mazurka; the form, alternation of keys, rhythm—all are excellent; the G major part we like extremely and the variant on p. 2, line 4, first four measures, is one of those little touches that are simple but effective. To speak now of things not so good—your piece is evidently an imitation of Saint-Saëns' mazurka in G minor, the correspondence being very strong in many places; we do not like page 1, line 3, meas 5, where you have a minor third, d-f, followed by a maj. third, c-e—there are a number of places like this; the succession of harmonies dominant—subdominant is difficult to manage easily, and on p. 3, line 4, meas. 2-3, you have not solved the problem. It looks as if you were coming out into the light.

CHILD-SONG.

He that is life beguiled
By the clinging of a child
Hath, I know, great store of grace,
And with Love a dwelling-place;
For all heaven hath dreamed and smiled
In the sweet face of a child.

—*Frank L. Stanton.*

A TECHNICAL CRITICISM.

The musical critic was unable to attend the pianoforte recital, but the handy man on the paper allowed that he could do the thing easy enough. And this is how he did it:

"Herr Diapason's recital last evening at Acoustic Hall was the most récherché event of the musical season. Herr Diapason is a master in cantilever, and both in his automobilia and in his tour de force he wrought wonders of tonic stimulation. He was especially potent in his dolce far niente passages, and in his diminuendo crescendo appoggiatura he displayed a technological skill that was simply wonderful.

"There was also a marvellous musicianly abandon in the mute bars, the instrument in these parts of the score being forcefully impressive in silent fortissimo. But it was perhaps in andante capriccioso that he excelled himself. Here he discovered a coloratura, a bravura and an ensemble that fairly electrified his audience.

"Herr Diapason, it is true, occasionally erred in an overponderosity of rutabaga, and again in a too lambent lustspiel; but these lapses were hardly noticeable in his rendering of cantabilious intermezzo. The recital, upon the whole, was a marvellous exhibition of poca hontas instrumentation and incandescent cavatina."

Slug Four, who takes lessons, said there was something wrong about it, although he couldn't say exactly what, and the managing editor, upon looking the critique over, was free to admit that it was all Greek to him; still he said that it seemed to read all right, so far as he could discover to the contrary, and it was quite in the line of the regular critic's composition—more luminous, indeed—and he didn't see why it shouldn't be printed. It was lucky, he said, that they had so able an all-round writer on the staff.—*Boston Transcript.*

Questions Answered.

[Under this heading THE MUSICIAN will be pleased to answer any questions submitted by its readers which may be of general interest. *All questions must be accompanied by the full name of the questioner.* Answers will be published without such names. Those who send questions should take care to state clearly what information is wanted. Only such questions as will be of interest to general readers will receive attention in this column. All others will be answered privately, for which purpose stamps should invariably be enclosed.—ED.]

G. M. E.—If the organist was capable it would hardly be necessary for a conductor to beat the time during a solo in the anthem at Church service. Usually the soloist is allowed certain latitude in delivering the work, especially if it is not accompanied by other voices. In the latter case, or if the accompaniment is by a number of instruments, the leader would have to designate the movement by beating time.

H. G.—Metronomic markings are given as desired:
Henselt, Op. 13, No. 2.
La Gondola, ♩. = 69.
Mendelssohn's Songs without Words:
No. 3, ♩. = 108.
No. 8, 𝅗𝅥 = 116.
No. 23, ♩ = 116.
No. 26, ♩. = 120.
No. 36 𝅗𝅥 = 144.
Correspondents will find all the metronome marks in the Hatch Edition of the Songs without Words.

B. W. E.—*Nel cor piu non mi seuto*, the melody upon which Beethoven constructed his variations, was the title of a duet in the opera of Molinara, by Paisiello. For a long time it was a remarkable favorite. It is known in English as "Hope told a flattering tale."

G. E.—Richter's treatise on the groundwork and analysis of "Musical Form," has not been translated into English. Lobe's "Catechism of Composition" and Pauer's "Musical Form" are excellent, and reasonable in price. They may be obtained through the Hatch Music Co.

P. A. H.—Practice of a correct kind should make the fingers supple. Finger exercises, played slowly and with light touch, should be the starting point. Increase the speed *gradually*, but *always* have a free and elastic feeling both in fingers and wrist. Neglect of the latter is the cause of much hard tone and most of the stiff fingers. It would occupy too much space to print a Beethoven Sonata in THE MUSICIAN. It would not prove acceptable to many readers, as they already have copies.

W. S.—Opinions differ as to the benefit of severing the ligament connecting the 4th and 5th fingers. When done by a skilful surgeon no bad effect is likely to occur. Dr. Keene of Philadelphia, has successfully performed the operation several times.

F. A. W.—In the Tonic-sol-fa system all flat, or descending chromatics take the consonant of the diatonic above them, with the broad vowel aw added, as ta, la, ma (taw, law, maw). Sharp chromatics—ascending—take the consonant from the tone below with the vowel "ē" added, thus d (dē).

B. E. B.—Common time is marked C, which indicates four quarter notes as the pulse or beat of each measure. ¢ is called alla breve, and indicates two half notes in a measure: 4-4 and 2-2 indicate respectively the same measures. The second Liszt Rhapsody is in C♯ minor. Invitation to the Dance (Weber), is in D♭ major. Which Bouree do you refer to? Chopin's Etude, Op. 25, No. 2, is in alla breve time (see above) and has two accents in each measure, by which the effect of the clashing of duple and triple time is produced. Perhaps this is why you called it syncopated. The figure on page 77—fig. 144 of Bussler's Harmony, is not a mordent but a direct, which is used to show where the following note would be placed. The Chopin excerpt you give is from Etude No. 12, Op. 10, sometimes called the Revolutionary Etude. The other examples are from Etudes Melodique by Burgmuller.

Subscriber.—Picchettato is an Italian word signifying very detached. Pointed dash *staccato* in contradistinction to the dot *staccato.*

J. A. W.—Nervousness and unsteady time are faults somewhat difficult to cure. Slow practice and counting the time in a *firm* tone of voice will help to carry one over the uncertain places. The trouble is more mental than physical. It requires great self-control to advance steadily, without either delaying or anticipating the count, but the control *must* be gained, no matter how severe the ordeal may be. The assistance of the teacher in helping to keep the count steady, is valuable. Always count *aloud*, no matter how troublesome it may be, and do not falter when the hard measure comes.

A CRITIQUE AND SOME COMMENTS THEREON.

T. L. RICKABY.

[This article is commended to our readers with the request that they send us their views regarding the matter it touches upon. It is a vital point, well worth full discussion. Let us hear from you.—ED.]

A concert was recently given in a town of some four or five thousand inhabitants. It was one of many which had been given purely as an effort to raise the plane of appreciation somewhat higher, and as the years passed, those who had the musical interests of the town at heart really persuaded themselves that conditions were much improved. The concert in question was given by a chorus of fifty voices, a violin soloist, a soprano soloist and a pianist. The music was all good—some of it exceptionally so—and it was all very well performed.

The editor of one of the town papers was a man who possessed no technical knowledge of music whatever—who, to use his own expression, "did not know the difference between a bar of music and a bar of soap," but yet who really loved music, whose soul was readily "moved by concourse of sweet sounds."

This editor wrote a critique of the performance, very kindly devoting a whole column of space to the "write up" His effort was quite unique. It was in part humorous, and in part serious, but withal good-natured, everything he said being prompted by anything rather than ill-will or ill-temper. When the article was read next day, many were indignant—friends of the performers, and those interested in musical growth, especially so—and at first sight it certainly did seem as if the whole column was what is known in street parlance as a "roast." However, let us look at a few of this editor's remarks; analyze them; read, mark and inwardly digest them. I am convinced that there is very much food for reflection in the whimsical expressions. We musicians do not know everything, and a hint or two from outsiders is often of the greatest benefit. But to the critique:

"The ordinary concert is very trying to our nervous system. As the tom-tom music of the savage is barbarous to the cultivated ear, so is the classical music so much affected by the amateur and professional, barbarous to the uncultivated ear. It is possible, in our humble opinion, to cultivate music so thoroughly as to weed all melody out of it."

This seems to force the question—why give such high class programs to mixed audiences? There is music enough of a good grade, written by the best composers, which is pleasant to hear, and is easily comprehended, because it is tuneful without being complicated in either rhythm or structure. Audiences would be grateful. Further, it is not just that money should be taken from people and nothing given in return, for, if the music "goes over their heads," it is practically the same thing as failing to give them value received. The finer music we might reserve for smaller and more congenial companies—for the fortunate few who have ears to hear and who *can hear*. General musical appreciation is a matter of slow development, and requires that several generations shall come and go before the fruit appears. We musicians look for returns too early. It would be well for us to remember that "Paul sows, Apolos waters, but God giveth the increase;" and also that in almost all our labors "one sows, but another reaps." Our work as teachers is not so much to educate the older people, but to give them music that will be a pleasure to them, devoting all our educating efforts to the coming generation. The kind of teaching that is being done everywhere will bear wonderful fruit when we have long been forgotten.

"The violin solos were over our head. The first number, 'Hungarian Rhapsody,' was the same we have heard so often without rhapsodizing over it once. Why do violinists always play that piece we wonder. We suppose he executed his solo with great skill, but without appealing to our sense of beauty or melody. Nevertheless, he was enthusiastically applauded by people who didn't know any more about it than we did, and the performer came back with something else imported from the Rhine or Danube we suppose. If he had played 'Money Musk' or the 'Virginia Reel,' or something like that, we could have kept up with him."

Why is it that violinists do not realize that so much of modern violin playing, which consists mainly of much rapid work in the upper register, is not only not musical, but in reality very disagreeable, being nothing but a succession of squeaking sounds, only too often out of tune. The upper notes of a piano are really musical in tone and possess a pearly, rippling quality which is pleasant even to untrained ears. But the violin is *not so well adapted to extremely rapid playing*, and its best tones are produced in the lower register, and in slow cantabile passages.

The beauty of violin music of this latter character is beyond words to express—and yet the beauty is capable of being enhanced by true double stopping. It is a beauty that appeals to all sorts and conditions of men, and yet how little we hear of it! Instead, we have a squeaking carnival, and it is no wonder that men of intelligence say, "If this is classical music, give us something else." Of course, the request for "Arkansas Traveler" and "Money Musk" must not be taken literally. It is an indication of the desire in the hearts of the majority of people for heart music, and if the laity are ever to be raised to a higher plane of appreciation, this desire must be reckoned with.

"The vocal solo 'Villanelle,' was clear out of our musical reach. The trills, quavers, crescendos, high vaulting, acrobatic features of this number were something wonderful and bewildering. The singer's sweet voice helped it out some, but we never could appreciate that kind of music. It's too classical for us. We have often wondered why singers who have been gifted with fine voices didn't use them in simpler melodies which appeal to the heart and soul of a man, no matter how ignorant he may be of staffs and distaffs."

There is really no excuse for a public exhibition of vocal gymnastics. People pay to hear singing—sweet tones from the most wonderful and beautiful of all instruments—the human voice. Instead, they hear trills, scales, arpeggios and high notes which are nothing but shrieks, and only too often without the merit of being in tune. The solos are often peculiar in rhythm, with unreasonable words, and instead of melody, simply progressions of notes—usually a sort of duet with the piano. Is it any wonder that people get tired of it. Trills, scales, arpeggios and such are technical equipment. They are an outward, visible—or audible—sign of an inward and spiritual grace. They indicate flexibility and control of the vocal machinery. They are for the studio and practice room—not for public performance. No singer should be incapable of performing them, but every singer should avoid displaying them. They are, to use a homely illustration, like the foam on the ale. No one wants ale without a foam. No one wants foam alone. The foam is a sign of excellence and should be in evidence, but there should be something else. Technical skill should be at command, but should be in the background—in reserve, so to speak. The finest vocal solos written need little technical skill to sing; but they are all the better and more effective if the singer is master of her art.

"The piano solo was Chopin's Third Ballade. It might have been called the fourth or fifth and we wouldn't have known the difference. Chopin is an old friend of ours, but he has written some things we can't read. Miss —— is a fine musician and very popular here, and the audience tried its best to get her to play another solo, hoping perhaps it might be 'Blue Danube,' or perhaps 'Louisiana Lou,' but she wouldn't do it."

No, of course, she wouldn't play either one or the other, although "Louisiana Lou" is a pretty and truly characteristic tune, and the "Blue Danube" is a classic. I do not think they would have been good for concert performance, although they are just as appropriate as the Third Ballade. Chopin, the poet of the piano, the musical aristocrat, wrote chiefly for the salon and the small cultured coterie usually found there. One or two waltzes, a couple of polonaises, and one or two other works might prove acceptable to a mixed audience, but that is doubtful. The majority of his compositions are of too serious a nature to give pleasure to any but the elect. Paderewski and Pachman can charm any audience with Chopin's pieces; still we must not forget that these artists play only to distinctly musical and esthetic audiences as a rule. What they would do with a heterogeneous crowd is another matter. Liszt, Weber, Mendelssohn, Schubert, Henselt, Raff, Rubinstein, Moszkowski and others have contributed generously to the stock of exhibition pieces. Let our pioneer players draw upon them, leaving Mozart, Bach, Beethoven, Schumann, Brahms, Grieg and Tschaikowszki for the select studio audience, the lecture room and for private enjoyment.

I cannot refrain from giving a few remarks concerning the choral music.

"The large choral society which has been organized gave music which was pleasing to the common ear. The chorus numbers were all right. There is always an inspiration in the swelling tone of many voices, and we found this inspiration last night. We liked the choral part best of all. The choral society is a splendid thing, and in future concerts, speaking for the common people, we hope it will be used more."

In the choral society lies the earnest musician's greatest hope for the future improved condition of music. Through it, and it only, will the "common people" be raised to a higher standard of musical discrimination. A choral society will do more for music in a community in five years, than piano, vocal and violin solos will do in fifty. Individual development tends to narrowness. Music is not thus disseminated, but concentrated. The influence it can exert is limited. The choral society influences for good all who sing, and all who come in contact with them. The music they make appeals to everybody, high, low, rich, poor, educated, ignorant; it affects them, and they thoroughly understand it. Then again, choral music is, after all, the grandest manifestation of sweet sounds, and through it must come any real appreciation of solo work. I cannot help wishing, that some of the efforts at present directed to artists recitals and solo work generally, might be used in developing choral music. It would be profitable in many ways.

PUPILS' DUTY TO THE TEACHER.

MADAME A. PUPIN.

Children and youth are for the most part unreflecting human beings. They live in the Now, and the Future does not enter into their thought; consequently they are apt to regard those who impose tasks on them as their natural enemies, and their bright minds are alert to evade their tasks and to get the better of their enemies.

It is strange that parents do not speak to their children in a more confidential way, and explain to them the purposes of life, and why they are called upon to perform certain duties. Children have a quick sense of justice, and I believe if they were treated thus, their conduct would be very different from what it sometimes is.

Would the child of loving parents be so apt to shirk his lessons if his parents were to speak to him in this way: "Consider, my child, how much we do for you; we give you your pretty clothes, we buy you many toys and we are constantly devising new ways to give you pleasure. Now what can you do, either to repay us, or to give us pleasure, for I am sure you would like to do something to please us—would you not?" The child has perhaps never before thought of it in this way, but having the idea thus presented to him, he is almost sure to answer that he would. "Then you can study your lessons faithfully, and learn to play your pieces for us."

Young people should be taught to recognize their duty towards their elders and teachers. Although thoughtless, children are reasonable, and if prompted to view things from the right standpoint, they would not be so apt to ridicule the peculiarities of their teachers, nor play their mischievous tricks on them in retaliation for fancied wrongs.

They should also be led to understand that from their teachers they are receiving something of great value—that opportunities and advantages are theirs now—which may never come to them again.

Said a young man to his former teacher: "Madame, I remember when I was a boy, I thought you were terribly strict and severe. I used to try to evade my lessons and shirk my practicing. Now I regret that I did not appreciate the value of what you were giving me. I would give anything if I could play the piano, but thanks to my stupidity, I cannot play a note."

I take the stand that if children were taught to think; if it were clearly made plain to them that every one in this world must get an education, and this education is the drawing forth, or unfolding, of talents latent within; that the teacher by his knowledge is the one to do this, but needs the co-operation of the pupil, there would be no question of the pupil's duty to the teacher. The pupil would be ashamed not to take pains to learn the lessons his teacher had taken pains to impart to him. He would recognize, and pay a deference to, his superior knowledge. He would consider his patience and try to regard him as a friend.

The idea of liberty and equality has been made so emphatic in this country, that it is sometimes difficult to make an American child feel that he must look up to any body, or that he has not a right to do just as he has a mind to do. But if he could see that his Future depended on his right use of the Now, he might be induced to rearrange his ideas and become more tractable and deferential.

THE MUSICIAN.

A Monthly Publication.

EDITED BY
ARTHUR L. MANCHESTER, A. G. O.

PUBLISHED BY
HATCH MUSIC COMPANY.

SUBSCRIPTION PRICE.

SINGLE COPY . . . . . $ 15
PER YEAR 1 50

Free of Postage in the United States, Canada and Mexico. Foreign Postage, per Year, 72 Cents.

Remittances should be made by Bank Draft or Check, Post Office Money Order, or Express Money Order. *Where none of these can be procured*, money can be sent in a Registered Letter.

New Subscriptions can commence at any time during the year.

Discontinuances.—The publishers should be notified when a subscriber wishes his paper stopped. In the absence of written notice to the contrary, subscriptions will be continued.

Communications are Solicited from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications intended for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned.

All Letters should be addressed and **Remittances** made payable to

HATCH MUSIC COMPANY,

Eighth and Locust Streets, PHILADELPHIA, PA.

The Publishers of THE MUSICIAN do a General Music and Music Publishing Business. They can supply anything in Music.

THE M. T. N. A.

The twenty-third Annual Convention of the Music Teachers' National Association, according to announcement already made, is to be held at Put-in-Bay, Ohio. This beautiful Summer resort insures a delightful outing, a combination of rest and recreation with the business of the meeting. All meetings will be held at the Hotel Victory, and the members will all be accommodated under the one roof. The facilities for holding a convention, possessed by the Hotel Victory are unsurpassed, making it certain that the comfort of those who attend will be provided for as never before. This is an attraction of itself, but there are other considerations which combine to make the coming convention a most important one. In fact, it may justly be called a pivotal meeting.

●

At present, in the minds of musicians generally, the M. T. N. A. stands for an Annual Music Festival, which gathers together a number of music lovers by providing a program of music to which are added various musico-literary features. There is nothing of a national nature in this. The affair is really local, depending upon local attendance and reaching only those who are within easy access of the place of meeting. The State Associations can do this work far better than any such so-called National body. Even though the participating artists be drawn from all parts of the country, nationality does not result. Neither does the election of officers representing widely separated localities give the Association a national flavor.

●

It is the policy and scope of influence which determines its nationality, hence the M. T. N. A. will be National only as its policy and activity are devoted to a specific work which touches the music life of the entire country. In this connection we quote from an editorial printed in the November, 1900, issue of *The Messenger*, the official organ of the Association:

"*The policy of a Music Teachers' National Association should be the exertion of a healthy and continuous influence on the musical educational progress of the country.* A perfectly familiar statement? Yes; but does the annual festival idea carry out such a policy? The answer is obvious. To perfect such a policy, the Association must touch to the fullest possible extent the daily teaching and study-life of the members of the musical profession. It must offer to each disciple of the art something that goes from it to him as directly as the blood courses from the heart to the parts it nourishes, and that nourishes his musical life as the blood does the various members of the body. The connection between the Association and him must be constant as well as direct. Too many months elapse between annual meetings to hold members; somebody is always too far away to feel the stimulus of the great festival. How shall this direct and constant connection be established?

"First, by just such an educational movement as was inaugurated at Des Moines. There are thousands of earnest, conscientious music teachers in America who will welcome opportunities to perfect their musical equipment under competent supervision; who will establish intimate and cordial relations with a body which provides such opportunities for them. The Music Teachers' National Association can be the body which thus influences the teaching life of the country, and in taking up the educational work outlined at Des Moines it has established a reason for its existence and established a condition which leads to true nationality.

"The festival idea is good so far as it goes, and can be maintained, but to base the condition of nationality on an annual convention is a false conception. The Music Teachers' National Association will be *National* only as it exerts an influence on the music life of the nation. This means that it can be national in the fullest sense of the word, and have *no* annual festival. Its officers and delegate body can meet at stated intervals to carry on its business without the slightest publicity. It is not the annual meeting that constitutes it a national body."

The educational movement alluded to in this excerpt is now in operation. A Syllabus of a course of Musical History, of 36 pages, is now in the hands of students and the work of developing and perfecting the educational plans is steadily progressing. The Association has thus boldly attacked the problem of determining and asserting the right to be called a National body.

●

In the solution of this problem also enters the question of organization. If any policy of far-reaching power is to be assumed, and if a really National educational work is to be done, there must be wisdom and caution combined with aggression in the counsels of the Association. Into this the question of organization enters very largely. A splendid policy can be wrecked by bad business management. Then, too, there must be a union of forces; all musicians who wish to see the standard of musicianship in this country uplifted must do their part in helping the Association to achieve such a result. This means a union of effort upon the part of individual musicians, of State and other Associations with the National body.

●

While, in the opinion of the writer, the delegate system, *per se*, does not afford either nationality or permanence, it is a step in the right direction. It is self-evident that the delegates represent nothing beyond their own relationship to the musical interests of the country at large. This, to be sure, is an important representation, but it admits of no legislation, no law-making. There can be no law making power in the musical life of this country. The standard of teaching, however much it may need it, cannot be legislated into better grades. While we may concede that there is no more important work, of a general nature, to be done than the uplifting of the standard of professional efficiency, we cannot accomplish it by means of legislation. But this does not argue that the delegate body is unnecessary. The institution of such a body affords an opportunity for the selection of people of experience who will do the business of the Association with due deliberation and foresight. Space will not permit an extended discussion of this point, and it hardly needs it, for the transaction of business by a selected and trained body of advisers is apparent.

●

So much by way of prelude. The coming Convention will be called upon to act upon some exceedingly important questions, which have grown out of the work of the last year. The educational movement has advanced far enough to call for discriminating review, and wise preparation for the future organization will be a vital part of the work of the session. Several important propositions will be brought forward. Representatives of State Associations will be present—also of the Southern Association—and it is expected that a conference of the presidents of the State Associations will be held in connection with the convention. The policy and lines of work on which the Association should base its future operations will be boldly and fully discussed, in the hope that some definite action will be taken, which will make the M. T. N. A. a National body that shall touch the entire musical profession of the country.

●

The program will be in keeping with these serious purposes. Its keynote will be an *educational uplift*. This will be done by the incorporation of some new features. The usual Round Table discussions will be given greater scope. Three lectures by eminent authorities on distinctly practical lines will be given. Of these, two are fixed. PROF. WALDO S. PRATT, of Hartford, Conn., will lecture on some phase of the educational movement now in operation. MRS. EMMA A. THOMAS, of Detroit, Mich, will lecture on "Normal Methods."

In addition to these, there will be a series of "Lecture-Lessons," of an hour and a half in length, on each day of the Convention. The subjects will include *Piano Technique*, which will be in charge of MR. E. M BOWMAN, of New York; *Normal Methods*, in charge of MRS. THOMAS; *Harmony*, which DR. HUGH A. CLARKE, of Philadelphia, has promised to conduct if the illness of his wife will permit; and *Voice Culture*, which will be placed in thoroughly competent hands. The concerts will number six, and will be given by artists of national reputation. Already some of America's foremost instrumentalists and vocalists have consented to take part, and it is likely that some surprises will be had.

●

It would appear that every teacher who can so arrange, even though it require effort, should be in attendance upon this meeting. With important questions of national bearing to be settled, educational advantages equal to a summer school at their service, concerts by eminent artists to be heard, and a delightful outing, which will include a moonlight ride on the lake on a large steamer, at their disposal, for the cost of the membership fee, it seems difficult to see what more can be offered.

●

We would urge all readers of THE MUSICIAN to join the Association and arrange to attend this meeting. The membership fee ($2 00 initial; $1.00 renewal) should be sent to the Secretary, Thomas a'Becket, 1541 North 19th St., Philadelphia, Pa. He will send membership ticket and a copy of *The Messenger*, the official organ, which will give full information as to the meeting, and will contain half-tone illustrations of the meeting place.

A REQUEST.

Ever since the time when music journals included music supplements within their pages, there has been more or less controversy over the character of the music published. Style, difficulty, variety, have all contributed to the trouble. One reader wants easier music, another condemns what is used as too popular, another as not popular enough; yet another complains of the variety. Among these conflicting desires the publisher has anything but pleasant experience. The publishers of THE MUSICIAN have not escaped, and after trying, lo! these years, to please their patrons, they have decided to make a statement and a request. These will be found in the Publishers' Column on page 126. We ask our readers to give them a careful reading and communicate with the publishers as requested. The intention is to make the music pages valuable and useful, and no ideas or hobbies of the publishers will be allowed to stand in the way of pleasing those who support the paper, if their wishes are known. But when thousands of people are to be pleased it is evident that the majority must rule. Again, we ask for a candid and *definite* response.

SOME REMARKABLE SYMPHONIES.

PERCY GOETSCHIUS, MUS. DOC.

According to traditions and long-established usage, the conventional Symphony consists of four contrasting movements: (1) An *allegro*, characterized rather by power and seriousness than by swiftness, and sometimes heralded by an Introduction of grave, almost ominously impressive character; (2) An *adagio* (or some kindred slow tempo) varying in style from the extreme of lyric sweetness to that of tragic pathos; (3) A *minuet* or *scherzo*—the merry episode in the tone drama, and (4) another *allegro* or *presto* of bright, dashing, brilliant character.

Besides these external conditions the artistic censor demands of the symphony that its thematic material shall be broad, impressive and pregnant; its technical development dignified but consummately skillful; its forms and aesthetic structure well-balanced and thoroughly interesting; its orchestral expression vivid, masterly and well abreast of the times; and its contents (especially in our modern era) so vitally emotional, so infused with the throbbing passion of the writer's own life, that it must profoundly impress the intelligent listener as a genuine and valuable contribution to the history of the human soul.

These requirements impose so formidable a task upon the composer that any symphony which can vindicate its right of being, in the glare of such comprehensive analysis, might be regarded as a sufficiently remarkable creative feat, quite aside from any other considerations. But, for all that, the muse of Tone points proudly to a multitude of splendid symphonic achievements wrought during the last century and a half; and among these there are not a few that have won special distinctions, or, at least, that merit particular attention, by virtue either of very marked intrinsic worth or striking originality, or of some unique external condition which assigns them to an individual niche in the symphonic temple. Of some of these "remarkable symphonies" the present article is briefly to speak, by no means, however, with the thoroughness which the subject deserves.

Were it possible to discover and specify accurately the author and date of the *very first* conventional symphony in musical history we should, assuredly, revert to that venerable patriarch of the distinguished symphonic race as the most remarkable of them all. But whether the honor belongs to Ph. Emanuel Bach or Giovanni Sammartini or Holzbauer, or possibly to old Giov. Gabrielli himself; and whether its life began in the seventeenth century, or not until the eighteenth was well under way, has not, to the best of my knowledge, been determined, nor is it likely to be. And perhaps it is well so, for the reverential regard we may cherish for this unseen, mysterious progenitor might be sadly shaken if we were permitted to witness its primitive rudeness and poverty.

An interesting word may be interlined right here in reference to the origin of the name "symphony": The Italians, to whom, as is well known, we owe the inception and promotion of the Opera, used the term *sinfonia* ("sound-combination") to designate the instrumental introduction (sometimes very brief) to the whole, or to parts, of their operas; and as this introduction in the sturdy upward march of instrumental art became more and more extensive and important, it developed, first into the Overture and later into the independent form of three or four-movements that led into our Symphony. In its specific relation to the opera it became and remained the more concise "Overture," while its name, *sinfonia*, passed over to the larger and wholly independent form. At first it, the sinfonia or symphony, is said to have been a sort of tone-drama in miniature, and this, in view of its original connection with the opera, seems more than probable.

One thing is certain: that the history of the symphony reaches back fully a quarter of a century before Haydn's day, though he is popularly styled the father of this art-form, and his are erroneously supposed to have been the first genuine symphonies. Among the 118 or so that Haydn wrote there is one which may be considered remarkable, not only for the quaintness and humor of its design, but for the evidence it bears of what absolute music was considered capable of expressing at that naïve period, namely, the "Farewell" Symphony. It was written in the Summer of 1772 while Haydn was music director to the court of Prince Esterhazy. The latter had the whim of keeping his Summer orchestra longer than usual, much against the players' will. Haydn, not venturing to make formal remonstrance, conceived the idea of doing so in musical pantomime and wrote this symphony for the purpose. It contains only two movements—an unusually brief and imperfect *allegro* and an *adagio*. In the 30th measure of the latter the second horn player is directed to lay down his instrument, extinguish his candle, rise and walk away; shortly afterwards the flutist, then the first hornist, then the oboe players, and then, one after another, all but two violinists follow his example, and these last finish the movement alone, with gestures expressive of great fatigue. The prince understood and graciously granted the pantomime petitions and the tired players obtained their furlough the next day.

The first symphony of Mozart is remarkable in being the work of a child of eight years. I do not know whether it still exists or not; it was the first of forty-nine, according to Köchel, and though its contents can scarcely have been worthy of even casual consideration in the history of symphonic evolution, it stands unparallelled as an instance of precocity in this field of musical creation.

For a vastly different reason the *last* one of these forty-nine Mozart symphonies is again remarkable. Its nobility and power, notably in excess of these attributes in any foregoing symphonic work, earned for it the name of the "Jupiter" Symphony. The unrivalled feature, however, that makes it remarkable is its polyphonic Finale, in which five (or at least four) independent themes are successively developed in the customary sonate-allegro form, and then combined, during the final Coda, in a regular quintuple-fugue exposition that is truly unique in musical literature.

It would not be difficult to point out some characteristic in each single one of the nine symphonies of Beethoven that is surely remarkable; but a distinction may justly be made in favor, first, of the third one (the "Eroica," 1803), for in this work symphonic art enters distinctly a new era. The stupendous insight of the greatest modern master into the resources of tone; the glorious daring with which these resources are compelled to divulge their power, and the maturing pulse of one of the noblest and most godlike of great human souls, all of these qualities are here recorded for the first time in overwhelming wealth in the symphonic art-form.

Passing by the 5th which, from its great popularity, might be esteemed by many no less remarkable than the 3d, I would single out the 6th (the "Pastorale," 1808), because of its relations to that descriptive style known as program music, later so vigorously cultivated by Berlioz, Liszt and others. It is by no means the first example of this kind in symphony literature, but is remarkable that so stern an advocate of absolute music, as Beethoven was, should, in this instance, have unbent to demonstate the actual power of music to arouse and sustain a *definite* emotional impression, for the first time, at least, with well-nigh irrefutable success. Here music seems to discourse in a wholly new language, coherently and intelligibly, and all the ecstasy and subtle charm of fragrant country surroundings completely envelop and capture the heart of the concert-hall listener. Perhaps it is only an imaginary vision, superinduced by the train of thought that its titles create, in each successive movement or by popular traditions, hut I believe it to be a *reality*. But for this symphony I question whether we should have been prepared for such masterpieces of tone-suggestion as Raff's "Forest" Symphony or the "New World" of Dvorâk.

Again, passing by the 7th of Beethoven, with its persistent rhythms and its astounding originality, and the 8th, that "apotheose of humor," we pause at the 9th, the "Choral" Symphony. This is not the oldest example in history of the coöperation of a vocal chorus in the symphonic design, but it was assuredly at that time the most remarkable one, and it stands yet unsurpassed, in many respects, a very monument of symphonic art.

Remarkable for their extension of this choral idea into striking dimensions are: The "Hymn of Praise" of Mendelssohn (1840), called by its author a "symphony-cantata," and consisting of three purely instrumental movements, followed by a complete cantata of several numbers, and the dramatic symphony, "Romeo and Juliet," of Hector Berlioz (1839), a truly imposing and, in some of its parts, very beautiful creation, that is partly symphony, partly melo-drama and partly opera. It embraces seven movements or numbers, some of which are sub-divided into several sections, among them the famous "Queen Mab" Scherzo.

The "Reformation" Symphony of Mendelssohn (1830), is remarkable for a curious, purely external reason. It was written (at least, partially), directly in full score, without any of the preliminary stretchings that is *always* made. The work itself is, however, of no especial musical significance.

To return to the classic period, no symphony that has ever been penned is more remarkable for its intrinsic musical beauty, might and pathos than that in B minor by Schubert (1822), further noteworthy for having been left "unfinished," for some unknown reason. Only the first *allegro*, the *adagio* and a few measures of the *scherzo* exist, but these far outweigh the full number of ordinary symphonic movements in their fathomless (in a sense unearthly) melodic beauty and impressiveness.

Schumann's Symphony in D minor (1841), is the first one in which the unity and cohesion of the several movements is promoted by connecting the latter uninterruptedly (without "waits"). He styles it "symphony in one movement" which, though inaccurate, is comprehensible. Mendelssohn had the same purpose for his "Scotch" Symphony (in A minor, 1842), but had to abandon it and separate the movements, to the undeniable relief of the auditors. In the above-mentioned Schumann Symphony there is also casual *thematic* association of the movements, a design first adopted, I believe, in the fifth symphony of Beethoven, where the theme of the scherzo recurs in the course of the Finale. And it occurs again in the third symphony of Brahms which, among other evidences of thematic recurrence, ends with the theme of the first movement.

Reference has already been made to the "Forest" Symphony of Raff. It is remarkable for the insistence with which it maintained its mood—a mood so poetic, soaring so high above the clatter of the technical machinery, and yet so definite, that one feels irresistibly here again (as in the "Pastorale" of Beethoven) the breath of some ethereal.

Of no symphony is this true, it seems to me, in so supreme a degree as in the "New World" of Dvorâk (1896). This is probably the most remarkable example of "orchestral mood" within the strict confines of the genuine traditional symphonic forms in existence. It reeks with the poetic perfume, thrills with the singular rhythms, glows and gleams with the transcendent colors of the South, but nowhere compromises one atom of its symphonic dignity. To a certain (limited) extent this is also true of Rubinstein's "Ocean" Symphony, though it is chiefly remarkable for its length. It consists of no less than seven movements, purely instrumental.

As a specimen of fervid emotional expression, that here also appears to transcend all consciousness of technical operations, the "Pathetic" Symphony of Tschaikowsky (the famous No. 6) may well be regarded as remarkable. It has made more stir than any similar work, unless it be the noted No. 7 of Anton Bruckner, brought to public notice some fifteen years ago, in Vienna, when its aged composer was nearing the end of a long and disappointed life. The future will determine how enduring the traits may be that have given the "Pathetic" Symphony its sudden and extravagant favor with music critics of every grade.

The two symphonies of Liszt—"Faust" and "Dante"—are both extraordinary exponents of the principles of program music, though probably less eminent than those of Berlioz.

Of the four symphonies of Brahms it is difficult to speak comparatively. They are, beyond question, *all* remarkable—the most genuinely classic in spirit and in execution that have been conceived since the day of Beethoven's 9th. It cannot be said that any one of them inaugurates a new symphonic era, as did the 3d of Beethoven's, nor is any one of them especially characterized. But in their mighty depths and heights of human passion and in the Bach-like, *absolute* mastery of tone-association and form, they constitute a collective art-creation of such grandeur and strength that they can never fail of reverential mention whenever critical discussion turns upon remarkable types of symphonic art.

Knowing what not to often settles the question of what to do. This is as true in the realm of one's ordinary every day work as in the ruling of a kingdom or in the command of an army. The number and variety of things that might be done confuse and perplex a man as he looks out on the possibilities and seeming duties of the hour. He does not at once see what alone must just now be done at any cost or risk, and therefore he is not able to decide what must have all his energies for the hour.

THE NEW EDUCATION.

Arthur L. Manchester
Thomas Tapper } Editors.

FOREWORD.

The *New Education* offers its readers, for 1900–1901, the best plan for a year's study that it has yet presented. It will be the best in two particulars: In choice of subject matter and in manner of presentation. The hearty reception which this novel educational feature has met with makes it possible for THE MUSICIAN to continue to develop the idea of home music study and to offer the best advantages that are to be attained in this manner.

The series of subjects for the coming year follows. Each subject is in the hands of a specialist and will be treated practically and as fully as possible in twelve lessons. In order to meet the immediate demands of students who seek information on special points in the work, the editors will be glad to furnish

Suggestions for the further study of any subject.
A bibliography of any subject
Information on any question in the lessons.
The consideration, and, if necessary, the presentation, for general discussion of any point that comes up in actual teaching.

The subjects for the coming year are as follows:

I. Advanced History of Music; twelve lessons, with suggested reading.
II. Psychology and Pedagogy of Music; six lessons in each subject; suggested reading.
III. Advanced Music Form; twelve lessons developing those already given in this department.
IV. Harmony and Melody; twelve lessons; six in each topic.
V. The Literature of Aesthetics and Criticism in Music, twelve lessons.
VI. The History and Development of the Piano, twelve lessons with illustrations.

The following conditions *must be observed:*

1. Address all communications for the *New Education* department, thus: THE MUSICIAN, New Education Department, 8th and Locust Streets, Philadelphia, Pa.
2. *Do* NOT *roll your manuscript.*
3. The answers for each month must be sent as soon after the issue of the journal containing the subject to which they relate as possible, and before the next succeeding issue. No papers are to be held until end of course. New members can join at any time by sending names and answering questions contained in current issue.
4. The editors are obliged to say that no papers will be read or rated that fail to comply with conditions 3, 4, 5 and 6.
5. No two subjects should be written on one sheet. All sheets pertaining to one subject—for example, History—should be independently fastened.

Ratings will be largely influenced by the following points:

Accuracy.
Clear, concise, yet smooth diction.
Grasp of the subject.
Originality of thought and statement.

The questions following each lesson have two purposes: First, to connect the reader's mind directly with the text—the most fundamental, that is, the lowest duty a question can serve, but necessary. Second, to suggest a thought beyond the mere expression of the words in the text; the highest purpose a question can serve. The first is by far the least useful if he has a memory; the second the most useful if he has a reasoning faculty.

The editors will welcome letters from teachers which contain:

a. Suggestions as to what will make this department more valuable, the suggestion being dictated by the teacher's individual experience.
b. Statements regarding the application of this work with pupils as well as in one's own effort to secure a broader education.
c. If there is any line of thought of practical value to you, and likely to be equally practical to others, let us know it.
d. All such suggestions must be sent to the office of THE MUSICIAN, addressed according to direction given in regulations.

[NOTE.—*New Education* students are specially requested to avoid enclosing *anything* relating to their business with the Hatch Music Company with their *New Education* papers. The failure to comply with this rule causes great trouble. Kindly keep this matter in mind. We wish to call the attention of our students to the necessity of *fully prepaying postage on their papers.* We have been compelled to pay additional postage on a large number of those already received. This should not be, hence we request our students to take care that sufficient amount of stamps be affixed before mailing.]

THE TEACHING OF MUSIC HISTORY.

EDWARD DICKINSON.

The writer who undertakes to discourse on the subject of music history and its study in a short paper, has a task only less appalling than that of a certain colleague of mine, who was given "The Universe" as his topic for a five-minutes after-dinner speech. He gracefully escaped from his dilemma by saying that his subject was the best in the world, because no matter how much he might ramble he could never get away from his theme. Now music history does not quite include the world and all things therein, but the longer one studies the farther its boundaries seem to extend; in fact, its boundaries can never be distinctly traced, for they shade away and become lost in the limitless domain in which human thought and desire act in constantly enlarging freedom.

My purpose in these papers is, therefore, the modest one of submitting a few suggestions in regard to this magnificent study and its proper method of pursuit, which I have drawn from a somewhat extended experience in the practical work of instruction in school and college. I intend these suggestions more for stimulus and encouragement than for exact guidance, for methods will differ according to circumstances. Although my own methods have been developed under the favorable conditions afforded by conservatory and college, with their libraries and concert systems, I believe there is nothing in the plan which I have adopted which is not practicable, although often, perhaps, in reduced and modified shape, in the case of the private teacher with his private class.

Among all the subjects connected with art and its study in America there is none that is making more rapid headway than the history of music. Some knowledge of it is now expected on the part of all musical educators, and every one who is able to lead in it among his constituency finds his credit and his influence distinctly increased. The subject, therefore, is timely and worth the attention of all musicians.

I have divided my little essay into two parts or heads: (1) what does music history include and from what point of view should it be studied; and (2) how should one teach it in order to make it of practical benefit to students.

The first point—what does music history include—suggests, at the first mention of it, certain elements which are so obvious that no time need be wasted in enlarging upon them. The lives and personal traits of composers, classes and styles of their works, the rise and progress of the great musical forms, the history of instruments, successive phases in the development of instrumental and vocal technic—all these and more are necessarily involved in the very nature of the case and could not be omitted without ignoring the subject altogether. The very definition of history also requires that the various details should be combined in some kind of logical order. This relationship of events and departments is recognized with more or less clearness by every one who is at all drawn to music history. Composers do not stand isolated, but are classed in groups or schools; different forms, such as symphonies, operas, oratorios, are seen at the most cursory glance to arise, not in a haphazard fashion, but according to some principles of succession. Now the more deeply one looks into the matter, the more one studies music history in the light of a philosophic method, the more one sees that the law of growth, of continuity, affords the clue to the proper comprehension of the whole matter. The unfolding of forms and groups out of antecedent forms and groups, the influences of composers upon each other, involve a recognition of some law of growth as a necessary condition of profitable study and right teaching. All who have looked into the subject are conscious of this, more or less, but I wish to emphasize it as the saving thread which guides the investigator through this very bewildering labyrinth. The cohesive principle, the life-giving element in music history study, is found in the progressive evolution of musical forms. Every student of music history must be an evolutionist. The method of evolution, which has been defined as "continuous, progressive change, according to certain laws and by means of resident forces," has found no more brilliant illustration in human affairs than in the history of modern music. There has been a steady unfolding from the simple to the complex, a constant process of differentiation; a regular, systematic expansion of new forms and styles out of the old; incessant selection, specialization and adaptation; with also, as in the organic world of nature, abortive growths, arrested developments and exhausted energies. Every composition, every composer and every group has a definite place in this intricate but logical system. No event or tendency can be understood if set off and studied alone; it takes on vitality and meaning only when seen as an organic part of the great living texture, whose law is constant change, constant adaptation to new conditions.

Many writers and teachers are satisfied with this. An evolutionary scheme, which holds all the innumerable details in its embrace, is to them the whole story of music history. But the real glory of the science is revealed only when we discover that with the recognition of the relationship of events and forms we are only over the borders of a territory of infinite riches. As I have come to view the history of music it discloses its real value only when I see that musical art is not final, but rather one phase of the larger self-revelation of the human spirit. Its message to the intellect and heart is only to be deciphered by the aid of the light thrown upon it by other manifestations of thought and feeling. That is to say, music is not isolated. At every one of its points it touches life; there is hardly a human impulse or tendency sufficiently widespread to become a factor in the making of history that has not helped to give color and direction to musical expression.

As we survey the history of man we find him revealing himself, not only in laws, governments, institutions, manners, social and political movements, sciences, but still more profoundly in literatures and arts. In studying literature in the broadest survey as the disclosure of the underlying character of a nation or period, we take account of the influences that moulded it as found in climate, physical geography and environment, as well as in native racial qualities and the leading motives of the epoch. The forces that produce a literature converge somewhere as we trace them backward, and if we can find that point of convergence we have the key to the people or the epoch. And so it is with painting and sculpture. Every work of literary or graphic art is a human document. Its author is displayed in it not as an individual merely, but as a member of a community whose ruling forces, however great his genius, restrain him and give form and color to his productions.

[TO BE CONTINUED.]

V.—THE MEDIAEVAL CHURCH—COALITION OF SACRED AND SECULAR MUSIC LIFE.

PERCY GOETSCHIUS, MUS. DOC.

Shortly before the last turbulent murmurs of the Holy Wars began to die away in the far east, the occidental Christian Church was preparing to make her second great contribution to the development of the art of music.

The first service she had performed consisted, as has been seen, in providing a shelter for music, and environing it with influences calculated to foster its early growth in a definite and appropriate direction.

These influences, like those exerted at a later period by the secular music lovers, affected solely the *melodic* phase of musical expression; there is no evidence that anything whatever occurred, either in theory or in practice, either from ecclesiastic or from secular sources, that might have led to the recognition and application of the *harmonic* resources of music, during the first millennium of the Christian era.

This—the apprehension of the *Harmonic* idea, the discovery that different melodies might be harmoniously associated, and the long course of patient experiment that resulted in establishing the rules of tone-union upon which music has ever since depended, and apparently always must depend—this was the second great service for which the tone art is indebted to the Christian Church of the middle ages.

First came the rude experiments of Guido and the two Francos (of Paris and of Cologne, end of the twelfth century), who attempted to realize a harmonic union by letting their singers chant the same Gregorian intonation together *in different registers*.

This simple device, though it led directly to a complete revolution of all musical practice and was of such vital moment that music as a refined art and science is totally inconceivable without its inception, was more than likely purely accidental. The difference of an octave between the natural voice-register of boys and male adults, had accustomed the choir masters to the effect of a melodic chant sung in octave duplication; and the same diversity of voice compass that defines, now-a days, the distinction of bass and tenor registers, must have resulted, almost as a matter of course, in the more startling (and obviously more pregnant) chanting of a sentence by "tenors and basses" together, at pitches differing uniformly by a perfect fourth, or fifth.

These methods of multiplying a melody would be rejected by a modern ear as unsatisfactory, if not downright intolerable; and although they seem to have been objects of childish admiration to these early harmonic pioneers, they were not long in devising such modifications as conduced to the independence of the simultaneous parts, if not to their collective harmonic beauty. Thus, after overcoming some scruples against an alleged desecration of the holy melodic forms, they ventured to diversify one of the two associated melodies, so that instead of running exactly parallel with the traditional intonation (the "cantus firmus"), it approached and receded from the latter, thus exhibiting a variety of successive musical intervals. This more liberal and prolific process soon became known as Counterpoint, and proved to be a source of most unexpected and apparently inexhaustible musical results, that gave the musical scholars of the Church ample food for fruitful experiment for the following four centuries.

Nor was the opportunity neglected. No other institution has ever afforded such leisure, such admirable conditions for studious research in every direction, as did the Catholic convents, especially during the comparative repose of the middle ages. Music, always an honored factor, and in truth a sacred element of the Church ritual, was one of the nearest as well as dearest objects of study, and the development of its new and valued promises along the lines of thought and experiment thus suddenly disclosed, was prosecuted with the utmost interest and vigor.

It is somewhat peculiar that little or nothing was achieved for a long time at Rome, the center of Catholic hierarchy. The most striking advances in harmonic theory and practice were first made farther north, in middle and northern France (Paris), in Belgium, the Netherlands and England. By the end of the thirteenth century, the primary principles of "Imitation" had been discovered and applied with some degree of success It was found that certain intonations could be harmoniously multiplied by being announced in a second voice a *few beats after* the first voice had started. This method was called Canon (a name it has retained ever since), and later, when applied with less rigor, the Fugue. In the course of the fourteenth century, the ruder distinctions of Double-counterpoint were defined, and six primitive laws of contrapuntal writing (recognized as valid to this day), were enunciated. About the same time the "falso bordone," the harmonic condition known in modern music as "Inversion," came in vogue at Avignon.

Thereafter these incipient principles of harmonic writing developed with great rapidity into a comprehensive scientific system, so abstruse and intricate that it is difficult for the modern student to follow, even superficially, the mazes of its elaborate rules, and utterly impossible to apply them and construct a page of such complex music as the "masters" of the fourteenth and fifteenth centuries wrote with apparent ease and delight.

That the products should have been, at first, wholly devoid of true musical spirit and grace, is obvious. But gradually the stirring discipline of such purely mathematical calculation (based as it was upon correct natural principles) began to tell; and after the climax of scientific complexity had been reached and safely passed (Des Pres, about 1500), the needed reaction came. Such immense facility in composition had been gained, that it was now possible for the composer to give expression to what he *felt*, as well as to what he knew, and the evidences of some slight yielding to individual *feeling* are present in the works of Lasso and Palestrina (sixteenth century), generally regarded as the culmination of old scholastic counterpoint.

A curious evidence of the coalition of sacred and secular music life is afforded by the very common practice among these old contrapuntists of interweaving the melody of some popular song into their Masses and other works, practically as basis of the composition. The Church permitted this practice, after much grave dissent, on condition that the secular melody be rendered unrecognizable; so it was placed in an inner part, and its tones were greatly lengthened, or otherwise rhythmically distorted, until no trace of its original character remained. But the usage was cherished by every writer of this era, with a constancy and determination that prove real appreciation of the intrinsic musical value of the popular art, and sympathy for it.

On the other hand, the secular musicians gleaned from their scholarly rivals the simpler (and therefore most worthy) harmonic devices, and utilized them in their own free fashion, so that, here again, the art of music owes its rescue from the fetters of unemotional scholasticism to the simple hearted practices of the people.

QUESTIONS.

1 What was the first service rendered to music by the Church, and when?

2. To what phase of music were all influences limited for a thousand years?

3 What was the second service rendered by the Church to music, and when?

4. What rude experiments led to the discovery of the Harmonic idea?

5. Describe the successive stages of practical achievement, down to the fourteenth century?

6. Where were these results achieved?

7. To what did the severe discipline of this era lead?

8. What coalition of sacred and secular music life took place?

9. What did secular music profit during this era, and how did it influence the future art?

THE PREPARATION OF THE MUSIC TEACHER FOR HIS WORK.

FREDERIC H. RIPLEY.

Teachers, like poets, are born, not made. Yet there must be added to native talent the elements of study and practice, for genius, after all, is but work, and he who possesses the genius for work will have all other things added unto him.

Teaching in itself is an art of the highest order and, like all other arts, is cultivable in those only who have a desire to succeed in it.

The teaching profession is weighed down alas! with persons who have unexpectedly found it necessary to earn money and, being possessed of some musical ability, have begun to teach as a means of getting a living pure and simple Very few who are teaching music have submitted themselves to normal training and come to the work well prepared. Those who would prepare themselves find the means for such preparation meagre, indeed. But there is a great change going on in this field and more and more earnest men and women are seriously devoting themselves to teaching as an art and, as a result, better and purer work is being done.

The teacher stands in about the same relation to his pupil that the physician occupies with reference to his patient. There are three things which each must clearly apprehend, namely: the present condition, the result to be reached and the means by which the first shall be made to yield to the last.

It is said of a famous doctor that he knew the remedies but was weak in diagnosis, hence which remedy to apply remained a mystery. Just this is the situation of the teacher who cannot penetrate into the mental and moral state of his pupil and who, hence, is forced to proceed in a routine manner and trust to luck for results. The other class of teachers realizes fully present conditions and yet lacks the skill to select and to apply the proper remedy. These conditions then suggest some subjects of study for the teacher. Simple in statement, indeed they are, but how difficult they are in the mastery!

The study of human nature is the first and the most difficult subject which the music teacher must attack in preparing for his work.

It has been said: "If you would know others study yourself; if you would know yourself study others." To study yourself means, in this case, examine carefully your own processes of thought, think of your own needs; notice how these needs are supplied; recall how your teacher affected you under various conditions, and so make your perceptions keen in discovering similar conditions in your pupil.

To carry forward self study successfully the teacher must always be a pupil He must continually attack problems which bear the same relation to his abilities that the pupils' problems bear to his powers. In this way sympathy is kept alive, impatience restrained and fellowship established. The pupil and the teacher are learners together and a strong bond of fellowship is established.

The teacher who can place himself on the same plane with his pupil is sure to succeed so far as his own power over the subject in hand permits. In most cases success depends not so much on the amount that the teacher knows, however, as upon the amount of knowledge he can command for ready use. The teacher therefore must be master of general principles and have, in addition, the power to apply those principles in a great variety of cases.

In no department of teaching is a correct general conception of the end to be reached so essential as in fine art. An inadequate object is fatal even in the most elementary walk. Hence, it is that the person preparing to be a music teacher should come in contact with the very highest and best examples of men and women, who are artists in the best sense. For in the office of teacher a contribution to human life is made. The life which is touched will be better or worse for your ministry. The pupil comes asking for bread; what shall he receive? Most pupils who present themselves for instruction do so because of something within them which impels them toward art as a means of enlarging their life. They are not conscious of this perhaps. They may say that they are fond of music and wish to learn to play or to improve themselves, but in reality this is a symptom which the teacher must correctly interpret, and to do this the teacher must be thoroughly alive to the scope of artistic thinking and living in every variety of manifestation. In other words, the music teacher must not confine himself to the narrow limits of the small things just before him, but must reach out beyond and lead the pupil to see how the principles which govern music extend to every department of art and of life. Hence, as a part of every music teacher's training I would count general art study of the highest importance. At least, the music teacher should read Ruskin and other art critics, and become, in a general way, acquainted with painting, sculpture and architecture.

The study of methods is necessary but dangerous. To the small and narrow mind a method is the all and end-all of teaching.

Those who take no broad view of the subject seek some means for universal application by which results can be obtained and work disposed of. This is indeed a most dangerous thing. Every teacher whose fame has gone abroad is beset by persons who wish to learn his methods. Mr. Beecher, who took a great interest in young preachers, was constantly beset by men who wished to learn the method by which his great power was cultivated. One young man, who was particularly troublesome, at last said to Mr. Beecher: "I am informed that eating fish gives men great brain power. Will you please tell me how much and what kind of fish I should eat?" Mr. Beecher replied that he had heard that eating fish tended to stimulate the brain; that for the inquirer he would recommend whale, and if they were small he should eat two.

The story is probably not true, but it illustrates the tendency on the part of unthinking people to attribute power to some manner or some method, and to forget that back of all manners and all methods lies the *man*, the character, the broad sympathy, the kindly disposition, the untiring patience, the desire to help others, which are the sources of all true power. So the study of a method while necessary must not be conducted in too confident a spirit. The question, "Why do I do this?" should always remain before the teacher, and unless an adequate answer can be given the *doing* should be changed.

The teacher should cultivate patience, reasonable patience, in his preparation for work. Reasonable patience is that kind which comes from a serious and unimpassioned examination of each case. Thus, John Smith comes to me for instruction because he wishes to increase his power. John Smith is very stupid and I see at once that he will never add to my glory as a teacher. John Smith tries over and over and continues

to fail. Shall I become impatient? Certainly not. On the other hand, my sympathy shall go out to him so fully that he shall enjoy his effort and not lose courage, and I shall keep my pupil and the little progress that he makes shall be a source of great pleasure to us both. In fact, it is the sick who need the physician and not the well, and the teacher should train himself to believe that it is those pupils who need most help who most fully justify the office of the teacher.

In the preparation for teaching I assume that the mastery of the subject matter has been taken care of, yet in this work there is a necessity for earnest study of the relation of means to ends and a full appreciation of the interdependence of parts. The teacher should so thoroughly grasp his subject that he may easily divide the course into years, terms and quarters, and have such a definite idea of what is to be done in each that no time shall be lost.

He should have his subject so fully in hand that he can treat of any phase of it over a definite period of time and so give to transient pupils even, so definite a turn of thought and action that they will realize new powers and see new possibilities before them.

When a pupil comes with little time, little money and little previous training and throws himself on your mercy, giving up his hard-earned dollars, living poorly, toiling incessantly and with full faith in you as a leader and guide, then it is that the honest teacher feels his need of special training for his work. Then it is that his powers of quick diagnosis, knowledge of remedies and ends and means come to the severest test. Then it is that the true teacher displays his power by bringing to bear instantly all that he has of art, of life, of skill and of character.

QUESTIONS.

1. What departments of knowledge must the teacher of music master?
2. How is the teacher able to keep himself in sympathy with his pupil?
3. What dangers arise from the adoption of a fixed method?
4. What are true sources of power in the teacher?
5. Why should the teacher have a definite course clearly in mind?
6. How may the loss of time in starting a new pupil be obviated?

FORM—FIFTH LESSON.

A Suggestion to the Teacher.

THOMAS TAPPER.

As the voice is nearer the soul of things musical than the tones of an instrument are, we must take care from the beginning of pianoforte study to cultivate the singing habit. And this because the voice is essentially the music interpreter. Once the child has been taught to seek acquaintance with music, by referring it to the voice, he has a new and great power. It enlarges his outlook, he understands more, it establishes for him an inner standard for his piano playing. If he may become accustomed to seek his way into music by way of the voice, his hands in their inability to master the technical demands, will not have buried the music's meaning beyond his reach. Often this happens. The child's hand is not up to the facile expression demanded by the music, and he works at it until his interest and labor in their problem have quite lost to him the real music of the composition.

Just this happens frequently with adult and thoughtful pupils in compositions as simple as the Little Prelude, by Bach, in E minor. Even playing such a piece over and over again with one hand will reveal something of its structure, which is not infrequently lost when it is played persistently with both hands. But one comes intimately to know the music, which one may say "pervades" such a piece, by trying every voice part literally with the voice. Where it drops out of the voice range sing it in a convenient octave, but do not fail to have heard *and felt* every portion of its melody by aid of voice alone. The voice finds many meanings which the fingers fail to discover.

It is curiously suggestive in this connection to think upon the development of instruments. From ancient times to the present day they, one and all, have sought the singing quality of tone. All instruments —save those of percussion—which we employ to artistic ends are instruments which can be made to sing. And we call him the true performer whose mastery and knowledge of his instrument is of its singing-tone possibilities. On the other hand, what we may call vulgar instruments are those whose possibilities in tone production are aside from the singing-tone. The aim, then, of instrument maker and of performer is to approach the wonderful completeness of the voice.

Hence, in all instrumental study the teacher must keep it in mind that the nearer she can make the pupil's work approach the nature of song the nearer she is taking him to the true art of the instrument itself. The best and only safe path to follow is the use of voice and hands simultaneously. That is, they should go on simultaneously, but the voice should receive attention first. Recently elementary piano music has taken the form, if not directly of songs, at least of piano melodies in the voice range. Hence, it is easy to proceed with material which is singable. If it be presented to the child *first* as a problem to be worked out by the voice and afterwards at the piano it will invariably be found that the piano problem is simplified (the hands have an intelligent inner monitor) and the result in performance will be more complete as a presentation of meaning. It will surprise the teacher who has never tried it to witness the results of this suggestion.

When the piano piece has in the right hand a single tone-line the voice problem is simple. When it has two or more tone-lines it is not so simple for the hand but quite as simple for the voice, for whatever the young player's capacity may be for playing many tones simultaneously he *must* sing parts one at a time. And by doing this—"one at a time"—he gets at the inner musical quality of the composition.

Then there is the accompaniment, as the left-hand part is persistently called. Invariably one may sing it, whatever form it takes; and one is frequently surprised to discover its subordinate or important melody cropping out here and there; or, may be, it is in constant evidence. The composer is worth no one's consideration whose writing is not thoroughly musical and interesting throughout, accompaniment and all. Sing all of it, for the voice kindles music into life. The hands often bury it.

When the young pupil can sing his way into his first piano pieces and can do it well, give him, at the proper time, some of the songs of Reinecke, of Abt, or of Graben-Hoffman. Here he will learn to carry a voice part more or less unlike what he plays; excellent practice for the ear, the voice, the hands, and splendid preparation in the difficult art of accompaniment.

No questions are logically required by this lesson. The point of prime importance is that the voice be taught how to kindle piano music so that one actually *feels* it within. Hence, the best test of the lesson is not a set of Questions, but its immediate application with pupils, or with one's self.

MODULATION.

DR. H. A CLARKE.

Like so many of the terms used in music, the word Modulation bears several meanings. It is often said of a singer that he modulates his voice well, meaning that he controls its dynamic quality well, or passes smoothly from one extreme of pitch to another. This meaning of the word is rather vague, but there is another meaning attached to it which is much more precise, namely, the passing from one key to another. Even in this case there is need of greater precision, the same word—Modulation—being used to signify passing into a related key and passing out of the related group altogether. For example, we say a piece modulates from C to F, which is a closely related key, or that it modulates from C to F♯, which is a very remote key. The author has suggested the confining of the word Modulation to the first case, that is, going into a related key, and the use of the word transition to signify passing entirely out of the related group. Transition has also been used in music with two meanings. Some writers use it to signify a sudden change of key occurring unexpectedly. It has also a technical meaning, being used to designate those parts of an extended composition that serve to connect or lead from one theme to another, but this does not interfere with its applicability in the way suggested above.

The principle underlying all changes of key is very simple; it is to find some chord that is common to the key in which you are, and the key in which you wish to be; if there is none, find some intermediate key as a step towards the goal. But, in fact, there is no need of an Intermediate key. Every musician knows that it is an easy matter to pass at once from one key to any other, apparently the most remote. To learn how to do this, the following points must be thoroughly mastered: First, the keys that form related groups; second, the various relations that may be sustained by common chords, major and minor, and by dissonant chords of all kinds; third, the new groups of relations that may be found by changing major chords to minor and the reverse; fourth, the additions that may be made to chords; and last, the Enharmonic changes that may be made in chords. But it should never be forgotten that there is nothing intrinsically beautiful in the changing of key—its beauty depends altogether on what preachers call the "context." The greatest composers use transition rather sparingly, it is like a high-flavored condiment that loses its effect if made too common. There is a certain Nocturne much admired in which one might almost safely say, that there is more "Modulation" than there is in the whole Volume of Beethoven's Sonatas. Music that cannot remain for more than a few bars in one key, always creates a suspicion of what logicians call a "confessio paupertas," a confession of poverty in musical ideas, or in the power to treat them successfully.

The wonderful effect that may be produced by judiciously used transitions cannot be over-rated. As illustrations, the student should examine the following examples, and, at the same time, find out how they are made. First, the change from C minor to E minor in the first movement of the Sonata Pathetique; second, from E major to G major, Rondo (last movement) of Sonata, Op. 14, No. 1; third, the series of transitions beginning with the double bar in first movement, Op. 14, No. 2, that lead to the return of the principal theme; fourth, the transition from C to A♭, slow movement of Sonata, Op. 7, and the return to C. None of these will be found to present any insuperable difficulties.

When analyzing a Modulation, it is not enough to name all the chords, but in addition, the relation of every chord in the Modulation must be given, both with that which precedes and that which follows it, for example in the following passage: The chord of C is *Tonic* to the chord that precedes it, and "Neapolitan sixth" (we hate to write this absurd name), to the chord that follows it.

There is one good rule that should always be observed when writing a dissonant group; that is to move in a way that is not its natural movement in the key in which the music happens to be. There is a certain rather pretty song in which the chord G, B, D, F♯ occurs at the bottom of one page. Ninety-nine out of a hundred musicians would play C, E, G perhaps before turning the page (the writer pleads guilty to it), to find to his surprise that the chord F♯, B, D, F♯ follows it. Now as the song in question is in G, the first way of writing indicates a modulation to the related key of C, but as B minor is to follow, the F♯ ought to be E♯, making the augmented sixth chord G, B, D, E♯. After this digression, the rule we alluded to is, always write a chord when making a transition, as it should be written in the key in which it is to be resolved.

There is one chord the writing of which is a puzzle to many, that is perfectly simple, if this rule is applied to it; this is the diminished seventh chord, thus, write

B, D, F, A♭ if C, E, G is to follow.
B, D, F, G♯ if A, C, E is to follow.
B, D, E♯, G♯ if F♯, A, C♯ is to follow.
C♭, D, F, A♭ if E♭, G, B♭ is to follow, and so on.

It is not possible in a short essay to do more than merely point out the direction the student's study should take, who wishes to master this very interesting branch of harmony, nor would it be quite fair to say that it is easy work. For some inscrutable reason, it has pleased the Superior Powers to decree, that nothing that is worth doing may be done with ease. The difficulty of doing anything well seems, in fact, to increase with its worthiness to be done. Perhaps this provides the needed incentive to ease-loving humanity.

Be this as it may, in music as in all good things, work and patience will surely bring their reward.

QUESTIONS.

1. With what meanings is the word Modulation used?
2. What distinction is suggested, and what term is needed to designate it?
3. What meanings are also attached to this term?
4. What principle underlies all Modulation?
5. On what practical points is Modulation based?
6. What tendency exists in the use of Modulation?
7. State how the Modulations are made in the illustrations cited from the Beethoven Sonatas.

THE DEVELOPMENT OF THE PIANO.

FRANCIS L. YORK.

Although the Clavichord as described in last month's MUSICIAN, was in some ways more nearly allied to the piano than was the Harpsichord—since in it the strings were *struck*, whereas in the Harpsichord the strings were *plucked*—yet the latter instrument was in point of time the direct forerunner of the piano. This was especially true in England, where the Harpsichord with the attendant Spinet and Virginal, supplanted the Clavichord almost as completely as the piano has now supplanted the Harpsichord.

There exists such a confusion, as well as such a multiplicity, of names among these old instruments, that one almost despairs of getting a correct idea of them. It will perhaps be well to group together the common names according to their points of resemblance.

First. Stringed instruments in which the tone was produced by striking the strings. (*a*) The Monochord, at first made with one string, afterwards with many strings, in which the strings were all the same length, the pitch being determined by the point at which the tangent struck. In its perfection it was played by keys. Also called the Manichord. (*b*) The Cymbal, Hackbrett or German Psaltery, in which, as in the Dulcimer (*c*), the strings were struck by little mallets in the player's hands. There are several other names for these same instruments, but it is best not to trouble ourselves with them. (*d*) The piano itself.

Second. Stringed instruments in which the tone was produced by plucking the string. (*a*) The Lyre or Harp. (*b*) The Psaltery, like the Harp, but carried in a horizontal position in front of the player by a strap about the neck, and played with plectra in the player's hands, somewhat like the modern Zither. (*c*) The Clavicembalo, which was a generic name for all keyed instruments which brought the tone from the string by plucking it, and included the Virginal, Spinet and Harpsichord. It must also be remembered that the same or similar names were not infrequently applied to different instruments in different countries. The Harpsichord was the most perfect of these instruments and attained the greatest popularity among musicians. Since the Harpsichord produced its tone by plucking the string, it required at least one separate string for each tone, and the strings were necessarily of different lengths. In this it differed from the Clavichord, in which the strings were all of the same length, and, at least in the earlier examples, in which one string did duty for several pitches. Thus from the very beginning the Harpsichord was the instrument for *harmony*, whereas the Clavichord was more suited to *melody*. Perhaps this is the strongest claim that the Harpsichord has on our consideration, namely, that it aided more directly in the development of harmony than any other instrument, the piano alone excepted. The Clavichord could be played either *legato* or *staccato* and the tone controlled to some extent while sounding. The Harpsichord gave only a *staccato* tone with a sudden vanishing *diminuendo*. Its tone as described by Dr. Burney, was a "scratch with a sound at the end," but it was stronger and of a more penetrating quality than that of the Clavichord. For this reason it was much more useful for concert work, for large rooms, for accompanying choruses and with the orchestra.

The Clavichord and the earlier Harpsichords were square in shape, but after the seventeenth century the larger ones—the true Harpsichords—were made in the "wing shape" of the modern grand piano. Even now the German name for grand piano is "Flügel," that is, "wing." The smaller harpsichords were square or three cornered, had no legs of their own, being placed on a table when in use, and were called Virginals or Spinets. There was also an upright Harpsichord called the Clavicytherium. It is interesting to note that even in the time of the Harpsichord the three characteristic forms of the piano, the grand, square and upright were in common use.

In the seventeenth century the Harpsichord became a very fashionable instrument and was much affected by the upper classes in England. In the diary of the famous Samuel Pepys we read that on Shrove Tuesday, in 1660, he went to the "Virginall Maister's in Bishopgates street to see the new Harpsichord made for Mrs. The. We offered 12 pounds, they demanded 14. The Maister not being at home, we could make no bargain." In another place he says that more than one-third of the families in London possessed Virginals or Harpsichords. This, of course, was among the better class of people, but it shows how popular the instrument was.

In construction the Harpsichord externally was like the modern grand piano, but much less heavy and usually not so large; some examples, however, were nine feet in length. The compass varied, but five octaves and a half was probably the extreme limit, many instruments being four octaves from C to C. It was not uncommon, too, when the larger compass was used, to omit some of the sharp keys from the lowest octave. The action was somewhat like that of the Clavichord, but instead of the tangent (shown on page 78, of the March MUSICIAN), there was an upright piece of wood carrying on it transversely a bit of crow quill. When the key was depressed, the quill was forced past the string twanging it, just as the plectrum in the hands of the player twanged the strings of the psaltery. But the quill was fastened to the upright by means of a tongue, which allowed the quill to pluck the string as it went up, but let it return noiselessly to its first position. Leather, tortoise shell, metal and wood were also used instead of the quill, but on the whole were not so satisfactory, although the quill needed frequently to be replaced.

The most celebrated Harpsichords were made in Amsterdam by the Ruckers firm. Four different members of this firm lived between 1580 and 1660, and in this period brought the Harpsichord to its perfection. Besides excellency in their work as makers, and in the care with which they chose their materials, they added greatly to the musical value of the instrument. From the beginning the Harpsichord was acknowledged to be unsatisfactory because of its having no means for producing tones of varying intensity. The Ruckers strove to remedy this in various ways. A description of the instrument they made for Händel will give us an idea of the methods they used. This instrument had two banks of keys, each with a compass of four and seven-eighths octaves, from G to F. The upper bank of keys twanged one quill against one string. The lower manual, by the use of a stop like an organ stop, sounded either one or two strings. Thus the lower manual produced a louder tone than the upper. By another stop it could also be made to operate a third set of strings which were tuned an octave above the other sets. Thus the player could play softly on the upper keyboard, more loudly on the lower on one string, still louder by adding the other string, and could add the octave to each tone by using the proper stop. This Harpsichord of Händel's was a great favorite with him. It may still be seen in the South Kensington Museum in London. He used it to accompany the opera singers, either supplementing the orchestra or playing without it. His performances in accompanying were often so masterly that at times the attention of the audience was rather on the player than the singer. One singer told Händel that if he ever again distracted the attention of the audience from his singing, he would jump down on the harpsichord and smash it. This amused Händel very much—we know that he had a temper himself—and he replied, "You vill jump, vill you? Very vell, sare, be so kind to tell me when you vill jump and I vill advertishe it in de bills."

Various other stops were added to the Harpsichord, many of them producing very inartistic effects, until the instrument was fairly overloaded with them. This was a sign of the decadence of the instrument. Already the piano was gaining ground, and the days of the Harpsichord were numbered.

QUESTIONS.

1. Which instruments produced the tone by striking, and which by plucking the string?
2. During what period was the Harpsichord most in use?
3. What produced the tone in the Harpsichord?
4. Who were the most celebrated Harpsichord makers?
5. How has its tone been described?
6. With what great musician is the Harpsichord identified?

A GUIDE TO THE STUDY OF MUSICAL LITERATURE.

ARTHUR L. MANCHESTER.

The importance of literature as an adjunct to music is perhaps most fully demonstrated in the career of Robert Schumann. His rank as one of the world's great masters of composition, resting as it does on the production of works, great and small, which are constantly growing in favor, assures him the homage always paid to great genius. It is noteworthy that this creator of music, this active participant in the music life of his day, deliberately turned to the use of his pen in the widely different capacity of critic. Early in his career he founded his paper, the "Neue Zeitschrift für Musik," continuing its publication until 1848. This publication was expressly intended to influence the music life of the day, by making better known the æsthetic and poetical significance of music. Critics were busy with the dry bones of technic, superficiality was rampant and the new journal entered upon a gigantic task, a task which it successfully achieved.

It has been said of Schumann that he did even more for musical art as a critic than as a composer; this is beyond the truth, but it shows the great influence exerted by his literary labors, and is a demonstration of the assertion, made at the beginning of this series of articles, that music needs writing about to make it clear to the general hearer. Schumann's originality was shown in his literary labors as well as in his compositions. Recognizing the different sides of his nature, he viewed music from different standpoints. To make his writings clear and more forceful he instituted an imaginary society which he called the Davidite Society. This body of imaginary characters discussed music, new and old, performances and other art matters in a striking way. Schumann himself wrote as *Floreslan*, an impulsive, passionate, humorous personality, and *Eusebius*, a dreamy, reflective nature, and sometimes as *Master Raro*, a logical, reasoning, philosophical intermediary between the two extreme characters. In each of these he produced some extremely valuable, as well as fascinating, articles. With him were associated other lovers of the true in music. *Serpentius*, *Jonathan*, *Leonora* were real people who aided him in his fight against superficiality. Mendelssohn took part in the warfare as *Merilis*, while Clara Weick, afterwards Mme. Schumann, wrote under the name of *Chiara*, *Cecilia* or *Zilia*. The influence of such a combination can readily be understood. The assaults of such artists, whose knowledge was equal to their enthusiasm, could not be withstood. Chopin, Franz, Liszt, Berlioz, Sterndale Bennett, Henselt, Gade and Brahms received tangible evidence of the benefit to be derived from the proper use of literature in connection with music.

"Eusebius entered not long ago. You know his pale face, and the ironical smile with which he awakens expectation. I sat with Florestan at the pianoforte. Florestan is, as you know, one of those rare musical minds that foresee, as it were, coming novel or extraordinary things. But he encountered a surprise to-day. With the words, "Off with your hats, gentlemen, a genius!" Eusebius laid down a piece of music. We were not allowed to see the title page. I turned over the leaves vacantly; the veiled enjoyment of music which one does not hear, has something magical in it. * * * "Now play it," said Florestan. Eusebius consented, and in the recess of a window we listened. Eusebius played as though he were inspired, and led forward countless forms, filled with the liveliest, warmest life. It seemed that the inspiration of the moment gave to his fingers a power beyond the ordinary measure of their cunning. * * * with what astonishment we both cried out "An Opus 2!" how our faces glowed as we wonder, * * * Chopin—I never heard the name—Who can he be?—in any case a genius."

It was thus the Neue Zeitschrift introduced Chopin.

Two books are within reach of our readers, which contain Schumann's contributions to musical literature. "Music and Musicians," in two volumes, translated by Fanny Raymond Ritter, furnishes reading not only essential to the earnest music student, but fascinating in its freshness of thought, clear expression and imaginative power. The two books contain 958 pages, and the genius of Schumann flashes from them in a most inspiring way. Essays, criticisms of concerts, of compositions, personal estimates, analyses, are included within the covers of these books. The quotation given above is too short to fully demonstrate the style of the contents, but it shows the definiteness of opinion and the enthusiasm contained in them.

Of Schumann's literary work the translator says: "It would be difficult to over-estimate the value of Schumann's labor as a critic. His influence was not destructive or depressing; it was beneficent and inspiring. * * * * * The musical opinions of so highly distinguished a musician as Schumann must, of course, appear of the greatest importance to, and carry weight with, every one who is interested in music; supported by a solid basis of musical knowledge and practical experience, enlivened by the glow of enthusiasm and lofty creative faculties, his criticism is removed as equally from dry technical analysis, as from vague æsthetic speculation unsupported by science."

These books should not only be read, but should have frequent re-readings. There is a fund of information, a stimulus to the imagination and clarifying of musical understanding to be had from them, the value of which cannot be overestimated.

FOR THE YOUNG PEOPLE

The Young Musicians' Perseverance Club.

Conducted by ARTHUR L. MANCHESTER.

We have some belated February answers.

Viola M. Dunklee.
Eva M. Edmonson.
Lydia Carolyn Heller.
Helen W. Wright.
Helen Cole.
Mary Louise Foster.
Helen Weber.
Bertha C. Nesmith.
Helen Englerth.
Margaret Hoffman.
Rose Hoffman.
M. Ethel Corcoran.
Bessie Downer.
Almo Young.

H. R. Barber.

We have a good list of answers of the March story. It would appear that our workers are all coming in line again. This is delightful, and we hope the number will grow indefinitely. Here are the answers:

1. St. Gregory the Great.
2. 590–604 A. D.
3. Rome.
4. The Tiber.
5. Gregorian.
6. St. Ambrose.
7. Milan.
8. A musical utterance in definite pitch.
9. The Roman Catholic.
10. They were considered sacrilegious.

And here are the names:

Carol Robinson.
Jessie Flock.
Ethel Mitchell.
Nellie Pakenham.
Héva Coursol.
Mamie Week.
Mae McKenzie.
Mae Flaherty.
Eileen Corcoran.
Mamie King.
Josie Pakenham.
Phyllis Smith.
Gertie MacFarlane.
Irene Glynn.
Annie Price.
Ollie Lynn.
Josie Burns.
Emma Baillargeon.
Mary A. Tierney.
Carrie Ritter.
Margaret Nortan.
Bessie A. Downey.
Florence A. Cross.
Ethel C. Porter.
Felice Lawson.
Herbert Eckert.
Ruth L. Simpson.
Cecile C. Kirby.
Ada R. March.
Julia Byrne.
Bertha Pyle.
May L. Horty.
Nellie Monaghan.
Madge M. Cheavens.
Margie Monaghan.
Katharine Horty.
Loretto Gaule.
Romola Chester.
Maria Kelly.
Regina Mahoney.
Mary Donohoe.
Rose F. Dougherty.
Mamie Kelly.
Estelle Levy.
Mary A. Wolf.
Irene Curran.
Catherine McCloskey.
Lydia Carolyn Heller.
Helen Barber.
Lillian Brockway.
Arma E. Davis.
Anna H. Coogan.
Annie Louise Yantis.
Liguori Hemler.
Corinne Johns.
Genevieve Johns.
Regina Poist.
Mary C. Smith.
Helen Johns.
Ava Miller.
Mary Johns.
Marie Eldridge.
Maud C. Busbey.
Louise Keffer.
Ida Cecilia Price.
Mary Cecilia Cleary.
Letitia Cecilia Marlowe.
Margaret McGuirk.
Katheryn Landers.
Marie Josepha Timmins.
May R. Keefer.
M. Camille Bunty.
Cora Overbaugh.
Lorena Timmins.
Leonide Timmins.
M. Genevie Overbaugh.
Anna M. Kinder.
Violet Smith.
Mary McCann.
Estelle E. Keefer.

Lela V. Busbey.

We are glad to receive this first letter, and hope there will be others. Florence Cross's name is in our list again, and we hope to hear from Emma Olmstead soon.

DEPARTMENT FOR THE BLIND,
ST JOSEPH'S ACADEMY,
McSHERRYSTOWN, PA.

Dear Mr. Manchester—Although I have been a member of your Club for more than a year, this is my first letter to you. I think I can guess what you are going to do; you are going to give us all about Church music for our club work. We are sorry not to see Emma Olmstead's name on the lists lately; she was very faithful for a long time. We also miss Florence Cross and Regina Gissy, but Jennie Davis, Helen Weber and others we watch for, are in every MUSICIAN. I enclose my examination paper; you will see what I am doing in my music. Of all the pieces I have learned this year, Fiuale, "Etude Symphonique," is my favorite; it is by R. Schumann. I am thirteen years of age; this is my eighth year at music, and I love it more every year. That our Club may continue to be a success under your direction, is the wish of

MARY CECILIA CLEARY.

Most assuredly we welcome new comers and we are glad to have this new member. All you have to do is to send answers to the questions and try to do good work in your music.

WARREN, PA.

Dear Sir—I am very very much pleased with THE MUSICIAN, and as I was reading it I found some questions in music and it looked as though there is a little club, and I write now to ask you if you will allow me to answer these questions, and if you accept new comers I would be very pleased to join the Club. Will you please write and tell me what I am to do if I belong?

Yours truly,
LILLIAN BROCKWAY.

We hope this member, whom we remember as a regular correspondent, will soon be able to answer questions regularly. We will consider him a member even though he does not send answers for awhile.

ALLEGHENY, PA.

Dear Editor—I have been unable to answer the questions, which are printed in THE MUSICIAN, for I am going to Holy Ghost College, and have a great deal of work to attend to just now. I am very sorry that I cannot answer the questions, and as soon as possible I will try to join in again, because it helped me a great deal in my work. I have been playing a great deal since, and some pieces are Moonlight Sonata, Fifth Grade Exercises, Danse Fantastique, Monastery Bells, William Tell Duet and many other pieces of that kind. I remain,

Yours truly,
THEODORE DANIEL KVATSAK.

Here is another new member. From Kansas this one comes. We will try to be what a home club would be to her. She must write us each month, and thus keep up our acquaintance.

EMPORIA, KANSAS.

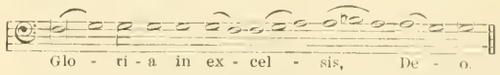
Dear Sir—My mother has taken THE MUSICIAN for several years but I have never paid much attention to it excepting the music, but the other day I noticed the name of your club and read all about it so now I want to become a member of it. I have enclosed the answer to the questions in the February magazine on a separate piece of paper. Perhaps it is too late to have my name put in the list next month, but it does not matter. I am so interested that I want to begin right away. That is why I send them. I would like to belong to a club of girls as some of the others do, but all my friends are either too busy or not enough interested in their music. I am anxious to answer the questions and keep up the work. I think it is lonely, and I am going to try to answer the questions every month.

Yours truly,
RUTH L. SIMPSON.

A CONVERSATION.

The Church fathers of the sixth century were men of learning and of forceful character, and the two friends who sat through the night in close conversation, in the high turret room of the monastery, laid plans which they meant should have effect upon their own day and age. They little realized how far-reaching would be the outcome of their efforts. In these days, too, it was believed that the end of the world was near, and the end of music would be reached, it was thought, when all the people knew the chants which had been composed and arranged by St. Gregory the Great, the good Pope of Rome, who had helped the city to be brave in her great trouble.

He sat now in the room, which had only its wooden benches, its crucifix fastened against the bare wall, and a long table, and opposite him at the table sat his guest, St. Isidore, of Spain. The men wore long, black gowns, with a cowl or hood; their faces were shaven smooth, and looked stern and set, in the flickering candle-light. The table was strewn with parchment manuscripts, and there were also scrolls of papyrus, yellowed with time, and covered with the ancient notation—a kind of musical shorthand—showing merely the intervals through which the voice should rise or fall. There were no bars, nor phrases, and no time, and the length of the notes was governed wholly by that of the syllables of the Latin words beneath. This is an example of it:



The scrolls were all headed with the inscription in Latin: "The ecclesiastical mode of saying and singing Divine Service, set in order by St. Ambrose for the Cathedral of Milan."

The parchment manuscript, which was new and fresh, was being copied by St. Isidore, slowly and carefully. He held in his hand a *stylus*, which was a pencil of carved ivory, and referred constantly to the Pope's manuscript as he wrote. Upon the back of the first parchment leaf was stamped in large gilt letters, the word "Antiphonarium," and the manuscript formed a book, its leaves in place by a ring of solid gold.

"It is truly wonderful how thou hast wrought out the greater compass," said the monk, who was soon to be ordained Bishop of Seville, in Spain, and who would carry his copy of the Antiphonarium with him for the use of the Churches in that country. "St. Ambrose was indeed a warm admirer of music, and in his day added greatly by his studies and research to the little knowledge that existed, and improved much the crude manner of rendering the hymns and psalms; but the four diatonic scales as used by him as foundation for the music to which the words were sung, could have no longer proved sufficient for the many additional chants which have come into use since his time." He had paused in his work of copying, while speaking, and sat thoughtfully looking down upon the parchment, on which his hand holding the ivory stylus rested motionless.

"It is a fascinating study," St. Gregory answered, "and interested others before him. Pope Sylvester established the first singing school in Rome, and Hilarius followed in his footsteps by founding several in like manner for the study of Church song, and thus downward to my own schools, the rules used being passed on from century to century, or, we might say, from generation to generation. Before Sylvester's time, from the first beginnings, in fact, of music expression, even if we go so far back as the temple music of David and Solomon, we know there could have been no real melody, nor beauty of musical utterances such as we have to-day in my arrangements of chants. The psalms of David are beautiful of themselves, but what a jangle must they have been, sung with neither rhythm or melody, shouted, more likely, midst a wild twanging of curious 'harps,' and still more wildly-performed dances. It is little wonder that we have been zealous in banishing instruments from the Churches, since from David's time down to the late heathen festivities, they have been associated with naught but irreverence."

"The sacred character of music," said the monk, "is proven from its having been constantly interwoven, even such as it then was, with the history of the Church from the beginning. I have thought, too, that after all, music is music, whether rendered by voice or instrument. It is one and the same art, the gift of God, but degraded by the idol-worshiping heathen, who know not of God, nor His gifts."

"The Greeks, though borrowing from the Egyptians, who no doubt were the first to discover a musical sound, have done much to raise music to the place of an art. Their finer natures recognized its true place and beauty, and forbade its least desecration."

"Was it not the Greek Alypius who invented the first known method of writing music, or of representing different tones by certain signs?"

"It was, indeed, and he used characters formed from the letters of the Greek alphabet, placed in various positions, for this system of *notation*, as it is called. Later, the eminent Greek scholar, Aristides, improved upon this system, making use of this, and the still earlier work of Pythagoras, in his manner of writing the signs. In arranging the new chants, and adding to the four keys of Ambrose, I have used the first fifteen letters of the Latin alphabet, as thou hast seen; but no doubt in time, if we come not soon to the end of all things earthly, there will be adopted to indicate the height and depth of tone, other characters than letters. I, however, have followed in the footsteps of Aristides, and of Alypius, and not of my worthy predecessor Ambrose, in his somewhat confusing system of signs used in his papyrus manuscripts."

"Thou dost, of course, require the chants to be taught orally, or without notes, in the many schools which thou hast established here in Rome and elsewhere?" asked the monk. He had dipped the stylus into the inkstand, which was a bronze Emperor's crown in miniature, and prepared to continue his copying.

"They are of necessity taught orally," the Pope answered, "since it would be impossible to supply the classes with a sufficient number of copies of the Antiphonarium."

QUESTIONS.

1. Which style of paper for writing was used in St. Gregory's time, parchment or papyrus?
2. Which was the more ancient?
3. How many years afterward, and in what year was printing invented?
4. About what year did St. Ambrose arrange his system of chants for the Cathedral of Milan?
5. In what country are the cities of Rome and Milan?
6. What Church office did St. Ambrose hold at Milan?
7. In the sentence "four diatonic scales," what is the meaning of the word *diatonic?*
8. What race of people is said to have been the first to discover a musical sound?
9. Who was Pythagoras?
10. What is the meaning of *notation?*

IDYLLE.

"Blossoms burst from every branch,
From out the copses a thousand voices sing."
Göthe.

Revised and fingered by
RICHARD HOFFMAN.

FRANZ BENDEL, Op. 122. № 1.

This Idylle should be played in a free, artless manner. Care should be taken that the left hand preserves a perfect *legato* in the first part; a very *staccato* and light touch for both hands in the *Allegro molto* makes a good contrast.

Con moto piacevole.

PIANO.

*) Take this G with the left hand.

ANGLO-SAXON WOMEN IN MUSIC.

VII. Queen Victoria.

LADY HALLE.
(For Sketch see February Issue.)

Sir Charles Hallé's verdict as to England's music-life on his first appearance there, was: "Very unmusical are the leaders of English society, only at court is there a pure musical atmosphere."

Though Queen Victoria and Prince Albert were admirers of Mendelssohn, this feeling did not prevent the Queen from recognizing the excellence of Wagner's music, for she was one of the most energetic and successful leaders in the struggle for Wagner's success. So the recent journals of every nation from the other side, are filled with anecdotes about the late Queen of England, proving her love of music and the furtherance she gave to the art, a seeming fulfillment of MacFarren's prophecy: "That the dynasty which saw the falling asleep of English art may witness its awakening."

Queen Victoria was of a musical nature and shared with her husband, Prince Albert, the love of good music, being present at every concert when possible. Naturally after the death of Albert, her presence was withdrawn. Yet never did she neglect to invite artists of repute visiting England, to appear at Windsor Castle; even operas were given on the little stage at the castle. Nearly all the celebrities of the musical art of the nineteenth century were known to her personally, among them, Rubinstein.

She was present as an invited guest of King Frederick William IV, of Prussia, at Bonn on the occasion of the unveiling of the statue erected to Beethoven's memory. This occurred August 12, 1845. Three days after, a concert was given to her, which Meyerbeer directed and at which the following artists took part: Madame Viardot-Garcia, Jenny Lind, Vieuxtemps, Tichatschek, Liszt and Staudgl. It was ten years later that the Queen became acquainted with Richard Wagner, who had gone to London in 1855 to direct some concerts. "The whole critical Press turned upon him," writes Hadow, "with a unanimity which it seldom displays." But the Queen showed herself decidedly in favor of his novel theories; under the circumstances her favor was doubly prized. She assured him that his music had enchanted her, asked him the subjects of his other works, and if it would not be possible to have them translated into Italian in order that they might be heard in England.

Mendelssohn tells in his letters of his visit to Buckingham Palace in 1842, and this interview of the young German composer with the still young Queen is well-known. It was of that occasion that Mendelssohn, having asked the Queen to select one from his works for which she had just declared a preference, wrote: 'I was obliged to acknowledge that her choice was not a composition of mine; it was by Fanny!" To Queen Victoria, Mendelssohn dedicated his Scotch Symphony, A minor, Op. 56.

Music is a prophecy of what Life is to be, the rainbow of promise translated out of seeing into hearing. —*Mrs. L. M. Child.*

CLUB WORK.

WOMAN'S MUSICAL CLUB, NEW CASTLE, PENNSYLVANIA.

The secretaries of two Clubs, whose work has not yet been recorded upon this page, communicate this month with THE MUSICIAN. To the one at New Castle belongs the enthusiasm of youth, with brightest prospects in consequence of a successful year.

Twelve months ago, Miss Mary Jackson invited nine ladies interested in music, to meet at her house, for the purpose of organizing a musical club. The membership was at first limited to twenty-five, but applications became so numerous, that the committee was forced to enlarge the roll call.

Topics for study were taken, as the Opera, the Oratorio, followed by a course in Biography: the lives of composers were studied with reference to national characteristics, commencing with those of Germany, then of France, America, etc. From Club activity, with resultant enthusiasm for music, many have added a course of music lessons and, needless to say, the time of the best teachers in the community has been in demand. A year-book is in course of preparation, patterned—it is gratifying to record—after those already quoted on this page. The New Castle Club's secretary testifies to the helpfulness from the recorded work of other Clubs and the practical aid from results in maturer Clubs, which has proved the "survival of the fittest."

"Some excellent performers, the average talent, eagerness for advancement in musical knowledge," thus is computed the Club's calibre by one of its officers. Just the community in which a Club is needed! Just the kind of music-lovers Club life benefits! A Club born in the twentieth century has a rich inheritance, and by virtue of a right use of the legacy it receives—the recorded experience of other Clubs, magazines, books, scientific appliances in the art world, above all, the sum total of creative work in melody—this new organization, now numbering thirty-five members, will be an important part of Clubland into which it has just been welcomed.

ALUMNÆ CLUB, LOUISVILLE, KENTUCKY.

DESTINY.

The sweetest songs that poets sing,
From out their bleeding hearts amain,
Like pearls within the oyster's shell,
Are perfected at price of pain.

—*Eleanor Evins.*

SCROLLS AND SOUNDHOLES.

THOREAN.

The Piano Club of Bridgeport, Connecticut, taking the initiative in courage during the past Lenten season, inaugurated a series of lectures upon the comparatively novel phase of the Science of Music. Having listened during three preceding seasons to considerations about music's history and literature, the class was prepared to glance back from effects to causes and compute the relative importance in the tonal art, of laws appertaining to nature and science.

A large gathering, whose interest did not flag during the hour, studied first the philosophy of the violin and its bow. Laws of vibrating string transmitted by bridge through sound-post, bass-bar and fibrous wood were noted: A brief sketch of the instrument's earliest transformations in history was given, while the period of its perfecting at Cremona, more especially in hands of the Amati, Guarnerius and Stradivarius was dwelt upon at length. The permanent form, crystalized by the thought and genius of these men, was exhibited in a tiny example bearing the name of Amati.

To this Piano Club, the instruments of the modern orchestra are not such curiosities as to most women, for owing to the courtesy of Mr. Carl Fischer—who has ever been ready to loan them examples for scrutiny—the wind-quartets of wood, as well as some of the smaller members of the family of brass, have become familiar. On the present occasion, another chapter in this series of object-lessons was enjoyed, which gave such pleasure and afforded so much gain that it offers suggestions to other clubs who may contemplate a study of the violin. Through the kindness of Mr. Victor Flechter, the well known violin dealer, several scrolls remarkable for beauty—in addition to intrinsic value—were passed from hand to hand for examination. There was one carved by Jacobus Steiner, one of Maggini, of Amati, of Guarnerius beside one, apparently most interesting of all, by Duiffoprugar. The scroll of this maker—one of the earliest names associated with viols—was a man's head finely carved.

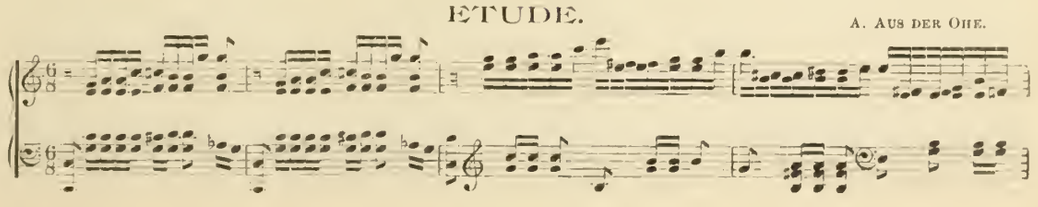
Mr. Flechter has prepared a list of dates and names of the great violin makers, and although a supply of these was ready for class-distribution, it was exhausted soon and petitions for more necessitated an added call upon the donor. Mrs. John Crosby Brown hearing of the prospective study by the class, sent her drawings of soundholes characteristic of the Cremona masters.

Summing up contributions from nature and art in this perfected instrument, the following quotations from literature *à propos* ended the hour. "A spirit sweeps the strings of the telegraph harp and strains of music are drawn out suddenly like the wire itself. What becomes of the story of the tortoise-shell on the seashore now? The world is young and music in its infant voice. I do not despair of a world where you have only to stretch an ordinary wire from tree to tree, to hear such strains drawn from it by New England breezes, as make Greece and all antiquity seem poor in melody. Why was man made so to be thrilled to his inmost being by the vibrating of a wire! Are not ecstacy and inspiration a more rapid vibration of the nerves swept by the inrushing excited spirit, whether zephyral or boreal in character."

A Club solicits several translations of the following quotation from Schiller, to be used as a motto in next season's year-book:

Leben athme die bildene Kunst.
Geist fordr' ich vom Dichter.
Aber die Seele spricht nur Polyhymnia aus.

ETUDE. A. AUS DER OHE.



WHEN AND HOW TO TEACH TOUCH.

WILSON G. SMITH.

In surveying the vast possibilities of the art of teaching it does not take the thinking investigator long to arrive at the conclusion that there are but two ways open to serious consideration in piano teaching.

First—Is that which classes all pupils as so many automations, whose mechanism is to be kept well lubricated with technic first, last, and all the time. Technic is made the Alpha and Omega of the gospel preached to them, and mechanical dexterity is placed upon a pedestal before which all incense is to be offered. The general results of this plan of operation is to manufacture technicians whose only conception of music is its facile and brilliant execution. The true representative of this school is he who can play the greatest number of notes in the shortest possible time. Musical conception and emotional interpretation do not enter into the question at all. It is purely a matter of finger agility and muscular endurance.

In direct opposition to this school is that which recognizes the fact that pupils are sentient beings, possessing the power of reasoning, and at least a modicum of latent talent and intuitive perception. This school recognizes the fact that technic is as much a mental conception as it is a mechanical process, and the principle aim of its representatives is to awaken in the mind of the pupil a recognition of the fact that before technical proficiency can be acquired a mental conception of what it represents must be awakened.

Technic is but the outward form with which pschycic conditions are clothed, and how can these emotional contents be adequately expressed without first a proper appreciation of emotional content? I am free to confess that I am one of those who look upon teaching as a development of such psychic intuition as the pupil may inherently possess. And the sooner the pupil is made to think for himself, and interpret according to his own conceptions the emotional conditions represented by music, the sooner he becomes a piano player. It has always been my plan to credit my pupils with the possession of latent musical intelligence, and my effort has been to strengthen and fortify their own intuitions, rather than make them the imitators of any special conception I may have upon the subject. The most important factor in intelligent and artistic playing is certainly touch, for technic without touch is simply banality and emptiness. Whereas, touch without technic knows its limitations and is not apt to become offensive and obtrusive.

Experience and a reasonable amount of investigation has forced upon me the conclusion that touch should be taught in the earliest stages of instruction. First must be awakened in the pupil's mind the value of musical expression and the essential conditions of touch which it represents. The process of imitation is not enough to establish this, for I take it that no one can properly produce the different dynamic shades of tone coloring and production without first having a mental concept of the varied tone pictures to be produced. After a lucid explanation of the tone required it is best to have the student give his own conception of the tone quality required, which original conception can be easily modified by example and suggestion.

I always impress upon the minds of my pupils that technic is but the raw material by which music is expressed, and it is by their artistic presentation of this material that musical emotion is interpreted.

I have long since discarded the old-time system of practicing with high lifted fingers and a consequent hard percussive touch. Why should we ask our pupils to use in practice a touch that we would condemn in musical interpretation? Why should we ask students to play with absolutely vulgar touch, technical passages that in a musical composition are used as a vehicle for an expression of emotion and musical thought?

Modern investigation has reached the conclusion that pure and singing tones are produced by pressure touch, with the fingers near the keys as they are played, and the tone quality is modified by the amount of pressure used. Staccato effects are naturally produced by an entirely opposite treatment—a pliant wrist, with a light finger action combined with a free fore-arm movement. I do not believe in thumping the piano to acquire technic when it can be easily gained by a more artistic method. I am sure that my readers would think but ill of a teacher of elocution or voice culture who insisted upon his pupils yelling at the extent of their lung power to acquire vocal technic and tone production, and the proposition is equally absurd when applied to piano teaching. Make your pupils think for themselves and you will soon develop their musical perception so that they will become intelligent players and musicians. Your avocation is to develop their latent talent and strengthen their individuality, rather than by a servile imitation of yourself to become mere pianistic graphophones.

Awaken in a pupil's mind as soon as possible a love for the pure in art, and you will have no trouble in a speedy development of their talent.

I have so often had pupils tell me that I made technic interesting for them. Why? Because I diverted their minds from the uninteresting technical side of their work, by suggesting many different tone modifications of a simple technical figure, to such an extent that they played it through twenty or thirty times without losing interest or realizing the amount of work they had put upon it. A scale in a classic masterpiece demands artistic treatment, so why should it not receive the same consideration in technical practice. Pupils should always be alert to study tonal effects when they practice. In fact, they should sit in critical judgment upon every tone they produce. It is only by such methods of work that really artistic results are accomplished. To sum the matter up, I advise teachers young in the profession to study the mental and psychological characteristics of their pupils, and endeavor above all things to educate them to think for themselves.

To tell a pupil how mechanically to produce a tone is labor lost, unless there is first awakened in the student's mind a conception of the tone required.

I will close my article with an illustration from my own professional experience. Some few years since a pupil came to me with a letter of introduction from a teacher with whom she had studied, asking me to accept her as a pupil, which I did. A few days later I received a personal letter from her former teacher saying that he feared that I could do little with her outside of technic, as she had no appreciation of expression or style in her playing. When the young lady came for her lesson I discovered that her playing was cold and unsympathetic. I asked her to play something of Chopin; this she did, selecting one of his nocturnes, which she rendered in a very placid and crystaline manner. Upon enquiry as to why she played it so placidly, she replied that she rendered to the best of her ability as it had been taught her. I then requested her to take it home and bring it again in a day or two, interpreting it as she felt it impress her. I easily discovered traces of sentiment and emotion, crude and affected perhaps, but nevertheless quite in evidence. To make a long story short, it was not long before I found that she had a sense of sentiment, but wholly latent and undeveloped. About three months after this her former teacher visited the city, and heard her play. He was astonished at the change in her touch and interpretive ability, and asked me how I had accomplished such a miracle. I asked him to play before answering, and lo! and behold! he played as his former pupil did when she first came to me. Her playing had been simply a reflection of his. His question was thus easily answered. No teacher can impart to, or awaken in, others qualities which he does not possess himself. A few suggestions to awaken her own dormant musical perceptions was all that was necessary to transform a mechanical player into one possessing taste and sentiment. The young lady has since become one of my most gifted pupils, and plays well enough to command the high encomiums of many artists who have heard her perform.

The fault in her early education was that her teacher, thoroughly conscientious in his work, failed to arouse and develop any individuality in her playing by making her a "thinking player," and made a bad matter worse by forcing upon her his own style and conceptions, which were, as her imitation and his playing afterward showed, lacking in the very qualities he said she did not possess. When an original is lacking in inspiration it is not judicious to make an imitation, and so I have previously said, do not make your pupils imitations of yourself, but strengthen whatever of individuality they may possess, and you will send out musicians fortified by a sense of independence and confidence that only original thought can beget.

I think sometimes could I only have music on my own terms, could I live in a great city—and know where I could go, whenever I wished the ablution and inundation of musical waves, that were a bath and a medicine.—*Emerson.*

SUGGESTIONS.

THALEON BLAKE.

It is gratifying to observe the effective lesson America has taught Europe in regard to her creative capacities. It is true that this example of what we can do is confined to the engineering professions, or rather, Europe has acknowledged our supremacy *only* in our ability to create wonderful automatic machines, and build locomotives and bridges at a speed unheard of on the continent. But we, as a nation, are very young, and art is very long and springs full grown only from a soil made congenial to its growth by years of cultivation and practice. Hence, it is but a question of time when our art-practice will equal, if not surpass, our shop-practice. Those pessimists who seem to take ghoulish delight in deriding everything American as being wholly without taste or artistic genius, remind us of the howling of the coyote of the plains, whose noise is most obstrusive just before the break of day. Traveling foreigners, whose perceptions are not blurred by prejudice, assure us that this country seems to be on the eve of a great awakening in matters artistic. Let us labor with enthusiasm through this season, nay, through *all* seasons, for the dawn of a new century is at hand, and in the coming years we feel that American art will be in the ascendent and shed its living rays to the uttermost parts of the world.

† † †

The season of work comes all too soon to those in the full enjoyment of vacation pleasures. But now that we are in the midst of the responsibilities incidental to it, we should carry on our work with constantly renewed energy. And while we do so, it is proper to examine what resources we have for the battle, what reserves we can count upon, and how much will depend on us as individuals to carry us through successfully.

The teaching campaign is now one of six or seven months work only, and what is to be done in the season now opening must be accomplished in this short time, or not at all. It is well to remember and plan accordingly, that our fighting forces, which we call *education*, and our reserves, which we call *experience*, may fail us in the hour of need. And that then we shall stand or fall according to the sturdiness of our naked, unassisted character, as men or women. But, if the showing we find is not to our liking, that need not discourage us, for victory often perches on the standard of those who *will not be conquered!*

† † †

Aside from such thoughts we should plan how to put to best use our time spared from teaching duties. However many the ways devised to fully occupy every minute of our time, there are three things the progressive teacher cannot afford to neglect. First of all, and the most essential, is exercise, without which the sap of vitality runs dry. Never less than a half hour daily is advisable (an hour is much better), to enable one to sustain nervous and continuous labor. Long breaths especially, should not be forgotten, as such give oxygen to purify the blood and strengthen the lungs. Next is reading, the source and never-failing fountain of pleasure and profit. Lastly, time must be found for concerts. This is important. In the concert hall, we listen to skilled exponents of the best in technic and interpretation. There are other things which each will consider necessary to be done, but these three no musician can pass by and thrive.

MOSZKOWSKI.

It was in Weimar, the so-called violet town of Goethe, in the year 1875, that the most wonderful of all living masters, Franz Liszt, assisted by a young pianist, was conducting a manuscript concert. The music was by an unknown composer, and was being performed by Liszt and his young assistant on two pianos. As the last note of the first number died away Liszt, with that charming enthusiasm of which his heart seemed always so full, threw his arms around his young partner, kissed him again and again, and then introduced him as the composer of the fine music which the audience had just listened to. The name of his blushing protégé was Moritz Moszkowsky, and the delightful violet bouquet extended to him by the great master seemed to fill the air with its fragrance. Happy be it for him who, in the beginning of his career, receives such a Spring greeting.

GIVE THE BOYS A CHANCE.

W. FRANCIS GATES.

Give the boys a chance. Why should the girls have all the musical opportunities? Why should a girl be expected to have a talent for musical art and a boy, as a matter of course, thought to have none?

Music is supposed to be innate in the case of a girl; it is hers by inheritance (whether her ancestors were musical or not). If she didn't inherit a musical ability, so much the worse for her. She ought to have done so. On the other hand the boy may inherit decided musical talent, a talent that might make him a shining light in the musical profession, but in more than half of such cases if the boy does conquer paternal prejudice and secure for himself a musical education, it is a matter of fighting for it. The general feeling is that a boy should have nothing to do with music any more than he should with sewing and nursing

When a girl reaches the mature age of seven or eight years, she is dragged to the pianoforte and figuratively strapped there till she is eighteen or twenty. Perhaps the girl has no native talent for the piano; that makes no difference. Perhaps she might make a fair violinist or vocalist rather than pianist: that cuts no figure. The piano she must play. She is a girl. That settles it. There are better ways of cultivating a very small bud of musical talent than a course of piano technics. The piano as it is frequently taught, by Blank's method, "the only correct one, you know, the one I studied in Yurrup," is more apt to be the death of any latent musical talent.

We might also say, "Give the girls a chance." A chance to escape from the grinding technical tedium if she has no atom of music in her, and a chance to exercise some preference in the kind of music she would study if she has. But that is another story. And a perplexing one—one that calls for patience and good judgment on the part of the parent and perhaps an unbiased but skilled professional judgment as well.

Does it not stand to reason that both the sons and daughters of a family should have an equal chance in the matter of preparation for enjoying the finer and more beautiful things of life, as well as in its more common and grosser features? There is a growing feeling that they should have equal share in general education, and in the family finances and property inheritance. Why not, then, in art, in the love and appreciation of the beautiful? That one which has the talent should be given the educational facilities for it, be it the boy or the girl.

It is notable in conservatories and music schools that out of an equal number of young ladies and young gentlemen, the average talent is the greater in the latter; but for every young man in such schools there are twenty ladies. The inferences are so clear as not to need statement.

The present state of things—urging the girls to the piano whether they were intended by the Lord to play the piano or not—leaves half of them driving their unmusical natures into chronic irritability, while perhaps their brothers, full of rhythmic tunes and jolly whistles, are never given opportunity to prove the extent of their musical talents. And as the boys do not set about discovering their innate possibilities in those years when their minds are the most receptive, in later years, when they discover for themselves their musical talent, it is generally too late to profit by it as they are immersed in other study or in business. A boy should have his chance before he is fifteen.

Music has a higher purpose than simply to furnish an amusement to the performer and listener. And while this is not the time or place to give a disquisition on the mission and benefits of music, it might simply be stated that a study of, and appreciation for, music is apt to lead to enjoyment to a greater or less degree in the whole family of arts, and, we might say, in beauty in general, in the æsthetics of life. Then there is the purpose that music serves in the home and social life. The musicless home is only one degree better off than the motherless home.

The boy has done nothing to forfeit his right to, at least, somewhat of a musical education. Thirty or forty years ago, there was a prejudice against a young man having anything to do with music unless he be a professional. That feeling has partially disappeared. May its end soon come.

Notice that we do not argue for more professionalism, that we do not urge that the boys study music for the purpose of using it as an income producer. No, we reserve that wish for our worst enemies. But we do urge a more general study of music as a means for developing the æsthetic sense, and as a refined and intellectual pleasure.

Parents should throw off entirely this new world prejudice that music and business are incompatible, that masculine dignity will not fuse with musical culture and artistic appreciation. They need to shut the piano to half of their unmusical daughters and open it to that half of their sons who are musical. The boys will take care of the rest, if the same parental control and stimulus to work is given them that is given the girls.

It is not found, in Germany or France or Italy, that a knowledge of the theory and practice of music unfits a man for a commercial life. Why should it here? There, the business or professional man that can not talk understandingly on musical topics is held to have but a partial education. How is it here?

Then comes the question as to what musical study the boy should take up. If he has given some proof that he is possessed of more or less natural musical talent, it might be well to try a few terms each on different instruments, the violin, the piano, the 'cello, the flute. Then let him push that one for which he has a natural predilection. This trial time will not be wasted. In future years he will be glad of the knowledge thus gained.

A boy may well begin his instrumental music study when he is eight or nine years of age. And what I have said about urging the girl who has no talent for piano playing toward that instrument applies equally well to the piano-hating boy. If the boy has no tendency in that direction, let him study something else. We can never have too many violin players, and there are never enough of 'cellists or players of wood-wind instruments. Let him play something that every body else doesn't play. He will enjoy his work more and take more interest in it.

Vocal study had better be delayed till the boy's voice has gone through its changing period. The girl can begin her singing lessons any time but the boy had best wait. And incidentally, if you want him to have a good voice, prohibit the screaming operation in the public-school room. Many a voice is ruined there before it gets out of the high school.

I have left the study of singing to the last, because it is the most important. Be sure to give the boy a chance to learn to sing well. If he has any music in him, let him have some cultivation of the voice, long enough, at least, to prove that he can not sing. But if he proves that he can, continue the voice culture to the limits of his talent and your pocketbook.

Singing is the most natural method of making music and consequently the most enjoyable, at least to the performer. And good male voices are rare. Try to get up a glee club or a church choir and you will immediately acquire a firm conviction of this fact. But even more rare than good voices are well cultivated voices. That missing tenor voice is the despair of the chorus conductor, the bane of the choir leader. How we brace ourselves as for a dental operation when it is announced that "Mr. Screech, the tenor, will favor us," etc. And then the real and rare delight of listening to Mr. Screech turns out to be not torture but pleasure, on account of his not necessarily large, but cultivated voice.

Give the young men a chance to sing well. Urge them to sing, to study singing. Let them not call up blushes of shame on the countenances of their friends. The young man who sings well is always welcomed in the social circle. And with the instrumental or vocal music, let there be a fair knowledge of musical theory acquired that the boy may appreciate what he does and hears.

Money invested in a boy's musical education is well invested. Give the boys a chance.

A BARCAROLE, BY RUBINSTEIN.

An Analysis.

EDWARD BAXTER PERRY.

Strictly speaking, the Barcarole is an Italian boat-song—"Barca" being the Italian word for boat. But in musical terminology it has been localized and signifies distinctly a Neapolitan boat-song, associated as exclusively with the Vesuvian bay as is the gondoliera with the lagoons and canals of Venice. In each case it is the song of the local boatman, sung to the rhythmical accompaniment of the swinging oar, and entranced in poetic charm by the beauty and romantic atmosphere of the surroundings. In each case also it has served as a suggestive and grateful artistic subject for musical treatment, used by nearly all the modern composers, great and small, one which is particularly suited to the pianoforte and facility adapted to its resources.

In many respects the Barcarole in this in idealized form as a musical art work closely resembles the gondoliera, similarly developed; for instance, in its graceful six-eight rhythm, its gliding, swaying boat like movement, its suggestions of dipping oar and rippling water, and in its sustained song-like melody representing the voice of the boatman.

These descriptive elements are common to all works of both classes, but the characteristic mood of the typical Barcarole is less tender and passionate, more dreary and fanciful than that of the gondoliera. It has less of the human element, more of the sea and its slumbering mystery, less of the lover's sigh and more of the half-seen witchery of sea-sprites and mermaid in the clear depths of inverted sky beneath. To appreciate this mood to the full, one must have drifted, with suspended oars, in a small boat, upon the far-famed Bay of Naples, just as evening fell, with the lofty banner of blue-black smoke waving majestically above the summit of Vesuvius, in the distance, like the pennon of some mighty Earth Giant, an ominous reminder of his terrible, though slumberous, power, with the city rising in the background, terrace on terrace, from the water's edge to the stern, old ducal castle, which crowns the height and looms dark and forbiddingly against the sky, a memory in stone. With the fairy island of Capri lying to seaward and the cool breath of the Mediterranean filling the sails of the countless fishing-boats gliding shoreward, while the boatmen sing to the subdued accompaniment of the evening chimes softened by distance. Seen at midday from the height, under the glare and scorch of the noonday sun, with the discordant, jangling sounds of busy life rising harshly to one, like the cries from some pit of torment, Naples seems a hell; but at the evening hour, from the bay, it is a dream of heaven.

No one has caught and embodied in music the mood and scene of this hour, with its caressing coolness, its murmuring ripples, whispering secrets of other days, like Rubinstein, though many have attempted it with more or less success. Of his five Barcaroles, all beautiful and characteristic, the most faultlessly typical, seems to me, the one in G major.

This is not only one of the most graceful and characteristic, as well as most perfect in form and finish, but also decidedly the most realistic of the five. The rhythmic play of the oars, the undulating movement of the boat and the constant plash of the water are all vividly suggested, and the melody of the boatman's song, original with Rubinstein, is very appropriate and typical, heard in intermittent fragments as if sung fitfully in broken snatches. The chords accompanying melody should be given lightly, though in nearly strict time, in regular, rhythmic pulsations, but with a broken arpeggio effect, with the idea of rippling water constantly in music.

The passages in double-thirds, which form the principal difficulty of the work, must be rendered with the utmost smoothness and delicacy. It is a good plan to begin each passage with a very low and extremely loose wrist, raising it gradually till quite high toward the middle of the run and then lowering it as gradually and easily to the end. This ensures absolute flexibility and enhances the undulating effect. The following little verses, by J. Buchanan Reed, express exactly in words the mood of this Barcarole, and I never play it without thinking of them:

"My soul to-day
Is far away,
Adrift upon the Vesuvian bay.
My winged boat,
A bird afloat,
Glides by the purple peaks remote.
Across the rail
My hands I trail
Within the shadow of the sail.
With bliss intense
The cooling sense
Glides down my drowsy indolence."

Genius is the most beautiful gift with which Nature favors mankind from time to time; through it we are allowed to enjoy what is most sublime—self oblivion in a loftier life.—*Hiller.*

‡ ‡ ‡

Passion, whether great or not, must never be expressed in an exaggerated manner; and music ought never to offend the ear, but should always remain music, which desires to give pleasure.—*Mozart.*

EARLY VIOLINISTS COMPARATIVELY CONSIDERED.

What Each Brought to the Technic of the Instrument.

H. W. HART.
Author of "Arranging Music for a Small Orchestra."

Toward the latter part of the seventeenth century, violin playing may be said to have drawn to a focus; the scattered rays of light, flashed from many talented violinists, were concentrated as in a lens in the illuminating genius of Archangelo Corelli, the light of which penetrates even to our time. He seems to have gathered the loose strands of his predecessors and woven them together. One of the earliest composer-violinists, he epitomized the achievements of those who went before him.

Nearly contemporary with him, but not of so high an order of genius, was Antonio Vivaldi, born in the latter half of the seventeenth century in Venice.

Although a brilliant executant, displaying great ingenuity in making new combinations and devising new effects, his claim to remembrance is based not so much on special developments in the technic of the violin itself, as on his development of the concerto-form, particularly in regard to the accompaniment.

In the concertos of his predecessors, the solo-violin was treated little differently from the orchestra violin; while the strictly solo passages were usually accompanied by the bass alone. Vivaldi, on the contrary, very distinctly differentiated his solo instrument part from the orchestra violins, giving to it marked individuality and passages of considerable brilliancy. And, going still further, contributed the first instance of orchestration as applied to the concerto by adding to his band oboes and horns, to which he gave independent parts of their own, not merely a doubling of the string parts.

Vivaldi died in 1743.

When the perfect violin-form had crystalized in the creations of Stradivarius, the instrument itself had reached that point beyond which it was impossible to go. Not so the bow, however, which was far behind its principle in point of improvement.

In 1660, we find violin bows made very much after the model of double-bass bows of to day, and but little lighter in weight. The art of bowing was consequently in a condition similar to that of the bow—stiff, heavy, and with scarcely any variety of expression beyond the simple *piano* or *forte*.

The work of the violinist's left hand is purely mechanical, while that of the right, controlling as it does the medium of expression, is of quite a different character. Without an adequate bow, then, the violin is like a singer possessed of a beautiful voice, but struck dumb, or at least afflicted with stammering.

The perfect violin-bow was not achieved until about 1780, by Tourté, than whose bows none better have ever been made. But in the meantime, improvements were, from time to time, being perfected, and the evolution of the bow had progressed from the ancient implement, which really was a "bow," resembling nothing so much as the complement of the arrow (the bent stick and the string being, in fact, much the same in both), to the bow of 1700, which was not a "bow" at all, but a straight stick with one end slightly bent and with a nut at the other, between which stretched the horse-hair.

Tartini is peculiarly identified with the advancement in the use of the bow, of which he made a particular study. Indeed, it is probable that he contributed to the mechanical improvement of the bow itself, which was, during his lifetime, in the transitory state from the stiff, unyielding stick of the earliest days to the light elastic bow of Tourté toward the end of the eighteenth century. Tartini was the first to have the stick at all elastic, and thus opened up that immense field, rich in varied *nuances*, only possible with a yielding bow.

Giuseppe Tartini was born in Istria, Italy, in 1692. He was a descendant of a noble family and at the age of eighteen he entered the University of Padua with the purpose of studying law. Music, however, received most of his attention, and that, combined with a love affair which culminated in a secret marriage with his bourgeoise sweetheart, seems to have shaped his career. Certain it is that his marriage made him an outcast from his family, and he was forced to leave Padua and endeavor to secure a living.

After many hardships, the prior of a convent at Assisi, who was a family connection, offered him shelter and protection. While with this good friend, Tartini worked assiduously at his violin and at musical composition, the most remarkable work being his famous *Sonata del Diavolo*.

Eventually he became reconciled to his family through the intercession of his friend, the prior, and took his abode in Venice, in order to benefit by the playing of Veracini, a great musician at the head of the Conservatorio of Venice. Though Tartini never studied with Veracini, the latter's playing greatly influenced him.

An intimate friendship was formed between these two and another artist, Mariello, and all three devoted much time to the study of the principles of violin playing, especially to the style and different kinds of bowing.

When Veracini's mind failed, Tartini retired to Ancona, and devoted himself entirely to the discovery of the fundamental principles of the bow in the technic of the violin—principles which no other violinist has improved or altered.

Tartini was also a student of science and mathematics. He discovered the phenomenon of the third sound, which has caused much discussion but has not yet led to any practical result. The third sound is the sympathetic resonance of a third note when two upper notes are played in perfect tune.

In 1721, Tartini was appointed director of the orchestra of the Church of St. Anthony, at Padua. Here he spent the rest of his life. His death, which was looked upon as a national calamity, occurred in 1770.

Tartini's great fame brought him repeated offers from all the large cities of Europe, but nothing could induce him to leave Italy. His violin school at Padua graduated many excellent players, among them, Pugnani, Graun, Nardini, Ferrari, etc.

He is quoted as saying that he never made any real progress in music until after he was thirty, and when past fifty he made a marked change in the character of his playing.

Tartini's compositions number over 150, and not only display great beauty of melody and intimate knowledge of the violin, but also sound musical science. Some of his Sonatas are still played at concerts. His famous "Devil's Sonata," is said to have been inspired by a dream.

While his bowing marked an immense advance, the technic of his left hand was somewhat limited, never exceeding the third position, and his double-stops were, on the whole, simple and easy. Instead of displaying extraordinary skill in brilliant execution, he developed grace and expression. He excelled particularly in the execution of shakes and double shakes, showing that his technic, though limited, was founded on the primary principles of good execution—firmness and lightness of fingering.

[TO BE CONTINUED.]

VIOLIN STUDY.

Profitless Work.

GEORGE LEHMANN.

The average pupil is so absorbed in work which, apparently, points to rapid progress, that he either loses sight of, or inadequately appreciates, the really important details of study. Day after day, week after week, month after month, he gropes about in the dark for that which seems to him a prodigious attainment, rarely consulting his better judgment or doubting the logic of his course. And when, occasionally, it does happen that such a pupil is roused from his mental lethargy—when he finds himself plunged in a thousand perplexities from which escape seems utterly hopeless—when he vaguely realizes that the art of violin-playing demands something more than thoughtless repetitions and familiarity with a mass of undigested music—when all this comes to the pupil as a new and wholly unexpected experience, he begins intelligently to scrutinize questions that have never before concerned him, and soon makes startling discoveries which testify to the absurdities of his past endeavors.

It would be folly to attempt, in a brief article, thoroughly to traverse the broad and interesting field occupied by the gravest questions related to violin study. The subject admits of, and requires, the very broadest treatment, and nothing less formidable than a volume could be made to record its ramifications. But it is possible, even here, to view certain phases of this subject with profit, and to touch upon some elements and conditions of study which should be clearly understood by all students.

Since it is not my purpose now to inquire into the strange workings of the child-mind, or to investigate such matters as properly belong to the field of psychology, let us take the average musical boy, aged fifteen years, or older, and learn, from the character and quality of his work, his conception of violin study.

Let us suppose that this boy has been playing the violin four or five years, and that, during these years, he has received what is commonly considered good instruction. He has long since forgotten the very names of the works which guided him in his earliest musical pilgrimage; he has "passed through" Fiorillo, Kreutzer and Rode, and cherishes the hope of an early acquaintance with the Caprices by Paganini; he has played scores of minor solo pieces, to his own satisfaction and the pleasure of his friends; and only the great concertos and the most intricate musical works can satisfy his ambitions and keep him interested in his studies.

All this naturally leads us to believe that this boy is an accomplished violinist, and that he is in a fair way to high artistic achievement. That he has long since "finished" such difficult studies as those by Fiorillo, Kreutzer and Rode should be convincing proof that he is possessed of uncommon technical ability and no mean order of musical intelligence; and that the Bruch and Mendelssohn concertos, and others of greater difficulties, are the works which, in his own and his teacher's opinion, are best suited to his needs and abilities, naturally inclines one to the belief that the boy's studies have been thorough and conscientious, and that he must necessarily have a clear and comprehensive view of the art.

When we hear this boy play we are shocked beyond expression. His ideas are either unmusical, or he has no ideas at all; his technic is crude and undeveloped—insufficient, perhaps, to meet even modest demands; his tone lacks charm and variety and has undergone no refining process; and, everything considered, there is in his playing little or no evidence that he has passed beyond the early stages of development.

Perplexed, we ask ourselves, How is it possible that the study of such works as Fiorillo, Kreutzer and Rode has yielded no desirable results? Again and again we ask ourselves, Is this the result of poor instruction, or must we attribute such incompetence to a low order of musical talent and intelligence? Unquestionably, the teacher is greatly to blame for such a state of things; but as we are here probing conditions bearing only on the pupil's method of work, we must leave the culpable teacher entirely out of the question, and devote our entire attention to the unfortunate pupil.

Certain daily studies are absolutely indispensable to artistic achievement. Chief among these may be mentioned: the study of scales, broken chords, trills, the long *legato* stroke and the *detaché*. These studies bear the same important relations to the violinist's musical health and strength, as wholesome, daily food bears to his physical health and development. But of the five studies mentioned, how many pupils can honestly say that two receive their daily attention? Few, indeed, are the pupils who can give satisfactory answer to such a question. Even when the teacher has repeatedly made clear the necessity and ultimate good of such studies, the average pupil continues to disregard his teacher's wishes and advice, foolishly believing that five hours devoted to other work is sufficient for his needs. In fact, the pupil is too easily inclined to the belief that scales, for instance, were invented for no other purpose than that of annoying him and wounding his pride; and he is firmly convinced that everything he has ever heard concerning their virtue in connection with technic, is either greatly exaggerated, or a deliberate misrepresentation of fact.

Now, when such a misguided pupil attempts to play a concerto, he is amazed to find that passages, apparently simple, require much and patient application; and (what is utterly beyond his comprehension) after he has practised such passages many days, or even weeks, and has every reason to feel that he has overcome their difficulties, he suddenly discovers that his fingers are unreliable, and that what he is able to do to-day with confidence and ease, is, to morrow, a capricious accomplishment on which he can place no reliance. Unhappy, but determined, he attacks the work with renewed energy, never attempting to discover the origin of his troubles, but tenaciously continuing his blind, plodding course.

Knowing, as we do, that the great Etudes form the basis, if not the nucleus, of the violinist's development, it seems incredible that we can trace to their

influence so few of the benefits which should result from study of their contents. And, indeed, we may search in vain for a solution of this problem if investigation into the character of the pupil's work fails to reveal the cause of his inefficiency. Such investigation, however, will shed on this question all the light we require. It will be found that the pupil is unable to play, even tolerably, a Kreutzer or Rode etude; that he has merely skimmed through these invaluable studies without any appreciation of their bearing on his technical and musical development; that the study of them was to him always a more or less disagreeable duty; and that, when he laid them aside and took up the attractive pieces of an artist's repertoire, he blotted them from his memory, elated at his escape.

These finely constructed studies (many of which, aside from their more practical worth, are certainly musical gems) contain the educational ideas of famous violinists whose pedagogical successes cannot be questioned. They are carefully wrought masterpieces by teachers of wide and varied experience, men who were deeply impressed with the need of contributing to violin literature works of great didactic merit. Nothing, of their scope and high character, had previously been written; and in the then tentative and undeveloped state of violin didactics, innumerable difficulties confronted the pedagogue in the training of his pupils. Kreutzer, Fiorillo and Rode not only embodied, in their etudes, the very highest principles of the art of violin-playing, but they have also given us these principles with scientific precision, and in such musical garb as will ever remain attractive. We know of nothing that can take the place of these wonderful etudes. To them generations of violinists are indebted for their knowledge and accomplishments. In design and treatment they are so complete and exhaustive that they may justly be said to constitute the requisite material for the highest technical training.

And how do most pupils—even very gifted ones—regard these etudes? Simply as a necessary evil. They realize that escape from them is impossible; so they "get over" them as speedily as possible, devoting little or no attention to their important details, satisfied if they but reproduce the notes with tolerable accuracy.

Again it must be said the teacher, too, is culpable; often the pupil's indifference and negligence may be attributed to the teacher's lack of knowledge or conscientiousness. But I am here simply appealing to the pupil to mend his ways, without attempting to prove the degree of the teacher's musical guilt.

OUR CHILDREN.

ALBERT W. BORST.

Thinkers of to-day are giving their best efforts to the conservation of energy in every direction. Our time, our opportunities, our health—are all so many units in the struggle of life, for which the strictest account must be given. When we consider the vast number of boys and girls who are taught music in one form or another, can we truly say that the results attained are not commensurate with the energy spent in such teaching? Is it not the rule that the child commences late, or has too many long gaps between terms of lessons, or is not censured for looking upon the art as of comparatively little value, or is possibly disheartened at the outset by the teacher's methods?

We have plenty of crude ore, but how to smelt it into a metal which shall prove malleable later on, and which shall bring forth some artistic product—this is one of the greatest problems now facing musicians and psychologists. Children have an innate love of sound, but they do not love the labor requisite to harness those sounds for their own practical use; anything which savors merely of the technical is to them an abomination.

A healthy child naturally loves play; he does not, however, care to be a mere spectator of games—at least when he is very young. As a passive listener, therefore, the child is not in his element. He must be personally interested. Now if the teacher can devise some plan of persuading him that he is playing, whilst at the same time he gets his musical faculties developed, then proportionate results are sure to come forth. It is only quite recently that musicians have done anything to drag the youth out of the old slough of mere pedantry, through which so many of us had our early plunge.

This is not the place to advocate any special system, but it is just the place to urge upon teachers to examine any new ideas, and to seize upon what will prove of benefit to their scholars.

The various methods for instructing children in music after the kindergarten plan, appear to embody the following ideas: By taking very young children in small classes and giving them games, figures, diagrams, blackboards, telling them stories, etc. You get them interested—the most vital point. No home lessons or practising is asked for. The pupil becomes as eager to find "two-lined C," or to sing the fifth quickly from a sounded tonic, or to tell what time a piece is in on hearing it played, as he would be to gain a certain number of marbles or to skip so many times in succession.

It is promised by many teachers of these new schools that, after one year, the child will be so prepared to begin the study of an instrument, that all preliminaries will already have been mastered; that the solid foundation will consist of an ear capable of recognizing at once the pitch of the notes and their distance one from another, a full knowledge of the keyboard of the pianoforte and how to write the notes on paper; arm, wrist and fingers prepared as his tools, the power to build up any scale or common chord, to read simple tunes at sight, to memorize the same with facility, and, parenthetically, a bowing acquaintance with some of the greatest composers and of some of the ordinary Italian words they use in their writings.

Now such a comprehensive program appears at first sight as if printed on too small paper, one must allow for the time to mature any such radical change in our system of teaching music. Improvement, however, is rightly demanded and will come as surely as the better methods now in vogue in the singing classes of our public schools.

If then, we can save time when it is so important, and from the start can instill into the minds of our children a genuine love of art, furnish them with a foundation upon which more musical studies may be built later on, and all this under the guise of play, it surely is a *prima faciae* evidence that the matter is worth sifting by every musician and parent.

MUSIC DEPARTMENT OF LENOX LIBRARY, NEW YORK CITY.

It has been suggested that some information concerning the music collection at the Lenox Library in the City of New York, would be of assistance to out-of-town music clubs and persons interested in things musical, some of whom are not even aware of the existence of such a storehouse of information within easy access, and who would be eager to avail themselves of the opportunities it affords.

The Lenox branch of the New York Public Library, is situated on Fifth Avenue, between Seventieth and Seventy-first Streets. It is open to the public on all week-days from nine until six o'clock; no tickets of admission, as in former days, being required. As it is merely a reference library and not a circulating one, no reader is permitted to take books from the building under any condition. Before securing a book, a separate slip containing the author's name, title and date of publication; also the reader's name and address is required for each work (in the case of sets, one slip only is necessary). The reader is privileged to take as many books as he desires at a time, providing he leaves a slip for each separate volume. There are fifty volumes, or more, on the open reference shelves, among which can be found Grove's Dictionary, Fetis, Famous Composers and Their Works, published by J. B. Millet Company.

The North Hall on the ground floor of the Library is devoted to music, genealogies and local histories. A music department was inaugurated at the Lenox in 1888, on receipt of Mr. Joseph W. Drexel's generous gift of his music collection, which numbered over sixty-five hundred volumes, comprising books relating to the history and literature of music, autographs of celebrated musicians, prints relating to music (including portraits of composers, etc.), and music for the church, theatre, chamber, etc., among which will be found a copy of the first edition of Handel's oratorios in score.

This library of Mr. Drexel's was formed by the union of the libraries of H. F. Albrecht, of the late Germania Musical Society, and Dr. La Roche, and augmented by importations of works from Europe. Mr. Albrecht spent over thirteen years in different countries in the formation of his collection, and it would be difficult to find a finer one of its kind.

When the Music Department of the Lenox was opened, all books bearing on this subject were sent up from the Astor Library, it also being a branch of the New York Public Library, and these, added to the Drexel books, with the gifts and purchases of the following years, now bring the number of volumes in the music catalogue up to about ten thousand, or more, each of which is catalogued under the subject, as well as author, and title where no author is given, or in the case of the editor or compiler publishing the work, or when the title is a "catchy" one.

The catalogue is a dictionary card catalogue, the books being entered upon their subject as well as author, enabling the reader, with very little bother or trouble to himself, to find, in a very short time, exactly what the library can give him on any particular subject. For instance, anyone looking for music of any particular country, has only to look under the heading, "National Music," subdivided into countries. Folk-songs, in which so many are interested at the present time, have also a separate section in the card catalogue. For those interested in the ancient forms of notation, etc., the "Paléographie Musicale," published by the Monks of Solesmes, is helpful, also the graduals, missals, etc., found in the library; as well as the publications of the Plainsong and Mediæval Music Society.

The Music Department does not boast of any musical instrument, such as a pianoforte for the use of the public, as there is no room in the building that could be devoted to that purpose. When the new library is completed, perhaps a piano might find place. One ingenious music reader, however, did not allow the absence of an instrument to hamper his enjoyment of the music before him, for no sooner was he provided with several large folio editions of compositions, than opening each and laying it carefully on its back, he tilted back his chair and with both hands in his pockets, began whistling loudly. It is unnecessary to add that he was at once suppressed and made to understand that a repetition of such conduct would make him liable to expulsion from the room.

The library is rich in orchestral scores. Under "Opera—Full Score," in the card catalogue, can be found works of Beethoven, Gluck, Handel, Wagner and many others. Under "Oratorio—Full Score," come the names of Handel, Haydn, Liszt and Mendelssohn. The librettos to these can also be had, with the usual translation.

Seated at the tables provided for readers in the North Hall, one usually sees a goodly sprinkling of the gentler sex. The Pedigree Department is responsible for the presence of many of these fair dames, who are engaged in that most delightful occupation of looking over family records. This does not mean, however, that the music department is devoid of women readers. On the contrary, of the average number of readers in the music department, per month, one-half are women; among whom, as well as among those who go to make up the other half, can be seen many well known authorities on music—foreigners as well as our own countrymen—consulting the catalogue day after day in an untiring search after data for some important work which the music world eagerly awaits.

The library subscribes to all the good music periodicals, both foreign and domestic, a list of which can be found on the desk for the use of the public.—*R. L. H. M.*

There exists a very general impression that the great masters are wedded principally to their violins, and that the bow plays but an unimportant part. Such is far from being the fact. The bow comes first, and great and serious as the loss would be, the artist could the better afford to part with one of his violins than any of his bows, and especially the one upon which he relied the most. The bow must be suited exactly to the violin, it must be in absolutely perfect condition, in accordance with the artist's temperament, or it would be impossible for him to do himself justice in playing. A bow must be made by a master in order that it may yield to the player's feeling, and it is oh! so difficult to make such a bow. An artist usually has four bows. His "best" one used for staccato playing, one for practice and one for solos. He could not play with any other bows than his own.

And when an audience disperses, can you guess what griefs the singer may have comforted, what hard hearts he may have softened, what high thoughts he may have awakened?—*Bulwer-Lytton.*

THE VOICE.

Mr. Frank Herbert Tubbs, Associate Editor.

THE SINGING VOICE.

Article Eleven.

FRANK H. TUBBS.

The Singer's Sensation.

There are times when every singer realizes that he is making a tone which is delightful. He knows that all effort has been removed, and he can for the moment, let himself go free. An abandon of movement is his for the moment, which is so unusual and delicious, that he is in ecstacy. But it is liable to be like "The Lost Chord." He doesn't know how he did it; and, try as he may, he finds himself unable to make that tone again or bring himself into the mood which he had when doing that singing. This attempt at instruction for the large groups, which we know looks forward month by month for our instruction, may help some to make permanent the ideal tone which thus far they have been able to catch only for a moment.

When nothing but pure tone is used and nothing acts wrongly, vibration only is felt. In preceding lessons, we have led up the details. We have shown the training needed for breathing, for obtaining freedom of larynx by means of the limp tongue, for inducing secondary vibration and connecting it with primary vibration, and for extending that vibration over the body. That ought to be all that is necessary. The help of the teacher is needed, however, with most students to see that this correct work is carried out. The guardianship of the growing student constitutes the greatest amount of attention at personal lessons.

Natural and normal action has no sensation. The act of talking is not felt; the act of ordinary breathing is likewise without sensation. These two acts constitute the basis of singing These two acts must be developed on natural lines till they can answer all the demands of singing. Artificial and unnatural action can be felt and such must be removed. That means that all the organs of voice production are to be induced to work naturally and normally. All students have over-estimate of what they must do to sing, and nearly all teachers have notions based upon error. The students are like the rustic boy who engages in boxing. He beats the air, just as all vocal students over-attempt. Educators have said that education is a constant "Don't!" There never was a diamond which did not need polishing. The work of the student in bringing his voice under control consists in cutting off superfluous crudity until nothing acts wrongly. These lessons have taught what is to act and how it is to act. Now avoid having it act wrongly. The best way for one to know whether it acts correctly or not, is by the test of sensation One can bring every individual organ used in singing into the greatest activity and have no sensation.

Here is suggestion: (It seems unnecessary to number it as an exercise.) Select a note in the middle of the voice; sing "ah," upon it, noting whether any sensation can be felt or not in any part. Sopranos and tenors may well use the note "A;" altos and baritones, "G;" basses, "F." These notes in ladies' voices are in the lower medium register; in men's, in lower chest. The organs to inspect with the "mind's eye," are the chest, throat, tongue and jaw. Keep repeating that note until it can be sung without sensation anywhere. It may take twenty attempts before that one note is right. Get that note right, anyway. Don't leave it "half right." That is a mistake which students make—satisfied with something half way good. One cause of mediocrity—one reason why there are so many called to take singing lessons and so few chosen—lies in that willingness to stop short of perfect work. It were better to make twenty attempts each day and attempt every day for twenty days on that one note, until it is perfect, rather than leave it not quite right. When it is right take the next lower; make perfect the notes of that register. After two or three notes are perfected the rest come easily. Thus can one vary the exercise in all manner of ways. Runs even, are but single notes spread out, so far as application goes.

Experience teaches the writer, that by far the largest number of imperfections arise from the belief that breath control must be a conscious act. It must not be. In fact, there is no breath control so long as there is sensation of holding breath. Students say they must feel that they are holding either at the sides, at the back, or at the abdomen. Such feeling is wrong. That "Lost Chord" note which we are now seeking can never come while the feeling is there. It is the projection of fear—of self-will—of lower mind. It must go in response to that mental control of the machinery necessary to give us the true singer's feeling. That feeling which permits to throb and pulsate with life, responding to pure musical emotion. On that one tone, then, utilize time until conscious sensation disappears. Then extend that throughout all the voice. "What?" asks some one, "are the high notes to be thus made?" Every one of them. Work up to them. It will take longer to command them than it does those of the middle voice (because laryngeal vibration doubles with each octave), but exactly the same process is to be applied to the high and low parts of the voice as to the middle part.

The singer's sensation is one of vibration responding to emotion. When singing sentiment, expressing musical idea, only may be given attention. When the body has been thus prepared, the throb, mentioned before, is all one can realize. One can hear his voice resounding through the hall but cannot feel himself singing, save that throb which all in the house can feel. The singer feels it most; sensitive souls in the audience next. Some souls feel nothing for they have not yet attuned themselves to the divine art.

Appearance on Platform.

Exercise Thirty-seven, which was given last month, is one which prepares the pliable body. While its purpose, as given, was to obtain the elastic body which admits no rigidity, it prepares the way for stage appearance. Here, again, are suggestions not numbered as exercise: When going out to sing, if the music is carried, have it closed and loosely folded or rolled in one hand and that at about the waist; while walking, let the feet swing close to the floor, keeping the soles as nearly parallel with the floor as possible; advance to a position one yard in front of the position which you propose to occupy, and advance to it on a curve (the latter means that when almost out to the middle of the stage, curve toward the audience); then, back slowly to that position where you will stand when singing. Assume the position given in exercise thirty-seven, namely: one foot forward, the weight on the ball of that forward foot; unroll and open the music to the first page; turn and look to see if the accompanist is ready; when he begins to play resume front toward the audience and look on the music while he plays the introduction; look up over the audience when you begin to sing and don't look on the music except when it is really necessary to see what is coming. Turn the leaves with the left hand as you would the leaves of a book; hold music with right hand by the lower corner; at closing, make a slight inclination of head and body toward the audience (as if it were a good-by bow), and step off with the foot which is on the side toward which you are to go.

The plan above outlined has much in it, and it is very valuable. But, to read it and wait till the concert to apply, it will be worth nothing. Put it into practice every day until it loses novelty; that is, until it is done naturally and without consciousness. The elastic body must now be used. Go over it again and again until it can be done without thinking of what you are doing.

It will be observed that what may be done after one has gotten into place, is gone ever very minutely. The seconds after arriving before the audience and before the singing begins, are about as trying as are any in life. The eyes of the audience is on one. They are scanning dress, style, bearing and all. Any one who is at all sensitive, and every good singer is sensitive, feels the presence of his audience. The singer needs something to do at that critical time and the above suggestions give him something for each second.

Students often ask if they shall bow to the audience when they enter? No. If one is a known singer, or has many friends in the audience, applause will be given as soon as he appears. This should be acknowledged by a cordial invitation (or half bow), and a smile while one is walking. Then if the applause continues till the singer is in position, there may be more bowing. But then, a singer who would have such cordial reception as that knows what to do without being taught. As suggested above, at the finish of the song there would be a little bow. Avoid recognizing anyone in the audience. Bowing to an acquaintance is instinctively resented by the rest of the audience as a slight. There are cases in which one may properly bow. For instance, if one, singing at his home city, has been away a long time and that is generally known, he would be justified in nodding pleasantly to a few friends who were in his first audience after the return. But, audiences resent familiarity and partiality.

Breathing Again.

Teachers and students realize very much of the time that something goes wrong, and in the uncertainty which surrounds voice culture it is not easy to tell what the trouble is. Nor is the teacher who cannot decide quickly the cause of trouble to be blamed. On the other hand, the teacher who is alwaye sure he is right is likely to be a big ignoramus. Training the voice is subtle, because the voice is an expression of mind, and that is a thing about which the wisest know so little that they keep quiet. It takes a big stock of ignorance to get a voice teacher to the the point where he "knows it all." But this fact may be accepted by teachers and students: breathing for singing is a life-long study. You may get away from it for a time, but you must get back to it, and every time you return you will find something new and interesting. This present return will permit us to lay down four statements and then explain them.

First, practice for breathing is physical culture and has nothing to do with singing.

Second, the manner of inhalation while singing is regulated by emotion.

Third, there must be no effort at breath control.

Fourth, breath does not make tone.

The location of the essential breathing organs has been given in these columns, but were all who read this now, even if they have had the previous training, were asked to show by pointing around the body the location of the diaphragm (when its level is in front, at sides and back), not one in twenty would answer correctly. As a test of yourself, student, please write on a piece of paper, before reading further, just where you think it is. The location of the diaphragm is one of the most important things a vocal student can have. If he has lost it from mind he would better stop at once and get this item of knowledge into his active perception. The diaphragm is a large muscle extending through the body from front to back and from side to side, making a platform (practically) on which the lungs rest. It is a floor, not quite level, for it slopes downward toward the back and it has two domes inside. But for the student's purpose the latter fact is immaterial. Now for its level: in front it attaches to the end of the breast-bone; at the sides it is an inch or more lower than that level and in the back it is lower still. Ask a lady student to point out the level of the end of the breast-bone and, almost invariably she points three inches too low. Now, consult the answer you wrote and see if you did not believe the diaphragm was located three inches lower than it is. Because one feels the expansion of inhalation low he thinks the organ of respiration is low. To avoid the mischiefs in respiration know the location of the diaphragm and use that muscle.

The first statement of the four given above means that a student should be given exercises for calling into use the breathing muscles and organs, and that he should use them daily without using the voice. He should be shown the dual act of respiration—inhalation and exhalation. He should be shown how to make pliable and active the organs which take breath and of those which send it out. These organs should be exercised daily, and the best time to do it is in the early morning. In most modern homes, the generous bathing (if not a complete bath) opens the day. Right after this, or with it, should come breathing practice for physical culture. It is well to use it while clothing is removed or while in the bath robe. Five minutes of correct practice at that time is enough for all day, but those few minutes *should* be given it *every* day.

Inhale generously on the real level of the diaphragm five or six times, spreading the ribs well up under the arms and very much at the shoulder blades. Then, next take a good breath without reference to how, and blow the air out through the partially closed lips or through the nose, if the mouth is closed. Repeat that five or six times. That exercises the expiratory organs. Take a breath and hold it as long as it is comfortable. Repeat that a few times. That is all there need be for physical drill in breathing, but that must be daily, and one *must* have in mind the location of the diaphragm.

The second statement needs more room than can be given now for complete explanation. More at another time. Here is a word. When singing, one's attention should be centered upon the words. There is no time for thinking of detail. The meaning sung is the controlling factor. Note how the meaning makes the facial expression: a devout sentiment will bring serious, yet pleasant, expression; telling of the rose will change the face; singing of war will give the stern look, etc. In the same way the expression affects respiration. One cannot test this on himself. Conscious examination prevents analysis. He must watch another singer and, to be sure of getting true test, that other should not know he is watching. It will be found that the light sentiments cause one to take little breaths, and generally only in the upper chest; nobler sentiments call for broader inspirations; florid and brilliant singing will cause inspiration to go down the front of the chest and manifest itself by distension of the abdomen; the orotund voice will call for expansion at the back. If the organs of inspiration and expiration are well trained, nature will select the way to take breath for every sentiment, and the singer need not think much about it.

The anxious face of most students while seeking breath control is enough to spoil any singing. Almost every student tries altogether too hard to hold the breath. Many singers, even to their dying day, believe they must hold their breath somewhere. One says at the back, another at the ribs, and another at the soft wall of the upper abdomen. It is all imagination and nonsense. While it is true, that during singing, these spots must be firm and still, there must be no sensation of holding. The *feeling* of holding is something more than is needed and that sensation must go before perfect breath control is had. Mental control of all parts of the body can be secured to the extent of removing all sensation. One should carry his mental control that far. At any rate, he should apply it till he does not have any sensation of holding the breath.

Breath sets into vibration the vocal bands which are in the larynx, and so far as making tone is concerned, that is all the breath does. If breath made tone, the more breath used the more tone would be made. Any rightly trained singer can demonstrate that he can make much or little, loud or soft, tone and not change the amount of breath because of change of voice. It is well, then, to avoid the habit students fall into in their zeal of taking enormous breaths. Overcharging the lungs is a more common and more serious fault than under-supply. Take little breath and conserve that.

The matter of breathing and study of its principles grow wonderfully simple when we take into account that we all over work as does a country boy when he tries boxing. A few scientific strokes are much more effective, and all can use them.

OPERATIC ARIAS.

Vi ravviso—La Sonnambula—Bellini.

W. LOWES-HEATH.

As a general thing the training received by bass voices in this country is apt to be a little too limited. Of course, with the development of music and wider appreciation of singing art this training is being somewhat modified, and the term "bass" no longer makes one think of a low D or C as a necessity.

Still, the inclination is somewhat too prevalent among us to think of but one part of a bass voice as being important, *i. e.*, the low part.

Teachers should not allow bass voices under their care to form the habit of vocal shirking. The lower voice should be divested of its rumbling quality and be subjected to the control of the will over the larynx instead of allowing it to sink down by its own weight. The middle voice should be lightened and tempered that the full voice may acquire traveling power and be kept up to pitch.

The upper voice has been the Waterloo of most basses, and this is due not to disability but rather to defective training. If the natural weight of a bass voice be not properly handled, with an intelligent understanding of the best methods of equalizing it, the effect of regular exercise is to transform that weight into thickness, by which the upper voice is simply suffocated. The truth of which is most palpably demonstrated by a great many of our native basses.

Basses should drill a great deal on the middle and upper-middle voice, striving to eliminate all thickness and control the weight.

Don't allow the lower tones to sing themselves if you would be sure of them. A bass, after singing continuously for a length of time in the upper register, should have no difficulty in dropping to low F and giving it out in a clear, bright tone. This, however, is only to be achieved by a proper and conscious control of the larynx.

Contraction is a dangerous word, and its significance is not for the uninitiated, but in the voluntary control of the lower notes something of the sort takes place and the process should be understood by the student. If any student be tempted to make experiments let him be sure he knows what he is about and has a good teacher to guide him.

The aria under treatment this month is one of the best in the old Italian school and wonderfully well adapted to impart an easy, flowing, singing quality, and graceful style to the bass voice.

The subject matter is simple reflection of boyhood and youth. There is nothing to tax a singer's mind, and he is free to yield himself up entirely to the pleasure of singing the charming and graceful melody.

On the way to his home Count Rodolfo arrives at the village about three miles distant from the castle. He asks: "Is there an inn in the village?" and Lisa responds: "Here is mine." The count, examining the house, continues: "That one; ah, I know it well!" and, to the surprise of the assembled peasants, who do not recognize him as the count, he continues to designate the different landmarks familiar to him as a boy: "The mill, the fountain, the wood, and there, hard by, the factory."

The recitative offers no difficulty. The greater part is conversational and interrogative and is to be sung brightly. The last phrase is the most important and should be well accented and sung intelligently.

The grace notes are sung so that they supersede entirely the notes to which they are attached. The whole phrase is taken "a piacere," which means use your own ideas as to time and pauses. The count's eyes rove round the scene and he recognizes the different objects: "Il mulino—il fonte—il bosco—E vioin la fattoria."

ILLUSTRATION 1.

Accent grace notes till they supercede principals.

Begin about half voice and crescendo as each object is named, up to the D♭. Give it a slight hold and diminish as you come down, with a ritard, and hold on the grace note. This last part forms the modulation which introduces us to the cavatina.

The count gives himself up to that sweet pleasure which one feels on returning, after a long absence, to the peaceful scene where boyhood's days were passed in happy thoughtlessness. All the more pleasant do they seem because he realizes that, though the places are the same, time has flown, carrying his boyhood away with it, nor can he ever find those days again except in memory.

In this spirit he begins the cavatina: "Again, I behold you, ye pleasant places, where so happy, tranquil and serene the days of my youth I passed. Dear spots, I found you, but those days I shall find no more."

It is marked "Andante Cantabile," which here means a swinging movement and sustained singing tone throughout.

The first phrase, "Vi ravviso," is marked *pp*. But the piano tone must be rich and not breathy, and the portamento well marked but clean. The phrase, "O luoghi ameni," begins with a crescendo, expressive of pleasure, which diminishes as you come to the A♭, and the sixteenth notes are sung piano and slightly accented.

Repeat the sames ideas in the next two phrases.

A slight crescendo begins in the phrase, "Si tranquillo," with the grace note accented. The crescendo continues in the following phrase, "I di passai." The first three notes are slightly accented with a suggestion of ritard. The C is held with a full, candid tone, which is carried by portamento to the B♭.

The next phrase, "Della prima," still has the crescendo with a marked ritard and a slight hold on the second D♭. After the short break of a sixteenth rest the phrase continues piano with the time accents well marked.

The sixteenth notes consequent upon the dotted eighths must not be sung jerkily. They should not be taken at their printed value, but rather with the intention of the composer, which was evidently to preserve and bring out the rhythm of the words and still keep the flowing character of the melody. They come on the unaccented portion of the words.

The second part of the cavatina should be sung in a full, free and flowing tone.

The phrase, "Cari luoghi," begins piano, the time is held back and the voice lingers on the words. In the next phrase, "Io vi trovai," a crescendo sets in and each note is well accented in conjunction with the ritard up to the C, the D♭ of the next phrase being anticipated in the portamento.

In the phrase following, "Cari luoghi io vi trovai," beginning with the D♭, the voice breaks out full and free and the time is accelerated, flowing evenly to the end of the phrase. The effectiveness of this phrase lies in the contrast to the ritard of the two preceding.

ILLUSTRATION 2

Sustain the tones well, but pronounce clearly.

To bring out the full significance of the phrase, "Ma quei di non trovo piu," the B♭ should be cut off just a little and breath taken before continuing the phrase, the rest of the phrase is sung with a slight ritard, a hold and crescendo on the C.

The phrases which follow, "Vi ravisso o luoghi ameni, in cui lieti in cui in sereni," are of secondary value, being repetitions of the sentiment of the first part, and forming a sort of interlude before repeating the melody of the second part.

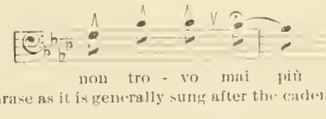
The first part of each crescendos as it mounts and diminishes to the close, the time accent being well marked.

The repetition commences very deliberately, but with the second phrase the time is taken up, the voice comes out full and free and the whole is sustained with flowing breadth to the end.

As regards the cadenza, it can be either sung as it stands, or a different one may be supplied by the teacher, more suited to his own ideas, or better adapted to the capacity of the student.

The final phrase, "Non trovo piu," is generally taken, as in the illustration, and not as it is written.

ILLUSTRATION 3.



Final phrase as it is generally sung after the cadenza.

So far the Andante, and now we come to the Allegro.

In the foregoing cavatina the count has been lost in his own reflections, but now, as he looks round among the villagers, he sees that some merry-making is afoot.

In a few passages of recitative he says: "But, among you, if I mistake not, to-day you celebrate some holiday." They tell him it is a wedding and he asks which is the bride, upon which they point out Amina to him.

"She is pretty," he says, "and very graceful. Come, let me look at thee. Ah! what charming features."

The recitative needs no special treatment with the exception of the phrases addressed to Amina. These are marked "a piacere" and should be well accented and sung piano. In the last phrase, "O il vago volto," there is a pause after "Oh," which is full of

meaning. The count is struck by the beauty of Amina, which also calls up before his mind another beautiful face, known and loved in the past. In this thought he addresses the following directly to Amina:

"Thou knowest not, with thy beautiful eyes, how sweetly thou touchest my heart, recalling to my mind an adorable beauty. She was, as thou art now, in the full morning of youth."

This movement is allegro The voice should be kept light in quality, flowing, free and easy. Brightness and graceful vocalization are its leading characteristics, and are the lessons which the student should try to learn from it. It teaches also the lesson of quick, easy breathing.

The crescendos and diminuendos suggest themselves and the accent is almost entirely that of the time.

There is an extensive cut in this movement which can be better explained by the teacher in the actual study.

For all basses, no matter what special line they intend to take up, as soon as the voice is well enough in hand, there is no better study in the world than this little scene from "Sonnambula."

It lies entirely in the middle and upper-middle voice. It imparts lightness, facility and security, and teaches the use of a sustained and flowing tone without being unwieldy and ponderous.

It is a solfeggio with words, one of the most beautiful ever written, and after continued study of it a bass realizes that he can sing other things besides second bass in a quartet, or songs that are transposed for the special purpose of carrying him to low E or D.

The low tones of some basses are very beautiful, but they should not be allowed to eat up the rest of the voice.

SONGS AND SONG WRITERS.

FRANK H. TUBBS.

Equipment of singers must go farther than vocal training or the possession of natural voice. It would seem, in view of the place of singing as entertainment, that any good voice not very badly used could answer all needs of the singer. And, were entertainment all there were to singing, it might be true. But there is another side. Singing is the expression of the soul through an art. With the development of man into higher demands which is going on a rapid pace, higher and greater expression must be engrafted upon the singer. It is necessary, then, for one who claims to be a singer to have more than voice. When the voice is ready his education must go into music. To know music one must know history, and the men who provide material to use in the art. That is why singers should know song writers, composition and the bearing of music (particularly songs), upon the present day, and upon the age when the songs were written.

Music *per se* and the program music of the day have differences. Previous to the last century when songs developed into their present form, writers clung to what we now term the classics. They wrote after a certain musical form which was stamped as correct. We are wont to think they dared not depart therefrom. Two thoughts come which will bear verifying and students will perhaps learn from them that composers were only obliged to conform to the set rules because of things outside of music. First, poets wrote in a sweet but colorless form; second, composers were not men who were made strong through contact with other men and with great events. These are outside of composition. One reason why the operas of the eighteenth century have not lived is because of the poor librettos. Even a Mozart, whose operas have lasted longest, could not so dress the librettos as to save them. Beethoven, the giant of the nineteenth century, wrote music *per se*, adding to the prevailing forms his inimitable coloring, but even he was unable to find poetry suitable for expression of his great soul when he would write songs or opera.

Those were strenuous times which ushered in the nineteenth century. Napoleon had awakened all the fight there was in civilized Europe. That awakening developed the greatness which was in men. Musicians came into contact with them and, by attrition, grew worn to productive shape. Poets also felt the force. The romantic school of composition was the result and it could no more be helped than can the explosion be prevented when fire and gunpowder unite. Those strenuous times never stopped. Down the decades of the century activity among nations developed and it reached to the individuals. Then came into being a strength of character with each decade much superior to that possessed before. Music could not fail to grow under it; musicians enlarged; poets became more enlivened and emotional. Berlioz, Wagner, Tschaikowsky and Brahms touched elbows with kings and scholars. They were obliged to mingle with men. The result is that they produced a kind of music in song which even now is not understood. The majority of music students pick them over and can't see much in them. The lighter music is more to their taste. The entertainer finds nothing whatever in them, and he does not realize that it is because of his lack of culture. The fault is not in the song or music, but in the ignorance of the so-called musician. Now, the best music of any age is an "acquired taste" in the sense that one must educate himself to it. The music has so much of soul, of vivid imagination, of depth of emotion, that no superficial glance or inconsiderate attention will reveal its nature. One must go in for severe study. "Art is long" and it grows "longer" with every generation. Were this intended for a plan of study we would say the education of the singer should be the history of song in its relation to its own times; the study of composers and corelative human nature; composition of songs; fullness of emotional expression; and means of rendition. This would constitute a fine musical education, and if anyone has a soul for music it would keep him busy about as long as he is permitted to stay on this earth.

PRACTICAL TONE PRODUCTION FOR THE STUDENT.

ALAN GRAY.

It is a puzzling question to the student and a difficult one for the teacher to make plain. To explain it in words may result in the student's getting an intellectual appreciation of it as a principle, but this will not help much until he feels it practically in the emission of his own voice; for the proof of the principle is ever in the preaching.

To the average student the request from the teacher to "sing naturally" conveys nothing. That's what he is striving to do, and as far as he knows that's what he is doing, and he'd like to know just what the teacher means.

It has often happened in the past, and happens oftener than it should in the present, that the student never gets very close to what the teacher does mean by "singing naturally," for the simple reason that the latter has been unable to explain it, and, by means of properly adapted exercises, make it practically clear enough for the student to take it in.

This, however, is a disadvantage which is greatly modified in the present time. Teachers are more earnest and conscientious than they were; the knowledge of good singing and the methods of arriving at it are infinitely more widely spread and competition is great. This last, while it is undoubtedly an evil in some respects, being too often the source of charlatanism and over much advertising of the patent medicine order, is yet not entirely unmixed with good, for by it teachers are animated to greater study and harder work, and the knowledge that the final test of the teacher must rest in the results obtained, stimulates him to the acquirement of the means best suited to achieve the best results.

For these reasons the vocal student of to-day is not so badly off in this country as he was of yore, for in all the leading centres and in many of the smaller places, there are hosts of teachers; *certes*, there will be many poor ones among them, but there is also a number of good ones, and these last are not so hard to find, especially in the larger cities, for they generally have a reputation which will reach the student.

Most of the good teachers have given special attention and study to tone production, and when the student is asked to "sing naturally" he is also given the exercises specially adapted to help him to a practical idea of what is meant.

Now to sing naturally is a very difficult thing for the young beginner to do. He may shout, or sing lazily, or stiffen his throat, or do a hundred and one other things, but only in very rare instances will he "sing naturally." And that is the reason why Tone Production is of such importance, because it is only by means of correct production that the student is enabled to sing naturally.

As a foundation for Tone Production something should be known of breathing and breath control. I don't think that students generally understand what is meant by breathing deeply. It does not mean that you are to breathe, or try to breathe, into the intestines. Yet many, as far as they can, do just that, and the result is a physical strain with not enough breath to sustain one tone properly. Breathing deeply means to breathe with the diaphragm instead of the chest. The shoulders should remain still, the chest in perfect repose. As the breath is taken in, the diaphragm should first expand, then the ribs should lift from the base and expand upward, the diaphragm sinking just a little but not contracting. When the breath is in muscular force is obtained by gripping or contracting the muscles of the abdomen below the diaphragm, which form a supporting column for the breath. This contraction of the abdominal muscles is practically the only conscious or voluntary muscular action which is to be used in singing. [Many of our readers will not agree with this direction. Shakespeare, at one time, objected to it.—ED.]

But, whatever you try to do, don't take in too much breath. Breathe naturally, directing it simply according to the directions given above. Nature develops supply when the extra demand is made regularly and in a natural manner. A clear, vibrating tone is, by no means, dependent on a quantity of breath.

Having obtained a fair understanding of how to breathe, the student may then proceed to tone production. In the first place, it is necessary to learn how to produce tone without consciously calling in the aid of either throat or tongue. In order that the throat may be left perfectly free to answer a natural call in a natural way, and that the tongue may become loose and flexible, lying flat in the mouth without being held down, unless called upon for the formation of some particular consonant or vowel sound, thus affording a free passage for the tone to the sound cavities of the head and the roof of the mouth.

The first practicing should be done on some simple syllable. I recommend "mem," as its formation helps materially in directing the tone to the lips, by way of the nasal passage and the roof of the mouth. A sustained vowel sound is not advisable in the early stage.

Take the syllable "mem" on the note C in the upper middle voice; pronounce it seven or eight times fairly quickly and very loosely. Take absolutely no thought for the tone itself, simply direct the thought first to the breath that it be taken easily and correctly, next to the muscular support by means of the abdominal muscles, next to directing the breath straight to the head, that it may seem to come to the lips from over and not from under; the breath itself will make the tone. Then give attention to the proper pronunciation of the syllable, which begins with a humming sound, opens out to the vowel sound of *a*, as pronounced in the word "flame," and closes again to the humming sound. By this it will be seen that, although the syllable is pronounced repeatedly, yet the voice is practically singing a sustained tone. During the humming sound, though the lips are closed, the mouth is open inside and the lower jaw should hang loose.

The exercise should be taken first on one note, from C descending by half tones to E♭. Pronounce the syllable quickly and clearly seven or eight times. Begin very lightly, indeed, on a mere breath of tone, allowing the breath to seek its way through the nasal passage to the lips, then crescendos by adding a little more pressure to the breath, but be careful to keep directing the breath ever as high as you can get it, giving no attention at first to the formation of the tone while you give heed to the vibrations in the nasal passage on the roof of the mouth and on the lips.

Carry the exercise down to E♭, striving to keep each tone as light and high as possible and to feel vibrations in the same place. Follow this exercise by one on two notes, repeating the syllable quickly as before on each note ascending and descending. Work up to D♭, so that E♭ will be the highest note. Always begin in a mere whisper and let the dominating thought be the overhead passage of the breath, the perfect looseness of the lips and facial muscles and absolute freedom from the attempt on your part to do anything whatever with the throat. It is true that the throat enters largely into singing, but in order to get the singer's control of it the student must first learn how to let it entirely alone.

Follow the exercise on two notes, with one on three, ascending and descending. Repeat it three times, quickly and lightly, pronouncing the syllable on each note. Carry it up an octave from D♭, making F the highest note. The next exercise is one on five notes, repeated twice, and the syllable pronounced on each note ascending and descending as before. Start on C and carry it up an octave, making G the highest note.

Of course, these exercises have little or nothing to do with voice development and placing, but are concerned almost entirely with Tone Production, teaching the student how pure tone can be made by the passage of the breath alone, and eradicating from his mind the idea that it is necessary for him to do something or other out of the ordinary with his mouth and throat.

There is a secondary purpose, however, in these preliminary exercises, and it is a very important one, and that is to educate the student in the knowledge and use of the resonance cavities of the mouth and head by making him feel the tone vibrate there, no matter what part of the voice he is using.

Flexibility and strength of the lips and facial muscles is also developed, so that later on the student literally sings with the whole face, because some of the tone vibrations strike full on the teeth, while others seem to find support in the facial muscles. Of course, this is more noticeable when the development and placing of the voice is begun on the open vowel.

THEMES.

FRANK H. TUBBS.

Concerning the Choir.

A prominent minister stated recently that at a Church which he was called upon to serve occasionally, the choir caused him sorrow. It was in a way not often reported. It seems that the members of the choir gathered in a room near the one in which the minister was robing just before service. The choir engaged in conversation loud enough to be overheard, and that conversation was of a very coarse nature. It was even vulgar, and the minister was so affected by it that he was rendered quite unfit to properly conduct divine worship. Such an accusation is startling. The word of the minister cannot be doubted and we must believe, although it seems almost too much, that at least one choir has persons in it who are unworthy. They should be dismissed and should be shunned. Our profession should be cleared of the stain which such a choir puts upon it.

The incident makes a topic. What should be the first consideration in engaging a singer or organist? See if he is in sympathy with the worship of the Church. If not, he has no place in that worship. The Church should look to this. That a man can play or sing well must not be made the only recommendation for engagement. It were well if only members of the Church were given positions, and better still if the several denominations selected from membership in their own particular denomination those who are to assist the minister in service. The choir workers become assistant ministers for the time being. They ought to be devout, sincere believers in the creed of the Church. If they are not, they do not belong in the choir. Suppose a Church selected an assistant pastor without enquiring about his belief and faith. Suppose he were needed for a particular kind of work, like visiting the sick, or supervising the philanthropics, would it be well to obtain a man who was a genial caller, in the one case, or a shrewd bargainer in the other? No, if he could not join the people in their beliefs no amount of other recommendation would gain him appointment. Not so in the choir. Any creed, no creed, or worse than no creed, is all right if he can sing or play well. The Church has a duty in this matter. It owes it to itself and the influence of its body to keep immoral thought away. It should not be possible that any minister would ever have his mind, filled as it must be when he approaches his Sunday duties with soul-helps, disturbed by profanity or his refined nature shocked by vulgarity.

Do many of the students who are ambitious to take a Church choir position know that they should not accept an appointment unless they can enter into the spirit of worship of the people whom they expect to serve? If they are not leading the life of a Christian, they do not belong in the Church service. Drop out of the profession or be in sympathy with Church services. The time will come when the choir leader will be looked upon as an assistant minister. The Church does not place him there now. It will some day. The Church must respect its choir people in order to have this respect. There is chance for meeting on proper ground.

All can sympathize with the minister who was so shocked at the conversation of the choir. We can but regret that he did not report the occurrence to that Church and try to secure the dismissal of the choir. It would be a lesson to choir singers. All the members of that choir are noted professionals. Their dismissal for such cause would become known throughout the country. While it would be severe punishment it would be deserved. A choir singer who will let his conversation in the Church edifice just before service become shocking, is not worthy a position among respectable people. We do not want such people to disgrace the musical profession.

It becomes the duty of every one in Church work to exert the highest Christian influence. Those who are working to-day are educating the choirs of the next decade. That means we are preparing the way for greater spirituality in the extended thought of a growing generation. One who is not ready to do all in his power for the future as well as for to-day, does not belong in Church worship. Purify the heart, come into sympathy with Christianity, or leave Church work alone. He who dares, with profane heart, to enter the sacred work invites the visitation of a just God, and he may explain his misfortunes and troubles in life as the result of his own wrong. At all times there is need to guard purity of effort and all institutions working for high ideals and for good, must see to it that their means of activity—"their tools in trade"—are of the right sort. There is room for improvement in the choir and it must begin in the hearts of singers and players.

Hurry!

There is no more busy person than is the musician when he is in the midst of the season. Practice, planning, participating in performances, teaching, learning take up his time so that every minute is full. It is small wonder that musicians are such "queer" people. It is not music which makes them so, necessarily. We all undertake too much and try to cover too much ground in a short time This is especially true of young musicians. Music is boundless. One writer says that if no new music were written for fifty years, there would be enough to use. The greatness of its study and the many channels into which it leads one, stimulates one into a rush. The days become so full that there is constant hurry. After a time one gets to know that he cannot learn and do all, and he becomes interested in a specialty to which he can devote his whole time, and he finds in that enough for him to do. When we can learn that what is done in a hurry is worthless, we become calm. But it takes many a "knockdown" to make most of us lie still. He is a philosophic man indeed, if he is a musician to whom a world has opened to him in music, who can undertake only that which he can do calmly and without disturbing his equanimity. Some reach that point and then what they do is resultful. It does others good and, of course, does the worker good. One cannot do good without getting good. Give and you receive. To give best, stop hurrying and give calmly.

Goethe was clear on this point: "A mind distraught conducts not to the goal; first must we calmness gain by self control." When one feels himself growing nervous and irritable, it is time to seek the self control in calmness. As it is the machine which gets nervous, no advice is better than that which enables one to calm the machine. Stop now and then (take the dose every hour if needed), and inhale five or six draughts of pure air deeply into the lungs. Inhale slowly and calmly. Although this is purely physical, it has the reflex action upon the mind which gives it quiet. We then enter our work with renewed activity. It gets us so we do not hurry so much but we do more work.

Young musicians may be told—although it will not do much good—that whatever they gain in their early years in music will be only the foundation for their later education. They think they are doing a lot and are able to carry out very much. When they look back from mature experiences, they will see that their rush and bustle was empty and productive of noise only. It was firing off blank cartridges. That solid shot which is effective is made out of experience, and the less hurry and commotion the more solid will the shot be made.

Lasting Music.

In the century from 1700 to 1800, there were thousands of operas written. Many composers wrote between one and two hundred. Where are they? Three or four only have lived a century. In the first half of the last century other thousands were written. We hear a few of them now. Examine those which live and you will find they illustrate a truth. They carry an intellectual message. Those which were written for entertainment and those which were written in the mood which made Rossini remark, "Give me music paper, a pen and a morning's newspaper, and I will make an opera," have passed out of sight. Even if the intellectual message is obscure, as is the case in Beethoven's "Fidelio," and Mozart's "Magic Flute," it has to be present to give the opera long life. We come into the works of Wagner and we go beyond intellectuality into spirituality. That is why his operas are so great and satisfying. They appeal to the highest in man. The deeper the spiritual significance the greater the opera. In "Parsifal," the greatest opera ever written, the motives are sublime in their spiritual significance.

Many have pointed out that there is no such thing as religious music. The same chords and progressions are used in all kinds of music. That is true, and it only illustrates the greatness of music as an art. It is the arrangement of that music to express ideas which is the thing. Arranged by a soulful mind to express the highest feelings of the human heart, music becomes spiritual. That this is not realized by composers is the reason why more music is not written at present which will be lasting. No one is writing opera now which can compare with that of Wagner. But little is being written for the Church which will have long life. The trouble is in the failure to grasp the possibility of spiritual expression.

MME. SEMBRICH'S ADVICE TO SINGERS.

Let a girl who wants to learn to sing first make of herself a good musician. Let her learn some musical instrument thoroughly. All women cannot take up the violin, although for singers that is the best instrument. The girl who begins to study singing by acquiring a complete musical education will have made the best preparation possible. With me, it was a lucky thing that I learned the violin, for it helped me more than anything else could have done, I have also noticed that singers who play the violin are more likely to sing in tune than others. But if the violin is out of the question, a girl who would sing had better learn the piano.

Then comes the difficult question of selecting the teacher who can do the most important thing correctly; that is, place the voice. Once that is done as much depends on the pupil as on the teacher. The teacher can do a great deal, but not everything. It is when the pupil has begun to learn singing that her talents as a musician will come to her assistance. If she is a good pianist or a good violinist her work of preparation will not only be easier, but all her practice will be more effective.

It is such music as "La Sonnambula," "Lucia," "Linda de Chamounix" and "Il Barbiere" that trains one to sing well. Learn that thoroughly and let the modern composers alone for a while. If there was anything needed to prove the truth of my theory one would only have to look at Mme. Patti. She is over fifty now, and yet she sings remarkably, and she has her voice left still. Of what other woman can the same thing be said? Look, too, at Lilli Lehmann, who began her career as a singer of the Italian music and is to-day another great example of what the training will do. It was not until she had learned thoroughly the Italian repertoire that she began to sing Wagner. No young ones are coming up to take their places, and the reason is that the old music which trained the voices best is no longer taught. Even in Italy it is not taught to the singer. They immediately begin to sing Leoncavallo or Mascagni, which is just as bad for their undeveloped voices as Wagner's music.

After a girl has learned to sing, the next important thing for her to learn is what she should sing. Certain voices, as so many singers seem to forget, are suited only to certain kinds of music. One may have a voice which would last for a long time in singing the music suited to it. But if it is used in singing Wagner or the dramatic music of the younger composers it cannot endure. There is only a certain quantity of it, and if it be used up in two or three years by singing music to which it is not suited only one thing can happen. But singers seem to forget that with a voice suited to only certain kinds of music it is impossible to succeed in entirely different fields. That is a thing which the singer must learn for herself.

Mme. Sembrich practices now for one hour every day, but not continuously. Fifteen minutes is the longest stretch which she attempts. In dieting for the sake of her voice she avoids only sour things. In order not to get stout, she eats no sweets and very little flour, but her abstinence in this respect is for her figure and not for her voice.

THE ORGAN.

Organ Study.

In this issue is given the eleventh of a series of articles on Organ Study, by an organist of long experience both as a teacher, church and concert organist. This instalment answers various queries evoked by previous topics. It is the purpose of the articles to give practical suggestions so complete and comprehensive that they will aid students of "The King of Instruments" to acquire a mastery over its complications and inexhaustible resources. It is particularly hoped that all who are interested in this subject will send to the editor any questions that they would like to have answered. Due notice will be taken of all that are so sent.—Editor of THE MUSICIAN.

XI.—PRACTICAL SUGGESTIONS IN ANSWER TO QUESTIONS.

WM. HORATIO CLARKE.

Reed Disorders.

J. P. C.—"I have been particularly interested in, and instructed by, your series of organ articles. I am remote from tuners, and the reeds of my organ, particularly the Trumpet, frequently require attention. I can tune and clean it, but sometimes things happen that I am afraid to try to remedy. A note may buzz, or speak slowly, or be too loud, without my being able to adjust it. A paragraph giving some details of the causes and modes of remedying the common reed disorders as far as it is safe for any but a professional reed voicer, would be of great value to many situated as I am."

Answer.—Full directions for cleaning reed pipes were given in Article VIII, January MUSICIAN, on page 26. In addition to what was there given, when the reed with the échallot has been removed from the pipe, it would be well to clean the inside of the pipe out with a swab made with a long, small stick, with cloth tied to the end, to remove any debris which may adhere to the sides, and also spider webs which often interfere with the speech of both reed and flue pipes. The échallot may be removed from the block by means of small gas-pipe pliers, care being taken not to indent it with the grip. The échallot should also be cleaned with a quill feather, and replaced so that the spring wire will bear evenly on the surface, and driven with a wooden block so that it will be inserted at the original mark.

Further than following these directions it would not be safe for one who is not an expert to attempt to remedy a defective reed pipe. If after cleaning, the reed buzzes or gives a false tone, it is doubtless caused by the tongue being out of the proper curve or angle in its bearing on the surface of the échallot, so that there is an obstructed vibration between the spring and the free end of the tongue. When the end of the tongue stands out too far, the tone will be loud and clangy as well as slow of speech. If it is not curved enough, the vibration will be choked in the attempt to tune the reed.

If you will take out the tongue which sounds the worst, describing the quality of sound it produces, and enclose it in a letter to me, I will examine its condition and return it to you with the proper curve adjusted so that it will give the right speech, you mentioning the letter and register.

Registration.

"Could you not give some ideas on the subject of registration, especially of standard works? In studying Bach, for instance, I have worked out plans of registration for the G major and D major fugues that are entirely different from any that are any where published, and to me, much more satisfactory, because in every case the principal subject is taken on a different keyboard. I would like to have your ideas about the registration of Bach's Toccata in F, and your opinions on these points may be of value to many organists who are working in as isolated a position as I hold."

Answer.—The registration is generally indicated in the organ works of modern composers. In the era of Bach, the prevailing style gave more attention to the polyphonic structure as specimens of musical architecture rather than to registration. It was the musical age of intellectual development when the emotional element had not taken form. The organs were crude and ponderous in their mechanism. There were no swell sections nor composition pedals, and when changes from forte to piano were made, the hands were changed on the manuals, and in organs existing to-day there are two sets of peda's, one for forte and the other for piano passages, it not having entered the minds of the builders to use a simple composition pedal to change the stops, as in modern organs.

In German organ music of the past, it was the custom to set the stops at the beginning of the piece for each manual, and if there was to be any change, it was indicated by I, II or III for the corresponding manuals. The largest organs had one section on the gallery front, while the main instrument was in the rear, the organist being between these sections. In some organs the stops were placed in the section behind the organist, so that if he did not have an assistant to manage the stops, he would be obliged to get up and walk across to them in adjusting the stop-handles.

In the organ music of Bach, there are no changes indicated in the registration, and his fugues were not written with the idea of making the changes; but in studying them upon the organ, if a continuity of tone quality can be maintained by each part, it will be more enjoyable in the interpretation. This can easily be done with a three part fugue with good effect, and also in certain portions of the four part fugues. It would be interesting to others if you would write a brief description of how you have worked out your plans of registration of the two fugues you mention, specifying the number and book of Peter's edition in which they may be found.

The Toccata in F is generally played with the roar of the full organ throughout, but it can be made more effective in the introductory canon by taking each hand upon a separate manual, with well balanced contrasting combinations, while the long pedal note on F should be sustained with soft 16 ft. and 8 ft. pedal stops, with the pedals not coupled with the manuals. The pedal solo would be given with full pedal coupled with the full I section, ending with the three chords on the full organ. In the canon which follows, the hands may be reversed from the position of its introduction, with the same combinations, with the same soft pedal stops on low C, uncoupled. The second pedal solo will be given with full organ coupled to the pedals and continue full to the finale. If the organ has only 27 pedal keys, measures 20, 21, 22 and 23 may be omitted from the second pedal solo without detriment to the musical form.

In the succession of grand climaxes which follow, there is not a good opportunity for changes in registration without disturbing the continuity, unless one has a well drilled assistant to manage the combinations. It is not unusual for an organist playing a concert program to have the assistance of a helper on each side of him in rendering transcriptions of orchestral music, so that the varied effects may be introduced without breaking the rhythm.

A Broad Assertion.

E. M. S.—"In your article X, on 'Internal Construction,' do you mean to make the sweeping assertion that all the large organs of the past method of construction have the serious defects to which you allude, and that all the celebrated organs in Europe built upon the old systems are not standards in regard to musical and mechanical value?"

Answer.—From a scientific point of view the assertion is broadly implied, and every conscientious expert will acknowledge the facts stated. It is made from personal experience with the old methods. During my professional engagements in various churches, a number of large organs were built for my use under my personal supervision according to the highest methods known. In one instance, where the organ had ten pedal stops and three manuals, no expense was spared in skill, labor and material. The organ had been set up in the edifice and the pipes put in. Every precaution had been taken to guard against known defects. The wind trunks were of unusual size and the chests were of large size, so as to afford ample speaking room for every pipe.

On drawing the "Octave" to set the temperament, to my great despair, nearly every key which was touched in the centre of the manual caused the pipe above and below to sound, and other pipes more remote also. The pipes of this stop were immediately taken out, the top board dressed off and the slides refitted, and the pipes replaced. But there was no improvement and the majority of the pipes had to be "bled" and revoiced before the tuning could be begun. To "bleed" a pipe is to bore a hole in the side of the foot to prevent a pipe sounding when a valve leaks or there is a "run" of the wind from a leaking channel or V groove, a practice which is to be deprecated if it is possible to avoid. With many of these pipes the bleeding hole had to be of the size of the orifice in the foot, and consequently each pipe thus "doctored," had to receive double the quantity of wind to insure its speech.

The night of the inaugural concert had been fixed only five days beyond this discovery. On trying the other stops, nearly all of the metal trebles were found in the same condition and had to be treated in the same way and revoiced and regulated. Where organs were built for me, I always attended to the final regulation, and to add to my despair, when I drew the softest stop in the Swell Section, I found that when a full chord was played, the notes of the right hand would feebly sound, so much so that even four part harmony could hardly be played, and so of the other fourteen swell stops! Here was a predicament!

The builder was distracted. The tickets for the opening had been sold, and a first payment was to be made toward the organ. The order was given to "bleed away!" And the beautifully voiced pipes were "bled." Then the consumption of wind was so excessive that the hydraulic motor was inadequate to supply the demand, and another one of larger size had to be procured before the concert could be given, and new plumbing attached. Notwithstanding that the vitality of the organ was gone, the program was adapted to meet the adverse conditions, which were not made known to the committee any farther than to tell them that after the concert the organ would need a week or two of regulation.

This did not obviate the great defect. Next, another large reservoir was made, the size of the swell chest, and placed directly underneath, over the Choir Section with no better result, for not a chord could be played with the left hand without shaking the right hand notes beyond tolerance.

The next experiment was to take the two thousand or more pipes out of the Swell and Great Sections. This being done, the top boards were carefully examined to see if there were twists or "casts" in them, but they were found to be true. Next, the slides were taken out and no defect was discovered. But when the tops of the sound boards of both Great and Swell chests were examined, they were found to be warped or twisted by having absorbed dampness from the newly plastered walls. In consequence of this warping, the slides could not rest evenly upon the veneer surface, so that the escape of wind was more than the grooves could carry off, and the surplus found its way into the nearest pipes.

As it was impossible to take the large chests out, the dressing down and truing of the entire surfaces had to be planed with the debris falling down in among the action-work and mechanism, to be slowly and carefully removed. Then the "bled" pipes had to be soldered where the wounds had been made, and all again revoiced, placed in the organ, regulated and tuned. And all this expense came upon the builder, who had done his very best to fulfil every detail of the contract.

This is only one experience with the slide chests in large organs. What was written in Article X concerning defects was from things seen and heard. The larger the chests, the more liable they are to defects. Some builders try to avoid these by using two chests entirely separate from each other, the larger pipes running from the outside toward the center in alternate order, by whole intervals, as C, D, E, F♯, G♯, A♯, B, etc., on one side, and C♯, D♯, F, G, A, etc., on the other side, but in the instance referred to, although the pipes were in alternate order, both the Great and Swell chests were entire.

The Choir chest being narrower was not affected. In small organs of only four or five slides on a chest, these defects are not apparent, because the wind channels under the pipes are shorter and the amount of wind used is less in proportion, so that in small one and two manual organs the old method will prevail, because where they are used the demands which the higher class of organ music require are not expected.

The noted organs in Europe all have their serious defects, known only to the builders. The old German organs, with their multiplicity of mixtures and unsympathetic reeds, would not bear a close comparison with the modern voicing and scales. The buildings in which these organs have the privilege of resounding, add much to the musical effect when they are heard. A poorly voiced organ in one of those grand gothic arched Cathedrals with solid stone pavements, will have a much better effect than a superior instrument placed in a stuffy American edifice with carpeted floors and upholstered pews to absorb and muffle the vibrations.

Pianoforte Pedal Attachment.

C. W. G.—"I intend to have a set of 30 pedal keys attached to my upright piano. How should they be placed in relation to the keys, and of what dimensions?"

Answer.—Your pianoforte will stand on blocks five or six inches high, according to the kind of action you will use. There are two ways of attaching them, one by means of a fan frame set of levers placed under the pedals, which concentrate under the 30 sticker rods which extend down from the remote ends of the piano keys, beginning with the lowest C key. These levers extend at the radiating ends immediately under the heels of the pedal keys, where the motion is sufficient to actuate the piano keys.

The other method is by means of a roller-frame placed under the remote ends of the piano keys, which are moved by stickers going upward from the roller arms, the rollers being moved by trackers which the pedals pull down.

The pedal naturals should not be less than 27 inches long, so that the depth of touch at the position of the heel will not be too shallow. The distance between the naturals should be 2⅜ inches from center to center, and the keys should be set under so that the front edge of the sharps will be two inches nearer the piano than the front edge of the manual sharps, in a plumb line. The distance from the top of the pedal naturals to the surface of the white keys should be 32 inches, and the middle C of the pedals should be in a plumb line with middle C of the manual keys. The height of the seat should be 20 or 21 inches above the naturals, according to convenience.

A Choral Organ.

S. M. A.—"I am one of a committee appointed to raise money for the purchase of a new instrument for our Chapel, for use in our mid-week services and Sunday-school. In considering the comparative usefulness of a grand piano or organ, I should like to know if a small pipe organ would not best serve our purpose in sustaining the voices in our devotional music? As different persons would play it from time to time who could not use sub-bass pedals, could it not be made so as to give a deep-toned bass when played by the hands, and also be blown with two blow pedals as with reed organs? As the instrument would be placed in an alcove, the case might be plain, either with neat screen-work, or with simple front pipes. Will you kindly make out one or two schedules for such an instrument and give the probable cost?"

Answer.—If the desired instrument is to lead and sustain the voices in hymns, anthems and chants, and used only for simple voluntaries, a well-voiced single manual pipe organ without a pedal keyboard, constructed according to the following specifications would be very useful in a Chapel or country Church where a regular organist could not be obtained.

Compass of Keyboard, Five Octaves from C C.

1.	8 ft. Open Diapason, from Tenor C	49 pipes
2.	8 ft. Dulciana, from Tenor C	49 pipes
3.	8 ft. St. Diapason Treble, from Tenor C	49 pipes
4.	8 ft. St. Diapason Bass	12 pipes
5.	4 ft. Octave	61 pipes
6.	4 ft. Flute	61 pipes
7.	16 ft. Bourdon Bass	13 pipes
8.	Sub-Bass Coupler.	
9.	Octave Melody Coupler.	

Although short and divided stops are not recommended in larger organs with two manuals and pedals, in such instances as are here indicated there is quite a saving of expense and room without any apparent loss in the strength of the bass, the St. Diapason Bass being so voiced as to be drawn with the Dulciana, and when united with the Bourdon Bass, the break from the Open Diapason is not so much perceived—the whole being enclosed with a swell box—excepting the Bourdon Bass. The Sub-Bass Coupler is an important feature in playing harmony. It is not a coupler which brings down the sub octave notes of a chord, but simply the lowest note in the octave below of any chord played below middle C. Thus in playing the harmony of a hymn as written, the left hand will play the bass and tenor, and for a sub-bass, instead of playing the bass in octaves and the right hand taking the three parts, simply drawing this coupler will, in addition to the bass note played, give the octave below of this bass note with the same effect as if a pedal sub-bass were played. Thus any one who plays a piano or reed organ, can at once play such an instrument with its full bass power.

The Octave Melody Coupler, instead of doubling all the notes of a chord an octave higher, simply doubles the highest note of a chord so that in leading the voices the melody of a hymn is clear and distinct. When the common Octave Coupler is used in a pipe organ, the effect is noisy and the highest part is indistinct, because the upper tones thus doubled are strongly out of balance with the tones of the middle compass.

This instrument could be blown by the player, with two blow pedals with ease, and the expression governed by the Knee Swell projection at the right. The pipes all being in the Swell, excepting the Bourdon Bass, a screen front would be preferable to having dumb display pipes A left Knee lever could bring on the full organ, and the nine stop knobs would be arranged in one line over the keys. Such a choral organ would cost about $800.00.

As the lowest vocal compass of hymn tunes and anthems is FF below tenor C, a more effective schedule is thus given:

Compass of Manual Keys, 61 Notes.

1.	8 ft. Open Diapason, from FF	56 pipes
2.	8 ft. Viol d'Orchestré, from FF	56 pipes
3.	8 ft. Dulciana, from FF	56 pipes
4.	8 ft. St. Diapason Tube, from FF	56 pipes
5.	8 ft. St. Diapason Bass	7 pipes
6.	4 ft. Octave	61 pipes
7.	4 ft. Flute	61 pipes
8.	16 ft. Bourdon Bass	13 pipes
9.	Sub-Bass Coupler.	
10.	Octave Melody Coupler.	

In this instance, the Open Diapason could be entirely outside of the Swell box and the lower pipes used in front, all the other pipes excepting the Bourdon Bass being enclosed in the Swell. In both these specifications, the Bourdon Bass would be of the same scale and power as in a pedal organ. The Viol d'Orchestré is a powerful string-tone stop equivalent to a reed stop, with no tendency to be out of tune. This instrument would cost about $1000.00. If the first three stops should be carried through 61 notes, with an undivided St. Diapason, the value would be about $1150.00.

Nervous Organists.

C. H. P.—"Is there any cure for nervousness in public playing? I recently gave my first organ recital and knew my pieces perfectly, but in the opening number I was so overcome with "stage-fright," that although the music was before me, I lost control of my thoughts and had to begin over again. Fortunately, I made no complete break! but played a few long modulating chords until I found out where I was. It put a damper on my freedom throughout the whole program, and resulted in such a state of mental depression that I quite made up my mind never to make the attempt again, for fear of a recurrence of the experience."

Answer.—You are not alone in such an experience, and have the sympathy of many who suffer likewise from this nervous condition. Musical natures are extremely sensitive to the fear of criticism, a somewhat morbid state which requires time and effort to overcome, until one can be independent of what is *imagined* to be the opinion of others. Many minds are so delicately organized that after a first experience in public playing, they shrink from repeating the attempt, and permanently retire from appearing in a public program. Yet, in a Church service they do not suffer from nervousness, and retain freedom of thought and execution.

There is a cure for this trouble if one can begin early enough to prevent its aggressive influence. When we become deeply interested in any subject upon which our minds are intensely concentrated, we forget to breathe normally and deeply, so much so at times that the lungs do not seem to inhale and exhale. In musical study this constantly occurs without our being conscious of it until attention is directed to it. You have often given a deep sigh of relief after practicing over and over a difficult passage, which you will call to mind as you look back upon your work. This sigh was the natural effort of the lungs in recovering from the suspense.

While we do not control the systole and diastole motions of the heart which drive the blood through the veins, arteries and lungs, as well as through the brain, power is given us to control the depth of the breathing. If this is suspended during mental action, the result is always unhealthy and exhausting, because neither the impurities of the blood are carried off by exhalation nor fresh oxygen taken in by inhalation. Hence there is often a headache and depression after close musical application. This is experienced by many musical students, and the study of organ music calls for a great amount of concentration, because the feet are also engaged, in addition to the art of registration with which the memory must be on the alert.

The prevention and cure of nervousness and exhaustion must begin in acquiring the habit of deep breathing at all times. Get control of your lungs in your practicing. Think about your breathing while you are studying and reading books, always breathing with the mouth closed. Keep this up when you are walking in the fresh air. Try it next Sunday through your organ prelude, and through the anthems and hymns, as well as through the sermon. In addition to this, take all the gentle exercise you can, both in and out of doors. Keep up this habit of deep breathing during your waking hours until you have control of your lungs on all occasions, and your nervousness will be cured. This will not be attained without persistent and unremitted effort on your part, it is so easy to forget it when absorbed in study.

The next time you give a public recital, do not be influenced by the fear of criticism. Probably not one in the audience could play the pieces on your program. Do not ever encourage the thought that an adverse critic is always looking over your shoulder on the notes and watching for mistakes in manual or pedal playing. It is all imaginary. An unfair critic is a mean, selfish man, and is not worth minding. If you always exercise a kind spirit toward every one, breathing out only good will and never criticising others, you will not be molested by unfair critics. Be your own critic, and if you do not attempt any piece until you know it is mastered, and keep up your deep breathing, your nervousness will be conquered That player only has enemies who assumes superiority and ignores others, and such a person has not often a sensitive artistic nature.

One word more. In public playing, learn to forget yourself, and strive to interpret the musical thoughts of the composer rather than cherishing the very natural desire of attracting attention to your attainments. This is a fundamental principle of musical hygiene in its application to organists, pianist and vocalists.

If any one has discovered a better cure for nervousness, the readers of The Musician would be glad to hear about his method, as C. H. P. has introduced a vital subject which is closely related to the development of musical students in all branches of the art.

The Tone of Old Organs.

V P.—"Does the tone of an organ improve with age like a violin?"

Answer.—There is no reason that an old organ pipe a hundred years of age should produce any better quality of tone than when it was finished.

It is the scale, firm material and voicing of an organ pipe which gives it a characteristic timbre. This is entirely a different process of vibration from that produced by a violin string. The latter depends for its sonority upon the proportions of the front and back united with the age and quality of the wood. A good violin thus made improves with age and use. A poor violin always remains a poor violin, no matter how old it is. Therefore, there can be no comparison drawn between an organ and violin in this respect. It is only a romantic idea that an organ grows mellow with age. Old organs were voiced with less wind-pressure and with a milder quality of tone in the Diapasons than modern instruments, which gives the

impression that they have become more mellow when contrasted. As far as reed stops are concerned, one has only to hear one in an old organ—without its having been revoiced—to form a very clear opinion concerning its improvement by the addition of years. The old organs of this country contained no string-tone stops, but the mixtures were so prominent in their shrillness that when the full organ was played, the chords of disc ords united with the squalling trumpets, so absorbed the mild Diapasons that the effect was very unmusical as compared with organs of the present.

SLIDE CHESTS FOR SMALL ORGANS.

M. G. W.—"If the great defects exist which you mention in Article X, will small organs continue to be made with slide chests?"

Answer.—Yes. Up to a certain capacity or number of stops, these defects do not assert themselves. It is when the number of pipes is increased that the "robbing" of the wind is apparent.

As before remarked in this article, with small wind chests of four or five slides, the channels are short, and there are a less number of large pipes which consume much wind; and for such instruments there is no condemnation of the slide chests.

STOPS AND REGISTERS.

M. A.—"I notice that sometimes you use the word 'stop,' and at other times 'register;' which is correct?"

Answer.—Both words are used to express the same idea, being synonyms. For centuries the word "stop" has been in conventional use in organ music and literature, as well as "register." In musical instruments the word "stop," means the closing of an aperture in the air passage in wind instruments, or where the fingers are pressed upon the string in instruments of the violin class, or the frets of a guitar, mandolin, etc. It was thus first used to shut off certain ranks of pipes. The rank of pipes was next called a "stop," and the handle which moved the slide also, as well as mechanical handles or knobs. So that the general meaning applies to the knob, push button or key, and whatever is accomplished by the indicator on which the name is engraved.

The word "register" also is used to indicate a movable cover, stopper or sliding plate to admit or exclude the air, in mechanics, and also the object on which a record is made. So that this word answers as well both for the indicator knob or key and what is accomplished by it. It therefore makes no difference which is used to convey the meaning any more than as if one person insisted on calling a cart a "team," and another a "wagon," another a "carriage," and still another who would prefer esthetically to call it a "vehicle."

If any reader can suggest a better name than "stop" or "register," it will be presented for the consideration of THE MUSICIAN organists. In the articles on "Organ Study," the word "stop" has been used to signify a rank of pipes so called by the name indicated, the word "knob" being used when referring to the arrangement of the handles.—*Clarigold Manse, Reading, Mass.*

OPERATIC MUSIC IN CHURCHES.

Editor of THE MUSICIAN.

Dear Sir—In a recent lecture on Church Music, one of New York's leading musicians condemned very strongly the use of operatic and similar selections of light-class music as an aid to religion. He attributed this ingrowth to that American institution—the quartet choir.

One of the leading Philadelphia newspapers took the matter up and interviewed the "leading choirmasters of the city." The testimony gathered, as reported in said paper, was unanimously opposed to the dogmas of the New York leader. The ground, viz., was taken, that the people must hear what they liked, and, farther, that what was good enough for the theatre was right for the church.

As to the constitution of a church choir, a good deal must be left to the taste of the congregation and what they have been accustomed to. But as to the class of music used, that is a totally different matter. We do not usually leave the selection of either bodily or intellectual food to the judgment of our children. Why should we let the congregation, whose insight into art is mostly but a very superficial one, be arbiters as to what is fit for the needs of the sanctuary?

Early in the last century it was not a very heinous offence in England for organist and male members of his choir to sing obscene ditties on Saturday nights in the tavern and to use the same tunes next day to words of the most solemn import. Whilst this would, of course, be no longer tolerated, yet, if we are to have no dividing line between the Opera and the Church, the partnership is likely to prove disastrous to the latter. A great deal of the blame for the lack of devotional music in many churches must be scored against the pastors. Do they chose nursery rhymes for their discourses?

In the exceptional case where music to some secular song is also appropriate to words adapted to the services of the Church, the selection and also the responsibility should rest upon the person specially engaged as director of the choir. Many argue that all music is good. To this it must be replied that it is the associations connected with certain strains which make them objectionable. Our Margherites and Zerlinas have most charming *canlilenas;* but memory is too strong to detach these melodies from the personalities of the character for whom they were composed.

Our concert givers no longer sanction the pieces which used to delight the patrons whom Mozart described as having "long ears." Surely, the Church ought not to be behindhand in fostering the very best that art can furnish. If she caters to the merely sensual, she can, assuredly, not expect to reap the spiritual. And the reformation which will ensue for such backsliding on the part of religion's handmaid—which is sure to follow—may have more sweeping consequences to the Church than the latter can conceive of. The whole subject seems of such importance that it is worthy the most serious consideration of our best educators and teachers of ethics.

ALBERT W. BORST.

HYMNS, TUNES AND ORGANIST.

R. HUNTINGTON WOODMAN.

We have frequently regretted the tendency of many organists to treat lightly or even contemptuously the hymn-tunes which they are called upon to play in the irregular church duties. Some musicians have even gone so far as to condemn the words of certain hymns as weak, trashy and even hypocritical. That is going a step too far, even if the criticism is prompted by good motives. It is not the business of a church musician to criticise the poetry of a hymn. Let others who are better qualified do that, and let musicians do what they can to improve the musical part of what may be termed hymn-worship.

Admitting the fact, for it is a fact, that many tunes, venerable in their associations, and earnestly loved by thousands of people, are weak and trashy, does that justify any one in treating them contemptuously in a service and playing them in an irreverent and slipshod fashion? We think not. Even an old and musically decrepit tune has certain claims which ought to be respected, not only by organists and church-goers, but by lovers of music generally. Not only as a relic of a past generation does the tune command our attention, but we must recognize that from such music our forefathers drew what musical ideas they had, and that psalm-tunes played an important part in the early history of music in this country.

Perhaps we owe more than we think to the old psalm-tunes of 1776. To William Billings, whom Dr. Ritter calls the "Yankee disciple of the English psalm-tune composer," belongs the honor of being the first American composer. He had a certain gift of melody, although his harmony was atrocious, and his psalm-tunes became very popular. Besides his musical abilities, he apparently had the shrewdness of the proverbial Yankee, and taking advantage of the revolutionary war, which caused the universal hatred of everything English (even psalm-tunes), Billings transformed the psalms into political hymns, and adapted some of his lively tunes to them. "Many of the New England soldiers," says an article in an old magazine, "had many of his popular tunes by heart, and amused themselves by singing them in camp * * * * and his tune 'Chester' was frequently heard from every fife in the New England ranks."

Psalm-tune singing seems to have been almost the only style of music in vogue until about the beginning of the present century, and even then it held its own and continued to be a power in the church and the home, and it has continued in its strength to the present day.

As new influences were brought into musical matters by the formation of musical societies and the immigration of foreign musicians, the character of the hymn-tunes became changed, and much of the old was discarded for the new. In our own day we see a gradual change for the better going on in church music, but there are still some of the old stepping-stones that are not washed away. These old tunes, which are the product of undeveloped musical intellects, have served their purpose, and probably in a quarter of a century will be almost forgotten.

There are certain old tunes that will live forever by reason of their inherent musical worth. They are respected by all who know them. But the weak and trashy tunes should not be treated contemptuously, however poor they are musically. They are the stepping-stones to better things, and are all the time helping some people to understand a better type of music. What should be condemned is the flooding of the market with poor stuff simply for the sake of gain. Much of this finds its way into the Sunday-schools of the land and holds up a low ideal before the children. Experiments have proved that the children of parents who, in their mature years, cannot "catch on" to any but the lightest music, will take up tunes by the best masters and learn them quickly and enjoy them greatly.

Let us, as musicians, respect the claims of the old tunes and realize the associations they have to many yet living who have been brought up on them; but let us also see to it, as far as practicable, that the young people are given a type of music which will stand the test of intelligent criticism. Reforms come gradually, and time will do what no amount of vigorous antagonism can accomplish.

A writer in the London *Musical Standard* gives the following interesting anecdotes of English organists:

"The writer, on attending the funeral of a mutual friend, well remembers riding in the same carriage with the brothers E. and J. Hopkins, telling of the first time that J. B. Sale (then organist at the Chapel Royal) attempted pedal playing, the organ having just been supplied with the proper pedal board, etc. Sale, during the performance of the Magnificat made his debut as a pedal player. After the bad effect of the first few bars, Hopkins, sitting by the side of the performer ventured to pass his hand behind the back of the organist and secretly put off the pedal stops. The Magnificat being ended the performer in ecstasy exclaimed, 'I never heard a wrong note!' Afterwards one of the naughty children of H. M. C. R. posted at the organ gallery door, 'Pedal playing done here by Wholesale (Old Sale).'"

‡ ‡ ‡

Dr. W. H. Cummings was one of the four solo boys at the re-opening, after restoration, of the Temple Church in November, 1842. He has contributed some reminiscences to the *Sunday Times*. "During the first few months at the Temple Church the choir of eight boys and six men was placed in the present organ gallery; but very soon the better arrangement of choir seats in the body of the church were obtained. The musical arrangements were made by a select number of the Benchers, of whom not one had any knowledge of music. There was, however, amongst them a kind and benevolent old lawyer, William B., who had a great love for music, and, I suppose, read much of current music-literature, and had formed an idea that all church music composed later than Thomas Tally's was vain and effeminate. His self-assertion and confidence imposed on his brethren, who looked upon him as an authority; and, under the circumstances, Hopkins experienced some difficulty in recommending such music as he thought desirable. I remember one Saturday afternoon we were rehearsing in the church the music for the following day, and were singing the Psalms to a well-known double chant adapted from Spohr, exhibiting the composer's predilection for chromatic harmonies. Mr. William B., at the close of the Psalms, addressed one of the choir boys, and asked who was the composer of the chant. The boy who, in common with his fellows, loved the chant, knowing if he replied Spohr it would be disapproved, boldly and unblushingly said he thought it was by Byrd, whereupon the old gentleman remarked, 'Ah! beautiful! There's nothing like Elizabethan music.'"

‡ ‡ ‡

Dr. W. H. Cummings relates another anecdote of the delightful "William B." "I remember a new set of 32ft. pedal pipes being supplied to the Temple organ by Bishop, and the authority before-named (William B.) declaring they were magnificent, because 'when they sounded they shook the spectacles on his nose.'"

IN THE MUSICAL WORLD

AMONG OUR SCHOOLS AND TEACHERS.

On March 27, in Cleveland, O., pupils of Walter S. Sprangle and Walter C. Tuttle gave their twenty-third concert.

The pupils of Kirpal's Flushing (L. I.) Conservatory gave a splendid program at the Waldorf-Astoria, New York, recently.

The Hyperion Concert Company, with G. L. Gordon, conductor, gave a successful concert at Hudson, Mich., February 22. Mr. Gordon is an earnest worker.

Mr. W. Irving Andruss, director of the music department of Doane (Crete, Neb.) College, gave a piano recital. The program was varied and well contrasted.

The third and fourth Faculty Concerts of the Toledo, Ohio, Conservatory of Music were given on March 8 and 18. The programs were excellent and gave opportunity for good artistic work.

A musical evening was given at the home of Mr. J. N. Alexander, Duke Centre, Pa., on March 28, 1901, under the direction of F. J. Fuller, at which Mr. Fuller's pupils gave a good account of his work as a teacher.

The Oratorio Society of Bethel College, of Newton, Kansas, gave Haydn's "Creation" on March 8, with a good body of singers. Prof. B. F. Welty was the conductor. This is the kind of work that does much for musical progress.

Pupils of Mr. E. T. Baldwin, of Manchester, N. H., gave an interesting concert on March 28. The audience was large and the attention close. Mr. Baldwin's work is receiving proper appreciation at the hands of his fellow citizens.

The Sinfonia Club, a description of which was published in February, has issued a very tasteful and interesting year-book, giving a full history of the organization of the club. It is sold for seventy-five cents, and is valuable to those interested in the doings of the club.

Mr. Wm. H. Pontius, of Dubuque, Iowa, gives the people of that city plenty of good music. On Friday evening, March 8, a memorial concert for Ethelbert Nevin was given, at which all the compositions were by this lamented composer. On the 14th, Mr. Pontius' pupils gave an interesting concert.

Mr. Oscar Nadeau, of New York, is carrying on what he terms "Courses in Appreciation," a suggestive title, by the way. In these he explains all the principal factors entering into the art of music, thereby enabling the student to understand, discriminate and love the true and the good in music. This is certainly a valuable and much-needed work.

The Mount Olivet College Conservatory of Music continues its splendid work in developing musical culture. The eighth annual concert was given March 18, presenting a program of great excellence. After miscellaneous numbers, Arthur Goring Thomas' Cantata, "The Swan and the Skylark," was sung, with Mrs Lizzie E. Bintliff as conductor.

At a song recital given by Mrs. George V. Brown, contralto, pupil of Herve D. Wilkins, March 7, the following attractive program was presented: Organ: Allegro (from Fifth Sonata), Guilmant; Canzona, Wolstenholm. Songs: "Sunset," Dudley Buck; "Under the Rose," Wm. Arms Fisher: "Summer Night," Goring-Thomas; "My Little Love," Chas. B. Hawley; "Loch Lomond" (ancient Scotch tune),——; Irish Love Song, Margaret Ruthven, Lang; Duet, "The Lord is My Light," Buck.

Pupils of Emil Liebling gave a recital, at Chicago, Ill., March 9, at which the following program was played: Spanish Dances, Moszkowski; Polka Noble, Joseffy; Wedding Music, "Lohengrin," Wagner-Liszt; "At the Spring" (with second piano), Joseffy-Liebling; "The Song of Night," Kullak; Prelude, Chopin; Arabesque, Stiehl; Dance of the Driades, Conrath; Sonata, Op. 53 (first movement) Beethoven; Nocturne, Op. 55, No. 1, Chopin; Etude in A flat, Joseffy; Polonaise, Op. 11, Moszkowski. Mr. Liebling played a recital at the University of Illinois, on March 1.

Mr. W. Waugh Louder gave a lecture-recital at Staunton, Va., in the Concert Lecture Course of the Virginia Female Institute. The program follows: William Tell Overture, Rossini-Liszt; (*a*) Elves at Play, Heymann; (*b*) Butterfly Etude, Chopin; (*c*) Menuetto Antico, Sgambati; Sonata Appassionata, F minor, Op. 57, Beethoven; "Siegfried and the Rhinedaughters" (from "Twilight of the Gods," "Ring of the Nibelungen"), Wagner; Berceuse, Chopin; Invitation to the Dance, Weber-Tausig; Military March, Schubert-Tausig; Wedding Mareh and Elfin Revels (Fantasie on "Midsummernight's Dream"), Mendelssohn-Liszt.

Following is the program of a Recital given at Ad. M. Foerster's Studio, on Saturday, March 30, 1901, by Miss Katherine Hilligrove, pianist; Miss Nettie Purdy, soprano; Miss Magdalene Klarner, soprano. Impromptu, Op. 142, No. 2, Schubert; (*a*) The Maiden's Lament, (*b*) Ave Maria, (*c*) Who is Sylvia? Schubert; With Verdure Clad, "Creation," Haydn; Impromptu, Op 142, No. 3, Schubert (Theme and Variations); My Heart "Samson and Delilah," Saint-Saëns; (*a*) Hark, Hark, the Lark, (*b*) My Sweet Repose, (*c*) Faith in Spring, (*d*) Margaret at the Spinning Wheel, Schubert; Concerto, Op. 11, Chopin. (*a*) Allegro. (*b*) Romanza. (*c*) Finale. With second piano.

A series of very interesting musical events has taken place at Wellesley College since the advent there of Mr. H. C. Macdougall. On Sunday evening, March 24, Lenten Easter Vespers were held in Memorial Chapel, the program is worth considering and is printed herewith: Processional, "O Sacred Head Now Wounded," J. S. Bach; Prayer; Service Anthem (From "The Seven Last Words of Christ"), T. Dubois; Lenten Sonnets: "The Garden," "The Ninth Hour." "Martha," "Very Early In the Morning"; Service Anthem (From "Mors et Vita"), Gounod; Tenor Solo, "Hosanna," Granier; Service Anthem, "Break Forth Into Joy," Barnby; Prayer; Recessional—Bass Solo and Chorus, "Onward, Christian Soldiers," Macdougall. On the 25th a song and violin recital by Misses Anna Miller Wood, mezzo contralto, and Carolyn Belcher, violinist, was given. The programs of these affairs are exceedingly well-gotten up and in thorough keeping with their character. Mr. Macdougall played an historical organ recital in connection with Louis C. Elson, lecturer, under the auspices of the Music Commission of Boston. As such a program is suggestive, it is given here:

*Claudio Merulo (1533–1604). Toccata.
†William Byrd (1538–1623). Pavane.
*Girolamo Frescobaldi (1587–1654). Capriccio pastorale.
‡Dietrich Buxtehude (1635–1707). Choral.
‡Johann Pachelbel (1653–1706). Ciaconna.
‡Johann Sebastian Bach (1685–1750). Saint Ann's Fugue.
†George Friedrich Handel (1685–1759). Allegro pomposo. (From the Fifth Concerto, third set).
G. F. Handel "O Lord, Correct Me." (From "Rinaldo.")
‡F. Mendelssohn-Bartholdy (1809–1847), Andante with variations. (Posthumous work)
ʔTheodore Dubois (1837–——). March of the Magi. (By desire).
†Edwin H. Lemare (about 1865–——). Pastorale in E major.
ʔCamille Saint-Saëns (1835–——). Thou, O Lord, Art My Protector.
ʔFelix Alexandre Guilmant (1837–——). Finale from the first organ sonata.

*Italian school. † English school. ‡German school. ʔ French school.

AT HOME.

Fritz Kreisler is pianist as well as violinist. At the Waldorf-Astoria, he played the piano to Mr. Max Bendix's violin in Emile Beruard's suite.

The dates of the Kansas Musical Jubilee have been changed from May 28–31 to June 4–7. Information can be had from the secretary, B. S. Hoagland, Hutchison, Kansas.

The New Chickering Hall, Boston, was opened February 8, with a concert, at which appeared Mme. Szumowska, Mr. Pol Plançon, the Kneisel Quartet and Mr. H. M. Goodrich (accompanist).

The London Philharmonic Orchestra has honored Mr Edward MacDowell by asking him to conduct one of his own piano concerti in London this spring, the soloist being Mme. Teresa Carreno.

Mr. and Mrs. Georg Henschel gave their second song recital in Pittsburg, at Carnegie Hall January 21, on the occasion of the two hundred and seventy-third reception of the Pittsburg Art Society.

Dr. Henry G. Hanchett has just finished a very successful concert tour of the West and South. He gives an analytical description of the numbers on his program and is doing a great deal of excellent work.

A recital was given by the orchestral class of the New England Conservatory of Music recently, at Sleeper Hall, by advanced students. There were two selections by the orchestral class. Mr. George W. Chadwick directed.

Johann Bach's Oratorio, "St. Matthew's Passion," had its first presentation in New York in over nine years, on Tuesday evening, April 2, in Carnegie Hall, by the Brooklyn Oratorio Society, under the direction of Walter Henry Hall.

Fritz Stahlberg, of the Pittsburg orchestra, has composed the music for an operetta which will have its first production the coming summer in Berlin. He is as accomplished a pianist as he is a violinist, and a very scholarly musician.

George Hamlin and Sydney Biden gave a song recital in University Hall, Chicago, February 7. The program was one of novelties, the Brahms, Franz and Götze compositions being all that were in any way familiar to the majority of concert-goers.

A project is on foot for the establishment of a permanent opera scheme in New Orleans to replace the present poorly managed affair and to share performances with Chicago, giving thirteen weeks of opera in New Orleans and eight in Chicago. An effort has been made to enlist Mr. Grau in the work.

Jean de Reske's salary this year represents the highest sum ever paid to any singer for so many performances as he is to give. For at least forty appearances he will receive $2,450 each, and it is readily conceivable he may appear more frequently, thus bringing up his compensation for the season to considerably more than $100,000.

Herr Eduard Strauss and his Viennese Orchestra left America February 16, by the Koenigen Luise for Bremen. The turnee of the orchestra has been in every way successful, especially in the Far West. The orchestra has visited over 100 cities and given 150 concerts. Beginning at the Waldorf-Astoria on October 20 last and ending February 11 at the Academy of Music, Brooklyn.

Edward Baxter Perry closes his season of a hundred and five Lecture-Recitals at Fitchburg, Mass., on April 9, and will go at once to his summer home, Baymount, Camden, Maine. Except for one season of concert work in Europe, Mr. Perry has filled more than a hundred engagements per year in this country for fifteen consecutive years. This is a record never equalled by any other pianist, American or foreign.

The Sembrich Concert Company was disbanded in San Francisco recently. She will soon sail for Europe. Mme. Sembrich was attacked with an obstinate throat trouble in Salt Lake City, which developed so seriously that when she arrived in San Francisco she was unable to appear after the first night. Later her physicians advised her that she should not sing again this season, and the company was accordingly disbanded.

The Central Methodist Episcopal Church, of Wilkesbarre, Pa., was dedicated in a series of elaborate services beginning on March 24, and continuing until the 31st. Music played an important part in these services. The organ numbers were of the best type and the choir music and vocal solos included most excellent music. Charles G. Goodrich is organist and choirmaster, and was assisted by Miss Saidee E. Kaiser, soprano; Miss Grace W. Duncan, contralto; Thomas R. Williams, tenor and Orval H. Yetter, bass.

A course of five illustrated lectures on music was given by Miss S. C. Very, Fellow of American College of Musicians, and Associate Pianist of Trinity College England, under the auspices of the Piano Club of Bridgeport, Conn., at the residence of Mrs Charles G. Sanford. The subject was "Music the Science," divided as follows: Thursday, Feb. 28, The Violin and Bow. Thursday, March 7, The Reeds of an Orchestra. Thursday, March 14, Brass Mouth-pieces and Tubes. Thursday, March 21, The Action of a Piano. Thursday, March 28, Acoustics in Music.

Clement Tetedoux, the veteran singer, died suddenly on Friday morning, March 22, from an attack of pneumonia. Mr. Tetedoux, a Parisian by birth, has spent most of his life in America. Some years ago he founded the Gounod club of Pittsburg, giving only oratorios and operas, many of which were performed by this club for the first time in this country. Mr. Tetedoux went to New York from Pittsburg, and then to Chicago, returning to this city about a year since to take charge of the vocal department of the Pittsburg Conservatory of Music. Many singers who have become noted on the concert stage owe their artistic success to him.

Mr. W. E. Fairclough, F. R. C. O., assisted by the choir of All Saints' Church, Toronto, Can., gave an organ recital on March 25. The program included the following: Concert Overture in C Minor, Alfred Hollins; Romance in D Flat, Edwin H. Lemare; Fantasia in F, W. T. Best; Anthem—"Come unto Him," Ch. Gounod; Larghetto from the Clarinet Quintet, Mozart: Duet—"I waited for the Lord," Mendelssohn; Canzone in B-Flat, W. Wolstenholme; Toccata (from a Suite for the Organ), Felix Borowski; Anthem—"Come, my Soul," George C. Martin; Allegretto in B Minor, Alex. Guilmant; Imperial March, (arranged for the organ by G. C. Martin,) Edward Elgar.

The Chicago Orchestra annual request program was as follows: Overture "Sakuntala," Op. 13, Goldmark. Symphony No. 3, F major, Op. 90, Brahms; Allegro con brio. Andante. Poco allegretto. Allegro. "Tristan and Isolde," Wagner; (Prelude and Isolde's love—death). Les Erinnyes, "Tragedie Antique," Massenet; (*a*) prelude. (*b*) Scene Religieuse. Solo (violoncello), Mr. Steindel. Andante con Variazioni (from the "Kreutzer" sonata), Beethoven; Orchestration by Theodore Thomas. Marche Funebre, Chopin; Orchestration by Theodore Thomas. Allegro molto vivace, Tschaikowsky. Finale. Adagio Lamentoso, Tschaikowsky. (Two last movements from Symphony "Pathetique.") The requests for the symphonies were as follows: Beethoven, No. 2, 1; Beethoven, No. 3, "Eroica," 1; Beethoven, No. 4, 1; Beethoven, No. 5, 2; Berlioz, "Fantastique," 1; Brahms, No. 3, 76; Dvorak, No. 5, 6; Goldmark, 'A Country Wedding," 2; Mendelssohn, No. 3, "Scotch," 1; Raff, No. 3, "Im Walde," 5; Raff, No. 5, "Lenore," 2; Schubert, No. 2, "Unfinished," 3; Schubert, No. 10, 2; Svendsen, B-flat, 9; Tschaikowsky, No. 6, "Pathetique," 25; Tschaikowsky, "Manfred," 1.

The inaugural recital of the new organ in the Central M. E. Church, Wilkesbarre, Pa, was given by I. V. Flagler on March 18. The program was as follows: Improvisations displaying the resources of the organ. Gloria from 12th Mass, (Chorus Choir) Mozart; Transcription, "Tannhauser," Pilgrim's Chorus, Evening Star, March and Chorus, Wagner; Serenata, Flagler; Oriental Music from "Feramors," Rubinstein; Trio, Nocturne I, F Major, Behr; Recollections of the Alps, introducing Alpine melodies and thunder storm, Flagler; Allegretto, arranged for the organ by Mr. Flagler Chaminade; Torchlight March, Flagler; 'Cello Solo, Mr. Thomas H. Rippard, *a* Reverie, Vieuxtemps; *b* Etude Caprice, Golterman; Concert Variations and Fugue on the tune "America," Flagler.

Sumner Salter, continuing his series of Sage Chapel (Cornell University) organ recitals, played three fine programs, the third of which was entirely devoted to works of Bach. Sonata II, G minor; Last Movement; Introduction; Fuge; Merkel. Symphonie II, in D. Third and Fourth Movements; Andante; Scherzo; Widor. Romauze for Violin in F, Beethoven. Pastorale in E, De la Tombelle. Fantasie in D, Op. 87, for two performers, Andante; Allegretto; Allegro Vivace; Fuge; Hesse. Sonata V, in C minor, Op. 80: Allegro Appassionato; Adagio; Scherzo; Recitativo; Ceoral et Fugue; Alexandre Guilmant (March 12, 1837). "O Fatima," Von Weber. "No one my grief can feel," Tshaikowski. (*a*) Cantilene Pastorale; (*b*) Mareee Religieuse, Guilmant. Compositions of Johann Sebastian Bach, born at Eisenach, March 21, 1685, died at Leipsic, July 28, 1750. (I) Prelude and Fugue in E minor; Chorale: "Herzlich thut mich verlangen;" Prelude in G major; Mr. Vocke. (II) Air for Violin from Orchestral Suite in D, Mr. Egbert. (III) Air from Pfingst Cautata: "My heart ever faithful," Mrs. Tyler. (IV) Adagio from Toccata in C. (V) Largo from Concerto for Two Violins in D minor. (VI) Toccata in F.

ABROAD.

The Chopin autographs of pianoforte pieces, owned by the composer's pupil, Mlle. Gavard, have been acquired by the Conservatoire of Paris.

In Rome, A new society, bearing the name of "Boccherini," has been formed for the cultivation and popularization of chamber music. M. Pélissier has been appointed its director.

Mme Emma Eames has recovered from her illness and will be a member of the Covent Grand Opera Company next Spring. Ternina, Gadski, Melba and Breval have also been engaged.

Commemorative Tablets have been affixed to the houses at Schönau, known by the signs of "Zur Harfe" and "Zur Eiche," in which Beethoven resided during the summer months of 1811 and 1812.

The prize of 1000 francs, offered by the Academy of Fine Arts, Brussels, for a pianoforte concerto with orchestra, has been awarded to L. Louis Delune, a pupil of Edgar Tinel, the composer of "St. Franciscus."

Weber's "Freischutz" still has an average of 250 performances a year in the opera houses of Germany, though it is 80 years old. On December 9, Stuttgart had its 250th performance of it, the 200th having been given there in 1888, the 100th in 1855, the first in 1822.

Emperor William has decided that the Berlin monument of Richard Wagner is to be placed in the Thiergarten Strasse. It is to be chiefly of marble, and the cost will exceed $25,000. Designs for the monument, for which prizes are offered, must be sent in by June 1.

The Paris Grand Opera gives 190 performances a year, four of them free. The government pays $160,000 to cover expenses, yet there is always a large deficit. The present opera house, during the twenty-three years of its existence, has brought out forty-one operas and twelve ballets.

Saint-Saens is not only a great composer, but an astronomer, whose writings are honored by publication in the *Bulletin de la Societe d'Astronomie*. And now he has tackled philosophy and is given his ideas on materialism, idealism, immortality, etc., to the world in the *Nouvelle Revue*.

The anniversary of Cimarosa's death (January 11, 1801) was commemorated in Vienna by an exhibition of pictures, autographs, etc. relative to the eminent dramatic composer and his more important Italian contemporaries, and a performance of "Il Matrimonio" at the Conservatorium.

M. Camille Saint-Saëns lyric drama, "Samson et Dalila," was produced for the first time, with a German version of the libretto, at the Stadt Theatre, Bremen, recently. Capellmeister Jaeger conducted the very brilliant performance, and the work was received with marked favor on the part of a numerous audience.

Mozart's Concerto for Three Pianofortes—hitherto almost unknown—was recently performed at Carlsruhe. According to Köchel, the concerto in question, a work of bright and graceful character, in F major, was written at Salzburg in 1776, and was performed several times in the two following years, under the composer's direction.

It is said that a remarkable tendency in the musical life of Germany at present is the growing demand for Liszt's compositions in the concert hall. The *Berliner Tageblatt* says that in the one month four pianists—Reisenauer, Busoni, Stavenhagen and Risler—gave special Liszt recitals, and in addition to these there was the oratorio "Christus," and the symphonic poems at the orchestral concerts. "One would hardly venture on so much with Beethoven or Wagner," it adds.

While giving concerts in Spain, Ignace Paderewski received word on March 22, that his son Hippolyte had just died. He at once started for Warsaw, and has announced that he will not appear in public again for a year. Paderewski was married in 1879, when only 20 years old, to a Polish girl, who died shortly after the birth of their son. The boy was hopelessly crippled, and has been the object of the pianist's solicitous care. They have lived together at Paris. Last year Paderewski was married for the second time.

Vladimir de Pachmann gave a piano recital at Leipzig, for the first time in twelve years. His program included Bach, Weber, Liszt, Schubert and Chopin, and was rendered with the beautiful tone and phrasing that are known to be his. His audience was very enthusiastic. Pachmann has great magnetism, and that even outside of his playing, he sways the audience by his will. They follow his moods invariably. For instance, after arousing his hearers to great hilarity by his remarks and gestures and the very impudence of his apparent disregard for their presence, he suddenly becomes stern and absorbed. Instantly, every face takes a correspondingly serious look. Then, as though satisfied with his experiment, his body animated by degrees, the unearthly grins reassert themselves on his otherwise thoughtful and impressive features, and the auditors laugh again at their ease. With this thought in mind there is an uncanny sensation in hearing and watching him. The weird idea possesses one that the clownish pantomine which he carries on, without the slightest danger to his concentration on the music, and his music itself, the perfection of sensuality, are all traps for the unwary, to amuse him. But if Pachmann is a Mephistopheles of the drawing-room, it must be admitted he is rather a good natured one, for after playing a long and trying program, he gave seven encores.—*Concert-Goer.*

PUBLISHER'S COLUMN.

"Blossoms burst from every branch,
From out the copses a thousand voices sing."

These words of Goethe aptly describe the spirit of the "Idylle," by Bendel, with which the music pages are begun. The breath of Spring is in its measures. The legato melody and accompaniment of the first part should be played with a free, singing tone, and shows out well in contrast with the staccato second part. It will repay study. Well adapted to commencement time is the next number of the supplement. "The Academy Bell," by W. F. Sudds, is a very pretty duet, which tells a story of schooldays. Although the theme is the beginning of school, its reminiscent character makes it suitable for use when friends gather to see schooldays end. The music is as fresh and charming as the words, and its form as a duet or two-part chorus increases its usefulness. "Dance of the Reapers," by Wilhelm Fink, is sure to please by its charm of melody and harmony. It is clear in form and very attractive both as a study and a piece. "My Little Princess," by Hans von Aachen, is quaint in rhythm and bright in melody. It is not easy because of the care it demands in phrasing and in a proper handling of the bass, but is well worth the practice it requires. "The Express Train," by Richard Tourbie, is a brilliant Galop, full of dash and "go." Like a real express train, its engineer must have it well in hand before trying to speed it, or there may be a wreck. Dainty and light is "Fairy Picture," by Hugo Reinhold. A quiet, singing melody, with a light moving accompaniment presents the picture. "Dearest Flower," by Alfred Wooler, is a ballad, which will prove attractive on any program. Simple and unpretentious, it gives chance for effective singing. The supplement closes with a "Silhouette," by Reinhold, which compresses in its one page a great deal of real music. It is a good study in staccato.

***

A recent mail brought two letters to the publishers of THE MUSICIAN, both relating to the music published in each issue. One of these letters complains that the music is so poor that it cannot be used, that the writer has seen only two good pieces in the journal during the last few months. The other says the music is not popular enough, and cannot be used on that account. Here are two statements directly contradictory, both coming from friends of the journal, who mean their criticism kindly. The publishers surely are placed in a dilemma, for these letters are but representative of many others equally divergent in views. The question is, what sort of music shall be published in THE MUSICIAN? The journal is published for the benefit of its readers, and it is their wishes that the publishers want to satisfy. But what are these wishes? How are they to know what sort of music is really desired?

They are willing to publish just such a class of music, and of just such grades of difficulty, as will best answer the purposes of their readers. They have no hobbies of their own to satisfy, and in an effort to arrive at a conclusion, they not only ask but urge every reader of THE MUSICIAN, who is interested in this question, to send them a plain and *definite* statement of the kind and grade of music he or she would prefer to have published in each month's issue. Kindly respond promptly and fully so that there can be no misunderstanding. Remember that there are twenty-four pages devoted to music and that variety is necessary as well as quality. We await these statements with expectancy and will give them the fullest consideration.

***

This number of THE MUSICIAN contains some particularly valuable matter. Dr. Hanchett's second article on "The Study of the Sonata," gives evidence of the practical value of the series. The article by T. L. Rickaby, "A Critique and Some Comments Thereon," opens a question of vital interest to every teacher who gives recitals. The Teachers' Forum touches an important phase of professional preparation, and in the organ department Answers to Inquiries are given on subjects met by every organist. Some very valuable articles are in hand ready for publication, and future numbers will bring much instructive matter to earnest readers.

***

If in need of a Metronome, one that will give entire satisfaction (all others are worthless) and last a lifetime, send your order to the Hatch Music Co. Owing to the increased cost of manufacturing Metronomes, prices have been advanced by nearly all dealers. We still offer them at the old prices—another proof of our claim that you save money by purchasing from us. We handle only the best makes, and guarantee every instrument for two years. All complaints receive careful attention and prompt adjustment. Our prices ($2.50 and $3.50) are very low, and we offer an extra discount on orders for six or more instruments.

In a recent issue we spoke of the growing demand for meritorious pieces of the easier grades and drew attention to the fact that we have been making a special and successful effort to meet this demand. The following abstract from a letter received a few days ago from the head of a large institution is a proof of this. "We are well pleased with your music. It is well-chosen and quite appropriate to the difficult grades. *The teachers admit that they never had a better choice.* Please accept our grateful thanks." We have received many similar letters which want of space will not permit us to print. Send for our "Selected Lists of Pieces in Different Grades"—furnished for the asking.

***

THE MUSICIAN should regularly reach *every* teacher and student of music. It will prove invaluable to those students who contemplate making a business of teaching. It is not only in the instructive articles, by leading writers, that THE MUSICIAN proves valuable to teachers. Its advertising pages are filled with announcements which will interest all teachers and students, and it will pay to consult them. If subscribers will send the names and addresses of those whom a magazine of this character will benefit, the publishers will gladly send a sample copy.

***

Agents Wanted.—THE MUSICIAN wants good, live representatives to solicit subscriptions. Those having a knowledge of music preferred. Full particulars, including sample copies, order blanks, other helps and terms, will be sent to all who desire to make a trial of this work. No other field of subscription work offers such liberal inducements.

***

Our Publications are noted for correctness and beauty. We carry a complete line of all Foreign and American publications. Our facilities for promptly filling all orders are unequalled.

Our *Special Novelty Offer*—an original plan by which you can obtain one copy each of our new sheet music publications at nominal cost—will interest you. Full particulars will be sent upon application.

***

NEW PUBLICATIONS.

The new music listed below contains some excellent publications for general use. The piano music is all in Grades II and III. The songs are varied, and among them are some good teaching songs. Comments have been made where they will add to the usefulness of the matter.

SONGS.

Blue Eyes and Brown. H. P. Hopkins. Key G: D to G. 40c.
A worthy song, bright and musicianly. Can be made effective.
Dainty Miss Mignonette. J. H. Clarendon. Key D: C sharp to E. 50c.
Down the Line (March Song). H. T. MacConnell. Key G: C sharp to E. 50c. A sprightly song, useful for school programs. Easy to sing.
How Sweet the Hours, etc. H. Winderstein. Key D: C sharp to F sharp. 60c. A graceful, sentimental song. Flowing melody.
I'd Like to Call You Mamma. S. S. Oakford. Key G: D to D. 50c.
Lady, I Love Thee. Aimé Lachaume. Key E flat: F to F. 50c.
A serenade. Thoroughly commendable. The guitar-like accompaniment is effective.
Lou Lou. Theo. H. Northrup. Key F: C to F. 50c.
Tell Mother I'll Be There. Chas. M. Fillmore. Key A flat: C to F. 25c.
There's a Picture in My Heart of You. Edith Pond. Key A flat: D flat to Eb. 50c.
All That Glitters is Not Gold. J. W. Casey. A flat. D natural to E flat. 50c.
Clover Blossoms. S. Townsend. Low Voice, B flat: B flat to D. 50c. An excellent song. It is singable, well written and good for study and recital.
Fill Up Your Flagon. R. Coverley. High Voice, G: D to F sharp. 50c.
Fill Up Your Flagon. R. Coverley. Low Voice, C: G to B. 50c.
Fill Your Stein. C. L. Mittell. Bass or Baritone. E flat; B flat to D. 50c.
Good Old Way. J. T. Kelly. A flat: E flat to E flat. 50c. Smooth and singable, without depth.
It's a Maid, Sweet Maid. W. R. Anderson. F: C to E. 50c.
Lovingest Face in the World. E. W. Corliss. G: D to E. 50c. The face belongs to the mother, and the song is healthy in sentiment. The music is attractive, without especial excellence.
Mine. Max Bendix. E flat: B flat to E flat. 50c. A thoroughly musicianly song. Will need to be well sung to do it justice.
Rose of Love. R. Coverley. E flat: C to F. 50c. This is another good song for a teacher's repertoire. It is not unduly difficult, but will repay study.
Zamora. H. W. Loomis. D: A to F. 60c.

PIANO.

Fiddle-Dee-Dee. Lancers. Arr. by C. Hoschna. 50c.
Frog Puddles. Howard Whitney. 50c. A jolly piece; good practice in hand and arm control. Popular, but not trashy.
Pasha's Dream. Chas. Bendix. 50c.
With Might and Main March. Nat. D. Mann. 50c.
Wonder Medley of Popular Airs. F. W. Meacham. 75c.
Zamona. Wm. Loraine. 60c. There is an oriental flavor about this which gives it a pleasing effect. It is quite bright.
Barnyard Frolics March—Two-Step. J. W. Bratton. 50c.
Beautiful Vision. Reverie. Op. 10. A. W. Holt. 50c. Of the taking, melodious class. Its musical construction is slight, but it will please.
Fairy Voices. Nocturne. C. D. Blake. 50c. Similar to the above.
Good Fellowship Waltz Quadrille. C. Hoschna. 60c. A graceful waltz. Presents no particular difficulty, but sounds brilliantly.
Iris. Intermezzo. E. R. Ephraim. 50c.
"Pixies Carnival." H. Englemann. Easy teaching pieces:
Pixie King March,
Frolic of the Pixies,
Queen of the Pixies Waltz,
Pixies Schottische, } 30c.
A set of teaching pieces in this well-known writer's style. They are tuneful and not hard.
Marseillaise. Beyer. 40c.
A good transcription of this martial hymn.
Miss Simplicity. Waltz-Potpourri. H. L. Heartz. 75c.
A good octave study.
Romance. B. Tours. 40c.
Another piece containing plenty of octaves. In the good old sentimental style and sure to please.
Siren. Entre Acte. T. Bendix. 50c.
Wanda. Salon Mazurka, Op. 88. C. Bohm. 50c.

OCTAVO.

SACRED. (Mixed Voices.)

Benedictus in G. John E. West. 15c.
Benedicte, Omnia Opera. E flat. Ed. C. Baistow. 12c.
Blessed Are the Poor in Spirit. E flat. Henry Hiles. 5c.
Calm On the List'ning Ear of Night. B flat. H. W. Parker. 12c.
Dream of Paradise. (Gray.) A flat. P. Löring. 12c
Earth Is the Lord's. G. J. Hopkins. 15c.
God Is Love. E flat. Arr. from Reichardt.
Be Still. G. J. B. Herbert } 10c.
God, Thou Art My God. E flat. Farris Tozer. 15c.
Greatest of These is Charity. F. J. B. Herbert. } 10c.
Hear Our Evening Prayer. E flat. Blumental.
How Amiable. E flat. T. W. Surrette. 5c
In Heavenly Love Abiding. E. Horatio Parker. 12c.
Kyrie Eleison F. B. L. Selly. 6c.
Light My Path Surrounding. D flat. 10c.
Long Expected Day. B flat. Ronalds 10c.
Lord, Thou Hast Searched Me Out. E flat. Sealy. 10c.

SACRED.

Lord, Thy Word Endoweth. A. J. F. Bridge. 25c.
Magnificat and Nunc Dimittis. E flat. Boynton Smith. 15c.
Magnificat and Nunc Dimittis. C. H. W. Davies. 15c.
Magnificat and Nunc Dimittis. A. G. H. Westbury. 15c.
Magnificat and Nunc Dimittis. B flat. E. H. Lemare. 25c.
Now Sinks the Sun. G. H. W. Parker. 12c.
Praise Waiteth for Thee. G. J. B. Herbert. 10c.
Song of Songs. B flat. C. B. Adams. 10c.
Te Deum (Unison). G. H. K. Hadley. 5c.
There Arose a Great Storm. F. J. B. Herbert. 10c.
Thou Shalt Remember. E. H. W. Parker. 15c
We Declare Unto You Glad Tidings. F. H. P. Danks. 10c.
We Stand in Deep Repentance. D. Pinsuti. 10c.
While We Have Time. E. H. W. Parker. 15c.
Easter Lilies (Easter Service.) J. H. Fillmore. 5c.
Easter Recitations No. 2. Chas. M. Fillmore. 10c

SECULAR. (Mixed Voices.)

Freedom's Land. F. H. L. Heartz. 10c.
Land of Washington. A flat. J. H. Fillmore. 5c.
Victory. Vocal March. B flat. Geo. Hayes. 12c.

MALE VOICES.

Fill Your Steins. E flat. C. L. Mittell. 10c.
Jolliest Crew That Sails. E flat. H. Karle. 8c.
When Summer's Just Ahead. D. H. Karle. 8c.

FEMALE VOICES.

Bird and the Rose. (Horrocks.) F. J. C. Macy. 10c.

Practical Music Course. Book 3. S. S. Myers.

***

The publishers of THE MUSICIAN have exceptional facilities for printing sheet music and music books. Upon receipt of manuscript, with full particulars concerning the style of publication desired, we will suhmit complete estimate.

***

If you are not satisfied with the way in which your orders have been filled by other dealers, why not give us a trial, and test our ability?

It pays to deal with a progressive and up-to-date house. We can save you time, trouble and money—all of which are worthy of serious consideration. No trouble to answer letters and inquiries. Don't hesitate to write us.

***

Are You Certain that you are buying your music at as good rates of discount as your fellow teachers? If not, you are doing business at a *disadvantage. We claim* that the discounts we allow teachers are MUCH BETTER than offered by other dealers, and unless you have had our latest quotations, you *cannot* be sure that you are not paying *more* for your supplies. This applies not only to our own publications, but to ALL the music you use. On our own publications we offer such liberal discounts (which will be supplied on request) that, no matter how far distant you are, or the cost of Postage or Express, we GUARANTEE you a saving when purchasing from us. In this connection you should remember that we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all that has not been sold or used. Full particulars regarding this department of our business may be had on request. We also offer numerous additional advantages which it is impossible to mention in the limited space of this page. *Write us!* No trouble to answer your letters and inquiries. It will pay you to correspond with a house that is progressive and up-to-date in all of its dealings. We can save you time, trouble and money. We suggest that you give us an opportunity to demonstrate this fact by sending us a trial order, it will bring us your steady patronage.

Burrowes Musical Kindergarten Method

INSTRUCTION FOR MUSIC TEACHERS BY HOME STUDY.

THE FIRST EDITION of the Manual of Instruction for Teachers by Home Study has been ENTIRELY EXHAUSTED, owing to the rapidly increasing demand for the Burrowes Method, and a NEW, IMPROVED AND GREATLY ENLARGED EDITION is now being issued from the press.

YOU ARE REMINDED that this Method may be acquired advantageously at any season of the year.

IT IS GOOD to introduce the Method in the third or fourth term. In this way the teacher may learn the Method fully and secure some testimonials; and so when the schools re-open in the following autumn he will be in a position to advertise and talk to parents from his own experience, and will doubtless be more successful than if he had acquired the Method just before the autumn term began.

YOU CAN BEST learn the Method by its actual use with a class, and it is not necessary that you should be completely familiar with it before beginning to teach. The lessons in the Teachers' Manual are laid out very minutely, so that after a day or two of study the teacher may begin to impart the earlier lessons, and may POST HIMSELF ON THE SUCCEEDING ONES AS THE CLASS PROGRESSES.

THE BURROWES METHOD was built up for children and from actual study of the needs, preferences, character, and even the whims of children. The authoress has taught a musical kindergarten for many years, during which she has composed songs, invented games, and constructed apparatus too numerous and varied to mention or describe; and of these only the most valuable have been retained. Everything that was dull, cumbersome, ineffective, or unchildlike has been abandoned, and what remains has been tested through and through, and its value proved beyond the shadow of a doubt. There is nothing in it that is not agreeable and entertaining. IT IS NOT BUILT ON MERE THEORIES. It is not the inspiration of a day. It is, on the contrary, the CREAM OF FIVE YEARS OF SPECIAL EFFORT, and the fruit of many other years of toil and study. The results speak for themselves.

THE MANUAL will enable any teacher of music to carry a kindergarten class through 120 lessons.

MUSIC TEACHERS OF ALL GRADES should investigate this work. ADVANCED TEACHERS will profit largely by establishing kindergartens in charge of an assistant or partner, thus creating a preparatory department which will act as a leader to the advanced classes. The advantages of the Method to YOUNG TEACHERS is obvious.

KATHARINE BURROWES, A 1302 Presbyterian Bldg., Fifth Ave., New York.

Send your address, and a beautifully illustrated SOUVENIR BOOKLET will be mailed free.

LATEST PUBLICATIONS.

PIANO SOLOS.

Costa, P. M. 'A Frangesa! March. Grade II 50
Full of spirit and vigor. While calculated to please, it contains some excellent octave and chord work. Very popular with bands and orchestras.

Eichler, M. Op. 9. Wanderer's (The) Dream in the Woods (Des Wanderers Traum im Walde). Grade III, ... 35
Brilliant sketch introducing scale runs and arpeggios.

Eilenberg, R. Op. 192. Alone (Allein). Intermezzo. Grade III, ... 40
Tone poem of much beauty. Striking solo for left hand.

Eilenberg, H. Forge (The) in the Forest (Die Schmiede im Walde). Characteristic Piece. Grade III, ... 35
Descriptive sketch with several pleasing movements.

Fink, W. Op. 295, No. 6. At the Fountain (Am Brünnlein). Grade II, ... 25
Pretty murmuring effect—sixteenth notes in treble, with accompaniment of eighths.

Fink, W. Op. 295, No. 9. Dance of the Reapers (Tanz der Schnitter). Grade II 25
Valuable, as well as pleasing, phrasing study.

Gael, H. van. Op. 36. Cradle Song. Berceuse. Grade III, ... 30
Extremely interesting and beautiful. A study in accent.

Gänschals, C. Op. 234. Field Flowers (Feldsträusschen). Grade II, ... 30
Rondo movement of beauty and action. No octaves or large chords.

Heins, C. Op. 220. Fairy's (The) Greeting (Feengruss). Tone Piece. Grade II, 35
Fine example for melody playing.

Heins, C. Op. 198. Light Cavalry (Leichte Reiterei). Military Sketch. Grade II, 30
Bright, imitative composition, without octaves.

Heins, C. Op. 202. Wanderer's Rest (Wanderers Ruhe). Grade III, . . . 30
Melodic tone-piece of value and interest.

Horváth, G. Op. 20, No. 4. Dance (The) of the Gnomes (Der Gnomentanz). Grade II, ... 25
Quaintly characteristic sketch in waltz movement.

Köhler, O. Morning (A) in May (Maienmorgen). Romance. Grade III, . . 30
Good pedal study; introduces some pretty effects of distance.

Köhler, O. Op. 178. Out in the Woods (Heinaus in den Wald). Melodic Sketch. Grade II, ... 30
Cheerful and bright rondo movement.

Wilm, N. von. Op. 81, No. 11. In the Mill (In der Klappermühle). Morceau. Grade II, ... 25
An interesting study of descriptive playing.

Wilm, N. von. Op. 81, No. 4. Round and Round (Ringelreihen). Grade II . . . 25
Sprightly little *scherzo*; full of beauty.

Wilm, N. von. Op. 81, No. 22. Spinning (The) Top (Der Kreisel). Grade III 25
Pleasing descriptive study piece. Trill-like sixteenths sustain a *staccato* melody.

Wilm, N. von. Op. 81, No. 24. Sprites at Work (Heinzelmännchen). Grade III, 25
Rapid work for both hands, with odd accents. Especially interesting.

Fletcher Music Method

(SIMPLEX AND KINDERGARTEN)

The aim of the Method is to eliminate the drudgery of the study of music and to give a fundamental, systematic and logical musical education in a thorough, natural and pleasurable way; and so make it possible for Music to exercise her three-fold power of development. The System was originated by Evelyn Ashton Fletcher, and the following are a few of the many endorsers and a partial list of the Conservatories in which the System has been adopted.

Dr. Wm. Mason, New York.
Mrs. John Vance Cheney.
Madame Hopekirk.
Philip Sousa.
Franklin Taylor.
Dr. Gerrit Smith, New York.
Wm. Tomlins, Chicago.
Dr. Hugo Riemann, Leipsic. **Thomas Tapper.**
Dr. Wm. Cummings, London, Eng. **Kate S. Chittenden**, New York.
And others.

University of the State of New York.
Institute of Applied Music, New York.
Departments—Metropolitan College of Music, Metropolitan Conservatory of Music, American Institute of Normal Methods, Synthetic Piano School, Fletcher Music Method.
American Conservatory, Chicago.
Gottschalk Lyric School, Chicago.
Mrs. John Vance Cheney School, Chicago.
Detroit Conservatory.
Broad Street Conservatory, Philadelphia. And others.
Also in the Eleven Leading Conservatories or Colleges of Music in Canada.

There are already over 250 teachers of the System, but the demand is greatly increasing Miss Fletcher studied for five years in Europe, and has already successfully introduced her System in the European centres, Leipsic, Berlin, Brussels and Paris. Special advantages to those willing to go abroad with the System. The different sets of apparatus invented by Miss Fletcher are fully protected by patents in Canada, the United States, England, Germany, France, Switzerland, etc. This System can not be taught by mail, and the Fletcher certificate of authorization to teach is only obtainable, with the apparatus, by taking the course of instruction. Write for information and circulars with letters of endorsement, to Miss Evelyn Ashton Fletcher, 1125 Madison Ave., or Mrs. E. A. Sturgeon, 5155 Cornell Ave, Chicago, or to the Corresponding Secretary of the Fletcher Musical Association, Miss La B. Brown, the Nightingale, Dudley St., Roxbury, Boston.

Do You Want Any Book on Music?

MUSIC PUBLISHING

WRITE US FOR FULL PARTICULARS.

We have every facility for the prompt and satisfactory publication of any musical work—no matter whether it is a piece of sheet music or a large book. Our facilities are unsurpassed and there is no kind or style of work in our line which we cannot do in the very best manner at the least possible cost.

Our printing is all that could be desired by the most critical and is equal, in every respect, to the finest European press-work.

HATCH MUSIC COMPANY, PHILADELPHIA.

Musical Rhythms for Piano. By Arnold D. Scammell.

With an Introduction by MRS. CROSBY ADAMS. Of interest to every Teacher. Pupils are delighted with them. Develops a refined musical taste. The Introduction is well worth the price.

Attractively Bound. Price, $1.00.

This book is the direct outgrowth of a need expressed by both teachers and pupils for certain definite rhythms which shall suit the times which come to all of us, when something "in lighter vein" is demanded. To supply this need, by giving marked rhythm as well as tuneful melody is the task set himself by the composer, Mr. Scammell. That these requirements have been met, the work itself is the evidence. The pieces lie well under the hand, do not require much technical equipment, and, best of all carry themselves easily along by the charm of the rhythm. Mr. Scammell has been fortunate in having the experienced judgment of Mrs. Crosby Adams in the preparation of his work. Teachers will welcome to their teaching list these compositions suited to the natural and healthy demands of a certain phase of the pupil's experience because, while the pieces are indeed "light" they are not commonplace, and will therefore help instead of hinder the progress of the pupil's development towards a refined musical taste

Pretty Picture Songs for Little Folks

By G. A. Grant-Schaefer and Walt M. Dekalb. .75

What the Chicago Press says of it:
"Artistically there is not a more attractive juvenile book on the market."—Chicago *Times-Herald.*
"The melodies are attractive and catchy."—Chicago *Tribune.* "Should be in every Christmas stocking."—*The Elite.*

Wee Wee Songs for Little Tots

By C. H. McCURRIE and WALT M. DEKALB. .50

Nearly 5,000 sold and demand constantly increasing. Praised by old and young alike.

Songs That the Children Sing

By MRS. L. D. FESSENDEN and MRS. V. A. BARBER .75

Contains two charming operettas and six solos. Nothing better can be found for school and home use. Both words and music are captivating.

Children's Music in Sheet Form

Vocal by CARRIE JACOBS BOND.

A Little Shoe	25

MUSICAL STORIES FOR CHILDREN A 16-page booklet describing all of the above mailed postpaid for the asking.

H. F. CHANDLER, Publisher, 45, 47 Jackson Blvd., Chicago. HATCH MUSIC CO., Philadelphia.

CHOICE NUMBERS
FROM THE
"Hatch Edition"

Diminished reproduction of cover plate used on the "Hatch Edition."

All numbers included in this list have been carefully edited and annotated by leading American teachers, our corps of editors including: W. S. B. Mathews, Wm. H. Sherwood, Frank H. Tubbs, Frederic W. Root, R. S. Goldbeck, Jaroslaw de Zielinski, J. S. Van Cleve, Thos. a'Becket, Wilson G. Smith, H. C. Macdougall, Bernhard Listemann, etc. This important work has never been attempted by any other publisher. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Regardless of the additional expense involved in the publication of annotated editions, prices have not been advanced, but are the same as those charged for ordinary reprints of the works included in this list.

No. 28. BURGMÜLLER. Op. 100. Twenty-five Easy Studies for the Pianoforte 1 00
Revised, fingered and annotated by Jaroslaw de Zielinski.

No. 29. CHOPIN. Nocturnes for the Pianoforte 75
Revised and fingered by Carl Mikuli.

No. 31. CHOPIN. Waltzes for the Pianoforte 50
Revised and fingered by Carl Mikuli.

No. 32. CHOPIN ALBUM. Thirty-two Favorite Compositions for the Pianoforte 1 00
Revised and fingered by Carl Mikuli.

No. 30. CLEMENTI. Sonatinas for the Pianoforte . . . 50
Edited and annotated (after Louis Köhler's Latest Revision) by Robert S. Goldbeck.

No. 59. CZERNY. Op. 299. School of Velocity. Complete 60
Revised, fingered and annotated by Thos. a'Becket.

No. 58. DUVERNOY. Op. 120. School of Mechanism. Fifteen Primary Studies in Velocity 50
Revised, fingered and annotated by Thos. a'Becket.

No. 70. FINK. Op. 295. Rural Pictures. Twelve Easy, Melodious and Instructive Pieces for the Pianoforte 60
Revised, fingered and annotated by Thos. a'Becket.

No. 27. GURLITT. Op. 117. The First Lessons. Thirty-four Little Melodies for the Pianoforte 50
Revised, fingered and annotated by Jaroslaw de Zielinski.

No. 22. HELLER. Op. 46. Thirty Progressive Studies for the Pianoforte 1 00
Revised and annotated by W. S. B. Mathews.

No. 23. HELLER. Op. 47. Twenty-five Studies for the Pianoforte 1 00
Revised and annotated by W. S. B. Mathews.

No. 33. KÖHLER. Op. 50. First Studies for the Pianoforte 80
Revised, fingered and annotated by W. S. B. Mathews.

No. 30. KÖHLER. Op. 190. Very Easiest Studies for the Pianoforte 50
Revised, fingered and annotated by W. S. B. Mathews.

No. 1. KÖHLER. Op. 249. Practical Method for the Pianoforte. Vol. 1 75
Revised, fingered and annotated by Thos. a'Becket.

No. 2. KÖHLER. Op. 249. Practical Method for the Pianoforte. Vol. 2 75
Revised, fingered and annotated by Thos. a'Becket.

No. 3. KÖHLER. Op. 249. Practical Method for the Pianoforte. Vol. 3 75
Revised, fingered and annotated by Thos. a'Becket.

No. 41. KUHLAU. Sonatinas for the Pianoforte. Vol. 1 50
Edited and annotated (after Louis Köhler's Latest Revision) by J. S. Van Cleve.

No. 42. KUHLAU. Sonatinas for the Pianoforte. Vol. 2 50
Edited and annotated (after Louis Köhler's Latest Revision) by J. S. Van Cleve.

No. 52. KUHNER. Etude School. A Model Collection of Well Graded Piano Studies. Vol. 1. Lower Elementary Grade 75

No. 46. LE COUPPEY. Op. 26. Fifteen Studies in Mechanism—Preface to Czerny's Studies in Velocity 1 00
Revised, fingered and annotated by Jaroslaw de Zielinski.

No. 8. LEMOINE. Op. 37. Etudes Enfantines for the Pianoforte 60
Revised, fingered and annotated by Wilson G. Smith.

A SELECTED LIST OF
Fifty Third Grade Pieces
For Teaching and Recreation.

Any of our publications sent subject to examination. Complete Illustrated and Thematic Catalogue free on application. Send for our Special Prices. Mail Order Business Solicited.

BEAUMONT, P.
Slumber Sweetly. Cradle Song 40
An exceptionally valuable teaching piece. Its difficulty lies in the technical requirements necessary to keep the cradle song idea prominent. Beautiful.

BENDEL, G.
Op. 108. Dream and Awakening (Traum und Erwachen) 40
Characteristic piece in which the first subject is given out by 1st and 2d fingers as the lower note of the chords. Excellent practice, and pleasing as well.

BLON, F. von.
Chat in the Spinning Room (Plauderei in der Spinnstube) 40
The chatting is done by the right hand, while the left develops the spinning effect. Effective and interesting.

BLUM, O. R.
Dancing Sprites 35
Graceful and melodious composition, presenting no particular difficulties, but certain to please the pupil.

BOHM, C.
Op. 265. Bright Green Fields (Frisches Grün) . 35
The music is as bright and pleasant as the fields. Good study in passage work and phrasing.

Op. 284. Dance of the Gnomes 35
An excellent teaching piece, full of melody and grace. Well worth using; easy but brilliant.

D'ORSO, F.
Op. 46. Dream of the Ball (Après le Bal). Valse Rêveuse 40
A short but attractive introduction leads to a waltz of dainty and dreamlike beauty.

Op. 47. Dream of the Angel (Rêve d'un Ange). Nocturne 40
Evidently this angel had pleasant dreams. The music is melodious and shows no trace of care. Good wrist study.

ENGELMANN, H.
Op. 356. Dance of the Snowflakes. Polka Caprice 50
The rhythm depicts the capricious whirling of the flakes as they fall. Good study and brilliant. Requires light hands.

Op. 415. Golden Road. Reverie 35
An attractive piece in the well-known reverie style. Good practice in octaves and chord playing.

Op. 370. Whirling Dervish. Tarantella . . . 50
Like these oriental fanatics, this piece certainly whirls. Splendid exercise in velocity. Plenty of tune to it, too.

ESPEN, T.
Op 35. Elder Blossoms (Flieder Blüthen) . . 35
These blossoms sway to the breezes with careless grace. The piece is not hard, but when well played is very pleasing.

FISCHER, L. H.
Op. 14. Dragon Fly (Libellenspiel) 50
Requires nice playing. Good study in finger work and light arm. Fully annotated.

FISCHER, O.
Op. 204. Flower of My Heart (Herzblümchen). Mazurka 40
Good mazurka, containing many elements of attractiveness. Variety of form makes it useful.

GÄNSCHALS, C.
Op. 78. Farewell Greeting (Scheidegruss) . . . 30
A typical piece of salon music of the better class. Melody and harmony will appeal to the listener.

Op. 27. Heart-Love (Herzlieb) 30
The melody is mainly expressed in octaves and sixths, combined and broken. Excellent and very interesting.

Op. 123. In Twilight (Au Crépuscule). Melodie 30
A very pretty melody by the same author. Nice study in double notes, and absence of octaves makes it extremely useful.

Op. 237. My Love Star (Mein Liebesstern) . . 30
Graceful and containing no especial difficulties. An interesting study for those who can play octaves.

GEIBEL, A.
Messenger Two-Step March 40
Brilliant two-step, by a popular author. Not hard to play. A favorite with the leading bands.

GIESE, T.
Op. 215, No. 1. In the Fresh Green Fields (Hinaus ins frische Grün) 40
The freshness of the fields exhales from this piece, which is characterized by airy cheerfulness.

GOERDELER, R.
Babbling Waters. Morceau de Salon 50
Typical example of this author's popular compositions. Certain to please, and it is useful for teaching purposes.

Op. 499. Dream of the Shepherdess. Morceau 35
An excellent piece of salon music. Not especially hard to play. Good exercise in finger work.

Yuletide Bells. Morceau de Salon 35
The jollity of Christmas is in this piece. Pretty cross-hand passage in second part is an attractive feature.

GREGH, L.
Op. 37, No. 2. Return to Me Soon (Reviens Vite) 35
Splendid study in melody playing, the melody being given to both hands. Very striking composition.

HEINS, C.
Op. 184. At West Point. Marche Militaire 35
Good study in march playing. Dignified and attractive; requires octave playing.

Op. 93. Enchantress (Die Zauberin) . . . 40
Good practice in octaves and full chords. Arm and wrist must be well controlled. Brilliant and taking.

Op. 156. Gitana. Mazurka Brillante . . . 40
Very brilliant piece of salon music, requiring considerable control of hands and arms. Grace notes should be light, and the staccato crisp, but firm.

JENSEN, A.
Barcarolle 30
A thoroughly good composition. Excellent for its technical training and for its musical characteristics.

LEGE, W.
Op 55. Elf Play (Elfenspiele) 35
Very characteristic. Will require practice to properly play it, but is well worth all it demands.

NIEMANN, G.
Op. 29 No. 12. The Chase 20
Short, but sure to please. Wrist touch is required, and must be played crisply.

PACHULSKI, H.
Op. 12, No. 3. Phantastic Fairy Tale 35
Strong musically, of considerable difficulty, requiring a good legato, but well worth careful study.

PEACOCK, W.
Sweet Memories 40
Attractive and presents no particular difficulties. Brilliant concert favorite.

PULLAN, C. H.
Echoes of Spring. Morceau de Salon 50
A popular piece of salon music, useful as a study piece.

RATHBUN, F. G.
Op. 15. Danse Impromptu 50
Characteristic composition by a well-known writer. Besides being a pleasing salon piece it furnishes instruction.

RUBENS, F.
Romance 25
Wide skips in left hand afford excellent practice. Good musically and technically.

Op. 17. Spanish Dance (Danse Espagnole) . . 25
Original and brilliant. Will demand practice, but repays it.

SAMARY, F.
Op. 17. Song of the Flowers (Chanson des Fleurs) 50
Melody and accompaniment in right hand. Two well contrasted subjects. Somewhat difficult.

SCHEHLMANN, L.
Under the Village Linden. Peasant Dance . . 35
Characteristic dance, full of vivacity and good humor.

SMITH, W. G.
Op. 74 Danse Pittoresque. Scene de Ballet 35
A decidedly attractive composition. Somewhat odd in style, it holds the attention. Good study, without great difficulty.

SPINDLER, F.
Op. 306, No. 1. Till We Meet Again (Auf Wiedersehn) 30
Tender melody, capable of much expression. Is developed into a good finger study without losing its pleasing quality.

STONE, A.
Electra. Scene de Ballet 40
A taking composition. Melody given out by right hand, left hand responding. Brilliant and effective; not difficult.

SUDDS, W. F.
Op 236, No. 1. As It Seemed to Me. Gavotte Sentimental 40
The sentiment contained in this piece is healthy. The music is strong, fresh and bright. Sure to please.

Op. 224. Our Brightest Days Gavotte . . . 40
Another of the same kind, and by the same author. Sprightliness and vigor are its characteristics.

TOURBIE, R.
Op. 206 Little Curly Head (Krausköpfchen) . 40
The curly-head must have been a lively little chap, if the music is at all like him. Gay and full of fun.

TOWERS, J.
Life's Springtime. Rondo 50
The title page says, "a joyous rondo," and the saying is descriptive. Thirds and full chords are interspersed with finger work.

WILLIAMS, F. A.
Op. 17 At the Twilight Hour. Nocturne . . 40
Very pretty descriptive sketch, well worked out and with well contrasted subjects. Good for study and the parlor.

Op. 20. Danse Fantastique 40
Another attractive teaching piece written by a teacher and sure to please as well as instruct. Good passage work.

Op. 27, No. 1 Day Dreams 35
Can be most heartily commended. A simple but thoroughly effective piece.

Op. 22. Fountain in the Forest. Mazurka Impromptu 40
Considerably more difficult than the preceding. Useful for teaching and pupils' recitals.

Op 24, No. 2. Water Sprites at Play 40
The sprites are active and sportive. The piece is full of grace and spirit. Pretty and useful.

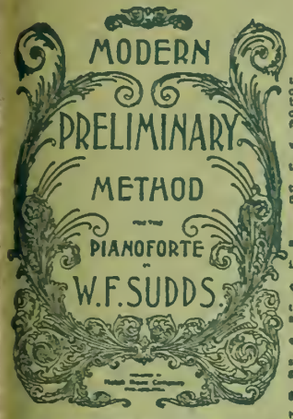
MODERN PRELIMINARY METHOD
FOR THE PIANOFORTE

Embodying the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation



By W. F. SUDDS.

As its title implies, this Method is modern, contains the newest ideas and their practical application. The bulky and voluminous instruction book is a thing of the past. The Method of to-day deals with *more* subjects than its predecessors, but deals with them in a terse and effective manner. It recognizes the importance of practical exemplification of the principles involved, but wisely leaves the application of various points to future study.

Among the many excellent features of the Modern Preliminary Method, we direct attention to the following

The Rudiments are very progressive and explained with such clearness that the pupil cannot fail to comprehend them.

The various Touches are clearly set forth and are accompanied by illustrations, drawn and engraved expressly for this work, showing the movements of finger, hand and arm.

The Correct Principles of Touch and Technic are illustrated by examples.

The Scales are introduced in an effective manner.

Proper Use of the Pedals, a matter generally disregarded, is given particular attention.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

Five-finger Exercises are judiciously used, but not in the usual enormous quantity that disgusts and discourages the pupil.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a Complete Preliminary Method—a work which cannot fail to interest both the practical teacher and the earnest student.

MODERN PRELIMINARY METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates on the best grade of music book paper.

Half Cloth Binding. Price, $1.00.

Magnificent Editions of Standard Piano Methods

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of national reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

Köhler's Practical Method for the Piano. Op. 249. Vols. 1-2-3. Paper Binding. Each $ 75
Revised, Fingered and Annotated by Thos. a'Becket.

The only ANNOTATED edition; the only edition in which the PHRASING is presented in accordance with the latest and most advanced ideas; the only edition that has had a comprehensive and thorough revision.

Löw's Practical Four Hand Piano Method. Vols. 1-2 . . . . . Paper Binding. Each $ 75
Revised, Fingered and Annotated by Wilson G. Smith.

Designed as a companion to all books of instruction for the piano, this method is a favorite with teachers. The perfect ensemble players are those who blend their individual characteristics in order to form a perfect whole, and this important accomplishment may be obtained by careful and conscientious study of Löw's Method.

Wagner's First Instructor for Young Beginners. Vols. 1-2 . . . Paper Binding. Each $ 75
New and Revised Edition. English and German Text.

This work, designed for the instruction of young beginners, presents a thorough and exhaustive course for the systematic training of children. The original edition (published with German text only) is a great favorite with leading German teachers in this country, while it holds a commanding position in Germany where it is a recognized standard not only for children, but for adults who take up the study of the piano.

All works included in the "HATCH EDITION" are printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Ask for the "HATCH EDITION," and take no other if you want the best.

KULLAK'S SEVEN OCTAVE STUDIES
From the School of Octave Playing. Op. 48, No. 2.
Revised and Annotated, with Introduction and Practical Directions for Study, by
WILLIAM H. SHERWOOD.

While numerous exercises for the practice of octaves have been presented to the musical world by virtuosi and masters Kullak's is the only method or "School" of octave playing that has become a standard. But good as they are in their original form, it is remarkable how much the usefulness of these studies has been enhanced by Mr. Sherwood's revision and annotations. A broad foundation embodying the general principles involved and the method by which the end may be most satisfactorily attained is laid in his Preliminary Remarks; instructions and suggestions for technical preparation are given in his "Notes on the Studies;" each study is *treated in detail*. Each movement of the hand and arm is designated by an ingenious device and these characters, elaborately used throughout the text, show the student *exactly* how the hand should approach and leave the keyboard in performing various passages. The progressive teacher will appreciate the importance of Mr. Sherwood's editorial work, and especially so since he gives, for the first time, his system of of instruction in octave playing.

Regardless of the great expense involved in the preparation of this edition, the price is the same as that charged for the ordinary reprint.

Paper Binding. Price, $1.25.

Magnificent Editions of Piano Studies

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of national reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

BUSSLER'S PRACTICAL HARMONY
Newly Revised and Corrected Edition
Authorized Translation from the Third German Edition by N. GANS.

Without exception, the best and most practical work on this subject ever published. The author is a noted German theorist, whose works are known, used and held in high esteem at all the most prominent European colleges and conservatories. The demand for PRACTICAL HARMONY has been so great that three revised editions have been printed in Germany. Ours was translated from the third German edition, by a writer selected by the author. It is, as its title indicates, a thoroughly practical work, embracing the latest and most approved methods. It is simple, is illustrated by practical examples, and is eminently suited for a self-instructor. Its price brings it within the reach of all.

For class instruction or for self instruction, Bussler's Practical Harmony is unequalled. It makes the study of harmony easy, rapid and entertaining.

Cloth Binding. Price, $1.00.

THE HARMONIZING OF MELODIES
A Text Book for Students and Teachers
By HENRY C. BANISTER.

The harmonizing of melodies, generally termed the knowledge of harmony, is one of the most practical applications of the knowledge of chords and their treatment. One may know the meaning of a number of words and still be unable to construct a sentence; he who lacks the ability to use chords in harmonizing a melody is in a similar position.

"Harmonizing of Melodies" will prove a most helpful aid to the student of harmony. It is extremely practical and abounds in examples which will readily be understood. No point has been overlooked, and all important subjects are treated at considerable length. Various methods of handling the same melody are shown, and valuable information as to the best choice, with reasons for the selection, are given. Many excellent hints as to taste and ornamentation, culled from the experience of the writer, are included.

Paper Binding. Price, 50 Cents.

DICTIONARY OF MUSICAL TERMS
100 Pages. By STAINER and BARRETT. 6 x 9 Ins.

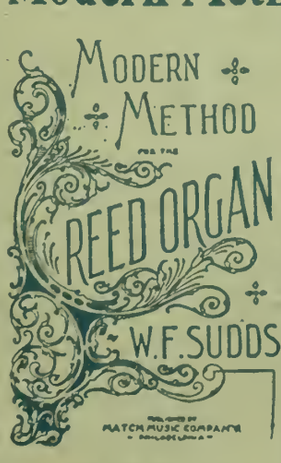
Compressed from the Imperial 8vo Edition, by K. M. ROSS.

We take pleasure in presenting a compressed edition of Stainer and Barrett's valuable work. Mr. K. M. Ross, in his preface says: "In reducing this book from the author's larger work, we have endeavored to omit only such terms as are not in general use, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits. To the general public it is hoped that this edition will be found of practical utility."

"Dictionary of Musical Terms" is a neat and attractive book. It is offered at a nominal price with the hope that it may prove of incalculable value to those in need of a handy reference book.

Paper Binding. Price, 25 Cents.

Modern Method for the Reed Organ



Embracing the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation; also Containing Various New and Important Features, such as Registration, Stop Nomenclature, Adaptation of Piano Music, etc., etc., Not to be Found in Any Other Work of the Kind

By W. F. SUDDS.

As the title implies, this method is modern, the newest ideas, and their practical application, governing its compilation. It treats all subjects in a terse and effective manner.

Among the many excellent features of the MODERN METHOD, we direct attention to the following

It begins with Dictated Lessons.

The Rudiments are explained with remarkable clearness.

It is Carefully Graded.

It is sure to Awaken the Musical Instincts of the pupil without smothering the soul with too much drudgery.

The Fingering is the so-called Foreign, thus according with all the best classical modern musical publications for either Organ or Piano.

It contains a complete treatise on registration as applied to the modern Reed Organ; also full information and comparison in the matter of Stop Nomenclature.

It is the only work of the kind treating the subject of Adapting Piano Music to the Reed Organ.

Every variety of Touch is clearly set forth, accompanied by illustrations (drawn and engraved expressly for this work), showing the movements of fingers, hand and arm.

The Scales are introduced in an effective manner.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a work which cannot fail to interest both the practical teacher and the earnest pupil.

MODERN METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates and on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

NATIONAL GRADED COURSE

DR. WILLIAM MASON.

The Only Method of Piano Instruction

ILLUSTRATED BY AMERICA'S MOST DISTINGUISHED TEACHERS AND PIANISTS.

A Practical, Comprehensive and Thoroughly Graded Course.

THE NEW GRADUS AD PARNASSUM

Embodying the Latest and Best Ideas in Pedagogy.

WILLIAM H. SHERWOOD.

SOME OF THE
FAMOUS TEACHERS
REPRESENTED IN THE
National Graded Course.

William Mason
William H. Sherwood
B. J. Lang
W. S. B. Mathews
Albert Ross Parsons
Robert Goldbeck
S. B. Mills
Emil Liebling
Richard Hoffman
E. R. Kroeger
Wilson G. Smith
Constantin von Sternberg
Bern. Boekelman
Carlyle Petersilea
E. M. Bowman
Mrs. A. K. Virgil
Robert Bonner
Thomas a'Becket
Jaroslaw de Zielinski
Homer N. Bartlett
Sumner Salter
H. C. Macdougall
Benj. C. Blodgett
N. H. Allen
Chas. Davis Carter
W. B. Colson, Jr.
Henry G. Hanchett
Benj. L. Whelpley
Harrison M. Wild
Herve D. Wilkins
Arthur L. Manchester

GRADE 1.

The Corner Stone of the Course.

Table Exercises; Instructions from the Very Beginning, Most Carefully Graded; Difficulties Introduced in Logical Order; Interesting Exercises and Etudes; No Octaves; Exercises for Free Wrist; Major Scales—*Written*, but *not* Played.

GRADE 2.

Introduction of Scale Playing; Exercises for Passing Under the Thumb; Minor Scales Written; Beginning of Arpeggio Work (Broken Chords); Major and Minor Chords Awakening of the Ideal of the Singing Touch; Interesting Etudes; Careful Grading of Difficulties.

The Preparatory Gymnastic Exercises, in Grade 1, are Practical and Helpful.

GRADE 3.

Velocity Assumes Some Importance; Attention Given to the Staccato, while Cantabile Playing Is Carried Aloug with Equal Care; Etudes Become More Like Pieces; Polyphonic Playing Introduced; Exercises for Weak Fingers in Each Hand.

GRADE 4.

Polyphonic Playing Carried Forward: Rhythmical Problems (Two Against Three) Introduced; Greater Richness in the Etudes; Etudes for Melody Playing, Rapid Runs, Trills, Arpeggi, Marked Rhythms, Extreme Agility, Fourth and Fifth Fingers Interest Maintained Throughout the Grade.

GRADE 5.

Musical Material of Great Beauty; Etudes for Left Hand, Octaves, Polyphonic Playing, Staccato, Double Notes, Grand Arpeggi, Fourth and Fifth Fingers. In Singing Tone, Touch, Velocity and General Intelligence. Much More is Demanded of the Pupil.

GRADE 6.

Etudes for Extended Finger Touches, Staccato, Doubl Notes, Extreme Rapidity in Staccato and Runs; More Attention Given to Octaves; Pupil's Task Steadily Increasing in Difficulty—Greater Requirements in Regard to Touch, Interpretation, Color and Phrasing.

GRADE 7.

Pieces and Etudes by Saint-Saëns, Henselt, Kullak, Chopin, Mendelssohn, Raff, Alkan and others. These, Making Greater Demands upon the Pupil, advance his Technical Skill to the Highest Efficiency and Insure Ability to Interpret the Greatest Works for the Piano.

Several Opinions.

WILLIAM H. SHERWOOD: I am happy to state that the "National Graded Course" is remarkably adapted to the needs of teachers and students of music. Your claim in regard to the excellent grading of the studies is a thoroughly just one. I do not think that I have ever seen as good a succession of topics and exercises arranged as they are from the beginning on, using the best kind of materials from all sources and without any superfluous pages.

WILSON G. SMITH: I have been particularly impressed with the practical value and uniform excellence of the "National Graded Course."

AD. M. FOERSTER: The "National Graded Course" is destined to hold a foremost position among the works of its class. I do not know of a better work, one containing a more interesting and valuable selection of studies and pieces for the various peculiarities to be mastered. A list of desirable pieces that may be added to each part, if found necessary, is given in each grade, also definitions of all musical terms used in this work. The work is bound to find favor with thoughtful teachers and students.

O. R. SKINNER: I like the "National Graded Course" much better than any other work I am familiar with. The editing seems to be thoroughly well done, and the print leaves nothing to be desired.

(Want of space alone prevents printing the opinions of hundreds of well-known teachers in all sections of the United States and Canada.)

It Will Help YOU in Your Teaching.

Because

- It embodies the work of the most eminent pianists and teachers in America.
- It can be readily adapted to your "method," no matter what that may be.
- It is the LATEST work of the kind.
- ALL of the studies are carefully annotated, fingered and edited.
- It is the most carefully graded of any course before the public.
- It begins at the beginning of study.
- It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.
- It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.
- Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

This complete work (7 grades) together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course," will be sent upon request, subject to examination and approval—without any obligation to purchase.

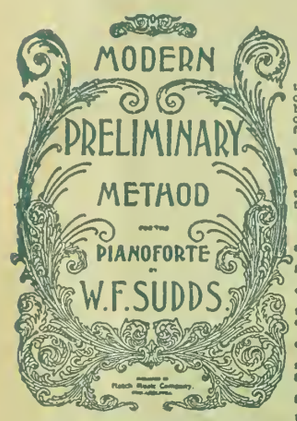
MODERN PRELIMINARY METHOD
FOR THE PIANOFORTE

Embodying the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation



By W. F. SUDDS.

As its title implies, this Method is modern, contains the newest ideas and their practical application. The bulky and voluminous instruction book is a thing of the past. The Method of to-day deals with *more* subjects than its predecessors, but deals with them in a terse and effective manner. It recognizes the importance of practical exemplification of the principles involved, but wisely leaves the amplification of various points to future study.

Among the many excellent features of the **Modern Preliminary Method**, we direct attention to the following:

The Rudiments are very progressive and explained with such clearness that the pupil cannot fail to comprehend them.

The Various Fingerings are clearly set forth and are accompanied by illustrations, drawn and engraved expressly for this work, showing the movements of finger, hand and arm.

The Correct Principles of Touch and Technic are illustrated by examples.

The Scales are introduced in an effective manner.

Proper Use of the Pedals, a matter generally disregarded, is given particular attention.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

Five-Finger Exercises are judiciously used, but not in the usual enormous quantity that disgusts and discourages the pupil.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a Complete Preliminary Method—a work which cannot fail to interest both the practical teacher and the earnest student.

MODERN PRELIMINARY METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates on the best grade of music book paper.

Half Cloth Binding. Price, $1.00.

Magnificent Editions of Standard Piano Methods

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of national reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

Köhler's Practical Method for the Piano. Op. 249. Vols. 1-2-3. Paper Binding. Each $ 75
Revised, Fingered and Annotated by Thos. a'Becket.

The only ANNOTATED edition; the only edition in which the PHRASING is presented in accordance with the latest and most advanced ideas; the only edition that has had a comprehensive and thorough revision.

Löw's Practical Four Hand Piano Method. Vols. 1-2 . . . . . Paper Binding. Each $ 75
Revised, Fingered and Annotated by Wilson G. Smith.

Designed as a companion to all books of instruction for the piano, this method is a favorite with teachers. The perfect ensemble players are those who blend their individual characteristics in order to form a perfect whole, and this important accomplishment may be obtained by careful and conscientious study of Löw's Method.

Wagner's First Instructor for Young Beginners. Vols. 1-2 . . . Paper Binding. Each $ 75
New and Revised Edition. English and German Text.

This work, designed for the instruction of young beginners, presents a thorough and exhaustive course for the systematic training of children. The original edition (published with German text only) is a great favorite with leading German teachers in this country, while it holds a commanding position in Germany where it is a recognized standard not only for children, but for adults who take up the study of the piano.

All works included in the "HATCH EDITION" are printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Ask for the "HATCH EDITION," and take no other if you want the best.

KULLAK'S SEVEN OCTAVE STUDIES
From the School of Octave Playing. Op. 48, No. 2.

Revised and Annotated, with Introduction and Practical Directions for Study, by

WILLIAM H. SHERWOOD.

While numerous exercises for the practice of octaves have been presented to the musical world by virtuosi and masters, Kullak's is the only method or "School" of octave playing that has become a standard. But good as they are in their original form, it is remarkable how much the usefulness of these studies has been enhanced by Mr. Sherwood's revision and annotations. A broad foundation embodying the general principles involved and the method by which the end may be most satisfactorily attained is laid in his Preliminary Remarks; instructions and suggestions for technical preparation are given in his "Notes on the Studies;" each study is *treated in detail*. Each movement of the hand and arm is designated by an ingenious device and these characters, elaborately used throughout the text, show the student *exactly* how the hand should approach and leave the keyboard in performing various passages. The progressive teacher will appreciate the importance of Mr. Sherwood's editorial work, and especially so since he gives, for the first time, his system of of instruction in octave playing.

Regardless of the great expense involved in the preparation of this edition, the price is the same as that charged for the ordinary reprint.

Paper Binding. Price, $1.25.

Magnificent Editions of Piano Studies

Particular attention is called to the "HATCH EDITION" of the works named below. No expense has been spared in the preparation of this edition. While all have been carefully edited by teachers of national reputation, prices have not been increased. The best is, therefore, offered at the cost of inferior editions.

BUSSLER'S PRACTICAL HARMONY
Newly Revised and Corrected Edition
Authorized Translation from the Third German Edition by N. GANS.

Without exception, the best and most practical work on this subject ever published. The author is a noted German theorist, whose works are known, used and held in high esteem at all the most prominent European colleges and conservatories. The demand for PRACTICAL HARMONY has been so great that three revised editions have been printed in Germany. Ours was translated from the third German edition, by a writer selected by the author. It is, as its title indicates, a thoroughly practical work, embracing the latest and most approved methods. It is simple, is illustrated by practical examples, and is eminently suited for a self-instructor. Its price brings it within the reach of all.

For class instruction or for self instruction, Bussler's Practical Harmony is unequalled. It makes the study of harmony easy, rapid and entertaining.

Cloth Binding. Price, $1.00.

THE HARMONIZING OF MELODIES
A Text Book for Students and Teachers
By HENRY C. BANISTER.

The harmonizing of melodies, generally termed the knowledge of harmony, is one of the most practical applications of the knowledge of chords and their treatment. One may know the meaning of a number of words and still be unable to construct a sentence; he who lacks the ability to use chords in harmonizing a melody is in a similar position.

"Harmonizing of Melodies" will prove a most helpful aid to the student of harmony. It is extremely practical and abounds in examples which will readily be understood. No point has been overlooked, and all important subjects are treated at considerable length. Various methods of handling the same melody are shown, and valuable information as to the best choice, with reasons for the selection, are given. Many excellent hints as to taste and ornamentation, culled from the experience of the writer, are included.

Paper Binding. Price, 50 Cents.

DICTIONARY OF MUSICAL TERMS

100 Pages. By STAINER and BARRETT. 6 x 9 Ins.

Compressed from the Imperial 8vo Edition, by K. M. ROSS.

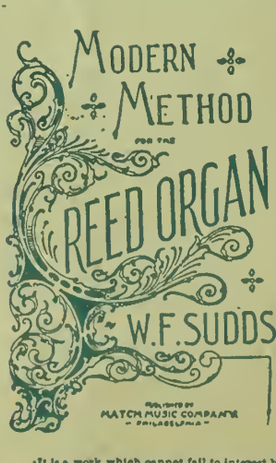
We take pleasure in presenting a compressed edition of Stainer and Barrett's valuable work. Mr. K. M. Ross, in his preface, says: "In reducing this book from the author's larger work, we have endeavored to omit only such terms as are not in general use, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits. To the general public it is hoped that this edition will be found of practical utility."

"Dictionary of Musical Terms" is a neat and attractive book. It is offered at a nominal price with the hope that it may prove of incalculable value to those in need of a handy reference book.

Paper Binding. Price, 25 Cents.

Modern Method for the Reed Organ

Embracing the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation; also Containing Various New and Important Features, such as Registration, Stop Nomenclature, Adaptation of Piano Music, etc., etc., Not to be Found in Any Other Work of the Kind



By W. F. SUDDS.

As the title implies, this method is modern, the newest ideas, and their practical application, governing its compilation. It treats all subjects in a terse and effective manner.

Among the many excellent features of the **Modern Method**, we direct attention to the following:

It begins with Dictated Lessons.

The Rudiments are explained with remarkable clearness.

It is Carefully Graded.

It is sure to Awaken the Musical Instincts of the pupil without smothering the soul with too much drudgery.

The Fingering is the so-called Foreign, thus according with all the better class of modern musical publications for either Organ or Piano.

It contains a complete treatise on registration as applied to the modern Reed Organ; also full information and comparison in the matter of Stop Nomenclature.

It is the only work of the kind treating the subject of **Adapting Piano Music to the Reed Organ.**

Every variety of Touch is clearly set forth, accompanied by illustrations (drawn and engraved expressly for this work), showing the movements of finger, hand and arm.

The Scales are introduced in an effective manner.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a work which cannot fail to interest both the practical teacher and the earnest pupil.

MODERN METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates and on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

Music Publishing.

(WRITE US FOR DETAILED INFORMATION.)

We have every facility for the prompt and satisfactory publication of any musical work—no matter whether it is a piece of sheet music or a large book. Our facilities are unsurpassed and there is no kind or style of work in our line which we cannot do in the very best manner at the least possible cost. We make an engraved sheet music plate (8 x 11—piano, or voice and piano) for $1.50. This quotation is for high-class work. We make engraved plate titles costing from $4.00 to $12.50, depending entirely upon the amount of work put upon the plate. Our $4.00 title is very much superior to the majority of titles used on sheet music, and unless the author desires an elaborate page, this will give excellent satisfaction. When a higher priced (more elaborate) title is desired, is is only necessary to name the limit. We will give all the work that the amount named will pay for. We make all kinds of illustrated titles, including crayon drawings, reproductions of line drawings, half-tone reproductions, combinations of line drawing reproductions and half-tones, combinations of half-tones and electrotypes, but as the cost of these titles depends upon the expense of design and amount of work, it is impossible to make an intelligent or complete price-list. If sample, showing style desired, and full description is sent us, we will make and submit complete estimate. Combinations (reproductions of pen drawing and half-tone or electrotype and half-tone, printed in colors) are very generally used on popular issues of the day, while standard works, and those designed principally for teaching purposes, are usually issued with engraved plate titles.

Our printing is all that could be desired by the most critical and is equal, in every respect to the finest European press-work.

Sheet Music. Below we print a convenient price-list showing cost of publishing sheet music with engraved plate titles. This list is based upon a $4.00 title, but if a more elaborate page is desired, the total cost can readily be arrived at by adding the additional amount.

PIECE WITH THREE PLATES AND TITLE.

250 COPIES.		500 COPIES.	
3 plates and engraving @ $1.50	$ 4 50	3 plates and engraving @ $1.50	$ 4 50

Printing 250 copies	3 90	Printing 500 copies	6 25
Folding 250 copies	16	Folding 500 copies	32
	$18 59		$24 12
Each succeeding edition of 250 copies, $7.09.		Each succeeding edition of 500 copies, $12.62.	

For a Piece with Six Plates and Title, add $1.50—cost of extra music plate.

NOTE.—Upon application, estimates will be furnished for pieces with greater number of plates; also for larger editions than 500 copies.

Orchestra Music—Band Music. As the instrumentation for orchestra and band publications varies, it is hardly possible to make a list which will cover this class of work. Upon receipt of manuscript and full instructions, we will make up and submit complete estimate for plates and any number of copies desired.

Music Books. We are prepared to do all kinds of music book work. Upon receipt of copy and full instructions (sample book, showing the style of work desired, quality of paper, style of binding, etc., will be of great assistance in illustrating just what is wanted), we will make up and submit complete estimate for plates and any number of copies desired.

Copyrights. When requested to do so, we attend to entering copyrights. It is highly important that this matter should have prompt and intelligent attention. For each entry, including certificate, we charge $2.00—$1.00 for entry; the balance ($1.00) covers our fee and expenses. For entry, without certificate (certificate can be obtained at any future time upon payment of an additional 50 cents), we charge $1.50—50 cents for entry; the balance ($1.00) covers our fee and expenses.

Hatch Music Company's
LATEST PUBLICATIONS.

PIANO SOLOS.

Blum, O. Bessie's Schottische. Grade I, . . . 25
Valuable as a first grade study of accidentals.

Blum, O. Blind Man's Buff Galop. Grade I, . . . 25
Pleasing first grade composition, introducing grace notes and leger lines.

Blum, O. In the Grove Schottische. Grade I, . . . 25
Pretty scale effects are introduced.

Blum, O. Joys of Life Polka. Grade I, . . . 25
Contains a variety of pleasing and useful figures.

Blum, O. Nimble Feet Polka. Grade II, . . . 25
Neat wrist movement is involved in playing this pleasing polka.

Blum, O. Oh! Such Fun Waltz. Grade I, . . . 25
Excellent for study of easy thirds and sixths.

Blum, O. Playing Soldier. March Rondo. Grade I, ... 25
Lies well under the hands for young players

Blum, O. Young Cavalier's March. Grade II, ... 25
Bright two-step movement, using short chords.

Fink, W. Op. 295, No. 7. Lark's (The) Morning Song (Der Lerche Morgenlied). Grade II, ... 25
Cheery composition, introducing grace notes and *quasi* trills.

Fink, W. Op. 295, No. 2. May Showers (Maienregen). Grade II, ... 25
Blithesome and melodious phrasing study.

Fink, W. Op. 295, No. 4. Merry Stories (Lustige Geschichten). Grade II, . . 25
Bright little *scherzo* in triple time.

Gurlitt, C. Op. 117, No. 25. Brave (The) Soldier (Der tapfere Soldat). Grade II, ... 25
Neat and useful military sketch.

Horváth, G. Op. 31, No. 2. Alpine Idyl (Alpen-Idylle). Grade III, ... 35
Graceful and pleasing theme, repeated in broken octaves.

Horváth, G. Op. 20, No. 10. Jolly (The) Romp (Der Springinsfeld). Grade II, 25
Joyous and extremely melodious rondo.

Horváth, G. Op. 20, No. 6. Little (The) Drummer (Der kleine Tambour). Grade II. 25
Example of dotted notes; pleasing effect.

Reinhold, H. Op. 39, No. 4. Waltz. Grade II, ... 25
Interesting in form and tone. Melody is transferred to left hand.

Streabbog, L. Op. 288, No. 6. Galop. Grade I, ... 25
Blithesome and sparkling. Easy to play.

Streabbog, L. Op. 288, No. 5. Gavotte. Grade II, ... 25
Delightful *staccato* movement; player should be able to stretch *arpeggio* octave.

Streabbog, L. Op. 289, No. 1. March. Grade I. 25
Gay little 6-8 march without octaves, and in the key of G.

Streabbog, L. Op. 289, No. 4. Mazurka. Grade I. 25
Key of G. Good rhythmic study; particularly pleasing.

Streabbog, L. Op. 288, No. 2. Polka. Grade I, ... 25
Pretty *staccato* effect—very pleasing. No octaves.

Streabbog, L. Op. 289, No. 5. Schottische. Grade I, ... 25
Keys of F and Bb. Pretty example of *staccato* touch.

Streabbog, L. Op. 288, No. 1. Valse. Grade I, ... 25
Nice little study of accent and light finger passages.

PIANO DUETS.

Horváth, G. Op. 27, No. 1. Jubilee Polonaise. 50
Stately composition with an effective theme in secondo.

Horváth, G. Op. 27, No. 3. Chime of Bells. Gavotte 35
Graceful, pretty and easy to play. The second part has its share of the melody.

Horváth, G. Op. 27, No. 4. Hungarian Melody 35
Very striking; slow and fast movements form strong contrast. Each part has its share of work.

Wachs, P. Light Heart (Cœur Léger!) . . 50
In jolly mood—somewhat similar to a galop. The secondo carries most of the melody. Good exhibition number.

SIX WEEKS SUMMER SESSION
OF THE
Clavier Piano School
IN NEW YORK CITY

THE VIRGIL CLAVIER METHOD

SPECIAL TERM
FOR TEACHERS AND PLAYERS

BEGINNING
July 8th, 1901, Ending August 17th

A. K. VIRGIL
DIRECTOR

EXAMINATION AND ENROLLMENT DAYS
Friday and Saturday,
July 5th and 6th

Further particulars by addressing the

Clavier Piano School
26 West 15th Street, New York.
After May 1st, Address, 11 West 22d St., New York.

N. B.—The Clavier Piano School will be removed about May 1st to No. 11 West 22nd Street, Near Fifth Avenue, its new, greatly enlarged and improved quarters, where the Summer Session will be held. The location is central and easily accessible from all sections of the city and all railroad stations.

CHAUTAUQUA, N. Y.
SUMMER SCHOOL OF MUSIC,
July 8th to Aug. 16th, 1901.

Dr. H. R. PALMER, Principal.

FACULTY:

WM. H. SHERWOOD, Piano.	L. S. LEASON, Harmony.
I. V. FLAGLER, Organ.	MISS GEORGIA KOBER, Piano.
J. HARRY WHEELER, Vocal Culture,	MRS. E. T. TOBEY, Piano.
SOL MARCOSSON, Violin.	MRS. A. B. ROBERTSON, Harp, Mandolin, Banjo.
CHAS. E. ROGERS, Orchestra.	J. MILTON BLACK, Asst. Harmony.
HARRY B. VINCENT, Accompanist.	H. R. PALMER, Methods, Harmony, etc.

FOR PARTICULARS, ADDRESS
CHAUTAUQUA GENERAL OFFICES,
CLEVELAND, OHIO.

WM. HORATIO CLARKE,
HARMONIST,
Lock Box 101, Reading, Mass.
—AUTHOR OF—
"The Harmonic School for the Organ,"

MAY NUMBERS READY.

FREE TO TEACHERS

Who Have Not Received Sample Copies.

We shall be pleased to send a sample copy of each of the following four periodicals free of charge to music teachers who send their professional card with their request to

Musical Record and Review, - 451 Washington St., Boston.

Musical Record and Review,

50 Cents a Year.

May Number 5 cts., contains $1.00 worth of music; A new song by E. R. Kroeger; piano solo by C. E. Van Laer; Soldiers' Memorial Hymn for men's voices by William Arms Fisher; special articles by W. J. Henderson, Annie C. Muirhead, Frederic Field Bullard, Frank H. Marling, George A. Burdett, William Wilson, Percy Goetschius, Mus. Doc., Albert Hardy; portraits and biographical sketches of Carl Goldmark, C. E. Van Laer, Anton Dvorak, J. C. Bartlett; book reviews, musical notes of the world, rare prints, etc.

SONG EDITION

75c. a Year.

May Number 10 cts., contains $1.90 worth of music; portrait and biographical sketch of Louis R. Dressler; songs by Louis R. Dressler, Ferdinand Dunkley, Frank H. Brackett, Charles F. Webber, Adolf Frey.

The music is identical with regular sheet music edition, being printed from the same plates.

PIANO MUSIC EDITION

75c. a Year.

May Number 10 cts., contains $2.00 worth of music; portrait and biographical sketch of William H. Sherwood; piano solos by William H. Sherwood, Harvey Worthington Loomis, C. E. Van Laer, G. Bonaldi.

The music is identical with regular sheet music edition, being printed from the same plates.

Choir and Choral Music Edition.

75c. a Year.

May Number 10 cts., contains 32c. worth of music; portrait and biographical sketch of Charles Fonteyn Manney; hymn anthems by Charles Fonteyn Manney, C. E. Van Laer; anthem by Nathaniel Irving Hyatt.

CLUB RATES: The *Musical Record and Review*, 108 pages of music for one year, with any one of the above music editions, (300 pages of music a year), $1.00; with any two (492 pages of music a year), $1.50; with all three (864 pages of music a year), $2.00.

Orders for sample copies and subscriptions received by the leading music dealers everywhere.

Modern Foundation Studies

—In—

Piano Playing

Graded for Beginners.

By W. F. SUDDS.

The great progress made in the art of piano playing during the past few years has, to a large extent, rendered older books of instruction obsolete. All good works contain the proper material, but its arrangement, and the method of presenting it to the immature musical mind, often leaves much to be desired. Improvement of these particular features—the arrangement and method—has been the guiding thought in the preparation of "Modern Foundation Studies."

It is a work for beginners, and matters of vital importance, such as formation of the hand, methods of touch and tone-production, are treated in detail. In addition to the comprehensive treatment of these subjects and numerous musical examples, exact positions and movement of the hands in the proper performance of the various touches are profusely illustrated. This feature will be appreciated by teachers.

The work contains foundation material on which the most elaborate superstructure may be safely built. The music has been selected with great care, to clearly illustrate the point under consideration in an attractive manner, without wearying the student.

Paper Binding. Price, $1.00.

MODERN STUDIES
In Phrasing and Interpretation.

By W. F. SUDDS.

It is now very generally admitted that a separation of the mental and physical features is the best plan for imparting instruction in the study of music. Both may be studied at one time, but it is a mistake to suppose that mental training is the result of physical effort.

To insure proper performance of a composition, the mental concept must be perfect. A pianist possessed of brilliant technic, acquired only by long and faithful practice, may mar a good work because of inability to interpret the author's ideas, just as one may recite the *words* of a poem without a proper appreciation of their meaning and without a correct grouping into phrases. To thoroughly enjoy a musical work one must be able to analyze it, and "Modern Studies in Phrasing and Interpretation" presents the means of doing this in a most compreheusive and intelligent form.

Want of space prevents a detailed description, but we shall be glad to send the work subject to approval, so that any one may test our assertion that this is a thoroughly modern and practical exposition of the subject.

Paper Binding. Price, $1.00.

Guide to Practical Musicianship

For Students of Piano, Organ or Violin.

By A. J. GOODRICH.

In his new system, the author does away with the old and slavish process of rote memorizing, *i. e.*, playing notes and repeating them until memorized, without attempting to master the composer's design; and he illustrates the means by which intelligent students may, in a comparatively short time, master any composition that does not present technical difficulties beyond their conception.

The results are three-fold: (1) A great economy of time; (2) An intelligent understanding of compositions; (3) An improved memory.

Professional musicians, practical teachers, amateur musicians and students of music have long felt the need of some improved method that would reduce the time required to memorize a composition, and Mr. Goodrich presents a method that he subjected to a thorough and exhaustive test, with eminently satisfactory results, before putting his ideas in shape for publication. It is the author's firm belief that, by its aid, compositions may be mastered in from one-quarter to one-half the time required by old systems.

Every musician needs a copy of "Goodrich's Guide to Practical Musicianship."

Paper Binding. Price, $1.00.

THIS SYSTEM IS COVERED BY COPYRIGHT.

MUSICAL KINDERGARTEN FOR THE PIANOFORTE

ASSOCIATE TEACHERS
MRS. GRACE YEAGER,
MISS KATHERINE SCHUSTER.

By FANNIE CHURCH PARSONS.

This system is most simple in outline and material.
It is most comprehensive and complete.
It is essentially a tone system teaching the children how to write music "by ear."
The materials used are, while very durable, most suggestive of the beauty of the art of music.
The lessons are equally instructive to either child or adult beginner.
The students do much real piano work, thus no intermediate course is necessary.
The stories and songs do not savor of the grotesque, but tend to refinement and culture.

The price for normal work, including materials, is within the reach of all.
You can take the work by mail, or of a normal instructor, or of Mrs. Parsons personally.

Correspondence should be addressed to **Musical Kindergarten Company,**
Office, 6 W. Chicago St., Quincy, Mich.

STUDIO, 510 HANDEL HALL, CHICAGO, ILL.

Characteristic Scenes and Sketches

A COLLECTION OF 81 PIANOFORTE PIECES

Compiled from the Masters and Modern Writers by

MARI RUEF HOFER.

Bound in limp cloth. Price, $1.25.

The material in this collection is especially desirable for teaching purposes, as they afford many phases of practice. They are particularly well chosen and represent a wide variety of subjects. Another attractive feature is that with few exceptions they are only one and two pages in length and, as the heading implies, are characteristic, "story-telling" pieces.

The well-known composers represented are Bach, Handel, Haydn, Beethoven, Mozart, Schubert, Schumann, Mendelssohn, Brahms, Reinecke, Jensen, Rubinstein, Grieg, Chopin, Heller, Karganoff, Hollaender, Gurlitt, Gayrhos, Foerster, Rheinhold, Kullak, Weber, Loeschhorn, Parlow, Gilchrist, Schoenefeld, Oldberg and others.

The pieces grade from easy to medium in difficulty. Most of them have been edited by Mr. Calvin B. Cady.

DON'T IDLY DREAM, BUT DO!

Don't idly dream! There is no time for dreaming.
No time to drone and loiter on the way,
With opportunity each day is teeming,
That, till you deign to waken, will not stay.
Be then alert, for all around you calling
Are voices, to press onward, heard by few;
Heed them, and venture, with no fear of falling—
Don't idly dream, but do!

Don't idly dream! Great deeds await your doing,
Deeds that will live, and you in them may live.
Noble your thoughts, each day your strength renewing,
Be you but true, that strength your faith shall give.
Life striving round you bids you, then, awaken;
Look where the future grandly stands in view.
In God press onward! Be your trust ne'er shaken!
Don't idly dream, but do!

—*Boston Globe.*

TRAINING THE PUPIL FOR PUBLIC PERFORMANCE.

AIMEE M. WOOD.

Among an audience seated comfortably at the verage pupils' recital, and more or less critically nclined, there are few who realize or appreciate the mount of work, the vicissitudes, and the strain and tress involved on the part of both teacher and players, n the preparation of the program which usually seems, n the opinion of most of those present, easily arranged nd execu'ed. Many teachers have attained success nd prominence through perseverance in the matter of ecital-giving; others are not including recitals by ieir pupils in their routine of work, either having ever given them, or become discouraged, after equent efforts yieldi g little return commensurate ith the time and labor expended.

"For my own part," complains one who has thus ersevered, and his words find echo with a majority f teachers, "I have almost always found pupils' oncerts severe afflictions; for, apart from the trial to ne's nerves, it is extremely disappointing that one's ost promising pupils never play their best, and that ose musically far inferior get most of the applause mply because, being too cold-blooded or too conceited to feel nervous, they make showiness and dash' cover all shortcomings; also, there are few ings more irritating and disconcerting to the earnest acher than for people to come up at the close and wish effusive congratulations on the 'talent' and progress' of those very pupils he feels most dissatfied with. And then the fond mammas come round d expect one to praise a 'dear little Mary's,' or Fanny's,' or 'Lizzie's' performance (woe betide ou if you don't!), and to echo 'how quickly the arling child gets on,' when one knows all the time e is a lazy little witch, who won't practice and oesn't advance one inch. On the whole, one is mpted on such occasions to wish pupils' concerts at richo, or, as the Germans more poetically express it, n the land where the pepper grows!'"

There are many arguments in favor of these times trial for teacher and pupil, which far outweigh jections urged by teachers who are not giving citals, the most common being that the work involves departure from routine, taking the pupil's attention om the usual course of study; the nervousness of e pupil during performance before others is also ed, and these, with a third, the protest of parents ainst the time occupied in preparation, seem to clude lesser obstacles. But the question remains, ould not every pupil be able to play from memory fore his friends at the shortest notice, and more pecially at the recital for which he has been carefully illed, without the fright and apprehension which ually accompanies the performance? And as it ems too often evident that he is not, may not the lt lie in the system of training?

A Successful Method.

At a class recital recently given, the problem had been solved in the case of the pupils who took part. As the time came to each to appear upon the platform and play before the large audience, there was manifested only a calm confidence, and an entire absence of self-consciousness, both before and during the ordeal. The youngest, a child of seven, played the Spanish Caprice, by Schmoll, with an abandon that fascinated the listeners, while the oldest pupil, a young man of eighteen was recalled twice after his number, the Rhapsodie, No. 10, of Liszt. Each piece on the program was artistically and charmingly performed, and each pupil, save the lad who had played the Liszt Rhapsodie, was appearing for the first before a large audience. The hall was filled because the recitals have become popular and interesting to this extent. There was no spiritless playing, and the pupil seemed to have no thought of self, nor of the audience save to make them enjoy the piece.

The system under which these students are trained was found upon inquiry, to be an outcome of thought and experience on these lines. A modest studio held the listeners at the initial recital years before; the secret of the teacher's present success is simply that he is attentive to new ideas, both of his own and others, tests them, adopts the best, infuses his pupils with his own magnetism, suggests and describes, taking for granted that all must be done, but neither supports nor leads. One principle is fundamental: The nerve devitalization which is made the basis of each movement from the first lesson onward. Relaxed muscles in the technical training are secondary and tributary to this training of the nervous system, which constantly goes on under the wise eye of the teacher, its results being apparent in the concert work of the pupils, where the lad of eighteen manifests the repose of a mature artist, and the child of seven, by nature of a diffident and sensitive temperament, has been trained to flower-like confidence and unconsciousness of aught but the giving of pleasure. Fright and self-consciousness while playing in public have too long been considered an indication of the musical temperament. Rather, they denote that the player has never been taught the value of right nerve conditions, a force at the helm which insures ease and confidence.

The successful pianist is the outcome of this method, in which the preparatory work from the first lesson, is included with, not considered apart from, the usual routine, overcoming thus the first and third objections, as given by teachers who are not adopting pupils' recitals in their work. The clavier is used as an indispensable aid in the building up of a technic, developed step by step, from the merest finger action to phenomenal velocity in trill, scale and arpeggio playing; and in memorizing, the clavier is the reliable factor, the method of work with the concert piece being as follows: The notes are first studied in sections, apart from the keyboard, until the whole can be written upon music paper by the pupil, without referring once to the printed sheets, and without his having played, or even heard a note of the piece. While this method has been regarded askance by teachers, on account of the time required, it will be found that practice brings surprising facility until at length it proves a much quicker and an absolutely surer way than the old one of memorizing at the keyboard. At the clavier the work goes on, without the aid of the ear, the practice being slow, and still in sections. After the piece is brought gradually to the proper tempo, it is found to be committed so thoroughly that the pupil is able to begin at any part or given phrase, or even to execute it backward measure by measure, from the end to the beginning. Touch, expression and shading have been acquired with the memorizing apart from the instrument, and also at the clavier keyboard.

Going to the piano for the first time with the piece, it is played, perhaps, a trifle mechanically at the outset, but without notes, without technical errors, and at the proper tempo, the expression, shading, touch, etc., needing only the after tonal-coloring, together with a gradual deeper conception of the content, the composer's meaning, and the power to convey the latter accurately to the listener.

All this, however, might avail little in enabling the performer to do either himself or the teacher credit at the final test, were the preparatory work to be carried forward in the old way, leaving the student untrained in conditions and habits of mental repose.

Advantages to the Pupil.

The desire to give pleasure by playing, and to perform easily and well for others, becomes the greatest incentive to work, if the results keep pace, even to some degree with the aims. It is the break-down which discourages, as well as the constant dread and timidity, which is the outcome of the methods of preparatory work. It may be noted that the quality of the early mental training a player, whether amateur or professional, has received, may be determined at once by the manner at the instrument.

There are benefits which the pupil derives when the work is made part of the regular routine, and adapted in practice to his needs, which are often at once apparent, others following in a gradual, steady development. Train a child for concert work from the beginning by correct ways, and test after test in playing before others will further aid in developing the qualities which make the successful performer; and in addition to this development, and including incentive for the work, the drill establishes the habits of thoroughness, of perseverance, patience, of self-reliance, of concentration, and of a self-poise which will be found manifesting itself in lines outside the music-life and endeavor.

An advantage even to the youngest student will be found in "Criticism Afternoons," when each pupil is obliged to play, even if it be only a scale, arpeggio, or finger exercise. The others listen attentively. Each is called upon in turn, and rises as at a school recitation, giving some opinion or criticism of the performance. As the work upon the concert pieces progresses, they are played by portions or sections, and subjected to criticisms by the class, and these often prove of a remarkably discerning nature. The teacher occupies the position of Corrector of Criticisms, and faults or lack of discernment in the latter are pointed out and set right. Thus the critical faculty is developed in the student.

ONE OF MENDELSSOHN'S PECULIARITIES.

It was while studying in Leipzig that I learned of one of Mendelssohn's peculiarities. Playing to my teacher, Herr Wenzel, one day, the Variations of Mendelssohn, I pointed to the closing cadence of the theme and remarked that it was written slightly different from the same cadence a few measures before this. Herr Wenzel seemed pleased that I had observed this, and said that it was Mendelssohn's custom to write a passage or a phrase in two different ways, when it appeared twice in the piece; and he instanced several phrases from the Songs Without Words, which I had also taken notice of. "Yes," said Herr Wenzel with a peculiar smile, "it was Mendelssohn's peculiarity to write the same thing in two different ways, when it occurred twice in the piece, but when it occurred only once and he wanted it in two different ways, what did he do?" That was a problem beyond my powers of solution, so after enjoying my perplexity for a few moments, he said: "He published it in Leipzig one way and in London the other way."—*Madame A. Pupin.*

THE Teachers' Forum

Conducted by N. J. COREY

This department is inaugurated for the purpose of uniting the many teachers who read THE MUSICIAN in a bond of professional brotherhood. It is to be their medium for the interchange of ideas, experiences, encouragement, discouragement and difficulties. The fullest correspondence is invited. The questions will be answered and suggestions given by the conductor and the contributions of those who wish to gain new light or to present their methods will be printed. We propose helping ever teacher who will permit us to do so; we intend to do everything possible to overcome the isolation with which you are burdened. Will you co-operate with us?

No conditions are attached; the department is open to *all* MUSICIAN subscribers. Address all communications to the Teachers' Forum, care THE MUSICIAN, Eighth and Locust Streets, Philadelphia, Pa Do not hesitate, but be among the first to ask help, or to give some other teacher a suggestion. Let us know what you would like to have treated in its columns.—Editor of THE MUSICIAN.

"The gates of art are closed unto none; who so entereth thereat, though he seeketh perfection, yet shall he not find it."
—*Ancient Egyptian Papyrus, 3580 B. C.*

TEACHING PROBLEMS.

It is a great pleasure to note the large amount of intelligent interest which this department in THE MUSICIAN has excited. Both the questions and the suggestions that have been received indicate capacity, scholarship and earnestness. It augurs well for pupils and for art when teachers are evidently so desirous of giving their very best and highest ability to their chosen profession. And it cannot fail to greatly stimulate those in charge of the Teachers' Forum, and to send them to their work with constantly renewed and increasing enthusiasm. It is a pleasure to feel oneself in touch intellectually with those standing upon a common ground and serving a common cause, the cause of the present, and thereby, the future development of Musical Art in America. There is every reason to hope and to believe that this century will, at its close, see the blossoming of a fresh flower upon the plant of our national growth, and that commerce and invention will be supplemented by the higher forms of civilization only possible to a community where wealth and prosperity unite to secure a certain degree of the leisure essential to the cultivation of these forms. The fusion of races and the originating of conditions dependent thereupon and upon comparatively novel forms of government, should result as happily along art lines as it has along those antecedent to them, and America should assume a dominant position here as elsewhere. In order to secure this, those of us who are working in the beginning of this probably most fruitful epoch, must lay our foundations broad and deep. Elementary they may be, in a certain sense, but elements are basic and more or less unalterable. Let us then be patient in our apparent day of small things, and never allow ourselves to be discouraged by an apparent apathy which seems to surround us. There is soil to prepare before even planting can begin, and the process is long, toilsome and slow in its awards. Let us believe that it will eventually prove effective and none of our endeavor will seem so difficult, nor fail to carry farther than if we worked without the vision of what is to come. And we must carry the same spirit into our contact with the individual pupil. There will be disheartening problems, and, now and then, insoluble ones, but we shall accomplish something in every instance. And it is a help to all when we work together, as we are trying to do in this department. It is not possible, much as we should like to do so, to send individual answers personally to correspondents, nor to assume the full function of a teacher and map out exhaustive courses of study, etc., to those who honor us by consulting us. But as much specific information as lies in our power, along general lines, will be furnished, and matters questioned or suggested will be treated as themes whenever possible that may interest all readers.

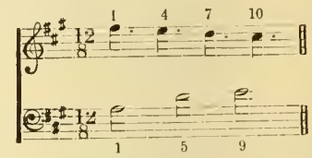
A recent correspondent asks: "How far should one go in a term of twenty-four lessons in teaching a child piano or organ (age from eight to twelve, or from twelve to twenty), who has never taken lessons? Besides the lessons, how much of scales, chords and harmony should be given? Should pieces be given? How many and give names?" This correspondent asks more than can be answered. These are matters which depend upon the ability and the temperament of the pupil. Some children, as well as some older persons, are as receptive as others are careless, indifferent or incapable, and some who are really intelligent and earnet, have minds which move slowly, though effectively. Others apparently bright are not retentive, and must therefore retrace steps they seemed to take easily. A hard and fast system cannot fail to work detrimentally. Some pupils will go too far, others not far enough, under such a system, and both courses are fatal to proper results. Keen and patient study must be made as to the personal ability of each pupil, from lesson to lesson, and the work prescribed must be entirely governed by the revelations of such study. Melody is the charm, almost always, which secures a child's interest in music. Therefore, exercises should be as melodic as possible and little pieces used to hold the will captive and secure the pupil's desire to practice. As a general system of instruction upon which to base a course of study, there is nothing better than the Graded Course. It is carefully graded in numbers, and a list of supplementary teaching pieces is given in each number. If the work is too progressive for some slow pupils, it can be supplemented by carefully selected pieces corresponding with the proper grade. Discrimination is needed, however, in the selection of the pieces, a different selection being necessary for a pupil from eight to twelve than from twelve to twenty. Although in the latter case, the original technical ability will be no greater, nor will the hands be more flexible, yet the purpose and endeavor being stronger and clearer, the result will be more swift and the mind more capable of understanding a higher class of composition. A statement of this kind in reality, needs many reservations, however, for conditions and surroundings have so much to do with what a pupil will be able to appreciate. A child of ten that has been brought up in musical surroundings where a great deal of high class music has been heard, will take more kindly to one of Schumann's little pieces than will a pupil of twenty that has never had any opportunities of hearing good music. The musical taste of a pupil needs to be cultivated, step by step, in the same manner as taste is developed in any other department. It is hard for some music teachers to come to a realizing sense of this fact. Children in the public schools are not given Shakespeare to study in their earliest lessons. And yet some music teachers are surprised that pupils do not at once like the music of Bach. It is not natural that they should. The needs of pupils should be studied from this standpoint quite as attentively as from any other. A teacher should keep a record of every successful teaching piece carefully graded, and in this way a repertoire will gradually be accumulated that will be sufficient for most emergencies. It is a good plan to keep a copy of each in stock if possible.

Another correspondent writes: "I would like to present a problem. I have a boy of about twelve years among my pupils. He has only recently come to me, and has had two terms (forty lessons), with another teacher. I gave him second grade studies and he read them quite well, one hand at a time, keeping pretty good time and fingering correctly. But at the second lesson he could play them with only one hand at a time. At the third lesson he still became fearfully entangled when urged to use two hands. He can play the scales one hand at a time. I was patient several lessons, then procured for him first grade studies. He still goes halting when he uses two hands. When I inquired whether he practiced with both, he replied: 'I played them a couple of times that way.' I explained and firmly impressed (so I thought), upon his mind the necessity of practicing with two hands. What more can I do?"

Nothing, save to insist upon no single hand work, assuming, of course, that sufficiently simple music has been selected, and to enlist, if possible, the home authorities in supervising the practice enough to see that it is so conducted. It has been within the experience of the writer that persons gifted musically were unable to learn to play the piano or organ, while becoming proficient upon other wind or stringed instruments, because of this very thing—they simply could not finger with both hands at the same time. This may seem an anomaly, but it is none the less a fact. The pupil just described may belong to this category, or may merely have acquired a bad habit. In the first instance the trouble may be incurable; in the second, the habit must, of course, be cured by the substitution of a better one. We would not be understood to say that reading each hand separately is a bad habit for a beginner, or even at first practicing each separately, when given a new composition or exercise or scale, but the overdoing of it is bad. The double action of the mind and hands should be stimulated from the beginning. If any other solution should occur to any of our readers, we should be very glad to give it place and have presented the problem in exact detail for that purpose.

The same correspondent offers a help to playing different groups for each hand placed over against each other in the same measure, by the aid of a mathematical figure. The figure:

In Variation II of Mozart's Sonata, No. 9, is expressed by our correspondent:



As is stated, the counts will then come as indicated by the figures, and by increasing the tempo, the desired result is to be attained "much easier and quicker than by waiting for the development of the musical feeling," for which it is not to be a substitute, but to which it is to be an aid. Anything which personal experience has proved helpful, may be of practical service to others and we are glad to receive and print it. The fact that such a subdivision has not been found necessary in our own experience makes no difference; the main thing is for others to decide what may be helpful to them in their own work. Our correspondent may gain some self-enlightenment by studying over the fact that in the rearrangement of the Mozart figures, the rhythm is entirely different from what it is in the original, and therefore in reality offers no solution of the problem, but tends to complicate the situation.

The "musical feeling," quoted from us, refers to a perception of the different rhythms which are to be fused in these passages. Rhythm, primarily simple and a musical antecedent in a certain sense, since it implies ordered motion, and ordered motion may exist without melodic or harmonic sequence, is more and more complex in the higher musical forms and calls for more and more intellectuality. Therefore, it is well not to give these forms to those who are not developed to the degree of understanding them without artificial or mechanical aids or devices. Pupils are taken far beyond their depth, in the majority of instances, and we have little original reading or rendering of compositions, because we have little more than a superficial grasp and understanding on the part of those who play them. How many, for instance, who play simply a lullaby, realize or have been taught that the rhythm of a lullaby varies in different countries? That it had its origin in folksong, and these untutored strains took their rhythmic form from the manner in which the children were rocked or put to sleep? Yet would not an explanation of this, and other compositions in the same fashion, be stimulating and helpful to pupils, especially if they should be required to look up what was the custom in each country and then determine the rhythm from it? Is it not our office to call out faculty and give it something whereupon to exercise itself, and are we not apt rather to spare the pupil's endeavor and superimpose upon his or her immature mind our greater intelligence, thereby burdening them instead of benefitting? Many excellent timekeepers show no sense of rhythm whatever; many good (or so accounted) conductors are utterly without appreciation of it. Shall we not then endeavor, from the very beginning, to awaken an interest in it and knowledge of it, based on simple primaries, and sha

we not be careful to keep to the primaries until they are understood? Growth will then be natural and proper, and many difficulties we now encounter would disappear. A little thing done well, rather than a great thing done badly, this is what a pupil is first to accomplish, and lay no irreverent hands upon the larger works until properly trained by mastery of small ones.

We have only space in this issue for one more correspondent, who asks what course of study should be pursued to fit one for being an accompanist? This question suggests the City Beautiful, which lieth four square, "for the length and the breadth and the heighth and the depth of it are equal." Broadly speaking, precisely the same course one would pursue to be a soloist. The same amount of technique, of knowledge of musical form, of grasp of musical literature, and of mastery of the possibilities of one's instrument are essential to each. But—and oh! the significance of this little word—to all these things must be added the tremendous power of sympathy, and the still rarer faculty of self-subordination. Not that the accompanist is necessarily secondary. Indeed, in many modern vocal compositions, the accompaniment is much finer than the song. "You often come across a fifty dollar saddle on a twenty dollar horse," and in writing for several instruments, one is exploited at the expense of the other. But when accompanying the voice or voices, it must be remembered that the musical mood or emotion has been definitely expressed in the spoken word. The tonality of the singer, the utterance, so to speak, of the entire composition has been placed in the realm of the absolute and is under the dominance of that word. The accompaniment must, therefore, keep to the bounds clearly indicated and agree with the singer. And one thing more. The limitations of the singer, or rather of the voice as an instrument, make imperative certain concessions on the part of the other instruments. This has been recognized by all great writers, and a certain amount of liberty in connection with the musical phrase has been permitted in consequence. This varies with each voice, more or less, and the accompanist must therefore learn to understand and sympathize with, not merely the composer, but the one rendering the composition. Every effect must be noted and supplemented. Here again, no course will be so beneficial as practical study with those to be accompanied and observation of their rendering. "Would you be a good writer? Write!" "Would you be a good accompanist? Accompany!" So much for vocal solo work. But, you must "wear your rue with a difference," when you come to the ensemble. There, you are the thread which ties the flowers together, not merely that upon which beads are strung, and you must hold them firmly, the entire bouquet, whether merely a quartette or an entire chorus. Then, you must be prompt, authorative, dominant rather than quiescent or submissive. When accompanying instruments, study the form of expression used in the title. Violin with piano accompaniment is a song without words, with accompaniment; but a sonata for violin and piano is a duet, where first one instrument and then another predominates and both are of equal value, and so of all compositions for instruments with piano.

A competent accompanist is "a thing of beauty and a joy forever." Upon his shoulders rests the responsibility of perfected or of ruined work. No cleverness, no mastery, no genius is safe from or proof against the errors of a bad or even an ineffectual accompanist. And in no department of the musical art is one so unrecognized nor so undervalued. For really good ones, there is an excellent field. But they are so rare that it almost seems that they are like poets, born and not made, or that what Sainte Beuve says of critics may be applied to them, that only one is born in a century! Add then to a usual musical education, special fitness for accompanying by constant practice with voices and instruments, singly or together, and by study of each composition with reference to its dominant part and your own relation to it, and be cheered by the thought of how greatly you are needed and how much you will be in demand, even though the extra degree of excellence in your work over that of the mere performer be not generally recognized. The soloist we have always with us, but the accompanist, of the right sort, very rarely.

Music when thus applied raises in the mind of the hearer great conceptions; it strengthens devotion, and advances praise into rapture.—*Addison.*

AS TO A STUDIO.

CHAS. A. FISHER.

There has been some discussion in the musical papers from time to time as to the propriety of the term. Ought it to be called a "Studio?" Various substitutes suggest themselves, but so far no one seems to have been bold enough to adopt a more appropriate term, and we shall probably be compelled for a while longer to do the best we can with a designation that does not precisely designate.

The purpose of this article, however, is not to enter into an abstruse discussion of terms, but to attempt an investigation of the more practical problem of where we are going to locate the thing commonly known as a studio. In what part of the town, under what conditions and surroundings shall we select the room in which we propose to attend to our work of teaching?

Shall we make terms with the energetic but suave commercial gentlemen who conduct the large music house, for a limited portion of their valuable floor-space at so much a month (including the use of a piano), and proceed to business within earshot of the tuning-room, while a colleague on another bit of partitioned floorspace not far off, is enlightening a pupil as to the mysteries of Concone, and directly below us the Pianola is vigorously expounding the pernicious doctrine of "Everybody his own performer?" Shall we contract with the rent collector of some large modern office building for a quiet room on the sixth floor, with a printing press overhead, a dyspeptic and irascible lawyer underneath, and a "painless" dentist with obstreperous patients on one side of us? Shall we select a silent corner in the topmost story of a family apartment house, with modern inconveniences, and there submit resignedly to the occasional but penetrating odors of the kitchen, all for the sake of securing that freedom from musical disturbance so necessary to the successful pursuit of our vocation? Or shall we (if we are married), prefer to rent a comfortable and unpretentious dwelling on some quiet street, conveniently accessible by means of electric contrivances, and convert our front parlor into a studio and waiting-room? Other possibilities may suggest themselves to members of the fraternity who are of a thoughtful and observant cast of mind.

A quiet studio—at any rate immunity from *musical* noises—is absolutely necessary if the teacher is to achieve the best results, and most of us would doubtless be glad to put up with minor inconveniences so long as this essential element of musical quiet is assured. While we would be inclined to stigmatize as unbearable the perpetual and incisive tremolando of a mandolin, the ubiquitous ragtime piano poundings, or indulgence in the celebrated exercises of Concone in more or less intimate proximity to our studio, we might be content to accept the rush of the electric car, the crowing of a neighboring rooster, the agonized wail of an infant, or even the aroma of boiling cabbage as necessary and endurable evils. The last-named, though noisome, is at least not noisy.

It seems that the rapid modern development of cities, at any rate in the West, has encouraged the popular notion that all professional men must pursue their calling on the commercial basis. With the legal profession this has always been the rule. It is natural to have lawyers clustering in buildings situated in close proximity to the courts of law and official depositories of public records, and within easy access of the business community.

But it has now become the fashion, particularly in the West, for the clergyman to ride to his distant church in an electric car, instead of stepping from the parsonage across a lawn into the vestry; for the physician to have an expensive office in the business centre of the city, and for the music teacher to do business as best he can in some crowded commercial beehive "downtown."

Just why the musical profession, with its especially imperative demand for quiet surroundings, should be thus forced into the noisy channel of modern mercantile progress, is an enigma still awaiting logical solution, but we cannot escape the fact that the old custom of giving the greater part of the week's instruction at the homes of pupils has fallen into disuse, and while to the clergyman and the physician no great hardship seems to have resulted from the new order of things, the question is very far from a definite and final settlement in the case of the teacher of music.

What has the studious preacher of the gospel of music to do with all this crush and bustle?

Why should the sincere advocate of a refining and elevating art feel constrained to spend the greater part of each day in the very heart of all this commercial pandemonium? The main trouble seems to be that the bulk of humanity has not yet learned to appreciate the fact that the earnest pursuit of art and disturbance in any form, are utterly repellant forces; that music and noise cannot possibly be expected to exist peaceably side by side.

Remarked a merchant of intelligence and education to a music teacher to whom he had rented a studio, in answer to the teacher's complaints: "Can you not so concentrate your mind upon your work as not to be inconvenienced by the sound of another man's piano?" "Sir," replied the distracted musician, "most subjects are supposed to be susceptible of discussion, but this question does not admit of argument."

Perhaps in our age of astounding contrivances there will, ere long, arise some architect of extraordinary ingenuity who will succeed in evolving the plan of a building in which the vexed problem of sound-proof studios shall be triumphantly solved. It is needless to say that this marvel of architectural skill would be hailed with gratified delight by all of our sorely tried fraternity whose nervous systems have not yet been completely shattered under the stress of the continued tintinabulations of many instruments, all emitting various "tunes" and exercises at the same time, with more or less distinctness and in a choice variety of keys.

Report informs us that some such buildings have already been erected in the large art centres of New York and Chicago. Perhaps some teacher of more extensive geographical experience than the writer will kindly inform the musical world as to the degree of success achieved in these experiments. Such attempts as have come to the knowledge of the writer in smaller communities—cities say of from 100,000 to 500,000 inhabitants, cannot but be condemned as utter failures by any unprejudiced investigator, who will take the trouble to meander through the resounding corridors and try to remain unmoved under the infliction.

Brethren and sisters of the profession, as to this studio question—is it not a matter of profound concern to each and every one of us? Is it not a pertinent subject for the serious consideration of all those societies of teachers that are springing up throughout the land—leagues formed with the honest purpose of continually improving the efficiency of our work—seeing that in all practical matters what one man doeth is of slight avail?

His magic fingers wandered o'er the keys—
Silent, alas! to him forevermore;
Though, like wave-music on a sun-kissed shore,
The tones float up in wondrous melodies.
—"*Deaf Beethoven*"—*Hodges.*

In the *Century Magazine* Mr. Henschel gives some interesting recollections of Brahms, with passages from his own diary relating to occasions when he was in Brahms's company. Here are some tit-bits:

Brahms said to Mr. Henschel that, in his opinion, a singer may, without hesitation, alter a note in a song which is out of his compass, provided the declamation and accentuation do not suffer.

"There is no real creating," said Brahms to Mr. Henschel, "without hard work. The first phrase of a song may be an inspiration, but I must make it mine by hard work. Return to a phrase months after you have written it down, and it will have taken shape."

"My dear Henschel," said Brahms, "let me warn you to be cautious in speaking of a nobleman's compositions, for you never know who did them."

Mr. Henschel read out from a Berlin paper the news of the death, at Bayreuth, of a member of the Wagner orchestra. "The first corpse," said Brahms. "If I look at the *Tristan* score in the morning, I am cross for the rest of the day."

Brahms taught Mr. Henschel to dive, with his eyes open, and fetch up pebbles.

"In writing songs," said Brahms, "you must invent, simultaneously with the melody, a healthy, powerful bass. You stick too much to the middle parts. I am fond of dissonances, but don't put them on the unaccented parts of the bar."

"I sometimes regret," said Brahms, "that I did not marry. When I was at the right age for marrying I lacked the position to do so, and now it is too late."

Genius at first is little more than a great capacity for receiving discipline.—*George Eliot.*

The pianoforte is at once the race course of our imagination, and the confidant of our solitary and deepest thoughts.—*Marx.*

A CRITIQUE AND SOME COMMENTS THEREON.

S. N. PENFIELD.

[In our last issue the above subject was exploited in an interesting article. Below is printed an exceedingly valuable and common-sense contribution to the series. Read it thoroughly. —Ed. of THE MUSICIAN.]

"A Critique and Some Comments Thereon" opens up a wide field for thought and discussion. In fact the question, "What is music?" has in all ages been most keenly and acrimoniously discussed, and the amount of dissension and bad blood developed between the advocates of different schools of music is surprising.

Churches have been disrupted by the dispute, and it has even made its mark in shaping the map of the world. Strange that concordance should cause such discordance and that lovers of harmony should be so inharmonious. Yet as Wm. H. Seward once said of slavery and freedom, so we find true of the different musical cults, that there is an "irrepressible conflict." It does, indeed, seem irrepressible, for we find the battle lines each year strengthening.

On the one side is a multitude of young and enthusiastic musicians poising their lances for the extreme modern school.

On the opposite side the ultra conservatives, whose chief defensive breastworks are the power of inertia. If the dispute is not in evidence for a length of time, it is because of an armed truce between the disputants. In fact, there is truth and error on both sides. Strong convictions always tend to bigotry, however well founded. The exponents of each musical cult are ever trying to fence in their own special preserve, saying, "Within is the genuine, the simon pure; without are the barbarians, the cheats and the vulgar."

Each side strives to demolish his neighbor's fence while building higher his own. Perhaps the best that can be hoped for is to establish a *modus vivendi*.

Let us approach the subject repeating the aphorisms of Solomon and Schumann, "There is a time for everything," "Beyond the mountains there live people too."

Let us ascend the hill or tower within our own grounds and look down into our neighbor's lot and with unprejudiced eye see what he is doing, why he is doing it, and especially what the results are, for "By their fruits ye shall know them." If we do this with entire candor the results will oft surprise us. We shall find that music, real music, legitimate music, is not a thing of any one school, of any one nation, of the sonata form, the song form, or any other form, of polyphony or of single melody, of warm sensuous tone, or of cold classic purity, of genuine gregorian concords, or of harsh discords resolving into accords. We shall find that the hearty reception which greets a Tristan and Isolde is largely a genuine appreciation of its beauty. So with Beethoven's symphonies, so with Bach's fugues, so with Chopin's etudes and ballades, so with Mozart's operas, with Schubert's songs, with the stately and imposing motets and anthems of the English school, with the delicate and etherial quartet anthems which are now in profusion if we search for them, with the Lutheran and other chorales.

The chorus choir is better suited for some churches and the quartet choir for others, and each succeeds best when confining itself to its proper repertoire.

A Strauss waltz or a Sousa march is just as legitimate as a Beethoven sonata or a Schumann Novelette, if only each is in its place. So with popular songs and two-step marches.

They fill a special niche in the world's musical economy which would be an aching void were they entirely banished from the earth. The vaudeville show, much abused as it has been and made often to pander to low and vulgar tastes, still serves as a pabulum for a large mass of brain-wearied mortals who, if compelled to listen to Beethoven or Bach, would go exhausted and disconsolate to bed.

And as for the bald, stupid and overworked gospel hymns, yclept Moody and Sankey, which are so universally derided by musical people, yet seem to go on and flourish just the same in spite of (possibly because of) all opposition; what shall we say for those? God sees not as man sees, and could we but lift the veil and see how many souls have been brought from our lower classes into the upper kingdom just by these tunes, which to us are so nauseating, I opine we would hide our abashed heads. Now the best of all these myriad styles of music have their times and their places, and when in time and place are legitimate. When out of place they are illegitimate.

The question raised by our critic is one of vital importance. It has been raised by thousands of persons who did not dare to speak it out loud. Our critic has the courage of his convictions and writes from his own narrow standpoint. From his standpoint his argument is correct. The standpoint is also that of a vast host of people, especially in small towns where the opportunities for hearing music are limited. These people and their musical needs are an important factor in the problem. They must be reckoned with and taken into the account. They hunger for music that will appeal to them. When they ask for bread and are given what is to them a stone, they will, if candid, cry out in their anguish as our critic has done.

That he goes too far and while calling for "simpler melodies which appeal to the heart and soul of man," begs for "Money Musk" and the "Virginia Reel," which only set the feet going, makes one smile. Even if true, as he says, that he "did not know a bar of soap from a bar of music," we can yet see from the excerpts of his article that he is moved by "concourse of sweet sounds," and that he is a man of intelligence. Program making is an art far too often neglected. In a vast majority of cases pieces are thrown hap-hazard into juxtaposition with no regard to their appropriateness. Contrasts are of vital importance, but our critic will certainly acknowledge the possibility of two or more pieces being brought together so that one piece shall quite neutralize the effect of another. A program consisting of coon songs (and some of these are really clever), the "Virginia Reel," and in fact anything for voice or solo instrument with a natural, song-like melody should make a homogenous program, and if including, for a contrast, one or two numbers showing rapid, brilliant and clear cut execution, it should give genuine pleasure to the listeners, and more so than if half this same program were severely classical or taken from the extreme modern French or German schools. Encore numbers can well be drawn from popular and well-known airs.

Patti with her "Home, Sweet Home," and Nilsson with her "Suwanee River," and Rubinstein with his "Ruin of Athens" and transcription of "Sweet Home," for their encore numbers, made themselves extremely popular all over the land. But our critic should certainly know that in any program where the salient features is a symphony or a great dramatic aria or a high-toned sonata for piano or violin, it would be the height of absurdity to follow it with a droney "Musk" or a coon song. In large cities the problem largely solves itself. There is room for everything. The symphony concert, the chamber music concert, the Wagner opera, the Verdi opera, the comic opera, the piano recital, the song recital, the organ recital, the oratorio concert, the part-song concert, the vaudeville performance, each serves its own purpose and draws its own audience. Even the churches with their boy choirs, mixed choirs, quartet choirs, precentors, etc., appeal to and attract a varied clientele. Things largely shape themselves and no one need go where he does not like the music. To be sure any music that is regarded as noble, classic and high-toned, as such, will attract all the aspiring society people who often really neither enjoy or comprehend it, yet must seem to. But the proportion of these fake connoisseurs is steadily growing smaller, for the public taste gradually but surely forms itself on models that are presented to it. No longer can performers now safely count upon the ignorance of their auditors and palm off upon them an indifferent entertainment. Each year a larger proportion of people understand, appreciate and enjoy a fine performance of a classic program. These conditions are specially applicable to large cities. In smaller cities and towns the case is different. Our critic probably lives in a small city where there is little opportunity for hearing classic music and he can not be blamed for finding it "barbarous." In most small places a concert will not pay its expenses unless it attracts nearly all the better class of people in the place. And of such an audience, probably a goodly proportion are in the same boat with our critic, but are not as frank as he in confessing their low taste. What shall the program maker do in such a case? Shall he make his program to suit the taste of the probable minority who hunger and thirst after high-toned music, or descend to the level of the probable majority who are better satisfied with "Money Musk?"

At first sight it would seem that the wish of the majority should determine, that the entire program, including encores, should consist of airs already popular or of new airs of the same diatonic order, and in church music that all the hymn tunes should be of the Sankey—McGramahan—Case type which appeal instantly and only to the surface feelings. Yet in all this, we are not taking into the account the rising generation which is now forming its taste and has not yet risen to the dignity of writing musical critiques in the papers. Shall a parent be content that his young people grow up without knowing "a bar of soap from a bar of music?"

Music is a progressive art. There are heights and depths of feeling, sentiment, passion, devotion in modern works utterly unknown to writers of past generations. We can not expect older people who, to-day, pay the expenses of concert and church music to appreciate all this. But do they not owe something to their children? They are glad to give to these better school, college, travel and art advantages than they had themselves. Why not musical advantages as well? Is it not just a trifle selfish for older people, whose taste is already crystalized on a pretty low model, to insist on the same low model for their children's taste? And if they reply that they hire piano teachers to educate the children in the higher grades of music, do they not overlook the fact that the art teacher in music or in painting will labor in vain, if after a lesson in the higher principles of the art, he should take the pupils to see daubs or hear maudlin representations? In the art gallery and the concert room, models are offered as representative art works and we have no right to expect water to rise higher than its source. Clearly, it is the prudent thing for the "Old Guard" to make some sacrifices for the benefit of the raw recruits.

Yet, is there no medium ground? No concert program of common interest and mutual advantage to all, old or young, musician or amateur? Surely. Mozart pointed the way when he crowded his great opera, Don Giovanni, with delightful airs, all in perfect taste and comprehensible to the veriest tyro in musical matters.

There is a great profusion of real music which will appeal to all. Plenty of music based on lovely singable melodies. Embellishments, fiorituri and roulades are ever in place if only they set off in a more beautiful light the melody on which they are based. When the embellishments themselves claim the main attention and the melody is only the excuse for the embellishment, the music looses its *raison d'être*. As to the squeaky, upper tones of the violin, there is an element of justice in the criticism. It requires a quick ear and long practice to play in perfect tune and with a musical tone, rapid passages in the higher registers. Young players take kindly to these, because they think they are doing great things when they can play in the 'steenth position.

It is usually safer and more musical to confine one's self to the first or second position. As to chorus singing, it always interests and stimulates the young people. In small places where solo artists are lacking, it may furnish the chief amusement and uplift for the people.

HUMOROUS MOTIFS.

It was Mina's second lesson and she felt very proud when her teacher pointed out to her middle C on the piano. After the lesson she rushed to her home and impatiently waited for her father to come in the evening.

"Oh, papa," she cried, as she threw herself in his arms; "you don't know what I know!"

"No, indeed I don't," he said, gathering her up.

"Ask me," said the coy little maid.

"Now, what *do* you know?"

"Well, don't you think my teacher's piano is divided in the middle by a great big C; but I don't believe ours is, for I looked and there's some man's name in the middle."

The Rathskeller is one of Philadelphia's most noted cafes where congregate many convival lovers of music, especially Germans One evening, a young and well-known composer of popular music, seated at a table with a few friends, suddenly received an inspiration and hastily improvising staffs on the back of a bill of fare, quite a la Schubert, began to jot down the melody. A portly waiter who was standing near, seeing the use the bill of fare was put to, exclaimed: "Wait, my friend, I will get you *white* paper instead."

"This will do," the composer said.

"Ach," the waiter replied, wholly unconscious of his humor, substituting note paper for his precious bill of fare, "what will a man say if he orders cheese and then sees on the other side—'Farewell to Annabelle!'"

THE STUDY OF A SONATA.

Beethoven's Op. 2, No. 3, in C.

DR. HENRY C. HANCHETT.

THIRD ARTICLE.

In former articles discussing some general considerations and the rates of movement belonging to the various portions of this work, instruction was given as to the method of numbering the measures for reference, with reasons for selecting the plan. A number is to be placed before every bar, single or double, just as they come on the page, regardless of the completeness of the measures, or of single or double endings in case of repeats. Each new movement begins with number one of a new series of numbers.

The most significant and important single consideration in the construction of music is that relating to the length of sounds. Everything living has its periods, and even in inanimate nature we see regular successions of events, like day and night, tides and swells in the ocean, gusts in the winds, and phases in the moon. Our years are divided into heart-throbs and respirations, and we act on impulses and acquire by vibrations. Without much training we find no pleasure in music unless we recognize the beats and pulses that ally it to our own lives, and a transient interruption of accenta by long pauses and in syncopations, arouses suspense or bewilderment. All is confusion in a printed score unless we are supplied with a meter sign and a series of bars; yet the hearer is satisfied if he can determine whether the meter is dual or triple, and leaves further refinement in the category of non-essentials.

The *Meter* of a piece is something quite distinct from the notes themselves or from the time in which they are to be played. In the sonata before us the first movement is signed for four quarter notes in every measure, yet the very first measure is entirely devoid of quarter notes, being made up of a half note, four sixteenths and two eighths. Nevertheless, the meter is a real thing, and its pulses—strong, weak, medium, weak—make their impression as truly in this measure as in the seventh, where for the first time notes and pulses exactly correspond. The arrangement of notes to make up the value of the meter sign constitutes the *rhythm* of the piece and is entirely at the command of the composer so long as the sum of the note values is made equal to the sum of the pulse values in every measure. The rate at which the pulses move and the consequent time values of the notes constitutes the movement, and by a simple and natural substitution of terms may be called the *time* of the piece, but every performer knows that the time may vary while the meter remains the same, and just as easily the meter may vary while the time remains the same. Why, then, it should be the well nigh universal habit of even good writers and even teachers of music to use the word time in place of meter is difficult to understand. There is no such thing as "common time" or "six-eighth time" in music. Time is a period of duration, and if a piece occupies a little time in performance, there is no harm in saying that it is "fast time" or "Allegro time;" but the arrangements of beats in a measure should never be indicated by the word time. Say "common meter," or "six-eighth meter," or "three-quarter meter," or whatever it is; and when one asks for the "time" a piece is written in, reply: Allegro, Andante, Adagio, or whatever may be the fact. Even if editors of magazines, newspaper critics, authors of annotated programs or text books, and teachers disagree with you, you may still nurse the comfortable feeling that you have used the correct term and made the right answer.

The meter sign does, however, have some slight relation to time. For example: If the first movement of this sonata had been written in two-half meter instead of four-quarter meter it would have indicated Beethoven's intention of securing a *faster* performance, because the unit of time is the measure note, and if the time is Allegro, with a half note as the unit, the rate would be faster than Allegro with a quarter note unit. This fact must be borne in mind in considering certain suggestions of Herr Heinrich Germer, who in his edition of this sonata, says that the meter of the second movement should be four-eighths instead of two-quarters, as Beethoven has it; and that the meter of the third movement should be six-quarters with every other bar erased, instead of three-quarters as Beethoven has it. In the case of the Scherzo, this change would not alter the time, because the measure note is unchanged, but the Adagio would go much slower in four-eighth meter than in two-quarter. Herr Germer's suggestions usually have the effect of setting one to thinking, and if he were in the habit of placing his comments in foot notes and giving Beethoven a fair opportunity in the text to express his own mind as to how his ideas should be put on paper, it would be well if the Germer edition could be widely studied; but as he inserts his own ideas in the text and in some instances does Beethoven the honor (?) of inserting a foot note saying how the original edition appeared, and furthermore, as his ideas are often foolishly pedantic, and as he inclines to the absurd use of the slur introduced by Riemann, I would recommend his edition only to students who have two or three other editions in their libraries. Yet I must think that with regard to this Adagio, Germer is right in his view of the meter. In two-quarter meter there is but one accent in each measure, contrasted with a weak beat. In four-eighth meter we have a strong and a mild accent contrasted with two weak beats. The effect of the latter, therefore, is to make the accentuation less marked and the flow of the music more smooth and calm—exactly what is appropriate in this Adagio. In fact, it would be well nigh impossible to play the many thirty-second notes of the movement without introducing the mild accents called for by the four-eighth sign. But no such endorsement of Germer's idea of six-quarter meter for the Scherzo can be given. In fact, he is compelled to make the 41st measure one of three beats, and to balance this by a similar treatment of the 66th (the first ending) in order to get the movement into double measures, and his plan causes him to begin the Trio on the fourth beat, which is manifestly contrary to its metrical character. The measure syncopation at the beginning of the Coda is also perverted.

This thought leads naturally to a consideration of those larger metrical groupings in which the measure itself becomes a sort of compound unit. If one plays the Scherzo fully up to time, for example, he will note how readily most of the movement lends itself to the plan of counting one to each measure in groups of fours, as does also the trio. The last movement, too, displays a regular metrical grouping of measure pairs—a stronger and a weaker measure—from beginning to measure 298, this latter measure being filled by a rest and covered by a fermata, making its time value double and thus causing it to represent two measures of silence. From that point the indicated time changes and the small pauses make the rhythmical grouping a little less distinct, but it exists throughout the movement with remarkable regularity. In the Scherzo, the regularity is interrupted by a group of three measures (39, 40 and 41,) by a single extra measure (63, or 64), and by an extra measure at the end of the trio. The coda ends with the first beat of the third measure of this larger metrical design.

In the earlier movements no such regularity in measure groupings asserts itself. In many cases in the first movement, contiguous measures will be of equal metrical importance, in other cases they will group themselves in twos as at the very opening, and at 27, 39, etc. In other cases they will group into twos, but with a different conception of strong and weak in accordance with the staff in consideration, as at 47 (corresponding to 48 in the left hand) and 130. In some places a figure occupying two measures will start on the odd-numbered measure with its principal accent, at others, a group exactly corresponding in every other respect will start on the even-numbered measure, showing that somewhere between them an uneven arrangement of measures must have been made—exactly where it is sometimes a little puzzling to say. Such an example may be seen by comparing the figure beginning on the third beat of measure 77, with that beginning similarly in 91. It will be necessare to note here that by reason of the first part having a double ending, the written numbers will be odd after the double bar that correspond in accent to the even-numbered measures before the double bar; that is, should the first part be played through but once it would terminate in the first half of measure 91 following measure 89, and being thus in a proper sense an even-numbered measure. In the midst of this measure begins a figure two measures long, exactly like one which began in 77 in an odd-numbered measure. I wish to emphasize this point particularly, because in later articles when we come to examine the punctuation of the sonata we shall see, I think, that it is false to define a sentence or any part of a sentence as consisting of a definite number of measures. A particular sentence is of course so many measures long; but sentences in general have to do with the *structure* of a work, not with its meter, and except in dance forms (which may be considered to include the Scherzo) the structure is as much a matter for the invention of the composer as is the rhythm. Composers are not in the habit of making sentences of definite metrical length, no matter what the authorities on form may say or think about it. But this matter must be postponed at present. Next month we will examine the rhythm of our sonata.

THE DAISY.

With little white leaves in the grasses,
Spread wide for the smile of the sun,
It waits till the daylight passes,
And closes one by one.

I have asked why it closes at even,
And I know what it wished to say,—
There are stars all night in the heaven,
And I am the star of day.

—*Rennell Rodd.*

OPPORTUNITIES.

C. N. MCHOSE.

Success in life may be said to depend in a large measure upon the promptness with which opportunities constantly presenting themselves to each and all alike, are seized and improved. Time, itself, is a golden opportunity. Action and effort, filling wisely—persistently, each fleeting hour, will inevitably bring one, day by day, nearer the goal of his desires. Do you ask yourself, sometimes, "Why is my practice hour no longer a pleasure, but rather a weariness, a dread?" "Why is my playing so cold and meaningless compared to my friend's, whose performance seems always soulful and pleasing?" "Why have I become so indifferent and discouraged?" My fellow student, you have not made the best use of your time. The reason why you cannot play one piece perfectly; why you always fail to do yourself justice at your teacher's recitals, and are compelled to go home displeased with yourself, while others are carrying off the honors, is because you have not given your piece enough time and study. Those who have succeeded, while you remain in the background, are those who, despite discouragement and obstacles, have made good use of the opportunity of *time*.

Reading is another opportunity. Reading makes us rich in thought. To be a true musician we must live as it were in the lives of our great masters, we must be full of their energy and vigor, and we must be imbued with the spirit of love for their art. "We are a part of all that we have met," is a living truth, but if you have not met in spirit those whose works you are studying, your interpretation will be indeed superficial, faulty, meaningless, and unfruitful. Read, then, the lives of the great artists and composers, and you will be heirs of amplest heritages of all the best thoughts of the great masters, and your music will be filled with soulfulness and beauty.

The practice of writing down thoughts and facts, for the purpose of holding them fast, is an opportunity that should be improved by every student, and one which will be found invaluable, since it prevents the escape of many a precious thought, and bit of acquired knowledge, into the dim region of forgetfulness. Entitle your Note-book "Gleanings," let the pages contain hints of ways and means for the bettering of touch and technique, ideas on interpretation, and notes on harmony and counterpoint, together with little incidents or events, bearing upon the trend of your own work, culled from the lives of the great masters, to light you as with inspiration flashes upon your way.

You will be what you make of yourself. Talent and genius amount to nothing, unless the possessor will develop these gifts by persistent, diligent and tireless turning to advantage of opportunities. Is it your wish to become a great player, or an artist? Do you desire to become a critic or teacher of note? Or an able admirer of all that is grand and sublime in music? Then I will say to you, "Do not despise the day of small things." Every hour well employed, every piece well learned, every book well digested, are seeds sown that will bring forth a rich harvest. The road to success in this noble art lies along the old highway of steadfast well-doing; and they who are the most persistent, who work in the truest spirit, making use, from the least to the greatest, of each opportunity as it presents itself, will be ever the most successful.

Young Composer's Column.

RULES.

1. MSS. marked "Young Composer's Column" must reach us by the 10th of the month to ensure notice in next issue.
2. Each MS. must bear the full name and address of the writer; the initials will be used unless a *nom de plume* is added.
3. Stamps must be enclosed if MS. is to be returned, but it is to be distinctly understood that the Publishers assume no responsibility for any MS.
4. No charge is made for the examination of any MS., and compositions of any nature may be submitted. The criticisms will be general and of such a nature as will be helpful to those honestly desiring frank and unbiased criticism.
5. No criticisms will be sent through the mail.

R. F. S.—(401). "Wing Wisdom" has a rather good tune and the song sounds as if it had been sung and had been liked. You cannot expect us to say, with any decision, whether your talent is worth cultivation until we have an opportunity of seeing several of your compositions. Your harmony is weak in some places (meas. 11, 12, 16, 18); the effect is bad from the third beat in meas. 16 to first beat in meas. 17. Let us hear from you with some more pieces.

Eli Presto.—(402). Have we not seen "A Ramble" before under another title? There's something in it, but it is so well covered up that it takes a sympathetic soul to dig it out; why don't you study? We have reminded you of the fact that near you (seventy miles to the Northeast) is a fine music school with a splendid musician at the head; you can study there with no loss of professional prestige. You *must* do something of the sort or you'll never learn to express yourself in music or get out what's in your heart. "A Ramble" is pretty poor in its present shape. If you wish a detailed criticism send it to us again.

F. E. C.—(403-406). Your MSS. did not reach us in time for the April number; see Rule 1. Your compositions show marked talent and considerable study. In the 14th and 15th measures of "the wondrous beauty" the last and first bass notes respectively better be B flat and A; you have weakened the effect of the climax in meas. 15 by having F for the bass in meas. 11; we recommend changing meas. 15 as above. By all means, have a bass note F in meas. 18. "Good Night" is too long drawn out and "sugary." "They kissed" is better, but you must change the chord in meas. 4, 4th beat; it is too harsh. "Thou art so like" is the best of the lot; don't you think, however, that shouting out *ff*, "praying that God may keep thee," borders on the ridiculous? Come again!

A. L. W.—(407). Your melody is good, but your MS. is illiterate; the twenty-one errors indicated by an X or A are all of them serious ones; inexcusable, in fact.

M. F. H.—(408). You surely do not expect us to correct harmony exercises; this column is for composers, not harmony students. Take lessons by mail from some of the teachers who advertise in THE MUSICIAN.

Tosto.—(409). The waltz is very clearly and beautifully written; you ought to correct the consecutive octaves at A. The section B-C is nonsense; you'll have to remodel it—as it stands it sounds like nothing at all. Is this your first attempt? If so, you ought to feel encouraged; let us hear from you again.

R. E. W. J.—(410). Your ideas are far in advance of your power of writing them down; your musical education has been, evidently, superficial; we have seen all sorts of queer spelling of chords, but never before this have seen the dominant triad in A minor written with an A flat instead of G sharp. Perhaps you will say, as you read this, "Well, what of it! Isn't A flat the same as G sharp? What a fuss over nothing!" Do not believe it; you must be particular, you must be exact. We think your song has some merit; in fact, we are sure that you have a good deal of music in you. Your song, however, is so illiterate, so queerly written, that we shall decline saying more till you rewrite it and send it again.

M. A. S.—(411). Your song has not altogether escaped monotony on account of the rhythm; your accompaniment, too, keeps down in the heavy part of the piano. In the 4th and 5th meas. we indicate consecutive fifths between melody and bass; these are bad—look out for them. In the third measure from the end A natural should be written B double flat. In 3-4 time divide eighths into three groups, not into two. Your melodies are good, your harmonies well chosen and the impression you make distinctly favorable. It is a long time since you sent anything in.

G. E.—(412). You send no address with your MS. The four opening measures are excellent in every way; the rest of the piece disappoints us; it is common and not always correct. You have talent; write, write, write; spoil all the music paper you can get hold of! It takes *practice* to make a good composer.

Rohilla.—(413). The ideas in your male quartet are good; the harmony is fairly correct; the melody is simple and rather pleasing. It is just the sort of thing that shows a musical nature and a simple, pleasant way of making music; you should make a better bass, though; your bass simply hops up and down as the case requires: it does not walk along scalewise. Calling your piece a male quartet doesn't make it one. If you could hear it sung you'd be a very-much-surprised composer! Your piece is really for S. A. T. B., not T. T. B. B. Your 1st Bass is above your 2d Tenor most of the time and above the 1st tenor some of the time! As some one says in one of the Sullivan operas, "Here's a state of things!" In other words, remembering that the two tenors in male quartet music are written an octave higher than they sound, your first measure must not be written thus:

but thus:

or, better still,

The art of writing well for male voices consists as much in letting the music slip easily into two or three parts, so that it shall not thicken up too much, as in anything else.

J. P. M.—(*Alabama*). We are quite as much pleased in giving you help as you are in receiving it. Let us see your compositions.

H. W.—(*Pa.*). We are glad to be assured of the "common authorship"; doubtless you gave us the facts, as you state; we have so many letters, however, and from so many people, that we fail to remember everyone's authography. Give your teacher our sincere compliments and receive for yourself our congratulations on your "gumption." As to printing, wait awhile; when you have a set of good things together then try printing them; one piece amounts to nothing. And, besides, your mazurka is not original enough. But, if you persist, write to the Hatch Music Company for particulars.

REVIEWS.

THE OPERA PAST AND PRESENT. By William Foster Apthorp. Published by Charles Scribner's Sons. 12 mo. 238 pp. Price, $1.25.

This volume is a valuable addition to musical literature. In this time, when the study of a subject is not confined to a single text-book, and various phases of a general subject are given special treatment, the publication of a book which gives so accurate, careful and comprehensive view as this work does of the opera, is a matter of importance to all musicians.

The Opera as a form of Art, is considered as an integral part of music, and the various schools and composers are viewed in their effect upon the development of this form rather than in their intrinsic excellence. This view point places little value upon Handel as a composer of operas. Despite his genius, he did little or nothing toward the improvement of opera, while many whose position as composers is far from high, exerted a strong influence in developing it. To study the history of opera from this standpoint is far better than to devote so much attention to those (and their works) who wrote, or attempted to write in this form.

The author holds that the principles avowed and promulgated by Wagner, were identical with those in accordance with which the opera was established in Florence in 1595. Its diversion by the Italian school led it away from these principles; Gluck combatted this error, but it remained for Wagner to destroy it.

The book is the expression of original opinion and criticism, is accurate and well proportioned. It is included as one of those to be used in the Courses of Home Study inaugurated by the Music Teachers' National Association. It should be added to the working library of every reader of THE MUSICIAN.

CHOIRS AND CHORAL MUSIC. By Arthur Mees. Published by Charles Scribner's Sons. 12 mo. 251 pp. Price, $1.25.

This, and the preceding volume belong to the "Music Lovers' Library." Choirs and Choral music have received considerable attention, but nothing quite so comprehensive as this book has been gathered between the covers of one volume. Its author is a Choral conductor of many years' experience, and he has treated his subject historically as well as practically. A chapter on Amateur Choral Culture in America very interestingly details the organization of singing societies in this country, and the conditions from out of which they grew. From the severely bare services of the Puritans to the ornate Choral service of to-day is a long cry, and the growth of Choral music is exceedingly interesting. The last chapter discusses the qualities that should be possessed by a good chorus singer and chorus conductor. The requisites of good choral performances are also touched upon. The reader of this book should have in mind that the word "choirs" does not particularly refer to Church choirs, but is used in its broader sense.

There is a lack of good literature relating to this subject, which makes this book doubly welcome. The Scribners are doing a service for musical literature that should be appreciated by musicians. In this series alone they have provided some extremely valuable and timely works. Careful in their choice of authors, and issuing their books in substantial binding and clear print, they should be upheld in the good work they are doing.

Questions Answered.

[Under this heading THE MUSICIAN will be pleased to answer any questions submitted by its readers which may be of general interest. *All questions must be accompanied by the full name of the questioner.* Answers will be published without such names. Those who send questions should take care to state clearly what information is wanted. Only such questions as will be of interest to general readers will receive attention in this column. All others will be answered privately, for which purpose stamps should invariably be enclosed.—ED.]

S. C. E.—Short lines over notes, $\bar{\ }$, indicate a *slight* emphasis and full value—not extended value. It was originally known as a *vibrato* mark, and was applied to string instruments. In playing *legato* octaves with alternating fingers, use a finger touch if lightness is desired. For heavier tone a little hand pressure should be added.

L. P.—The musical novel, "Charles Auchester," was written by E. S. Sheppard. In it are introduced, under fictitious names, Mendelssohn, his sister Fannie, his pupil Sterndale Bennett, Joachim the violinist, and some other musicians.

A. M. P. B.—Movements vary in different localities and under certain circumstances. Approximately the metronomic marks are:

Polka, ♩. = 104.
Waltz, ♩. = 72.
Schottische, ♩ = 80.
Galop, ♩ = 160.
Quick March (two-step), ♩. = 120.
Majestic March, ♩ = 96.

J. T.—*Senza replica* and *senza repetizione* mean the same thing, that is "without repeats or repetition." They are generally used in connection with *Da Capo*.

Fina.—Short score means that the four voice parts are written upon two staves—as in Hymn tunes—instead of each voice having a staff to itself. E. Schütt, the pianist, was born in Russia in 1856.

O. I. N.—Anton Seidl died in New York. He was a Hungarian, born in 1850. Wm. Shakespeare, the English vocal teacher is still living.

B. P.—The holding of pauses are rather indefinite as to length, as good taste regulates it. However, musicians generally agree they should be sustained *at least* twice the value of note, or rest, over which they are placed.

It has been discovered that the human voice is produced by forty-four different muscles. Fourteen of these serve for the emission of 16,380 sounds, and the others aid the production of some 175,000,000 different sounds. That is, these forty-four muscles go to produce millions of different tones which acoustics distinguish as absolutely distinct one from the other. No wonder the diva "comes high."

RANDOM SAMPLES OF TEACHING PIECES SUGGESTED BY THE SEASON.

MARIE BENEDICT.

In these spring days, what may the piano student find for her own study, whose mood is in sympathy with the mood of the season? Freya, in the old legends, goddess of the spring, of flowers and of music, has summoned the birds once more to their northern homes; has called to the trees to unfold their fringes of golden green, their blossoms of pink and white; has called to the fields to don their dresses of delicate green with clustering anemones and violets. They have heard her voice, and have responded and are still responding to her call. Not with that seemingly almost instantaneous growth, that sudden bound into the fullness of life, which characterizes the spring of far higher latitudes, but with the more gradual movement which we love to watch, which we may all enjoy. In music even the very youthful students may find the sweetness of the season reflected in Mendelssohn's "Spring Song." The winsome melody, in its simple and beautiful harmonic setting, will charm as long as there are students, and professionals also, who have in them the love of the genuinely musical. Grieg's "Spring Song," which I have elsewhere analyzed, and the same composer's "Spring Fancies," are among other compositions suggested by the season. The very name of Sinding's "Fruehling's Rauschen" is eloquent with the first faint stirrings of the new life now filling the world of Nature; with the first low, sweet response of the delicate young leaves to the caress of the soft spring breezes.

In these days, if possible, so arrange your hours of work in studio or practice room that you may find time to hear, and to appropriate, the message of the spring-time to yourself. Time to stroll in the woods and fields; to seek out the wild flowers in their homes. To study the tints in Nature's tapestry as, under the marvelous spell of the Artist, they change and deepen from day to day, and week to week. Time to so absorb the spirit of all this beauty that something of its inward power shall be reflected in your musical work.

In the Andante of Grieg's E minor Sonata, we have another number whose spirit is peculiarly appropriate to late spring or early summer. Its slow, sweet melody is unmistakably pastoral in mood. It sings the freshness and charm of the June days in one of the upland valleys of Norway, which has only recently, and as if by magic, changed the dull tints of its winter robe for the full perfection of its early summer dress. Over the valley bends the brilliant sky of that far north, its brilliance intensified in contrast by a few fleeces of white cloud, resting here and there against the blue. Presently, the silvery notes of a shepherd's pipe float out over the valley, from the hillside where its owner is watching his flock. The piano imitation is so perfect that the phrases are absolutely unmistakable. Then suddenly comes a quaint little dance theme—its melody, rhythm and accentuation all so peculiarly characteristic that one may easily fancy it accompanying the sport of the half human sylvan creatures with which the stories of the olden time always people the forests and the groves.

But ere long a change begins to creep over the Nature picture; the blue skies are disappearing; and suddenly, a storm sweeps down from the rocky heights above the valley, darkening the landscape with its cloud curtains, and rousing all the voices of the forest to join the wild storm chorus. This, however, is only one of Queen Nature's many moods; ere long the storm chorus is silenced; peace once more descends upon the valley, and the Andante closes with the satisfied chord of the tonic; as in assurance of the final retirement of the storm.

This sonata was one of the first compositions of importance which Grieg wrote after his return to Norway, with the determination to allow the Norwegian life and the Norwegian spirit to speak through his music, and after his consequent study of the folk-lore and folk music of the country. As another has said, it plainly shows the influence of these two sources of inspiration; the influence of that national spirit which, speaking through his music, so easily leads the listener captive.

The slow melody, which is the principal theme of the Andante, should be marked, in delivery, by full, well sustained tone. Its mood and style are those which, in the orchestra, belong to the clarinet, and the student should keep this effect in mind, in the production of her own tone.

In the Minuet, which immediately succeeds the Andante, we have a peasants' dance, and the curiously characteristic mood, content and movement of the music are most interesting. The contrast is as absolute between its style and that of the usual minuet, with which thought is apt to associate the elegance and glitter of the court and social functions of which it was so prominent a feature in the olden times, as is the contrast between the two classes of people. This Minuet, as a well-known New York musician recently said to me, pictures the hard handed, heavy footed men of the soil; whose lives are filled with labor, that others may spend their days in leisure; who know and see little but hard, sordid work from year's end to year's end; who know little or nothing of life's higher pleasures. The theme in four sharps, opening in piano, with its attendant change from minor to major setting, with its rising, instead of falling phrases (which latter for the most part characterize the rest of the movement), is an interesting instance of retention of rhythmic style and melodic individuality with change of melodic mood. As it were, the same person, under very different circumstances; or, to put it in another way, a gleam of new and brighter ideals for the sons of the soil; or again, a little love passage between a peasant youth and maiden.

This movement of the sonata affords fine opportunity for practice in producing full, resonant chord tones; in gaining volume without hardness of tone, an acquirement so absolutely essential to the work of the piano student.

In the same composer's "Papillons" we have yet another attractively suggestive number for summer study, or for spring study, that it may be ready for summer playing. Its delicate chromatic runs, with their constantly changing tonal tints, may readily picture to the fancy the airy flight of these "flowers of the air," now rising, now gently descending, now poising for a moment on leaf, or rose blossom; their iridescent wings flashing back jewels of color with their every motion. A very delicate, very sure, perfectly controlled running touch is the pre-requisite for the satisfactory rendition of this style of composition.

One of the most exquisite of summer idyls in tone is the introduction, comprising the first two or more pages of Mr. Edward Baxter Perry's "Memory of Last Island." Its inspiration was the descriptions, in Mr. Lafcadio Hearn's prose poem by the same, or partly the same title, of the long July days on that ill-fated "L'Isle Derniere" the Last Island, in the sense of most removed from the mainland, of the group lying off the mouth of the Mississippi five decades ago. "Days born in rose light, buried in gold." I regret that memory will not serve me for further quotation from Mr. Hearn's wondrously beautiful descriptive lines, and that words will not convey the charm of the interpretation, in Mr. Perry's music, of the mood of the scene which Mr. Hearn describes. For the pleasure and the benefit of the large body of amateurs for whom the piano work as a whole is too difficult, these first pages should be published in a separate sheet. I know of no music which more perfectly realizes the mood of calm and beauty in this phase of Nature, something of which we have all felt in the long summer days by the sea.

To turn to the more prosaic, the useful side from the technical standpoint, this introduction gives one effective left hand practice in bringing out a well sustained and beautiful melody tone at the top of chords, both when rolled and when not arpeggiated, but struck; while the right hand finds at the same time most useful technical work in the rippling accompaniment which is its share, formed of a combination of single and double notes in an effect most fascinating to the ear, but which comes by no means so easily to the fingers.

My spirit like a charmed bark doth swim
Upon the liquid waves of thy sweet singing
Far away into the regions dim
Of rapture—as a boat with swift sails swinging
Its way down some many winding river.—*Shelley.*

A man's success in life is usually in proportion to his confidence in himself and the energy and persistence with which he pursues his aim. In this competing age there is little hope for the man who does not thoroughly believe in himself. A man who can be easily discouraged and turned aside from his purpose, a man who has no iron in his blood, will never win.—*Edward L. Bill.*

Music herself teaches us harmony.—*Beethoven.*

Music washes away from the soul the dust of everyday life.—*Auerbach.*

PLAYING FOR PUPILS.

EFFIE W. MUNSON.

Shall I, or shall I not play for my pupils?

The above is a much discussed question, and the end of the discussion seems yet far distant. Like every other point on which "doctors differ," there are two sides to be considered, depending largely on the nature of the pupil. A small child will frequently have so quick an ear, that if it hears the tiny phrases of the lesson played once or twice by the teacher, it is able to play them itself with a degree of accuracy that is surprising, and the teacher leaves the little one believing that the lesson is well on the way to being learned correctly. On his next visit, however, he finds, to his disappointment, that all has been forgotten, because the tiny tot has followed by ear, and, not having a clear comprehension of the notes, was unable to help itself when the memory picture grew dim. In such a case, playing for the pupil is of no possible benefit.

I once had a pupil who had been under the care of another teacher for some time. When the little girl came to me, her former teacher said, "I see you have Mary X; she took some lessons of me, but she is very dull in music." I knew the child was a bright pupil in school and that she was anxious to learn to play, so was puzzled for the first lesson, because she *was* dull, apparently.

A little investigation revealed the fact that Mary depended largely on her sense of hearing, and scarcely knew one note from another, although struggling with pieces far beyond her reach. The difficulty being recognized, exercises in sight reading quickly wrought a cure, and in a short time she began to make rapid progress. Here was also an instance where playing for the pupil was positively harmful.

On the other hand, a small pupil whose efforts to penetrate the mysteries of time values seemed unavailing, quickly grasped the matter through her sense of rhythm on hearing the phrases played for her. An older pupil came with a Mozart Sonata, playing the Allegro in a most cumbersome and laborious fashion, though the Andante went well. The Allegro being taken in hand, the bright, sparkling style was pointed out, and the various touches to be used were noted, all to no purpose. The idea escaped the pupil, though he made desperate efforts to catch it Said the teacher, "Let me play the movement for you, you may get the idea better." At the close the student, being requested to try once more, refused, but at the next lesson brought the same Allegro vastly improved. So also with a Bach Gavotte. Explanations of the proper touches to use in gaining the desired effect, all avail little compared with the magic result of the performance of the piece by the teacher. Some say, "I do not want my pupils to imitate me. I want them to express their own individuality."

Never fear but they will do that, if they have any individuality to express. Possibly they may copy their teacher for a time, but sooner or later, if the divine spark be latent within, it will express itself in the interpretation of the music played.

Another point sometimes advanced against the teacher's playing for his pupil, is that a busy master can not find sufficient time for practice, and is frequently unable to play satisfactorily for his students. Unless your pupil has very slight confidence in your ability as a pianist and teacher, he will gladly overlook false notes or other slips for the sake of the help your playing will be to him. If he has the saving salt of common sense in his composition, he will know that the busy teacher is rarely the finished artist, and he will thank you heartily for the ideas furnished him by your conception of the music he is studying, and if he be endowed with real talent he will not follow servilely in your steps, but will appropiate and develop all that comes to him through hearing a composition, and will profit by it far more than by any verbal explanations and analyses of the muscular action used in producing certain results.

The poet Saint Amant was in the company one day of a man with very black hair and a gray beard, and as this queer combination appeared to the poet to be rather *bizarre*, he turned abruptly and said: "Apparently, Monsieur, you have worked more diligently with your jaw than with your brain."

The works of those who have stood the test of ages have a claim to that respect and veneration to which no modern can pretend.—*Sir Joshua Reynolds.*

THE MUSICIAN.

A Monthly Publication.

EDITED BY
ARTHUR L. MANCHESTER, A. G. O.

PUBLISHED BY
HATCH MUSIC COMPANY.

SUBSCRIPTION PRICE.

SINGLE COPY . . . . . $ 15
PER YEAR 1 50
Free of Postage in the United States, Canada and Mexico.
Foreign Postage, per Year, 72 Cents.

Remittances should be made by Bank Draft or Check, Post Office Money Order, or Express Money Order. *Where none of these can be procured,* money can be sent in a Registered Letter.

New Subscriptions can commence at any time during the year.

Discontinuances.—The publishers should be notified when a subscriber wishes his paper stopped. In the absence of written notice to the contrary, subscriptions will be continued.

Communications are Solicited from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications intended for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned.

All Letters should be addressed and **Remittances** made payable to

The Publishers of THE MUSICIAN do a General Music and Music Publishing Business. They can supply anything in Music.

THE M. T. N. A. CONVENTION.

Preparations for the meeting of the Music Teachers' National Association are progressing steadily. A distinctive policy having been settled upon, the details of the meeting are shaping themselves readily. The policy of the administration has already been alluded to, and the following excerpt from an editorial in the *M. T. N. A. Messenger* states it very succinctly.

I. That the M. T. N. A. is an educational body intended to exert a steady, elevating influence on National Music Life by means of a continuous educational activity.

II. That its real work should be done during the entire year, and not at its annual meeting alone.

III. That its annual meetings are necessary as a means of cementing the feeling of brotherhood and professional coöperation that should exist between members of so important a profession as that of Music.

IV. That the annual meetings should partake of the educational nature of the Association's work, the activity of the year being reviewed, the business body expressing its wishes and directing the officers. The program should be in the nature of a Summer School from which direct instruction is derived, and stimulus given for another year's labors. The concerts should be in keeping with the ideals and purposes of the Association.

This policy is an abandonment of the festival idea, and constitutes as the watchword of the Association, *Education*, with a definite, clearly defined and well organized method of operation. The program of the coming meeting is based on this policy. Every item has a distinct educational bearing upon the advancement of the participant and the future of the organization. For the first time, no particular bid is made for general patronage. This meeting is intended to appeal to the profession in a peculiar degree. While the concerts will be such as to please the music lover and attract a general audience, they are primarily designed to supplement the other educational features of the sessions. The musical profession is invited to go to Put-in-Bay in the capacity of educators who desire to exert a real influence on their art, and listen to artists who will exemplify the best there is in that art, take part in pedagogical discussions, receive instruction, through lectures, lessons and discussions, from those whose experience enables them to speak with authority, and to plan for an educational campaign that will result in the uplifting of the standard of professional proficiency throughout the entire country.

It is not now possible to give all the features of the program, but enough detail is fixed to insure a very fine meeting. There will be six concerts by artists of acknowledged reputation. Among them are Wm. H. Sherwood, Alberto Jonas, Arthur Foote, Allen Spencer, pianists; the Yunck String Quartet, with Mr. Yunck as violin soloist; Mrs. Helen Boice-Hunsicker, soprano; Geo. Hamlin, tenor; Sidney Biden, baritone; Fletcher Norton, baritone. Negotiations are in progress with other soloists of reputation, which promise to result favorably. It can be relied upon that the six concerts will be of an unusually artistic type, and well worth going to hear. As has been stated in a former issue, a new departure will be inaugurated in the shape of *Lecture Lessons*. These will occupy an hour and a half each day. Each subject will be taken up and carried through progressively, and in such a way that they will not conflict. The class on *Piano Technic* will be conducted by EDWARD M. BOWMAN, of New York; *Normal Methods*, by MRS. EMMA A. THOMAS, of Detroit; while *Voice Culture* will be placed in the hands of a prominent teacher. DR. HUGH A. CLARKE, of Philadelphia, will conduct the work in *Harmony*, if the health of his wife will permit. Other teachers of prominence, whose names will be announced later, will also take part in these lessons. Of the various attractions offered by the Association, the *Messenger* says:

"These classes will receive a thorough drill in modern methods as applied to each specialty, and will thus gain a clear idea of the essentials which make the musician successful in any of these branches. It would be difficult to over-estimate the value of such a unique opportunity to the teacher or student who is anxious for improvement in his art. The educational idea will also be extended and amplified in the daily morning lectures. They will be on topics of general interest, and will be held in full session. MRS. THOMAS will lecture on *Normal Methods;* PROF. WALDO S. PRATT, of the Hartford Theological Seminary, will speak on a subject apropos of the educational work undertaken by the Association.

"The Round Table discussions will occupy an hour and a half at the opening of each morning session. These discussions have been very popular in previous meetings, and great care has been taken in their arrangement. Each one is devoted to an especial subject—piano, organ, voice, harmony, public school music, etc., and is placed in charge of a chairman. They are informal in character; some papers are read, but the principal object of the chairman is to elicit individual opinion and promote general discussion, hence their interest.

"The delegate meeting will be held one day in advance of the general meeting. There is every prospect of a full representation of men and women prominent in State musical circles, who will handle the questions at issue with discretion and vigor. The hearty response made by precisely this class of musicians is a gratifying proof that the serious aims of the Association are meeting with recognition from the earnest members of the profession. They feel that there is no more fitting work for the Association than a campaign of education, and stand ready to aid it by counsel and personal influence. Seldom during the twenty-five years of the existence of the Association has any measure met with such acclamation and unanimity of support.

"Too much can hardly be said of the locale chosen for the meeting. Its choice for this occasion exemplifies the peculiarly American idea of mental improvement combined with pleasant and relaxing surroundings. Put-in-Bay Island has long been known as one of the most popular summer resorts in the West. Its natural surroundings are ideal, and everything possible has been done for the comfort and pleasure of visitors. There are five large hotels, an electric railway, many handsome summer cottages, fine bathing beaches, while every facility for out-of-door amusements has been provided—golf, tennis, yachting, fishing, boating, etc. There are fine roads for wheeling and many romantic excursions to the caves, rocks and woods of the island can be made. Its historic associations give it a noteworthy place in American history. It was from Put-in-Bay harbor that Commodore Perry sailed to meet the British fleet in the War of 1812, and it was from there that he sent the famous despatch to General Harrison: 'We have met the enemy and they are ours.'

"The Convention will be held at the Hotel Victory, and the members will be under one roof. The hotel possesses ample facilities for the various round tables, delegate meetings and concerts, an assembly hall seating seven hundred people, and a still larger hall being available. The management of the hotel are in hearty accord with the efforts of the officers of the Association to make the meeting a noteworthy one, and have made numerous concessions to our comfort and pleasure.

"Exceptional privileges are promised the members of the Association. The hotel rates by the day will be substantially reduced, with a still further reduction, if the stay is prolonged to a week. The rate of one-fare for the round-trip has been granted by the Central Association, and we are assured that the Western will do so at the proper time. The Eastern and Southeastern Associations have granted a rate of a fare and a third on the certificate plan. The concession of one fare for the round-trip includes territory from Buffalo and Pittsburg on the east, to, and including, Colorado and Utah and the Dakotas on the west; while that of a fare and a third is for the territory east of Pittsburg and Buffalo, except the New England States, and the Southern States south of the Ohio and east of the Mississippi rivers. The railroads have agreed to extend the time, so that ticket holders will be allowed to spend a week on the island if they desire. It must be borne in mind that these concessions are open to others than professional musicians. Anyone interested in music, whether professional or not, can obtain an associate membership by the nominal fee of three dollars. This will entitle him to all privileges of the Association—admittance to lectures, concerts, etc., reduction of hotel rates and railroad fares—except, of course, participation in business meetings.

"Put-in-Bay is easy of access, being sixteen miles from Sandusky, sixty miles from Detroit, sixty-five miles from Cleveland. All railroads centering in Buffalo, Sandusky, Toledo, Detroit and Cleveland, make daily connection with the steamers for Put-in-Bay. A visit to the Pan-American Exposition and to Niagara Falls can easily be made. Steamers leave the island every afternoon for Buffalo *via* Cleveland, arriving at Buffalo early the next morning.

"Opportunities for recreation and social enjoyment will be abundant. The claims and distractions of a large city will not interfere with resumption of old friendships and the formation of new ones. Early in the course of the meetings a reception will be arranged in order to give members occasion to become acquainted with each other. A steamer will be provided by the hotel management for a moonlight excursion around the islands.

"In view of the many attractions offered by the coming meeting the question ought to be not, Can I afford to go? But, Can I afford *not* to go? Such a combination of musical enjoyment and educational advantages with romantic and unusual surroundings is new in the history of the Association. It is the earnest hope and belief of the administration that the occasion will prove one of signal benefit to the organization. It can easily be made so by the hearty coöperation of all who can and will lend a hand to the great cause which it has espoused—the raising of educational standards in music. Send application and fees to Thomas a'Becket, 1541 North Nineteenth Street, Philadelphia, Pa."

The attention of our readers is again called to the request of the publishers for information and suggestions regarding the music published in THE MUSICIAN. They are anxious to include that which will be most useful and pleasing to our subscribers, and you can help them in this purpose by giving them your frank and definitely expressed opinion.

BUSINESS OR PROFESSION, WHICH?

T. L. RICKABY.

The question has frequently been discussed as to whether it was the proper thing to speak of music teaching as a "business." Many consider it undignified to do so, and carefully avoid anything that would give their work a commercial aspect—except taking the fees; and some do not even do this, as the pupils are expected to lay the money on the piano, discreetly covering it—the money, not the piano—in an envelope!

Now the dictionary definition of business is as follows: "Employment; that which occupies the attention and labor of men; occupation; profession; calling." Profession is defined as "the business one professes to understand, and to follow for a subsistence; calling; vocation; employment." According to this, the two words are synonymous, being really identical in meaning. At the same time, however, the work of preachers, lawyers and musicians is very essentially different from that of those who buy and sell, or of those who labor at the forge, the bench or the plough, and while the same dignity and honor are attached to all honorable employment, whether its demands are on brain or brawn, there is a natural tendency to distinguish between the one and the other. Perhaps it is just as well that it is so. I might further mention that I prefer to speak of those who study with me as "pupils." The doctor has "patients" (usually); the lawyer, "clients"; the grocer, customers; the teacher has "pupils." "Scholar" is not a good term; in fact, it is not correct. A scholar is in reality a learned man, not a learner. I do not think any one would like to have his pupils called "customers," although they are nothing more, in a sense.

Now while we may decide that we are "professionals" and insist on being considered so, in contradistinction to other workers, there can be no reason in the world why we shou'd not be business men; or—seeing that so many teachers are ladies—why we should not conduct our affairs in a business like way. The chief reason, and probably the only reason, why the profession of music is regarded so lightly—if it is regarded at all, is simply because so many of its members are not only peculiar almost to eccentricity, but do not deem it necessary to follow the rules which govern all other business. In this article when I use the term music teacher, I mean one who teaches music, and does nothing else. I cannot consider for a moment, the music teacher who is a real estate man and horse trader—who would take anything for anything at any time. I see no good to music in the teacher who mixes organ and piano selling with his teaching. And I want to say to every young teacher (this means ladies as well as gentlemen) who may read this, that the public generally looks with suspicion on the teacher who ever gets mixed up in organ or piano sales. These remarks apply equally to the sale of violins, guitars, etc., etc. If a town is worth living in, it will surely have tradesmen who will procure small musical goods of this description.

There is one sale which the teacher must of necessity attend to—that is the sale of music. A goodly stock of music must be kept on hand for many reasons, which are too obvious to need mentioning. Outside of this, however, a teacher serves his best interests by keeping out of business "deals" and transactions hinted at above.

Going from house to house is not a business-like way of giving lessons. It is out of date—obsolete, and no teacher who claims to be anything continues the custom. Have a studio—a room specially dedicated to music. Furnish it with a special view to artistic effect and influence. Create, by pictures and instruments, a musical atmosphere in *one* place at least, and by so doing, sow seed which may bring forth fruit abundantly in the future. Further, it is not good economy to go from house to house. So much time is wasted between lessons, time which might be spent very profitably in self improvement were the teacher in a studio, instead of wandering from one house to another, like a book agent. Suppose a teacher has twenty pupils. It would be an easy matter for them to make one trip each week to a central point, but quite a task for the teacher to make twenty trips. But the advantages of a regular place for lesson giving are too numerous to mention here.

A music teacher, like any other business man, must advertise. The well known commercial aphorism "A pleased customer is the best advertisement" is all well enough, but no business man rests upon it. He continues to advertise even after having many pleased customers. A good pupil is the best advertisement a teacher can possibly have, still he needs to advertise regularly. However, "bargain day" and "display" ads. are not for the music teacher. It is useless advertising except to those who need what you have to offer. Hence, beyond occasional personal notices, newspaper advertisements are of very little service. Concerts, recitals, musicales, and lectures are by far the best, if not the only, advertising medium for the musician. If a teacher attends personally to the invitations, the audience will be choice, congenial and useful. If the invitations are left to the pupils, the results will not be so satisfactory. So much depends on getting the right people to attend these affairs that it is absolutely necessary that the teacher makes it a personal matter. This advertising violates no code of ethics that I know of, and will result profitably, alike to income and reputation—and without loss of dignity or self respect.

Further, how quickly we notice any little deviation from fairness (I almost said honesty) on the part of the grocer or dry goods merchant. A teacher who contracts to give a forty-five minute lesson should carefully keep to his part of it. The youngest pupil will notice it if a lesson is "shaved," even to the extent of five minutes. They also notice if a teacher reads a magazine or a newspaper during the lesson, or if he goes into another room, or interrupts the lesson to talk with a visitor. They also notice with equal celerity if the teacher sits by them during the whole lesson, and gives close attention to every detail. If a few minutes are unavoidably given to something else, it is clearly the teacher's duty to see that the pupil does not lose the time. Honesty is certainly the best policy here, because as I said, the youngest pupils notice many little matters that we never give them credit for.

I have read somewhere that Henselt, while giving a lesson, wandered round the room catching flies. He would not have given many such lessons in America in our day. By the way, I wonder what he did when there were no flies.

No merchant can continue a business after it is known that he has more than one price. If a lesson is worth a dollar, charge a dollar and see that it is forthcoming. Nothing will cause greater dissatisfaction than for people to learn that they have been paying more for their instruction than others. If a person is too poor to purchase a dollar lesson, he must find a cheaper one elsewhere. This sounds harsh, but it is "business," and if a teacher wishes to retain a clientele worth having, and to keep up the value of his instruction, he must have "one price" and keep to it.

Further, in the commercial world it is becoming more and more apparent that the most successful business is that conducted on a cash basis. Music teaching can be more successfully and satisfactorily done on such a basis than on any other. However, as this opens up a very wide topic and a rather delicate one, I will content myself with merely giving the hint.

In all business ventures and institutions regularity and punctuality are two vital virtues. The lack of them simply invite failure. The music teacher cannot ignore them. If a pupil is to come for a lesson at nine, she must find the teacher there before her. This will have a tendency to make pupils punctual. Further, it gives a teacher greater freedom in insisting on punctuality on the part of a pupil and gives him firmer ground for censuring those who are behind time. Again, the hour assigned to a pupil should not be changed for caprice or for anything except the best of reasons. Above all, never change a pupil's hour for the convenience of another. Let such changes be made by mutual agreement between the pupils themselves. Another point along this line is that teachers should be reliable in their lesson giving. In other words, when a child comes for the lesson, let it be given. No one, young or old, likes to take the trouble to walk some distance and then be asked to "postpone the lesson till to-morrow." If the teacher is always certain to be found in his studio at the appointed time, ready to give the lesson, there will be less chance of the pupil becoming dilatory and slow.

One more suggestion and I will close. No merchant can get along with last season's goods. Neither can the teacher. While the usual amount of classical and standard music will always be used, yet there is a great amount of music published by the writers of to-day which the teacher should give his pupils. I do not now refer to the flood of "coon" songs, the so-called "popular" songs, two-steps, "rag times," etc., but to the works of MacDowell, Sherwood, Mason and other American and European musicians. Music can be had on selection from any publishing house; and by scanning the advertising pages of the magazines, much desirable teaching music can be discovered. And by a careful study of musical literature—and by investigation of new pedagogical works and methods, the teacher will keep abreast of the times and take rank with the leaders—or at least he will be able to keep his place in the procession. It is the teacher's duty to see that he keeps out of ruts—and to prevent himself from retrograding. In politics men are often contemptuously spoken of as "has beens." The teacher who degenerates to a "has been" is to be pitied to some extent, but he has himself to blame. Never in the history of the world was self-improvement so easy as at the present. Ignorance is really criminal in this age of cheap books and magazines; criminal because it implies a waste of both time and opportunities.

In conclusion I wish to emphasize the need among musicians of life insurance. Too many musicians reach old age with nothing, or next to nothing, between them and destitution. Insurance companies offer every inducement to invest money and in this way provide to some extent for old age. Of course I refer now to those policies which mature in fifteen and twenty years, and which put $2,000 into a man's pocket when he needs it most. That is *business*, and business that is certainly beneath no man's notice. The merchant who is most methodical and business-like in conducting his affairs will succeed. The professional man who brings to his work skill, ability, knowledge, tact and common sense will also succeed, in obedience to natural laws. Trust in Providence to any extent you please, but "Keep your powder dry."

IN LIGHTER VEIN.

A piano dealer, wishing to deliver an instrument on trial to an old lady who had more wealth than knowledge of music, and who did not give her consent without the assurance that the piano would be a concert grand, employed a young man to assist his crew in the moving and as the men were getting the piano up the stoop, the old lady met them and asked the new hand (whose experience was as limited as hers), if it *was* a concert grand. He answered: "I don't know, mam, but when we get it in we will take the lid off, and you can look at its works and see."

Coney Island, in Summer, is the scene of a curious collection of human oddities, and is a place where new ideas of old occupations may be encountered at every turn. I was down there one day with a visitor and became impressed with the wonderful piano playing of a coatless Paderewski in an open restaurant. He played with the endurance and force of a steam hammer, and, drawing near, I asked him if he could play from notes.

"Play from notes?" he said, wiping his face. "Naw—wat d'yer *tink* I am?"

It was about time for the curtain, and the stage manager's bell rang for the overture as the orchestra men filed in. While they, hurriedly preparing to play, the man with the "box" (double-bass viol), was seen to search his pockets carefully, having mislaid the resin for his bow. At length a bald-headed gentleman sitting in the first row, leaned over, and in a confidential whisper, said, "Vat you vant?"

"My goose-grease" (a nickname for resin), said the man, continuing his search.

"I vas a beeg fool," said the old gentleman, as he hastily leaned back, "to offer my asseestance for noddings!"

Isaac thought the Gentile had insulted him.

Four years ago the writer was put down to make a speech at a political meeting of a Young Business Men's Club. Being unavoidably detained until late, he lost his place as speaker of the evening, and did not come on until fifth and last. By that time the edge of enthusiasm and of patience was somewhat dulled, and he, not caring to address a tired out audience, made a few remarks only. Closing in a loud voice so as to arouse them, he cried: "What is it we want most?"

Just then the bass drummer of the nodding band woke up, and being somewhat dazed, and not knowing exactly what was expected of him, he grasped his stick firmly, and gave his drum a resounding *thwack!* A quick-witted man on the platform instantly shouted: "Yes, that's what we want, we want a business *boom!*" And when some one started "America," the meeting broke up with unexpected jollity and enthusiasm.

The ward committee should have given that drummer a vote of thanks.

THE NEW EDUCATION.

FOREWORD.

The *New Education* offers its readers, for 1900–1901, the best plan for a year's study that it has yet presented. It will be the best in two particulars: In choice of subject matter and in manner of presentation. The hearty reception which this novel educational feature has met with makes it possible for THE MUSICIAN to continue to develop the idea of home music study and to offer the best advantages that are to be attained in this manner.

The series of subjects for the coming year follows. Each subject is in the hands of a specialist and will be treated practically and as fully as possible in twelve lessons. In order to meet the immediate demands of students who seek information on special points in the work, the editors will be glad to furnish

Suggestions for the further study of any subject.
A bibliography of any subject.
Information on any question in the lessons.
The consideration, and, if necessary, the presentation, or general discussion of any point that comes up in actual teaching.

The subjects for the coming year are as follows:

I. Advanced History of Music; twelve lessons, with suggested reading.
II. Psychology and Pedagogy of Music; six lessons in each subject; suggested reading.
III. Advanced Music Form; twelve lessons developiug those already given in this department.
IV. Harmony and Melody; twelve lessons; six in each topic.
V. The Literature of Aesthetics and Criticism in Music, twelve lessons.
VI. The History and Development of the Piano, twelve lessons with illustrations.

The following conditions *must be observed:*

1. Address all communications for the *New Education* department, thus: THE MUSICIAN, New Education Department, 8th and Locust Streets, Philadelphia, Pa.
2. *Do* NOT *roll your manuscript.*
3. The answers for each month must be sent as soon after the issue of the journal containing the subject to which they relate as possible, and before the next succeeding issue. No papers are to be held until end of course. New members can join at any time by sending names and answering questions contained in current issue.
4. The editors are obliged to say that no papers will be read or rated that fail to comply with conditions 3, 4, 5 and 6.
5. No two subjects should be written on one sheet. All sheets pertaining to one subject—for example, History—should be independently fastened.

Ratings will be largely influenced by the following points:

Accuracy.
Clear, concise, yet smooth diction.
Grasp of the subject.
Originality of thought and statement.

The questions following each lesson have two purposes: First, to connect the reader's mind directly with the text—the most fundamental, that is, the lowest duty a question can serve, but necessary. Second, to suggest a thought beyond the mere expression of the words in the text; the highest purpose a question can serve. The first is by far the least useful if he has a memory; the second the most useful if he has a reasoning faculty.

The editors will welcome letters from teachers which contain:

a. Suggestions as to what will make this department more valuable, the suggestion being dictated by the teacher's individual experience.
b. Statements regarding the application of this work with pupils as well as in one's own effort to secure a broader education.
c. If there is any line of thought of practical value to you, and likely to be equally practical to others, let us know it.
d. All such suggestions must be sent to the office of THE MUSICIAN, addressed according to direction given in regulations.

[NOTE.—*New Education* students are specially requested to avoid enclosing *anything* relating to their business with the Hatch Music Company with their *New Education* papers. The failure to comply with this rule causes great trouble. Kindly keep this matter in mind. We wish to call the attention of our students to the necessity of *fully prepaying postage on their papers.* We have been compelled to pay additional postage on a large number of those already received. This should not be, hence we request our students to take care that sufficient amount of stamps be affixed before mailing.]

THE TEACHING OF MUSIC HISTORY.

EDWARD DICKINSON.

Now does music come under the control of this law of epoch, race and environment? Less obviously, indeed, than poetry and painting, but no less truly. If it were not a part of the life of the time and directed by that life it could never have made progress; nay, it could not have existed at all. Man does not produce art in his dreams. It is conscious life, the stress of circumstances, external demand or opportunity which, touching the brain of the composer, draws fire from him and moulds his vision into form. What first sets his creative impulse in motion is the stress of inner spiritual compulsion—I grant you that, but the special form in which his musical impulse runs is determined by conditions which are not of his creation. Take, for example, Handel's oratorios, Wagner's operas, Beethoven's symphonies, Bach's cantatas. Could they have been interchanged in time, surroundings or authorship? Can we imagine Handel writing "Tristan and Isolde" in London in 1740? Could Bach have written the Heroic Symphony in Weimar in 1710? Could Gounod's Masses have been written for Calvin's state church of Geneva in 1550? There is something more involved here than the mere evolution of forms out of each other. If it were not so, if music were a totally independent art, as many seem to suppose, then the development of music in different countries would have followed much more nearly the same track than was actually the case. At every point in the history of music the art has been powerfully affected in physiognomy and direction by controlling forces in the general life of the time. The modern science of criticism declares that the analysis and classification of separate works and the judgment of their value when measured by ideal standards is simply playing on the surface; works must be studied as the products of causes, both within and without the artist's mind, and the task of criticism is not complete until the attachments to the life of the period have been identified. The study of Catholic Church music must begin with the liturgy and ceremonies of the Catholic Church and a comprehension of the ideals of devotion especially fostered by her discipline. The study of the rise of the music of the German Protestant Church and its culmination in Bach implies an insight into the spirit of the Reformation by which that music was inspired. The opera was the latest-born child of the Italian Renaissance, and would seem to have no motive unless we look back of itself for its incentive. Again and again the natural course of musical progress has been deflected or checked by social and political conditions, as the early German opera by the unpatriotic worship of foreign fashion on the part of the aristocratic order, and the English choir music under the rule of the Puritans. On the other hand, an excited national consciousness stimulates a brilliant national school, as in Germany in the time of Weber, and in Russia in the rise of the school which looks to Glinka as its founder. In such instances the same national ambition gives rise to analogous movements in literature and art, sometimes even in political revolution. The long contest between classicism and romanticism was fought out in music at the same time and under the same causes as in poetry, fiction and painting. Hector Berlioz is spiritually kindred to Delacroix and Victor Hugo. The modern love of landscape, which has given new motive and coloring to modern poetry and painting, has inspired a host of musical works of a quite novel order of beauty. And so one might sweep over the whole field of music, pointing out everywhere these relations which teach what I hold to be the deepest and most profitable lesson of music history or of any art history—the close interdependence of all forms of human expression, and the truth that the powers that quicken and exalt the soul are at the same time the soul's most adequate revealer.

The musicians, like the poets and the painters, are the offspring of their age. They are not voices crying in loneliness, singing of a remote world of unreality. Through their music, however celestial and infinite it may seem, there runs an undertone which is a reverberation of those sounds which they have heard in secret as the utterance of that larger human nature to which, even in their most rapt moments, they feel themselves allied.

I hope that no one will accuse me of discouraging all but those of largest leisure by demanding that every student of music history should take all history for his province. Of course, the full development of this idea that I am presenting would be the work of a lifetime, and for most it would be out of the question. But if we wish to avoid superficiality and dryness we must admit that these relations between music and historic life exist, and keep them before us as a clue and as an inspiration. That is all that I insist upon for the generality of students. Behind all musical phenomena there looms a background. This background gives to the masters and their works their proper relief and reflects upon them its own colors. The composers reveal themselves as men like ourselves, related to their time as we to ours. They are spokesmen of their race and epoch. We cannot know them intimately unless we have some knowledge of the most prominent characteristics of their time. This is particularly the case where marked transitions in musical forms and the introduction of new aims coincide with analogous movements in the general civilization of the period, as in the rise of Protestant Church music, and the appearance of the romantic school in Germany and France early in the nineteenth century. The largest knowledge of history, especially the history of literature and the arts, is never superfluous in the study of the history of music. Some knowledge of this larger setting of the subject is necessary and easily acquired; there are many hand-books which clearly summarize the main movements of history. Curiosity will grow, and every forward step brings further illumination. It is good for the musician to be drawn sometimes out of his special sphere—good for many reasons; and the encouragement is all the greater when such excursions have for their outcome a keener insight into the deep things of his art.

My second question is: How should one teach music history in order to make it of practical benefit to young students? This, of course, depends a great deal upon circumstances, such as the teacher's own equipment, the amount of time available for class room work and the degree of musical knowledge or mental maturity existing in the pupils. The whole purpose of music history teaching is to give students a more intelligent appreciation of the works of the masters. If it does not do that no one ought to waste his time over it. Its aim is to show the composers in their proper environment, to teach the learner to estimate works and groups of works in the light of the conditions which produced them. The formative periods in music must be traversed with an eye forward towards the finished product, and all that enters into the motive of the different composers must be recognized. This study brings the student face to face with musical works, enables him to view them from all sides and to enter so far as may be into the minds of their creators. In a word, the object of music history study is criticism in the broadest sense. Criticism, all the authorities are telling us nowadays, does not mean simply judgment of merit or demerit, praise or blame; it means *interpretation*, and interpretation implies a vast deal more than lies on the surface. The love of music in young people is ordinarily only a vague sentiment. They naturally pass judgment on all works from the same point of view, and there are whole schools of great works which make little impression upon their minds, because they are not prepared to comprehend the qualities which give their peculiar strength to works of that character. Historical study alone does not, of course, render the mind capable of appreciating different forms and ideals of beauty. A work may have great historic interest as a link in a chain of development and yet possess very little aesthetic value. But there is no one, however sensitive, who will not find his musical perceptions more confidently based and less liable to error if he habitually looks at things with the broad, liberal and unpartisan temper which is the finest fruit of historic study. An intellectual interest is added to the emotional thrill; works seem to acquire a more permanent value, a deeper meaning, when seen in their entirety. Let me repeat—the historic spirit is the best fruit of historic study; it helps to see things whole and to see them true.

Now what method is the most effective? A method very much in vogue among young teachers who are fired with zeal to conduct a music history class is the text-book method. A manual of the subject is chosen

Fillmore's, perhaps, or Hunt's or Mathews', and the class is set to memorizing the statements of the book and reciting upon them. In most cases, doubtless, there is more or less supplementary explanation on the teacher's part, and a modicum of musical illustration. Now I do not condemn the text-book *in toto* and without qualification. As Coleridge said of literature as a professional calling, it is good enough as a staff but a very poor crutch. The main use of a text-book is as a help in holding together in proper connection the facts which are gathered from many sources. It will prevent vagueness, it is a handy reference for names and dates, it furnishes the skeleton which teacher and students are to clothe with flesh and inspire with life. The text-book must be supplemented at every point by the teacher's talk, special books, and the constant study of musical works. The amount of this material that is available depends somewhat upon financial considerations, but we are fast arriving at that happy state when school and public libraries are ready to assist this study like any other.

I am not speaking to those, if any such there be in my audience, who carry out music history teaching on a university scale. The vast majority of teachers who are drawn to this subject have no immediate intention of doing more than to add a modest amount of history teaching to their strictly professional routine. To such I wish to say that there is no necessity of traveling in all cases over the whole musical field. There is no reason why the subject should not be divided into periods, or into groups of composers. Music history may be treated in the same way as literary history. College classes study literature by periods and by groups of authors. A class finds it perfectly feasible to study the poets of the nineteenth century, or even two or three of them, without going back to the Anglo Saxon period. We need not follow seriously the jesting advice of Washington Irving to village historians that they begin their chronicles with an account of the Creation. The most agreeable way, and I believe the most profitable in ordinary circumstances, is to divide up the subject, carrying a single line of investigation to a reasonable degree of fullness and then exchanging it for another. The teacher may follow one of two plans. First, he may select certain of the great geniuses and discuss the lives and works of each. In that case, however, he should never treat them as independent of each other, for if he does he is not teaching history. The teacher must bring out the influences which made each master what he was, and either link composers together in cases where their mutual action is evident, or at least exhibit the relation of each to contemporary movements in musical art.

The other plan is to trace the development of certain forms, as, for instance, the symphony from its origin in Italy, through the Austrian masters, down to the modern school. At another time one might select Catholic Church music, at another the German Lied, at another the Italian opera. If there is sufficient time allowed, it is well to have two courses in progress at the same time: a general course, covering the whole subject in outline, and a side course dealing with particular composers or forms.

The prime essential is to get the class interested and to keep them so. It is possible to make the study of music history as dry as the history of mathematics, which I picked up one day in our college library. And right here I want to say a word in favor of musical biography. I know that some have expressed great scorn of the "story-book" method of teaching history. But the lives of composers ought to have a place in the study of their music. The best lesson of art history is learned when we are brought face to face with real, living, passionate humanity. It is too often the case that to students the authors of the works they hear are mere names, vague impalpable abstractions. The connection between the personal character of a musician and his works is not always distinct, but we must not leave it out of the reckoning. Magnify the human element. Don't be afraid of seemingly trivial stories such as that of the quarrel of Händel with Cuzzoni, Schubert's composition of "Hark, hark, the lark" in the confusion of a beer garden, or the boy Bach's theft of a music manuscript in order that he might copy it by moonlight. These tales throw light on character and increase our personal interest. When it comes to broader and more typical facts in composers lives, such as Beethoven's deafness and solitariness, or Mendelssohn's classical studies, we have to do with matters which are essential to the understanding of the work of these men. The more human the geniuses appear the more we are able to feel a fellowship with them; the more their music is felt to be the outcome of their personality the more it will be seen to contain those touches of nature which make the whole world kin.

Finally, I believe that the teacher should rely most of all upon the instruction that springs out of his own knowledge and experience. The final aim of the teacher is to show his pupils how to investigate and think for themselves, and in that, as in other ways, he may be their best example. The use of text-books, historical and critical authorities, first hand examination of musical compositions should all be held together by the talk of the teacher out of a full mind. With the necessary safeguards and supplements, the lecture, more or less ample and detailed, is indispensable. Whether it should ever be allowed to take the place of independent reading by the student must depend upon circumstances. It is not the theory of the lecture that it should do so. It may under some conditions take the place of a text-book, but its chief value is in the direct, living, inspiring contact which it creates between the mind of the teacher and that of the pupil. Prof. Paulsen puts the matter admirably in his book on the German Universities, when he says: "It is precisely for the first introduction to a study that oral communication retains peculiar advantages. These lie, above all, in the fact that science thus appears to the hearer as in possession of an indwelling personality which puts him at once into direct relations with the subject matter and convinces him of its reality and its significance. A book is a dead and an abstract thing; it inspires no belief, for real belief is propagated from person to person. When a man who stands before us and addresses us, a man whom we have learned to respect and trust puts his faith in science and devotes to it his best efforts, even his life, then it is that we first acquire a real feeling for its actuality. It is here with science as it is with strange countries of which we have read in books or been taught in school. Presently there comes somebody who has been there himself, who has lived and toiled there for years. It is then that a sense of the reality of these things first grows in us. Just such is the attitude of the beginner towards science. From the words of the teacher standing before us in person, the past assumes a reality in the mind of the novice such as no book could possibly give it."

A question of very great interest arises at this point which might be the theme of endless discussion, but which I have time only to suggest: How far should a lecturer permit personal preferences to color his teaching? He must have his favorites among the composers; others he considers over-rated and he is out of sympathy with their styles and ideals. If he is an ardent Wagnerian, he perhaps considers Mendelssohn manneristic and shallow; if his faith is rigidly orthodox he abhors the later ultra-romanticism. Is it possible to keep his bias and his temperament out of his teaching, and would his work gain or lose if he succeeded in doing so? As a help to an answer to this difficult question, let the teacher remember that his first and last duty is to his pupils. His office is not to put up or put down this or that composer, certainly not to display his own brilliancy or learning, but to guide his pupils into the paths that lead to sound scholarship and liberal musical culture. It is best for students, considering the nature and the perils of young minds, that they be led first to see merits rather than defects. We know defects by first seeing merits, not merits by first seeing defects. We should not know darkness if we did not first know light; we know ugliness by first knowing beauty. In the second place, if a teacher condemns or praises works of art he is morally bound to give his reasons. A teacher's mere *ipse dixit* is worth nothing to a class of intelligent students. And in the third place, he cannot safely express personal feeling unless he has shown himself a deep, sincere and loyal seeker after truth. The dogmatic assertions and cheap sneers at celebrities which we see so pitifully often in our musical journals (and in literary journals too), are contemptible, because their authors have given no evidence of intellectual or moral fitness for the sacred task of criticism. They carry no authority and therefore inspire no respect.

To this may be added that there is no greater benefit to a teacher than is found in lecturing to a class of receptive students. One never knows the extent or the limitations of his own knowledge until he puts it into words. Ability in talking to a class means fulness and accuracy of scholarship and the power to make knowledge instantly available. The responsibility is immense, for youthful minds may take a permanent direction from the talk of a respected instructor. Great are the burdens of such an office, and great, too, are its rewards.

VI.—THE EFFECT OF PRINTING.

PERCY GOETSCHIUS, MUS. DOC.

The invention of printing from movable lettertype, ascribed by some to Coster of Haarlem, by others to Gensfleisch (Gutenberg) of Mayence, between the years 1420 and 1440, was followed near the end of the same century by the application of a similar principle to the printing of music pages.

It has often been declared that no other single discovery has ever been known to wield such a mighty revolutionizing influence upon civilization as the invention of printing, so aptly called the "art preservative of all arts." It operated like the removal of a weight of fetters from the aspiring spirit of the early renaissance era, or like the speedy lifting of a dense mist that had rendered all movements laborious and doubtful. The strides with which all phases of civilization, art, science and culture thereupon advanced, were like the sure and steady paces of a man who has gained the power of clear wide vision, after slow and painful groping about in uncertain light.

While the beneficent results of this momentous innovation were first and most powerfully felt in the domain of literature, no other province of art failed, in time, of being caught up and borne along upon the broad current of progress and enlightenment which the art of printing set upon its mighty course. Music was the next fortunate sister to share the benefits with literature, and it is by no means difficult to divine the manner and extent of the influences thus brought to bear upon the propagation and development of all that was best and enduring in our art.

Up to the year 1473, all musical characters were written by hand—a process far more laborious than the preparation of ordinary script, because music was then, even more than now, a complicated system of notation, the copying of which involved very great labor and a vast amount of time. Those of our ambitious readers who may have undertaken to copy for themselves a piece of music lent by a friend, will realize the difficulties that beset the mediæval penmen upon whom the reproduction of music manuscript devolved.

At first, the plates from which multifold impressions were made, consisted of solid blocks of wood, upon which the characters (notes, staff-lines and text) were engraved. The honor of substituting for this clumsy and expensive method the Gutenberg system of movable type, is due to Ottavio *Petrucci*, of the little town of Fossombrone in Italy, who, in 1498, obtained a twenty-year patent for the prosecution of his new process. Petrucci's first book was issued in 1501 or 1502, and consisted of thirty-three three-voice motets by the most distinguished scholars of the time. Up to the year 1519, he had printed no less than twenty-six books of masses, motets, French and Italian secular songs, lute-tabulatures and miscellaneous compositions.

Movable type were used by this pioneer only for the notes and other musical characters, and the text; the *lines of the staff* were first printed separately from strips of metal, and upon these, as "double-print," the notes and text were then impressed—with an accuracy of adjustment that appears admirable even to-day. Not until many years later (about 1530), was the process invented of attaching the staff-lines in minute sections to the notes, etc., as has been done ever since in musical typhography.

A noteworthy consequence of these inventions was the gradual transformation of musical script. The ofttimes enormously large, heavy notes were superseded by smaller and more delicate characters that soon became the model for music manuscript generally.

A general survey of the field of musical history during the memorable epoch under consideration, reveals the following conditions: *Ockenheim*, the so-called patriarch of counterpoint, finished his life work in the Netherlands in 1512; *Hobrecht*, his younger and more popular, though less scholarly rival, had died in 1506; *Josquin des Près*, the greatest master of the early Dutch school, had lived fifty years of his prolific career when Petrucci's first book appeared, and he survived until 1521; *Willaert*, the great promoter of secular song and originator of the madrigal, had just begun his active life (born in 1480); *Goudimel* (to whom the revered chorale melody known as "Old Hundred" is ascribed), was the first of a group of eminent composers born during the inauguration of the era of printed music—born in 1505, he was followed in 1510 by Andrea *Gabrieli* (the elder); in 1514 by *Palestrina;* in 1520 by Orlando *Lasso* in Belgium and

Thomas *Tallis* in England. Hans *Sachs*, born 1494, was tuning his poetic lyre among the Meistersinger of Germany, and Martin *Luther* (1485), was preparing to shake the Roman Church to its foundations and complete the work of Wycliffe, Huss and Jerome. The "revival of letters" (the Renaissance movement), was well advanced; and, as the reader knows, the art of book printing had reached nearly a century of its life and influence, extending by this time over nearly all Europe, inclusive of Great Britain.

Petrucci's invention spread with considerable rapidity into other cities and countries. In Germany he was next followed by the younger Peter Schoeffer (Mayence), who published a book of "hymns and songs," by Schlicke as early as 1512, and laid claim to many independent improvements. The art was further prosecuted at Rome in 1523; at Paris in 1524 (by the famous house of Attaignant). In the same year George Rhaw began, at Wittenberg, his publication of the Protestant chorale music which was to become so significant an ally in the great reformatory movement. In 1536, the printing house of Gardano was established at Venice. The art reached Lyon in 1532; Munich and Augsburg in 1540; Nuremberg a few years earlier.

All of the publications of this era are noted for their distinctness, accuracy and really great beauty. During the succeeding century, however, the art deteriorated sadly, and had fallen so low that the radical changes and improvements made by Gottlieb Imanuel *Breitkopf* (the founder of the present firm of Breitkopf and Härtel), at Leipzig, in 1755, were practically tantamount to a wholly original invention.

Questions.

1. When was book printing with movable type invented?
2. When, and by whom, was a similar principle applied to music printing?
3. Enumerate some of the advantages resulting from his invention.
4. Explain the earliest process (1473); that of Petrucci (1498); the later one (1530).
5. Recount something of the conditions in musical history during the first years of music printing.
6. Describe the spread of music printing into other cities.

FORM—SIXTH LESSON.

Constructive Work.

THOMAS TAPPER.

The reader who has followed these Lessons from the beginning of the Series (1899), will recall that the first suggestion made was in respect to the recognition of Form by means of the ear. This plan works admirably even with young pupils. Care must be taken, however, to give no long Forms for some time; in other words, the recognition of Phrases, Periods, and the Forms of two and of three Periods combined are sufficient to occupy the pupil for a considerable time. And for two reasons: (1) a thorough knowledge of fundamentals is indispensable to one's advancement in the subject; (2) so much variety is expressed even by the Primary Forms that its literature is extensive.

We do not, however, succeed in entering intimately into the spirit underlying music until we begin to seek expression in it. All people read better from the occasional act of self-expression in writing. We do not for a moment regard these "writers" as authors or as aspiring to authorship. In music one may enjoy the same privilege (of self-expression) without trespassing on the domain of the composer. In short, to begin to write music is not necessarily to aspire to musical authorship. It is merely that outer evidence of thought which permits the thinker to see the thought. The great value which results from any well organized attempt at self-expression is so evident, that the aim of modern education demands as much of the creative effort as possible; for there is a definiteness in the creative act which compels the attention to dwell with a complete object.

If the reader will turn back in these Lessons to those which treat of the Phrase and Period, it will be found that the former is a musical effect which is dependent for its completion on the Cadence. The length is not a definite quantity; but as a matter of fact, Phrases of four and of eight measures are the most common. Bussler, in his manual of musical Form, names the Four-measure Phrase, the Small Phrase, the Eight-measure the Large Phrase, and other length as irregular Phrases. The Period being a Phrase group will express the regularity or irregularity of the Phrase in one part or in both.

The first step in Constructive work in Form is the first step in musical composition. The pupil must be taught to write melodies which are simple enough to be thought out away from the piano. His only necessary equipment is the Major Scale. This he must know so well that he can sing its tones in any order; which means, think them in any order, still preserving the scale unity. He should be given definite lessons in elementary sight-reading from a text-book that presents melodies in abundance. With these before him the thought is ever busy with the scale in a definite form of melodic expression; and further, the pupil is gaining more and more familiarity with elementary Form (Phrases and Periods).

Having gained the ability to think the Scale freely, to conceive the Phrase as a complete unit, the pupil should begin to write original phrases as melodies, making the process to begin with as simple as possible. Simplicity is secured by keeping the melodies wholly diatonic, in the sense that no skip shall be found from a tone to the next. At first, nothing seems more difficult than to keep to the step-wise process and yet to give some interest to the structure. The first request of the young writer is for more liberty. But the wholesomeness of trying to do much with little is so apparent after a while that the process soon recommends itself.

The question that naturally arises at this point is this: "How many Phrases should one write?" As many as will exhibit all the Phrase forms, regular and irregular. Nothing makes one know so much about any structure—whether it be a Phrase or a church-spire as trying to make it.

The following questions are inevitably review for the most part.

Questions.

1. What is a Small Phrase?
2. What is a Large Phrase?
3. When is the Phrase irregular?
4. What is meant by a Diatonic melody?
5. State the benefit that results from writing these Elementary Forms.

CHORDS AS A MUSICAL VOCABULARY.

DR. H. A. CLARKE.

The analogies between music and language are so numerous, that many musicians habitually speak of music as a "language." If the term "language" is used metaphorically of music, such use is perfectly justifiable, but if used in any other sense it is misleading. "Language" gives definite expression to thought, "music" gives indefinite expression. The precision of the spoken word is utterly wanting in music. This vagueness is one of music's greatest charms. It gives free scope to the imaginative hearer, to evolve from it meanings that lie beyond the reach of language. The closest analogies between music and language are found in those departments of each that deal with the construction of word, phrase or sentence.

In language, orthography, the construction of the written word, is closely analogous to musical notation. Etymology, the origin of the word, is analogous to the origin of the chords. Syntax, the proper ordering of words in the sentence, is the analogue of "Harmony" in its fullest extent. Prosody, the marshalling of words into Poetic forms, is the analogue of "Form" in music. Of course, care must be taken not to push these analogies too far. Analogy is merely resemblance, not identity. With this reservative kept in mind, we may speak of the "chords" that are the material with which the musician works as "words." Just as the meaning of spoken words may vary, through emphasis or position in the sentence, or the nature of the context, so may the meaning of chords vary through the same causes, but within much wider limits. But after making all allowances for these variations of meaning brought about by emphasis, or position, or context, the fact remains that every chord has an individuality so characteristic, that the musical instinct of the composer intuitively selects those arrangements of the chords that are productive of the best effects of which they are capable.

At the risk of being somewhat fanciful, we will try to put into words—a confessedly difficult thing to attempt—what seem to be the most striking characteristics of chords; to begin with the common major chord. With the root at both extremes—*i. e.*, in the octave position—it gives a feeling of repose, finality, also solidity. Put the third at the top—*i. e.*, tierce position—the finality is weakened, the solidity gone; the repose remains, but its character has changed. It is conscious repose, not mere cessation of effort. Put the fifth at the top and the sense of repose is gone, and an unquiet desire to continue has taken its place. There are innumerable illustrations of these various effects of the common chord, for example, in Songs without words, compare the final note of the melody of any one that ends on the keynote with the final of No. 18 on the third, and No. 31 on the fifth.

It is almost needless to advert to the gloomy effect of the minor chord in its octave position. In its tierce position it expresses repose, but the repose of resignation. In its quint position, unrest. Compare the finals of No. 35 on keynote 17, on third 2, on fifth. One of the most beautiful examples of the fifth as a final, is to be found in Schubert's wonderful song, "Margaret at the Spinning Wheel." These "finals" are chosen as illustrations, because the peculiar character of the chord is more forcibly brought out in a "final" than in any other way.

We have not by any means exhausted the meanings of the common chord. The change from close to open harmony gives a new shade of meaning. The inversion of the chord changes it so much that it almost becomes a new "word." With the root at the base, the chord is in "stable equilibrium." With the third at the base, in "neutral equilibrium," free to move in any direction at the least impulse, its expression is lightness, grace. With the fifth at the base, the chord is in "unstable equilibrium"—it cannot remain, but must move. It is hardly necessary to say that the character of a composition is largely affected by the presence or absence of inversions. As extreme illustrations, compare a choral, such as "Luther's Hymn," with scarcely any inversions, with Mendelssohn's Spring song, in which there are more inversions than chords with roots at base. In the one case we have the extreme of solidity, in the other of lightness and grace.
